If convicted, the executives and officials each face up to 54 years in prison: 45 years of that sentence would be related to the homicide and nine would be linked to environmental crimes. The companies also face fines.

Samarco, Vale, and BHP Billiton declined to comment to Bloomberg BNA on the ruling suspending criminal proceedings.

This criminal case is unrelated to civil lawsuits against Samarco and its co-owners seeking billions of dollars. Last month, another Minas Gerais federal judge gave Samarco and its co-owners until Oct. 30 to finalize a settlement-for-damages agreement that would dismiss both civil suits.

Shale Drillers Spend Less, Produce More in Glut-Gorging Push

Posted August 09, 2017, 7:58 A.M. ET

By Joe Carroll, Giacomo Tognini and Alex Nussbaum

Shale drillers are greeting the fourth year of a historic oil-market slump in a curious fashion, promising to generate even more price-killing production as 2017 progresses.

Second-quarter reports in the last two weeks show producers led by ConocoPhillips, EOG Resources Inc. and Diamondback Energy Inc. plan to pump 50,000 barrels a day more than prior forecasts, easily offsetting modest production cuts by other peers. At the same time, full-year drilling budgets were largely curbed, some by hundreds of millions of dollars.

Investors, though, were unimpressed, erasing as much as 11 percent from an index of Permian shale explorers since the updates began on July 26. Meanwhile, crude futures, once seemingly ready to breach $50 a barrel in New York on OPEC-led cutbacks, are up just 0.8 percent.

Here are three charts on production forecasts, capital expenditures and hedging showing the status of U.S.-based drillers heading into the second half:

Apache Corp. was an outlier among shale players, cutting its production forecast for the year by 30,000 barrels a day to adjust for its exit from Canada. The producer sold its assets there earlier this year, choosing to focus on operations in the U.S., U.K., and Egypt.

Overall, the companies said they would cut about $1.25 billion from their capital expenditures for 2017. The reasons varied company-by-company, with some executives citing shortages of fracking crews in some regions that will delay some planned wells until early 2018. At least seven more companies were due to disclose quarterly earnings this week.

“This is reflective of cautious capital budgeting, continued operational efficiencies in the field, and perhaps in some cases, service costs not meeting inflation expectations built into budgets,” David Tameron, an analyst at Wells Fargo Securities LLC, said in a note to clients. “In addition, capex reductions are also a nice tag line for companies to address Street concerns about capital discipline.”

One reason drillers have been sanguine about pumping more crude even as an existing glut weighs on prices is that they’ve been able to lock in profits for future barrels with hedging instruments such as swaps and options.

Pioneer Natural Resources Co., Devon Energy Corp. and Antero Resources Corp.are among the shale drillers amassing hedges that protect their future proceeds as far out as 2023, according to data compiled by Bloomberg. With U.S. crude futures getting closer to a new bull market, the pace of hedging by energy producers is poised to accelerate.

One of the most-active drillers in the Permian Basin, Pioneer has been closely following Energy Information Administration tallies of crude inventories that are released every Wednesday. Recently, the data has been lifting prices, and Pioneer's risk-management team has been swooping in to lock in the upticks, said Chief Executive Officer Tim Dove. So far, about half of the oil Pioneer expects to pump next year is covered.

"I'm pleased about that, of course," Dove said in a conference call. "We'll look to do more hedges in 2018 as we look for attractive opportunities to do so in the next few months, to actually be significantly higher than 50 percent."

Gas Sellers Warn Hard-Bargaining Buyers: Market Is Turning

Posted August 09, 2017, 8:36 A.M. ET

By Naureen S. Malik

A worldwide glut of natural gas has buyers of the fuel driving hard bargains and pushing for shorter supply contracts. The only problem with that, according to their sellers: The market's about to turn against them.

Gas buyers have become too focused on the short-term, turning away from long-term contracts, said Greg Vesey, chief executive officer of Liquefied Natural Gas Ltd., an Australian developer of terminals that liquefy and export gas. If they keep it up and don't lock in enough contracts next year to encourage the construction of more export terminals, the market could end up short supplies as soon as 2021, he said.

"Things come to a head in late 2018," Vesey said in an interview at Bloomberg's headquarters in New York Aug. 8. "By the end of 2018, people will realize they have to make a decision."

The global glut of LNG supplies and an ensuing plunge in prices have already killed plans for export terminals around the world. Just last month, Malaysia's Petroliam Nasional Bhd. decided to scrap a $27 billion export complex in Canada, citing low prices. And more could follow as buyers take advantage of excess supplies to renegotiate contracts.

"The reality is that a new facility needs to be backed by a 20-year contract," Kathleen Eisbrenner, chief executive officer of export terminal developer NextDecade Corp., said in an interview late Tuesday. "There is starting to be a realization that, if those contracts aren't signed soon, we will go into a shortage."

There is an appetite among some buyers, such as large Asian utilities, for 20-year contracts, with one counter-party interested in a 25-year deal, she said.

And yet Anatol Feygin, chief commercial officer of Cheniere Energy Inc., the U.S. shale gas exporter searching for long-term contracts to back an export terminal in Texas, noted a "good appetite"

among buyers to lock in supplies for three to seven years rather than 20. He said in a call with investors Aug. 8 that "market conditions continue to be challenging for long-term deals."

Spot LNG in Northeast Asia, the biggest LNG-buying region, tumbled about 70 percent from its peak in February 2014, according to industry publication World Gas Intelligence.

Cut-Rate Prices

Increasing volumes of gas from Australia to America's shale gas formations have hit the water in recent years, inundating the market with so much supply that analysts say demand may not catch up until the next decade. Raymond James said last month that export projects will probably continue to be shelved.

That has escalated the competition among LNG suppliers to score the long-term contracts they need to expand capacity, and some sellers are trying to entice buyers with cut-rate prices, Vesey said.

They are putting "ridiculously low prices out there" with the hopes of raising them in future contracts, he said. Liquefied Natural Gas is developing an export project in Louisiana that has already gained regulatory approval but needs supply agreements.

"There is a disruptive nature to what's happening," Vesey said.

Hurricane Maria May Be Preview of Climate-Fueled Migration

Posted September 27, 2017, 9:42 A.M. ET

By Christopher Flavelle

Hurricane Maria's devastation of Puerto Rico may offer a preview for Americans of one of the most jarring potential consequences of global warming: the movement of large numbers of people pushed out of their homes by the effects of climate change.

The storm, which destroyed houses, washed away roads, and cut off power to the commonwealth's 3.4 million residents, risks accelerating an exodus that's already under way as people flee economic stagnation and rising taxes brought on by a fiscal and debt crisis.

On Sept. 26, Puerto Rico Governor Ricardo Rossello warned that without "unprecedented relief" from the U.S. government, "thousands if not millions" of residents could leave the island for the mainland. That would strain housing and job markets in the cities that received those people, as well as local government services.

In Puerto Rico, a further drop in population would make it harder to reverse its economic decline. The commonwealth declared bankruptcy in May and has stopped making payments on much of its more than $70 billion in debt. Fewer residents would mean less economic activity, further reducing tax revenue and leaving officials even less able to repay Puerto Rico's loans.

Scientists say higher water and air temperatures, as well as rising sea levels, increase the intensity and destructive power of hurricanes, a trend that will continue as the concentration of greenhouse gases in the atmosphere increases.

Migration Underway

Researchers at the International Monetary Fund, in a report released Sept. 27, looked at the links between extreme weather and emigration in more than 100 countries over three decades. They found that "a rise in temperature and greater incidence of weather-related disasters increase out-

migration," according to Petia Topalova, the IMF researcher and lead author of the report.

It describes migration as an "adaptation strategy for households hurt by weather shocks" and predicts that "substantial migration flows, potentially spilling across country borders, could arise if climate change causes a significant rise in sea levels."

In some parts of the world, that's already happening.

In Africa, climate change forced an estimated 1 million people to leave their homes in 2015; in the Pacific, the World Bank has urged Australia and New Zealand to open their doors to residents forced off small island nations such as Tuvalu and Kiribati. Even in Syria, internal migration sparked by a historic drought contributed to the civil war, which has added to the wave of people trying to enter Europe in recent years.

Maria, which struck Puerto Rico Sept. 20, could expose the U.S. to a similar dynamic. The scale of destruction on the island, combined with its large population and Puerto Ricans' legal right to move anywhere in the U.S., could prompt migration on a larger scale than other natural disasters.

East Coast Influx

That raises questions about the country's ability to handle such a movement of people. The housing market in those cities may not be able to accommodate that kind of influx, according to Jesse Keenan, an expert on climate adaptation at Harvard University.

"Let's say just 350,000 leave," Keenan said. Of those, he added, "let's say just half end up in cities. It's a major housing crisis. We don't have that much slack in housing inventory."

Keenan used the example of New York, which has the largest concentration of Puerto Ricans outside of the island. The city's traditionally Puerto Rican neighborhoods, where new arrivals might settle—East Harlem, Bushwick, parts of the Bronx—already have low vacancy rates and high rental costs, Keenan said.

"The city of New York right now needs to set up a plan to house these people," he said. If they're forced to stay with friends or relatives, "you're talking about housing being burdened by having too many people legally in the unit," Keenan said, leading to fire risks, domestic strife and other problems.

Large numbers of newcomers also would place "a tremendous burden on social service delivery, at least for a couple of years," Keenan said.

Climate Migration

Topalova, the IMF researcher, said that people who leave Puerto Rico because of Maria may have a harder time finding their feet in their new homes.

"Previous IMF work suggests that people who were forced to depart their home country due to various events outside their control may be different, in terms of demographics and skills, than economic migrants," she said. "They may face greater challenges integrating in the job market relative to economic migrants who—by definition—chose their destination to maximize employment outcomes."

With enough planning and foresight, the U.S. "will be able to absorb and put to good work a wave of climate refugees," said Giovanni Peri, an economist at the University of California, Davis, who studies climate migration.

Natasha Lycia Ora Bannan, an associate counsel at LatinoJustice, an advocacy group in New York, got a call Tuesday from a friend on the island, asking if she could help him find a job in the city. She described him as "somebody I never imagined asking that."

For those who feel they need to leave the island, "this promise of economic opportunity elsewhere often does not lead to a job, or the job that they thought they would encounter," she said. "I call it the forced migration."

Debt-Ridden, Maria-Menaced Puerto Rico Faces Environmental Crisis

Posted September 27, 2017, 10:27 A.M. ET

By Adam Allington and David Schultz

Days after Hurricane Maria ripped through Puerto Rico, a severe reality is settling in: Food and gasoline are scarce, the island's electric grid is decimated, and nearly half of the population lacks access to clean drinking water.

"In previous hurricanes, like Hugo [in 1989] and Georges [in 1998], people in rural areas or poor communities went to rivers and springs to get water," said Alan Covich, an ecologist studying natural disturbances at the University of Georgia.

But Maria knocked down trees on mountain hillsides, making them susceptible to landslides and muddy waters, Covich told Bloomberg BNA. "When all of that sediment and debris makes its way into the river, it could contaminate the water, but it's also going to create problems for treatment plants further downstream," he said.

In the coming days and weeks, Covich said there will be a tremendous need for water purification kits across the U.S. territory, especially in rural areas. Without those kits, people will be drinking contaminated, stagnant water and face greater exposure to mosquito-borne diseases like Zika and Dengue fever, he said.

In a statement provided to Bloomberg BNA Sept. 26, the Federal Emergency Management Agency said it has delivered 6 million liters of water, 4 million meals, 300 infant and toddler kits, and 70,000 tarps to the U.S. Virgin Islands and Puerto Rico since Hurricane Maria's Sept. 20 landfall, which brought 150 mph winds.

"An additional 7 million meals and 4 million liters of water are en route by barge," said FEMA.

According to the Department of Defense and others that are assisting in the humanitarian response, about 44 percent of Puerto Rico's 3.4 million residents are without clean drinking water.

And the destruction that Maria caused also could compound environmental risks in certain neighborhoods—particularly in low-income and rural areas.

Compromised Water Utility

Hurricane Maria's devastating landfall came just two weeks after another powerful hurricane, Irma, skirted the island, leaving 1 million without power.

But even before the twin storms, the Puerto Rico Aqueduct and Sewer Authority (PRASA), was facing criticism for systems operating in violation of the Safe Drinking Water Act.

And the island's main water utility was hamstrung by $4 billion in outstanding debt, rendering the agency effectively unable to fund much-needed infrastructure upgrades.

Under a 2015 settlement with the U.S. Department of Justice and the Environmental Protection Agency, PRASA agreed to undertake major upgrades, improve inspections, and prioritize island-wide capital improvement projects. In recognition of the financial conditions in Puerto Rico, the U.S. government agreed to waive payment of civil penalties.

But tropical storms and hurricanes put so much stress on infrastructure that it can be difficult to fortify them, even when money isn't tight, civil engineers said. And, compared to most municipal water authorities, Puerto Rico's PRASA is much, much larger.

"PRASA has eight dams and reservoirs and 114 water-treatment plants," said Melissa Pomales, a civil engineer for Arcadis, based in Puerto Rico. "They also have 51 waste water treatment plants and over 20,000 miles of water and sewer pipes."

Between 2005 and 2015, PRASA invested about $3 billion in capital improvements to bring itself back into regulatory compliance, Pomales said.

"But since 2015, the government hasn't had access to the financial markets to lend them the money," she told Bloomberg BNA.

The main problem now, said Pomales, is simply getting gasoline and wireless communications necessary to conduct damage assessments before treatment plants can resume pumping water.

'All Been Blown Away'

Puerto Rico declared a form of bankruptcy in May, facing a crushing multi-billion-dollar debt load following years of financial mismanagement. For the past decade, the government hasn't had the funds to pay its creditors or improve its aging infrastructure, let alone deal with the consequences of a major hurricane.

"Many times, when public utilities get into trouble, they quit funding maintenance and Puerto Rico has been failing to fund infrastructure for about 15 years now," said Brookings Institution Economist Barry Bosworth.

"I think they were starting to at least develop a plan to reduce costs and prioritize new spending," Bosworth told Bloomberg BNA, "but that's all been blown away now."

The extended public debt crises had already cast a pall over the island's economic future. But Bosworth notes that none of that should factor into providing people with the aid they need to survive and start to rebuild.

Island Isolation

Yet, even with FEMA able to provide an infusion of capital and equipment, the problem going forward might turn on whether people are willing to come to assist with the recovery, according to Bosworth.

"Think about what happens when we see hurricanes hit the mainland," he said. "Utility companies from states all across the country send in resources and workers—those companies might be hesitant to send their staff down to Puerto Rico to help, because they're worried they might not get paid back for that work."

Under normal circumstances, municipalities might split the cost of disaster recovery 25–75 percent, with the government picking up the larger share, he said.

In the case of Puerto Rico, the only realistic way forward now is for the U.S. government to simply give the island the money to rebuild, no strings attached, according to Bosworth.

Appropriation From Congress

The momentum for an emergency funding bill for Puerto Rico is growing on Capitol Hill. Republicans in both chambers said Congress will have to act quickly to respond to the widespread destruction the hurricane caused.

GOP leaders in the House are preparing a bill similar to the one that was passed earlier this summer to help mainland U.S. communities in response to Hurricanes Harvey and Irma, according to Rep. Bob Gibbs (R-Ohio). He also told Bloomberg BNA that congressional leaders are waiting to hear from FEMA and other federal agencies about what types of aid will be needed on Puerto Rico.

That process is being complicated, however, by the massive logistical problems the storm triggered on the island including gasoline shortages and damaged roads. For example, disaster specialists from the Army Corps of Engineers have had a difficult time responding to congressional inquires because of downed communications infrastructure, according to Rep. Brian Mast (R-Fla.).

'Between a Rock and a Hard Place'

Mast also told Bloomberg BNA that the Coast Guard is having trouble sending flights to Puerto Rico as "we can't even get on the ground because they're worried about places where martial law is in place."

Sen. Marco Rubio (R-Fla.), floated the idea of extending ultra-low interest loans to the island. But it's unclear how much capacity the local government has to take on more debt at any interest rate.

"Puerto Rico, its government, and its people are between a rock and a hard place," Sen. Tom Carper, (D-Del.), told Bloomberg BNA. "They deserve our help and we need to provide it."

Sen. Charles Schumer (D-N.Y.), the Democratic leader in the Senate, said Congress should be talking about grants, not loans.

"Low-interest loans are down the road," he told reporters. "They need help now."

Broader Look at Chemical Uses Needed in EPA Rules, Groups to Say

Posted September 27, 2017, 03:54 P.M. ET

By Pat Rizzuto

The EPA is not casting a wide enough net in considering how people are exposed to certain chemicals, environmental and health groups plan to argue in lawsuits challenging two of its regulations. By ignoring certain pathways of exposure to particular chemicals, the Environmental Protection Agency is effectively narrowing how carefully it regulates these products, Andy Igrejas, the founder of the Safer Chemicals, Healthy Families coalition, told Bloomberg BNA. His group and others, including the Environmental Defense Fund and the Alliance of Nurses for Healthy Environments, are challenging two rules intended to implement the 2016 amendments to the Toxic Substances Control Act, saying the agency unlawfully allows itself to exclude chemical uses from its risk evaluation.

"EPA's position that it can ignore known and foreseeable uses violates the text of the law," wrote the Environmental Defense Fund in comments it recently submitted to the EPA about the agency's preliminary plans to determine whether 10 chemicals pose risks to people or the environment.

The range of uses and exposures the EPA considers could determine whether companies as diverse as the Occidental Chemical Corp., Tiffany & Co., and General Motors could face restrictions on their products. Regulations to control risks are required under TSCA if the agency evaluations conclude a chemical or its specific uses pose an unreasonable risk to people or the environment.

The narrower the scope of the EPA's assessments, the fewer the companies that would be subject to resulting regulations if the EPA concludes a chemical or its particular uses pose an unreasonable risk. A broader scope means more of a company's use or manufacture of chemicals could be regulated.

Rationale

The two rules being challenged describe how the EPA will go about prioritizing chemicals for risk evaluation and the procedures it will use for those reviews. The risk evaluation rule summarizes the agency's rationale for excluding uses.

The EPA may exclude chemical uses "in order to focus its analytical efforts on those exposures that are likely to present the greatest concern, and consequently merit an unreasonable risk determination," the agency said.

Companies and trade associations supported that rationale in comments and public meetings that proceeded the final rule. No company or trade association would discuss legal arguments to be raised in the upcoming lawsuits, but the American Chemistry Council and more than a dozen other trade associations asked the courts to allow them to intervene in the lawsuits supporting the EPA.

"Some stakeholders claimed that EPA is required to examine all conditions of use, all vulnerable subpopulations, aggregate risks, continuing exposures to legacy contamination, intended and actual uses (even misuses), and incidental and cumulative exposures," the chemistry council wrote in comments on the agency's plans to evaluate the risks of asbestos, pigment violet 29, seven solvents, and a cluster of three related flame retardants.

"ACC is concerned that such a comprehensive approach is neither legally required nor practical," it said. The American Public Health Association said the agency should look at exposures from all current and legacy uses and consider them together to do an adequate assessment and risk characterization.

"Asbestos is widely prevalent in the environment due largely to legacy uses and risk evaluations that assess only exposures from current uses will fail to characterize the risks these chemicals pose," wrote Georges Benjamin, a physician and executive director of the health association.

Lawmakers Eye Common Ground on Wildfires, Forest Management

Posted September 27, 2017, 6:33 A.M. ET

By Alan Kovski

Congress is stepping up action on forest management and wildfire funding bills, with potential for disagreements over streamlining environmental analyses but notable areas of agreement, too—especially in the case of a court decision that has entangled forest managers and logging projects.

A decision by the U.S. Court of Appeals for the Ninth Circuit that frustrated the Obama administration, as well as members of Congress, is on the chopping block. Lawmakers may make changes in the law to override the Cottonwood decision, as it is known, to make it easier for forest managers to approve projects such as logging in the federal forests.

Wider-ranging legislation may have a tougher time. Environmental advocates and many Democrats usually are strongly opposed to streamlining of environmental review requirements or most ideas about restraining litigation.

The bills are important to logging and sawmill companies in many rural parts of the West, to communities dependent on those business activities or threatened by wildfires, and to many environmental activists. Wildfires in 2017 have burned more than 8 million acres.

Sen. John Barrasso (R-Wyo.), chairman of the Senate Environment and Public Works Committee, presided over a Sept. 27 hearing on three bills concerning forest management strategies for reducing the risk of wildfires. Barrasso told reporters he intended to advance bills out of committee this year. Forest management has been a contentious subject for several years because of arguments over logging, environmental analyses, and litigation relief, but Congress gets a little closer each year to passing legislation, according to Sen. Steve Daines (R-Mont.).

Cottonwood Decision Targeted

Daines is the author of the Litigation Relief for Forest Management Projects Act (S. 605). It targets the Cottonwood decision and has the support of Sen. Jon Tester (D-Mont.). It is mirrored by a House bill (H.R. 1483) that also has bipartisan support.

The bill also received support from Collin O'Mara, president of the National Wildlife Federation, during the Senate hearing that Barrasso chaired.

The 2015 Cottonwood decision by the Ninth Circuit said forest managers must start new consultations with the U.S. Fish and Wildlife Service whenever new information indicates potential impacts on endangered species from federal agency decisions.

The U.S. Forest Service told Bloomberg BNA Sept. 26 that the Cottonwood decision has led to some extensive projects being halted by litigation in the service's Montana-based northern region. The stalled projects mean an estimated 99.6 million board feet of timber are waiting to be harvested and 1,539 associated full-time or part-time jobs are unfilled, the service said.

Much of the proposed work is to reduce the buildup of hazardous fuels that can contribute to wildfires, according to the service. The projects also are intended to help trees withstand insect infestation and disease, the service said.

The Cottonwood decision came about after the Fish and Wildlife Service revised the critical habitat of the endangered Canada lynx. Environmental activists argued forest managers should be required to restart consultations with the Fish and Wildlife Service and revise forest management plans as needed for the lynx.

The Cottonwood decision confronts national forest managers with the prospect of endless rounds of consultations on species, because new information is always coming up, U.S. Forest Chief Tom Tidwell said in June, two months before his retirement.

Money and Management

Bipartisan bills also have been proposed to revise federal funding of wildfire suppression. Rep. Mike Simpson (R-Idaho) in June proposed again a bill (H.R. 2862) to use budget cap adjustments to allow more funding of wildfire suppression. Sen. Ron Wyden (D-Ore.) introduced a companion bill (S. 1842) Sept. 19 in the Senate, where it was referred to the Senate Budget Committee.

Several lawmakers, including the Republican chairmen of the Senate Energy and Natural Resources Committee, the Senate Environment and Public Works Committee, and the Senate Agriculture, Nutrition, and Forestry Committee, have said it makes sense to enact changes in forest management policies along with wildfire funding because better management can reduce the frequency and severity of forest fires.

That is where environmental advocates and many Democrats dig in their heels. They worry that the revised forest management policies will lead to too much logging under the guise of forest "restoration" or forest "resilience."

"Timber companies would be the only winners if these terrible bills pass," Brett Hartl, government affairs director with the Center for Biological Diversity, said in a statement.

O'Mara of the National Wildlife Federation was less condemning, though he warned against short-changing environmental reviews. Congress could marry some changes in forest management to wildfire funding changes for a valuable package, he told the Senate committee.

Bills S. 1731 by Sen. John Thune (R-S.D.), S. 879 by Sen. John Barrasso (R-Wyo.), S. 1752 by Sen. Dean Heller (R-Nev.), and H.R. 2936 by Rep. Bruce Westerman (R-Ark.) all would mandate streamlining of National Environmental Policy Act procedures. Barrasso's bill also contains minimum annual acreage requirements for forest improvement projects, and it would require the establishment of an arbitration program as an alternative to judicial review.

The Environment and Public Works Committee discussed both Thune's and Daines' bills. After the hearing, Barrasso said he also had been talking to senators about wildfire funding, increasing the prospect of a legislative package combining forest management and funding changes.

Another Sept. 27 hearing, in a subcommittee of the House Natural Resources Committee, also looked at forest management strategies, although the full committee approved Westerman's bill in June.

Sen. Pat Roberts (R-Kan.), chairman of the Agriculture Committee, said this month he intended to work with Daines to develop a forest management bill in his committee, especially with ideas from Daines. Asked if the various committees of jurisdiction in the Senate would work well together to get a bill passed, he said, "That's a damn good question."

Maryland to Take EPA to Court Over Interstate Air Pollution

Posted September 27, 2017, 01:08 P.M. ET

By Leslie A. Pappas

Maryland is suing the EPA for failing to limit air pollution blowing in from others states, it announced Sept. 27.

Maryland Gov. Larry Hogan (R) directed state's Attorney General Brian Frosh to file a lawsuit against the Environmental Protection Agency for failing to act on a November 2016 petition that seeks new pollution controls on 19 coal-fired power plants in five upwind states.

Pollution from Indiana, Kentucky, Pennsylvania, Ohio and West Virginia impedes Maryland's ability to meet federal air quality standards, the state said. About 70 percent of Maryland's pollution problems come from emissions from those states, the state said.

Delaware and Connecticut also filed petitions with the EPA in 2016, targeting plants such as NRG Energy's Cheswick plant outside of Pittsburgh and Duke Energy's East Bend Generating Station in Kentucky.

S.C. Regulators Asked to Review Rate Hikes for Canceled Project

Posted September 27, 2017, 9:43 A.M. ET

By Jim Polson

South Carolina utility regulators are weighing a request to suspend previously approved rate increases for Scana Corp. related to its canceled V.C. Summer nuclear plant expansion.

The request by staff of the Public Service Commission of South Carolina cites a state attorney general's opinion that rate hikes for unfinished or abandoned power plant projects were approved under a "constitutionally suspect" state law. Customers may be due credits or refunds should the law be amended or deemed unconstitutional, according to the filing Tuesday. Scana will "vigorously contest the request," the Cayce, South Carolina-based utility owner said Sept. 27 in a separate filing.

Scana and its partner, state-owned utility Santee Cooper, halted construction on two new reactors at the Summer plant after costs ballooned to over $20 billion, a decision that leaves Southern Co. as the only utility building a nuclear plant in the U.S. Scana had asked utility regulators for permission to recover $4.9 billion in expenses for the project before withdrawing the request in August to give officials more time for review.

"This would be a severe, a huge financial blow to the utility," Kit Konolige, a New York-based utility analyst for Bloomberg Intelligence said by phone Wednesday. "My guess would be, the commission won't want to do that."

Scana shares fell 2.1 percent to $54.41 at 9:43 a.m. in New York.

The utility's South Carolina Electric & Gas utility is collecting about $445 million a year for the Summer project, Konolige said. Suspending rate hikes would save the average residential customer about $27.03 a month, according to the staff filing.

The commission staff also cited allegations that Scana failed to disclose information that would have appeared to provide a basis for challenging rate increases. The utility "should not be allowed to continue to benefit from nondisclosure," it said.

Wal-Mart Steps Up Push to Remove Potentially Harmful Chemicals

Posted September 27, 2017, 9:46 A.M. ET

By Lauren Coleman-Lochner

Wal-Mart Stores Inc. is expanding its program to clean up the products it sells, setting a 2022 target for reducing potentially harmful substances and widening the list of chemicals it wants to avoid.

The world's largest retailer aims to reduce the chemicals in products such as household cleaners, cosmetics, skin care and infant items by 10 percent by then, according to a company statement Sept. 27. It's also added some fragrance allergens to its so-called priority list of substances it wants to remove from goods.

The new goal is the latest in the retailer's efforts to respond to consumers seeking greener products and more information about what's in them. Last year, Wal-Mart named eight high-priority chemicals it wants eliminated from the goods it sells, and it's on schedule to have the chemicals listed on its broader priority list labeled online and on packaging next year.

"We're trying to center around a broader approach that emphasizes three elements: building trust, delivering impact and really staying ahead of regulation," said Zach Freeze, Wal-Mart's senior director for strategic initiatives for sustainability.

Last month, Wal-Mart also started participating in the Chemical Footprint Project, which helps companies track and eliminate dangerous substances. The program gives Wal-Mart a tool to make further reductions, Freeze said. So far, its suppliers have removed 96 percent of high-priority chemicals by volume weight from consumables products sold in U.S. stores.

Wal-Mart announced in 2013 that it would ask suppliers to find safer alternatives for ingredients in personal care, cleaning and beauty products. Some of its suppliers have recently announced their own initiatives. Unilever and Procter & Gamble Co. both said this year they'll start labeling fragrance ingredients in their products, illuminating an area that's long been opaque.

Climate Shocks May Cost U.S. $1 Billion a Day as Planet Heats Up

Posted September 27, 2017, 12:17 P.M. ET

By Joe Ryan

Stronger hurricanes, hotter heat waves, more frequent wildfires and more severe public-health issues are all adding to the costs of climate change, which will reach almost $1 billion a day in the U.S. within a decade, according to a report released Sept. 27.

Total costs to address the impact of rising temperatures will swell 50 percent by 2027, to $360 billion annually, according to the study from the Universal Ecological Fund. That equates to about 55 percent of expected economic growth in the U.S.

The report comes as the U.S. continues to reel from one of the costliest hurricane seasons in history. Hurricanes Harvey, Irma and Maria have inflicted an estimated $173 billion in damage in Texas, Florida, Puerto Rico, and the U.S. Virgin Islands. On the West Coast, record dry conditions and heat have triggered wildfires in nine states. Unless the U.S. cuts fossil fuel use, the economic toll from such events will continue to rise, the study concludes.

"The increasing damage from climate-change related storms, wild fires, human health, agriculture loss and the like are taxing the potential of economic growth," said James McCarthy, a Harvard University professor whose co-authors included Robert Watson, former chairman of the Intergovernmental Panel on Climate Change. The researchers weren't paid for their work.

The study's conclusion that fossil fuels exacerbate global warming and create a drag on economic growth runs counter to the view of the White House.

President Donald Trump, who has called climate change a hoax, has put oil, natural gas and coal production at the center of his economic agenda. Energy Secretary Rick Perry told a meeting of the National Petroleum Council Sept. 25 that fossil fuels are even saving lives in developing nations by increasing access to energy.

The economic toll of climate change is not limited to storms. Droughts in states including California, Texas and Oregon have led to $56 billion in crop losses since 2012, according to the study, which used data from the National Oceanic and Atmospheric Administration, the Centers for Disease Control and Prevention, and other federal agencies. If global warming goes unchecked, corn and soybean production may fall as much as 30 percent in the next three decades, costing farmers as much as $25 billion annually, according to the study.

For years, policy makers argued it was impossible to grow the economy without increasing fossil fuel use. Renewable energy has become more common, challenging that notion.

"That's no longer true," McCarthy said.

Landfill Gas for Dinner? Scientists to Cook Food from Waste

Posted September 27, 2017, 9:49 A.M. ET

By Ann Koh

Imagine a world where gas emitted from landfills can be turned into edible protein that ends up on your plate as a burger or a steak.

That's what scientists are hoping for. Calysta Inc. in California and String Bio in the Indian city of Bengaluru are among biotechnology firms that have separately discovered ways to turn methane into protein. Bacteria found in soil are fed a liquid containing the gas, sparking a fermentation process similar to making beer. Instead of alcohol, protein is released into the water, which is then dried into a brown powder. The product is already being used in animal feed, the first step toward readying it for human consumption.

The companies are betting their products will help alleviate the strain of a growing global population on agricultural land and oceans while natural gas prices trade near the lowest level in almost two decades. String Bio, a start-up which won $200,000 in Indian government grants, and Calysta, backed by investors including Japan's Mitsui & Co. and Cargill Inc., hope methane-made protein will become a sustainable food of the future.

"It's way better to turn methane into food than burn it," said Calysta's chief executive officer, Alan Shaw, a Menlo Park-based chemist who led efforts to turn crop waste into fuels at his previous firm. "What better use for it than to turn it into protein and put it into the human food system, and take a lot of the pressure off?"

Landfills, sewage plants and farms all naturally produce methane when organic matter decomposes, which can be captured and transported to a facility, said Ezhil Subbian, the co-founder of String Bio in Bengaluru. Shaw says the amount of methane from such sources is too small to feed a large plant economically at the moment but Calysta is working on "scaling down" its technology. Subbian is optimistic that String Bio will be able to build plants using biogas methane in the next five years.

"We're working on a way to essentially be economic, but at a smaller scale," said Shaw. "That's not easy, but we do have some ideas and are working on it."

For now, Calysta will use natural gas from a pipeline at its $500 million Memphis, Tennessee facility instead of biogas. In May, the company received $40 million in funding from investors and expects to start operating in 2019, with the aim of having an annual capacity of 200,000 tons of protein. Global feed production broke above 1 billion tons, according to 2017 Alltech estimates. Mitsui & Co., one of the investors, saw a business opportunity given the growing demand for protein that can't be met through fishmeal, said Yuhei Saito, who oversees the nutri-science business at the Japanese trading house.

String Bio is still seeking funding from investors to commercialize its technology, and is producing a few kilograms a month at its pilot plant in Bengaluru. Local suppliers deliver canisters of methane that's fed to bacteria, which ferments to produce wet protein clumps that are dried and sent to poultry and fish farmers for testing.

"You just mix the protein with regular feed and feed it to animals," said Subbian, a synthetic biologist who worked on developing fuels and chemicals from plants. "I envision us purifying it further where it could be ready for human consumption."

By creating food from waste gas, the companies say they'll be able to feed emerging economies in Africa, South America and Asia, where arable land and ocean resources are declining. By 2050, the world population is expected to surge to 9.6 billion, leading to a 61 percent increase in food production, according to the Food and Agriculture Organization of the United Nations.

The market for gas and fishmeal has also turned in favor of the scientists. U.S. natural gas prices plummeted to $1.639 per million British thermal units in March last year, the lowest level since 1999. It's now trading at $2.923 as of 4 p.m. Singapore time, still about 80 percent below the December

2005 peak.

Meanwhile Peruvian fishmeal, a common source of protein for livestock and shrimps, has more than doubled from a record low $373.16 a ton in June 1993 to $1,092.07 a ton in June this year, according to data from the International Monetary Fund.

“Natural gas is transforming the world economy at the moment because of its relative cheapness to oil and other forms of carbon,” said Shaw. “You’re not going to stop people from using fishmeal, but you will be able to provide a sustainable replacement.”

Subbian shares Shaw’s vision for the future, and is trying to think of ways it can be shared at the dining table. The taste, she says, can be best described as similar to whey -- a protein derived from milk favored by body builders.

“We’d sell it to someone else who makes it into a steak-like product, or a fish-like product, or something like a tofu perhaps, that we could grill and eat,” she said. Laughing, she adds: “When it gets there, we’ll need to bring a good chef on board.”

World’s First Green Exchange Lists $74 Billion in Its First Year

Posted September 27, 2017, 9:13 A.M. ET

By Anna Hirtenstein

The Luxembourg Green Exchange, the world’s first bourse for securities related to climate change, listed 63 billion euros ($74 billion) of bonds after one year.

“This far outstripped what we expected,” Jane Wilkinson, head of sustainable finance at the Luxembourg Stock Exchange, said in a phone interview. “It clearly outstrips the growth we’ve seen in Luxembourg on the regular market, which was stable.’’

The Luxembourg Green Exchange, also known as the LGX, was set up as a place where investors could be certain that what they were buying was really a green bond. The industry is unregulated to date, although issuers can voluntarily follow frameworks such as the Green Bond Principles or the Climate Bond Initiative. The LGX obliges its issuers to provide full documentation, both before and after issuance.

The 63 billion euros makes up about 1 percent of the Luxembourg Stock Exchange, in terms of value of listed assets, according to Wilkinson. The global green bond market reached $95 billion last year. After a record-breaking 2017 first half, Bloomberg New Energy Finance raised its 2017 forecast for issuance to $130 billion from $123 billion. Wilkinson said the figure could be as much as $140 billion.

The LGX receives as many as two to three questions and requests daily from parties such as treasury departments and law firms that are interested in issuing green bonds, according to Wilkinson.

“There’s definitely an increased interest by potential issuers,’’ Wilkinson said. “New players that are waking up and thinking this could be an interesting market for us and starting to do their homework.’’

There is rising interest in China, U.S. municipalities and Latin American financial institutions, she said. Corporate issuers are also getting more involved.

"It's still a bit of a nascent market, if you're a big company I feel like they should lead the way," Wilkinson said. "I understand that they don't need to list because they have enough interest, but that kind of issuer can use their influence."

Some large companies in the clean energy industry haven't labeled their bonds as green, even if they could, such as Tesla Inc.'s recent $1.8 billion offering. This may be because of the additional reporting that's generally expected from investors to prove that the funds raised are only being used for environmentally-focused projects, Wilkinson said.

Now One of the World's Energy Powerhouses Has a Coal Squeeze

Posted September 27, 2017, 10:14 A.M. ET

By Perry Williams and Ben Sharples

Australia's energy crisis keeps getting stranger.

The world's second-biggest seller of liquefied natural gas is already threatening producers with export curbs as it struggles to find enough supply for its own use. Now the country that ships more thermal coal overseas than almost any other is scrambling to replenish stockpiles at some power plants after they dwindled following a surge in demand and constrained supply.

It's the latest twist in the saga of how a global energy powerhouse is struggling to sustain reliable and affordable electricity for its own population. Power price spikes and gas shortages have already frustrated businesses and homes across the nation and put pressure on the government and generators to prioritize domestic customers over sometimes more lucrative export markets.

Coal inventories at Australia's three largest electricity providers—AGL Energy Ltd., Origin Energy Ltd. and CLP Holdings Ltd.'s EnergyAustralia—have shrunk over winter as they use more of the fuel to compensate for natural gas shortages. The closure of the Hazelwood coal-fired power plant in Victoria state also put further pressure on the nation's remaining generators to produce more power, eating through their stockpiles at a faster pace.

Against this backdrop, the power producers have struggled to get sufficient supplies as they compete with overseas buyers for lower-quality coal that was once considered too poor to export. Miners in Australia can command higher prices for coal known as high ash in China, South Korea and India.

"The high ash market has developed in North Asia over a number of years and that has caused complications for some power stations," said Robin Griffin, a research director at Wood Mackenzie Ltd. in Brisbane. "It means that miners can actually sell a much lower quality product into the export market."

Griffin estimates miners can probably sell coal to international customers at double the price sold to domestic utilities. Australia exported 116.1 million metric tons of thermal coal during the first seven months this year, compared with 114.4 million in the same period last year, according to government data.

"The local power producers have got a set delivery amount and they may be asking for more coal," he said. "It's going to be very difficult to convince miners to sell coal at a lower price to domestic utilities, it's just a no-brainer."

Strong Chinese imports and the price gap Australian producers can achieve by exporting coal rather than selling to local plants was a factor contributing to low stockpiles, according to Gavin Wendt, a senior resource analyst at MineLife Pty.

There's growing concern power supply disruptions may trigger blackouts during the peak summer demand period. Three of the biggest LNG producers on Wednesday guaranteed to supply more of the fuel to alleviate domestic shortages and lower spiraling prices after Prime Minister Malcolm Turnbull threatened to impose export curbs from their projects.

Australia has been scrambling to find additional sources of electricity since the national market operator said in March that gas-fired power shortfalls may be possible next year. The warning spurred Turnbull to propose rules to restrict gas exports in the eastern state of Queensland amid concern outbound shipments had contributed to supplies being crimped and a tripling of Australia's wholesale gas price in the past two years.

'Historic Lows'

Coal accounts for 76 percent of Australia's power generation. Stockpiles at AGL's Liddell and Bayswater plants in New South Wales state fell to "historic lows" over winter as consumption rose due to limited natural gas supplies and the loss of power from the Engie SA-owned Hazelwood, an AGL spokesperson said in an emailed statement. International coal demand has also placed pressure on the rail lines that thread through the Hunter Valley region of the state, adding to constraints.

EnergyAustralia and Origin have struggled to procure sufficient quantities of the fossil fuel. The Mt. Piper power station, which supplies 15 percent of electricity demand in New South Wales, only has stockpiles to operate at "very low production levels" for a few months due to a legal dispute impacting mine supplies, EnergyAustralia said in an emailed statement.

Origin said its Eraring power station in the state "ran very hard" to meet demand over winter that created an issue with coal stockpiles, which now "needs to be managed." It has since sourced additional supply to replenish stocks and expects record coal to be delivered by rail to Eraring in September, according to Origin's general manager for energy supply and operations, Greg Jarvis.

The New South Wales government is working with the Australian Energy Market Operator to ensure there is sufficient fuel supplies this summer while also looking at how it may reduce demand on the power grid during heatwaves.

"There are many parallels with what is happening in the gas space and what's happening in the coal space right now and I think it's taken the market by surprise," MineLife's Wendt said in an interview Sept. 27.

Amazon.Com for Fuel Is How China Oil Wolves Battle State Tigers

Posted September 27, 2017, 8:18 A.M. ET

By Alfred Cang and Serene Cheong

China's oil-industry "wolves" want to help fuel buyers get rid of paperwork, and instead provide them with the Amazon.com experience.

Dongming Petrochemical Group, the biggest of China's private refiners in the eastern province of Shandong, has set up a website where traders, factories and pump stations within a 300 kilometer radius can ask for fuel to be delivered within 12 hours. They can also choose to place orders via an app or even through instant messaging service WeChat. There's a digital wallet payment option too. Chambroad Petrochemicals Co., another independent processor in the region, also has a similar service.

The strategy is part of their plan to take on more powerful state-owned refining giants such as Sinopec amid increased competition in the domestic market, while fuel demand is threatened by everything from electric vehicles to shared bikes. Moreover, while the state behemoths have government approval to export their oil products, the private companies, known as teapots, don't—meaning they can't access overseas markets for their merchandise.

Dongming says it's having to sell fuel to its bigger state rivals at a discount of 1,200-1,500 yuan ($180-$226) per metric ton to market prices. Other private refiners outside Shandong province, such as Rongsheng Petrochemical Co., are also seeking to make their mark and are posing a threat to the independent processors within the region. Dongming will be part of a new $5 billion group that's banding together to better take on rivals and have support from the regional government.

"Independent refiners in Shandong think of themselves as wolves, alongside tigers that are the national oil companies," Zhang Liucheng, vice president of Dongming Petrochemical, said in an interview in Singapore during the S&P Global Platts APPEC conference. "But with the emergence of other bigger independents that will soon bring new capacity online, they will become the wolves, while the tigers remain, and we will be the sheep in their presence."

China's New Silk Road Seen as Spur for Electric Cars in Europe

Posted September 27, 2017, 02:16 P.M. ET

By Jonathan Tirone

China's new silk road stretching into the heart of Europe may be what ultimately delivers more climate-friendly technologies like batteries and electric cars.

The trade route known in Beijing as the Belt and Road Initiative is spurring $1 trillion of investment on rail, highways and ports linking Europe and Asia. China's renewable-energy companies already are using the initiative to open new markets in southern Asia, the Middle East and Africa, according to Bloomberg New Energy Finance.

Austrian executives gathered outside Vienna to discuss the future of energy are banking on similar market-making effects in Europe. They anticipate the scale of manufacturing from China and quicker market access through the Belt and Road links to drive down the costs of electric cars and energy storage technologies in Europe.

"It's not a question of if but when, because it's happening," Verbund AG Chief Executive Officer Wolfgang Anzengruber said Sept. 27 at a green energy conference in the small Alpine town of Fuschl, Austria. "If China says it, it is so."

China's market-making role in Europe extends beyond developing EVs and is striking at the heart of traditional European businesses, according to Wolfgang Hesoun, chief executive officer of Siemens AG's Austrian unit, which employs 2,500 workers making trains and trolleys.

"The best ideas come from outside," Ramon Vullings told the energy executives gathered in Austria. The Dutch consultant said he traveled China's ancient silk road for 1 1/2 years in a bid to bring back new ideas to help Europe's companies deal with transition to renewables.

European companies will only be able to challenge Chinese companies by developing "locally-oriented" supply chains that cultivate customer loyalty, Hesoun said at the event a day after Siemens merged its rail unit with Alstom SA.

Similarly, just how quickly European companies can develop things like the lithium-ion batteries—used in electric cars and grid-balancing systems— depends on how much demand there is for those things consumers in China at the other end of the Belt and Road.

Automakers who employ 300,000 in Austria—and supply German giants Volkswagen AG and Daimler AG—are looking for ways to use electric cars to tap into China's market of 1.4 billion people.

"We need to start developing these technologies because if we don't, others will," World Energy Institute Secretary General Christoph Frei said, adding that China's huge market is leading the green energy shift.

Brazil Gets $3.8 Billion Boost to Budget from Power Auction

Posted September 27, 2017, 02:28 P.M. ET

By Vanessa Dezem and Rachel Gamarski

Brazil raked in 12.1 billion reais ($3.8 billion) in revenue from a power plant auction that was key for efforts to hit a closely-watched budget goal.

The government sold concessions to operate four hydroelectric plants previously run by state-owned utility Cemig in an auction Sept. 27 that lasted less than an hour and beat policy makers' expectations of 11 billion reais in revenue. A separate auction for 287 oil exploration blocks is also underway, with that sale seen raising around 500 million reais.

The power auction results boost chances that President Michel Temer's administration will deliver its 2017 fiscal goal of a 159 billion reais deficit. Even after announcing plans to target a wider budget gap than previously forecast, policy makers are facing an up-hill battle as Latin America's largest economy recovers slowly from recession.

"In the short-term, the income will help deliver the target," Leonardo Costa, an economist at Rosenberg Associados, said in an interview. "But the pressure continues."

Since assuming the presidency last year, Temer has placed fiscal responsibility at the center of his strategy to woo back investors and spark growth. His government has cut spending, announced plans to postpone civil servant pay raises and said it will sell other assets including a lottery service run by state-controlled bank Caixa Economica.

Still, a series of corruption allegations against Temer have hindered the agenda. Lawmakers are now focused on voting on the second round of charges against the president, which will likely further delay deliberations on his flagship pension reform.

After the results were announced, Temer said on his Twitter account confidence in Brazil has been recovered. The government will use additional funds from the sale to help compensate any future disappointment in tax income, according to an official with direct knowledge of the matter.

The government expected to raise at least 11.05 billion reais with auction, while analysts from Goldman Sachs had an estimated range of 14.45 billion reais to 17.99 billion reais

China's State Power Investment Corp., known as SPIC, won the rights to operate the biggest of the hydroelectric dams being auctioned, Sao Simao. The bid was 7.18 billion reais, 6.51 percent above the set minimum

Engie SA won the contracts for Jaguara and Miranda plants, paying 2.171 billion reais and 1.36 billion reais, respectively. The company paid the highest premiums for the assets in the auction

Enel SpA, Italy's biggest utility, had the winning bid on the Volta Grande dam for 1.419 billion reais

The plants have a combined 2,922 megawatts of installed capacity and are located in the states of Minas Gerais, Goias, and Sao Paulo. They were previously operated by Cia. Energetica de Minas Gerais, a state-run utility known as Cemig

—With assistance from Ana Carolina Siedschlag.

U.K. Opposition Steps Up Push to Nationalize Energy Companies

Posted September 27, 2017, 01:14 P.M. ET

By Jessica Shankleman

Jeremy Corbyn's Labour Party is talking more about nationalizing Britain's energy companies, suggesting it could "take control" of major utilities like SSE Plc and Centrica Plc if the opposition wins the next election.

Key figures at the party's conference in Brighton the week of Sept. 25 hinted that Labour is poised to go beyond its current pledges of renationalizing local grid networks, a move they say would bring down costs for consumers and expand clean energy supplies.

To a standing ovation, Corbyn pledged "to take utilities back into public ownership" during his speech to the party conference Sept. 27. Shadow Chancellor John McDonnell on Sept. 26 vowed to bring energy companies under the "ownership and control" of "the people who use and work in them."

Their promises are broader than the manifesto pledge published in May to only change the licensing arrangements for regional grids in order to take them into public ownership and to make new publicly-owned grid companies that would compete with the Big Six utilities.

Rebecca Long-Bailey, the party's lawmaker who speaks on business, energy, and industrial

strategy, explained some of these details at a energy-policy meeting on the sidelines of the conference. The party leadership may be banking on many members confusing the finer points of the manifesto with more popular pledges made on stage.

"We've said we want to set up regionally owned energy companies to rival the 'Big Six' energy companies and create competition in the market. But that's not the only thing we want them to do," Long-Bailey said. "In time we want them to be able to harness the ability to generate electricity on a local level alongside other business in the area."

CBI business group, which represents British industry, bristled at the idea.

"Forced nationalization of large parts of British industry will send investors running for the hills and puts misplaced nostalgia ahead of progressive vision," said Carolyn Fairbairn, the CBI's director-general.

The Conservative Party said Labour's entire nationalization plan of rail, mail, water, and energy networks listed in the manifesto could add at least 134 billion pounds ($180 billion) to the public debt, citing figures from the non-partisan Institute for Fiscal Studies.

Chi Onwurah, a Labour lawmaker speaking on industrial strategy, said nationalizing energy companies wasn't "a backward step."

"What isn't working is what we have now," Onwurah said at an event at the conference on Monday. "Where we have private sector generation and distribution and a market which is supposed to be competitive but isn't."

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

October 13, 2017

Latest News

Toxics Chief Seeks Input From OPPT Staff On Reorganization Proposals

EPA's career toxics chief is requesting input from staff within the Office of Pollution Prevention and Toxics (OPPT) regarding a trio of proposals he has floated for reorganizing the office, options under consideration as part of the office's ongoing efforts to implement the one-year-old statute reforming the Toxic Substances Control Act (TSCA).

CPP Repeal's GHG Impact Unclear Amid Trump's Energy Policy Shifts

Despite recent analysis showing that EPA's move to repeal its Clean Power Plan (CPP) might do little to slow ongoing power sector greenhouse gas cuts, observers say the emissions dynamic is likely more nuanced, in part because of a host of other Trump administration efforts to change power sector economics.

Gulliford, Bush-Era Official, Returns To Prior Role As Region 7 Administrator

Jim Gulliford, who served at EPA during the Bush administration as its toxics chief and Region 7 administrator, is returning to lead the region in the Trump administration, a move that will again see him overseeing the Midwestern states of Iowa, Kansas, Missouri and Nebraska.

EPA Extends Deadline For Perchlorate Review, Forcing Request To Court

In response to industry requests, EPA is extending the public comment period on a report that will form the basis for a landmark drinking water standard it is required to set to regulate perchlorate, the widespread rocket fuel ingredient, though the extension will force the agency to miss a looming deadline and seek additional time from the court that is overseeing the long-delayed rulemaking.

Industry Groups Call On EPA To Reform NO2 Air Permitting, Relax NAAQS

Groups representing utilities, the petroleum sector and other industries are calling on EPA to reform its Clean Air Act permitting process to ease compliance with the 2010 nitrogen dioxide (NO2) national ambient air quality standards (NAAQS), and to

consider softening the one-hour NAAQS from the current 100 parts per billion (ppb) limit.

August 18, 2017

Today on Climate Beat . . .

. . . we looked at the costs and benefits, reporting that several academic economists and legal experts are seeking to counter the Trump administration's rejection of the social cost of carbon climate damage estimates, arguing that the values represent the best available tool for calculating climate-related damages from greenhouse gas emissions.

On the climate risk front, we noted that EPA has updated its environmental justice screening tool with new water pollution data, though officials have not yet added promised features addressing flooding and other climate change risks.

We also highlighted some top stories from the past few days, covering automakers' hopes for federal vehicle fuel economy rules and diffusing tension with California, as well as legal drama over HFCs, oil and gas methane and NEPA reviews.

And our daily news roundup took another look at Democrats' efforts to push a carbon tax as the Trump administration tries to begin debate on a broad overhaul of the tax code.

Subject: SPECIAL UPDATE: Conservatives on Solar Tariff, Fed AV Policy Released, Hurricane Flooding Risks for HVAC Systems

Friends,

Some really important issues moving today, as well as an update for flooded HVAC Systems in light of the recent hurricanes. Finally, **REMEMBER today's 2 p.m. press briefing** at the National Press Club on steel tariff issues.

1) Conservative Groups Weigh In on Solar Tariff – Today, six conservative groups urged members of the US International Trade Commission to reject the relief requested by Suniva under rarely used but powerful statute, Section 201 petition in a letter today. I can send you pdf if you can't get the link or contact Clark Packard at R Street (cpackard@rstreet.org)

The groups said the tariffs and minimum price floors requested by Suniva and SolarWorld would double the cost of solar products in the United States, lead to retaliation by our trading partners and face a challenge at the World Trade Organization (WTO).

They also said while they oppose government policies that pick winners and losers in the energy marketplace, we are equally hostile to protectionist trade measures that distort markets and invite retaliation by our trading partners.

"We urge the ITC to reject an injury finding in this case. If the commission does find injury, we urge you to tailor your recommended relief narrowly by exempting imports from countries with which the United States has free-trade agreements."

Signers of the letter include R Street, the American Legislative Exchange Council, ALEC Action, Citizens for Responsible Energy Solutions Forum, the National Taxpayers Union and the Taxpayers Protection Alliance.

Finally, the Heritage Foundation also released a white paper that urges US ITC to Oppose the position: http://www.heritage.org/node/553152/print-display

2) DOT to Release Federal AV Policy – The Department of Transportation's National Highway Traffic Safety Administration (NHTSA) today releases the Federal Autonomous Vehicle Policy (FAVP) "2.0," streamlining and refining its inaugural autonomous vehicles (AV) policy. The new policy reflects the response to public comments, including those by SAFE.

Securing America's Future Energy (SAFE) applauded Secretary Elaine Chao and the impressive work by NHTSA staff for prioritizing AVs within DOT and responding to stakeholder calls by continually improving the foundation of these vital policies that will encourage innovation and maintain America's leadership.

Autonomous vehicles are a critical technology with the potential to spur some of the greatest improvements to society since the industrial revolution. SAFE will continue to work with policymakers and regulators to ensure a strong national framework is in place to allow the deployment of these vehicles of the road keeping America in the lead of this innovation.

"The on-time release of the FAVP 2.0 reemphasizes the commitment by DOT and NHTSA to quickly address and overcome the chances of a messy patchwork of state regulations," said Robbie Diamond, SAFE President and CEO. "SAFE looks forward to continuing to work with the agency on version 3.0 to keep ahead of this technology revolution and ensure driverless cars have the necessary flexibility to significantly enhance our nation's transportation, save tens of thousands of lives on our roads, expand mobility for millions of Americans and strengthen our national security through increased efficiency and fuel diversity."

SAFE continues to advocate for a unified, clear, modernized framework from Congress to allow for a safe and speedy deployment of AVs on public roadways for both cars and commercial vehicles. Please call Bridget Bartol (202-461-2361) or me if you have questions.

3) Flood Impact on HVAC Systems – Even though power in many cases still hasn't been restored to the hurricane zones, when it is, there are significant concerns that homeowners and businesses must consider as they return.

The Air-Conditioning, Heating and Refrigeration Institute (AHRI), the trade association representing HVAC and water heating equipment, offered a few important safety precautions after a flood or hurricane with regard to their heating and cooling equipment. AHRI says standing water can severely damage a home's heating and cooling equipment and recommends that flood-damaged HVAC equipment be replaced, rather than repaired.

If HVAC equipment has been submerged or damaged by flood water, it is recommended that all inspection and replacement work be done by a qualified contractor and not the homeowner. Furthermore, not only is gas equipment is at risk, but that risk includes units using oil and electricity as the power source should be left to professionals to inspect.

Please review the following information about home HVAC equipment and take necessary precautions to have that equipment inspected, as well as repaired or replaced by qualified professional contractors.

Heat Pumps and Air Conditioners:

Split air conditioning and heat pump systems have power and control wiring between the indoor and outdoor parts of the system, and piping through which refrigerant flows through the system. If flood water has caused either the outdoor or indoor units of a split system to become repositioned, even by a small amount, there is a potential for refrigerant leaks. The system will then require major repair or full replacement.

If the refrigerant system remains intact after the flood, the entire system should be cleaned, dried, and disinfected. Homeowners should have a contractor check the indoor and outdoor units' electrical and refrigeration connections, including all control circuits. The decision to repair or replace should be made after consultation with a qualified professional on a case-by-case basis.

Gas Furnaces and Boilers:

If there is any concern that flood water has reached a gas furnace or boiler, it should be inspected by a qualified HVAC contractor. Furnaces and boilers feature gas valves and controls that are particularly susceptible to water damage. While the damage might not be visible, corrosion begins inside the valves and controls, even if the outside appears to be clean and dry. At the very least, this damage can result in reliability issues.

Ductwork:

If a house that has incurred flood damage contains a central forced-air system, it is important to also closely inspect the ductwork. Duct insulation that has been in contact with flood water should not be salvaged as it is impossible to decontaminate. A qualified contractor can clean, dry and disinfect the ductwork; and a thorough job requires disassembling the ductwork all together.

Please make sure to have a qualified contractor inspect any HVAC equipment that has been submerged or damaged by flood. We also recommend that you contact any of the offices set up by the Federal Emergency Management Agency (FEMA) as government aid may be available to help flood victims finance the replacement of flood-damaged HVAC equipment.

Please visit www.fema.gov for information. You can also contact Francis Dietz (703-969-6444) or me if you have questions...

Subject: POLITICO's Morning Transportation: Stepping on the gas — Cole stands against ATC overhaul — Kelly cleans house — Duncan peacing out

By Brianna Gurciullo and Stephanie Beasley | 08/01/2017 10:00 AM EDT

With help from Tanya Snyder and Annie Snider

STEPPING ON THE GAS: The Trump administration hopes the House will pass a tax code overhaul in October and the Senate will then clear it in November, leaving about a month left in the year for Congress to potentially move on an infrastructure package. Transportation Secretary Elaine Chao has said for months that we'll see a legislative proposal in the fall, but the chances of enacting a bill before year's end - especially when such a thing doesn't yet exist - look slim at the moment.

First things first: GOP lawmakers have long put overhauling the tax code before an infrastructure package on their to-do list (though, some have suggested they could be paired). Now, Republicans clearly want a legislative win after their unsuccessful effort to repeal Obamacare. And, as Pro Tax's Aaron Lorenzo reports, they're aiming to give the economy a boost through their tax code changes before the midterm elections. "So that, I think, is an aggressive schedule but that is our timetable," Marc Short, the White House's director of legislative affairs, said on Monday about the administration's expectations for October and November. "I think we're in for a long fall, legislative calendar-wise."

On the other side of Pennsylvania Avenue: White House press secretary Sarah Huckabee Sanders told reporters Monday that infrastructure is still very much on Trump's mind. "The president's been very outspoken on the need for a massive overhaul to the country's infrastructure system, and that's certainly still a priority - both legislative and in any capacity that he has the ability to carry that out," she said.

COLE STANDS AGAINST ATC OVERHAUL: Speaking of to-do lists, the House will have just 12 legislative days to reauthorize (or, more likely, extend) the FAA's expiring authorization when members come back in September. On Monday, Rep. Tom Cole, an Oklahoma Republican and appropriator, dedicated his "weekly column" to air traffic control, saying he thought last year's attempt to hand over air traffic control operations to a nonprofit corporation was "a terrible idea" then, and that he still disapproves.

Catching up with Cole: MT spoke with Cole before House lawmakers left town Friday, and he made it clear he would vote against severing air traffic control operations, as Rep. Bill Shuster (R-Pa.) has proposed. Cole said that "most" of his fellow Oklahoma lawmakers, including Rep. Steve Russell, also oppose Shuster's plan. Russell and several other Republicans are pushing their colleagues to reject the House Transportation chairman's legislation, H.R. 2997 (115).

Just one of those things: "It's another one of those cases where I think all the Democrats are against it. So given that, if you have much in the way of division on the Republican side, it

becomes pretty dicey. And right now, I know they're working it hard, and they may get there, but I don't think the votes are there in the House, let alone the Senate," Cole said. "I think it's going to be very hard, quite frankly." Last month, Cole signed onto a letter with Russell - as well as Reps. Ralph Abraham, Ron Estes and Walter Jones - asking leadership to "prohibit any provision to privatize air traffic control operations from consideration on the House floor."

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Steph and Brianna are driving the MT train, so please send along tips, feedback and lyrics to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Mr. Driver, I hear the music playin' and I see the lights / Will you throw me a ride?"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

SATAN'S SUBWAY? This New Yorker cover prompted a cackle from your MT scribes.

FOR YOUR RADAR: Secretary of State Rex Tillerson will sit down today with "U.S. industry stakeholders" who asked to meet with him to talk about Open Skies and other issues, a State Department official told MT.

KELLY CLEANS HOUSE: Now-former Homeland Security Secretary John Kelly blasted into his first full day as White House chief of staff by ousting Communications Director Anthony Scaramucci, putting folks on alert that he is about business. Just hours after Kelly was sworn in, news broke that Trump had dismissed Scaramucci per Kelly's request. Sources had speculated that Trump would look to Kelly, a retired Marine general, to help rein in the in-fighting and drama at 1600 Penn. Earlier in the day, Trump commended Kelly not only for his "record shattering" (albeit brief) tenure at DHS but also for handling controversial issues like border security without creating much controversy. "I predict that Gen. Kelly will go down in terms of the position of chief of staff [as] one of the great[est] ever," Trump said.

Before I let go: Before Kelly started setting off White House fireworks, he sent one last email to the "tremendous group of selfless public servants" at DHS announcing personnel changes, POLITICO's Ted Hesson writes. Chip Fulghum, current acting undersecretary for management, will take over as deputy secretary now that Elaine Duke has assumed the role of acting secretary. And Duke's previous chief of staff, Chad Wolf, will be promoted to acting chief of staff for DHS. Kirstjen Nielsen surrendered her position as DHS chief of staff to follow Kelly to the White House.

DUNCAN PEACING OUT: Rep. John Duncan Jr. (R-Tenn.), a longtime member of the House Transportation Committee, won't campaign again to keep the seat he's had for almost three decades. "I have decided I wanted to spend less time in airports, airplanes, and traveling around the district and more time with my family, especially my nine grandchildren, who all live in Knoxville," Duncan told the Tennessean.

News comes amid controversy: Early last month, the Nashville Post reported that Duncan "doled out hundreds of thousands of dollars to his two sons, his niece, his son-in-law, his daughter-in-law and his sister for campaign work" over the course of the last 10 years. Pro Campaigns' Elena Schneider has more on Duncan's retirement plans.

BARLETTA EYES SENATE RUN: Rep. Lou Barletta (R-Pa.) is eyeing the Senate, The Associated Press reported Monday. The chairman of the House Transportation subcommittee on economic development wants to challenge Sen. Bob Casey (D-Pa.) next year. Barletta was once a contender to be Trump's secretary of Transportation. As Pro Campaigns' Kevin Robillard reports , Trump carried Pennsylvania in 2016 and has recommended that Barletta face off against Casey or Pennsylvania's governor, Democrat Tom Wolf.

LOOK OUT: NTSB sent out an alert Monday cautioning about relying on just a lookout to tell track workers about oncoming trains. "If a watchman/lookout does not devote his or her full attention to their duty of looking for approaching trains, they might not provide warning of an approaching train with sufficient time for their coworkers to clear the tracks," Robert Sumwalt, the acting chairman of NTSB, said in a release. An incident in which two employees died in South Dakota partially inspired the alert, NTSB said in the release. The docket for the probe into that January incident opened last week.

HIP PIPP HOORAY: DOT on Monday issued a notice of proposed rulemaking for "new, experimental procedures" to grow the use of public-private partnerships in transit projects. The newly proposed Private Investment Project Procedures (PIPP) would allow federal funding recipients to identify FTA regulations and practices "that may be an impediment" to the use of P3s or private investment and let them ask for a waiver of those requirements. The proposed rule was required by MAP-21.

'ALMOST' DOESN'T COUNT: States have ramped up their investment in bridge repair projects over the last decade, but it still isn't enough, according to a new analysis from the American Road and Transportation Builders Association. The group marked the 10-year anniversary of the I-35 bridge collapse in Minnesota by examining federal data that tracks investments in bridge work, finding that bridge construction had increased just 8 percent, from $54.6 billion in 2007 to $59.2 billion in 2016. At the current pace of investment it would take more than three decades to replace and repair every bridge that needs work, ARTBA Chief Economist Alison Premo Black said. The group said that "a long-term infrastructure package from Congress and a permanent revenue solution to the Highway Trust Fund would help states make greater progress."

CONTENTIOUS ASIAN CARP STUDY COMING NEXT WEEK: The Army Corps of Engineers has alerted lawmakers that it will release a draft plan for halting the spread of dangerous Asian carp into the Great Lakes on Aug. 7. The study was originally due out Feb. 28, but was put on hold by the Trump administration amid concerns from the barge industry that it could hamper navigation between Lake Michigan and the Mississippi River. Both Republican and Democratic lawmakers have been pushing for the study's swift release, including through policy riders inserted in pending appropriations measures.

SHIFTING GEARS: Valerie Jarrett, who was a senior adviser in the Obama administration, has become a member of Lyft's board of directors. Jarrett was previously Chicago's commissioner of planning and development and chairwoman of the Chicago Transit board, Pro Technology's Steven Overly reports.

THE AUTOBAHN:

- "Most automakers slow to fix dangerous airbags." The Associated Press.

- "Disabled travelers sue DOT to speed airline reporting about damaged wheelchairs." USA Today.

- "World's longest pedestrian suspension bridge opens in Switzerland." CNN.

- "Hyperloop will improve transportation and national security." The Baltimore Sun. (Op-Ed)

- "Driving Tesla's Model 3 changes everything." Bloomberg.

- "Child advocates urge back-seat alarms as 2 die in Arizona." The Associated Press.

- "VW secured EU money by fraud for Dieselgate engine: watchdog." POLITICO Europe.

- "Anthony Levandowski didn't make a deal with Uber until he was protected against possible lawsuits." Recode.

THE COUNTDOWN: DOT appropriations run out in 60 days. The FAA reauthorization expires in 60 days. Highway and transit policy is up for renewal in 1,156 days.

Subject: POLITICO's Morning Transportation: House FAA bill amendments due Thursday — Senate Commerce marking up self-driving car bill today — More infrastructure 'principles' coming soon?

By Brianna Gurciullo | 10/04/2017 10:00 AM EDT

With help from Lauren Gardner, Tanya Snyder, Stephanie Beasley and Adrienne Hurst

START YOUR PLANE ENGINES: House lawmakers have another chance to offer amendments to Rep. Bill Shuster's FAA reauthorization bill, with the Rules Committee setting a deadline of 3 p.m. Thursday for new filings. The panel "is likely to meet" next week to consider a rule to let some amendments come to the House floor for consideration, Chairman Pete Sessions said in a letter to colleagues. Shuster told reporters Tuesday that early this month is "absolutely" still the target for floor debate for his legislation (H.R. 2997 (115)), but it's unclear if the Transportation Committee chairman has enough votes in his corner. More for Pros here.

NOT TRUCKIN' AROUND: The self-driving car bill that the Senate Commerce Committee will mark up today (S. 1885 (115)) doesn't address trucks - the end result of a battle between Chairman John Thune (R-S.D.) and co-author Gary Peters (D-Mich.). But Sen. Jim Inhofe (R-Okla.) has filed an amendment to bring them back in. If it doesn't succeed, senators say they'll introduce a standalone bill dealing with trucks and buses instead. But lobbyists warn that could be an arduous path, as it puts employment and safety issues in the spotlight, all of which is easier to get through under the cover of a comprehensive bill. More for Pros.

Meanwhile: Sens. Ed Markey (D-Mass.) and Richard Blumenthal (D-Conn.) joined safety advocates Tuesday in drawing attention to provisions in the bill that they say could put the public in danger. For example, the bill seeks to exercise preemption over state and local laws without NHTSA taking regulatory action. The senators have offered an amendment to cut that language. Safety advocates also say the bill exempts too many vehicles from federal safety standards and lacks a mechanism to evaluate safety performance.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"There's a shadow on the moon tonight / I swear I see your face up there with the satellites / Looking down from outer space / Me, I'm drifting home again / Headlights in my eyes / Fighting sleep with windows down / Worn out from long goodbyes."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

ALONE IN MY PRINCIPLES: Shuster indicated Tuesday that the White House's next tranche of infrastructure principles could be coming sooner rather than later. "We've seen their outline, but that's continuing to be adjusted, and we hope they're going to make it public in the next week

or so," the Pennsylvania Republican told reporters. "It'll be more of an outline or principles, so that we can move forward with sort of putting meat on the bone." A White House spokeswoman didn't respond to a request for comment

Principals on principles: Nick Ayers, Vice President Mike Pence's chief of staff, told GOP donors Tuesday that White House "principals" are meeting weekly on infrastructure. "Because if we pass a bill, it'll be years before states and frankly average people see the benefit, but I think it's something that could make a big difference for his reelect," Ayers said, according to an audio recording of his closed-door remarks obtained by POLITICO. "But we're hopeful that that's one of the topics, whether it's rolled into tax reform or not, that that's one topic we can keep beneath the radar, work with Democratic leadership and Republican leadership, and start passing infrastructure bills that actually fix our system." (During the same talk, Ayers urged wealthy party patrons to withhold their largesse from members who have pushed against President Donald Trump's agenda. More on that here.)

TWEET DU JOUR: FCC Chairman Ajit Pai (@AjitPaiFCC) tweeted: "Thanks for the Model X test-drive, @Tesla! Neat seeing the autonomous and connected capabilities of the car."

SENATORS GRILL MITNICK: DHS general counsel nominee John Mitnick said Tuesday that, if confirmed, he will do his best to make sure states are notified as early as possible if they don't qualify for an exemption from the impending REAL ID deadline. During a nomination hearing, Sen. James Lankford (R-Okla.) pressed Mitnick on the issue, saying that states should be notified well in advance of the Jan. 22, 2018, cutoff for them to switch to REAL ID-compliant driver's licenses. "The earlier those decisions can be made, the better," Lankford said. "Counsel at the last second is not as helpful as counsel a month ahead."

Other areas of interest: Lankford also told Mitnick to expect oversight inquiries regarding controversial phone inspections that U.S. Customs and Border Protection is conducting at ports of entry. CBP may be acting within its authority, but lawmakers want to ensure the agency is also abiding by U.S. citizens' privacy rights, he said. Meanwhile, Sen. Gary Peters sought assurances that the general counsel's office would respond to inquiries from members on both sides of the aisle. Mitnick said he was committed to "working cooperatively with individual members of Congress, including members in the minority," though he noted that there could be exceptions if the Trump administration exercised executive privilege.

MISSION READY: The Coast Guard's preparedness came into question Tuesday as House lawmakers focused on the under-resourced service's asset losses from three recent hurricanes. Members urged Coast Guard officials to push the Trump administration to include Coast Guard funds in its emergency supplemental request. Subcommittee Chairman Duncan Hunter (R-Calif.) said if they don't ask, more money is not going to be magically granted by their "fairy god-Congress."

PLAYING POLITICS WITH THE JONES ACT: At the same hearing, Hunter said he thought the administration had "political motives" for granting a brief waiver of the Jones Act for Puerto Rico. He claimed that Trump knew the waiver wouldn't help the island and that's why the administration only waived it for 10 days. Hunter said the move was "anti-American worker, anti-

American made" and "anti-Trump." Democrats agreed that the Jones Act was important to protecting the U.S. shipbuilding industry, which is considered a national defense necessity. Brian Schoeneman, the Seafarers International Union' political and legislative director, argued that proposals for long-term waivers or the permanent exclusion of Puerto Rico from the Jones Act are "foolhardy and misguided at best; blatantly un-American opportunism at worst."

HOMEWARD BOUND: The American Kennel Club was among several groups urging members of the House Homeland Security and Oversight committees to back a proposal for a domestic breeding program for bomb-sniffing dogs during a joint hearing Tuesday. Both the Department of Homeland Security and Department of Defense are over reliant on foreign breeders for dogs, AKC argued. Scott Smith, a lieutenant with the Orlando Police Department, said it's difficult to determine the health and age of foreign-bred dogs. Some dogs have been sold to U.S. agencies after they are beyond working age, he said.

How much is that doggy in the window? Lawmakers on both sides of the aisle have largely remained loyal to TSA's canine programs despite Trump's proposal to cut funding for programs that use dogs like Visible Intermodal Prevention and Response teams. Still, some committee members asked what the benefit-cost ratio would be for a domestic breeding program. After witnesses said the average cost of obtaining and training dogs could range from $9,000 to $13,000, Rep. Mike Rogers (R-Ala.) said he thought the success rate of a domestic program would need to be about 80 percent to 85 percent to make a good business case.

NOTHING'S FINE, I'M TORN: Maine Sen. Susan Collins is grappling with whether to make a bid for governor, missing her own Sept. 30 deadline to decide, POLITICO's Burgess Everett reports . "Given the contentious environment in Washington right now, my voice and vote matter a great deal," the chairwoman of the Senate's transportation appropriations panel said. "On the other hand, if I were fortunate enough to be elected governor, I could work more directly on job creation. ... That's why it's such a difficult decision to make. And I'm trying to figure out where I matter most."

MY LIPS ARE SEALED: The U.S. Trade Representative's office won't comment on whether it's considering changes to trucking access for Mexico as a part of NAFTA talks, Doug Palmer reports - the debate has split two U.S. trucking organizations. The Owner-Operator Independent Drivers Association sent a letter to Robert Lighthizer last week saying that "the original NAFTA trucking provision harms American small-business truckers and jeopardizes highway safety." But the American Trucking Associations also wrote to Lighthizer last week arguing that "NAFTA's trucking provisions help reduce border congestion."

TWO LEGAL CHALLENGES MOUNTED AGAINST TRAVEL BAN 3.0: Two lawsuits are taking aim at Trump's new travel ban. "The first lawsuit, filed by the nonprofit group Iranian Alliances Across Borders, argues the new restrictions will harm U.S. citizens and permanent residents who can't bring relatives or business associates into the country," Ted Hesson reports for Pro Employment & Immigration. "The second lawsuit, brought by the Brennan Center for Justice at New York University Law School, seeks the disclosure of an administration report that explains why certain countries were selected for the ban."

SHIFTING GEARS: Juan Reyes, a partner at Seyfarth Shaw, was named FRA chief counsel. He "concentrated his practice on land use, development, and permitting, with particular experience in zoning, planning, landmark and building code matters, and governmental approvals," and helped lead Seyfarth Shaw's public-private partnership practice, the firm said in a release Tuesday. ... Meanwhile, Bret Manley returned to Rep. Jeff Denham's office last month to serve as the California Republican's chief of staff. He most recently did government affairs work at the Association of American Railroads.

NOM ALERT: Trump is nominating former Rep. Lynn Westmoreland (R-Ga.) to Amtrak's board. For six years, Westmoreland was on the House Transportation Railroads Subcommittee. He now holds the title of principal at Westmoreland Strategies LLC.

MAKE AMERICA MOVE AGAIN? A bipartisan group of House lawmakers on unveiled a bill this week that would let states leverage public-private support for infrastructure projects by tapping into tax-exempt "Move America" bonds and tax credits. The bill (H.R. 3912 (115)) would "leverage $8 billion in federal funding into an estimated $226 billion worth of bond authority or $56 billion in tax credits over the next decade," according to a release. Sens. John Hoeven (R-N.D.) and Ron Wyden (D-Ore.) introduced the Senate version (S. 1229 (115)) in May.

MT MAILBAG - I'LL ASK AGAIN EDITION: Three House Democrats wrote to Trump this week requesting once more that he pull back Scott Garrett's nomination to be the Export-Import Bank's president. "He is controversial, unqualified, and, ultimately, un-confirmable," wrote House Minority Whip Steny Hoyer of Maryland as well as Reps. Gwen Moore of Wisconsin and Denny Heck of Washington. "There is no evidence to suggest that more time will change this situation; in fact, it is our understanding that Mr. Garrett's meetings with key senators have made them less likely to support his nomination."

NEVADA SENATORS REACH OUT TO AIRLINES: Nevada Sens. Dean Heller and Catherine Cortez Masto wrote to the CEOs of 10 airlines this week saying that after the deadly mass shooting in Las Vegas, they should look at "ensuring reasonable and economically sensitive airfares, expanding customer service, waiving costly fees, and promptly issuing refunds to the victims, their family, and friends to assist delivering them safely to one another." The senators, a Republican and Democrat, respectively, added: "In no way whatsoever should individuals and families be forced to delay or cancel their efforts to reach loved ones because of expensive tickets or the accumulation of costly fees." Allegiant Air and Southwest Airlines are giving families of the victims free flights, The Associated Press reports.

ICYMI: Former FRA Administrator Sarah Feinberg's birthday was Tuesday. Now the CEO of Feinberg Strategies, she told POLITICO Playbook's Daniel Lippman that the "lack of significant and sustained infrastructure investment over the last 20 years" should be in the national spotlight. "It's become an existential threat to our economy," Feinberg said. "Cities can't grow. Suburbs are four lanes of endless congestion. Companies are seeing recruiting problems because of long commute times. Productivity is significantly impacted. We're watching our national competitiveness disappear - and it is a completely fixable problem!" More here.

THE AUTOBAHN:

- "Report: Search for Malaysia 370 'almost certainly' flew over floating debris and missed it." USA Today.

- "European airports urge U.K. to give post-Brexit clarity for aviation." POLITICO Europe.

- "Buffett bets on truck stops, to buy majority of Pilot Flying J." Reuters.

- "Uber and TfL plan more talks after meeting fails to resolve London row." The Guardian.

- "Hedge fund billionaire flew top Mnuchin aide on private jet to Palm Beach." The Washington Post.

- "Cruise says SF's gnarly traffic helps school robot cars faster." The San Francisco Chronicle.

- "Alphabet successfully pushed back the trial date for its Uber lawsuit until Dec. 4." Recode.

- "Iris can't hold your hand, but she may ease your mind as you step into a driverless car." The Washington Post.

- "Ford to slash $14 billion in costs under new CEO." Bloomberg.

- "A hyperloop route between St. Louis and Kansas City is under serious consideration." The Verge.

THE COUNTDOWN: DOT appropriations run out in 66 days. The FAA reauthorization expires in 179 days. Highway and transit policy is up for renewal in 1,093 days.

Subject: POLITICO's Morning Energy, presented by the U.S. Chamber's Global Energy Institute: Republicans eye budget process for ANWR opening — Highlights from Zinke, Perry's joint appearance — Democrats want faster action for Puerto Rico

By Anthony Adragna | 09/26/2017 10:00 AM EDT

With help from Esther Whieldon and Ben Lefebvre

AN OPENING FOR ANWR? Senate Republicans intend to use their fiscal 2018 budget blueprint to lay the groundwork for new energy production in the Arctic National Wildlife Refuge by using special rules that would allow them to avoid a Democratic filibuster, Pro's Ben Lefebvre and Sarah Ferris report, citing sources familiar with the process. While the budget document couldn't mandate specific policies, it would enable Senate Energy Chairman Lisa Murkowski to write legislation that would remove restrictions on drilling in ANWR that could be bundled into a massive tax reconciliation package that needs just 50 votes in the Senate.

Doing so would realize a long-standing goal of Republicans and oil companies, while attracting vehement opposition from environmental groups and virtually all Democrats. The U.S. Geological Survey estimates that part of ANWR, a wide swath of tundra on the northern Alaska coast, home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years, could hold up to 12 billion barrels of oil. But Senate Republicans have little margin for error since two members of their caucus - Sens. Susan Collins and John McCain - have opposed similar bills in the past, though they'd be forced to consider that provision as part of the broader tax effort. A McCain spokeswoman says he's open to a "full debate" on the subject despite his past opposition. Collins told ME Monday night that ANWR has been far from her mind recently. "I've been focused on health care," she said, just after coming out against the latest Obamacare repeal effort.

There are a number of key questions. Some wonder if Murkowski's prior breaks with GOP leadership and the White House will hamper her pursuit of other priorities. Current low oil prices might make opening ANWR less urgent than in the past and there's some question whether oil and gas companies would flock to the area at today's crude price of $50 a barrel (though that answer would likely depend on the company). Infrastructure is not likely to be a major barrier, though, with the biggest requirement a short pipeline to connect drilling wells in ANWR to the main Trans-Alaska Pipeline System pipeline. "A pipeline is not a big lift,' said one oil and gas company representative who asked to speak on background to discuss the matter. "If the oil is there like they think it is, it's not prohibitive."

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and API's Carrie Domnitch was the first (of many) to identify Sen. John McCain's cameo in "Wedding Crashers." For today: Way back on Season 2 of "Saturday Night Live," this future presidential candidate hosted an episode. Who was it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Pro Policy Summit Highlights: Don't miss the highlights from the 2017 Pro Policy Summit. The Pro newsroom has assembled must-read stories, scoops and video content from a day packed with breaking news and insightful policy discussion. Summit Highlights.

LOTSA GROUND COVERED: Energy Secretary Rick Perry and Interior Secretary Ryan Zinke covered a wide array of topics during a Monday appearance at the National Petroleum Council. Highlights from that event via Pro's Ben Lefebvre:

-**New infrastructure study coming:** DOE Deputy Secretary Dan Brouillette, in coordination with the National Petroleum Council, will lead a study on how to improve the permitting process for pipelines and other energy infrastructure, Perry announced. The former Texas governor also called on the group to study how to make carbon capture, utilization and storage infrastructure economically viable. More here.

-**Interior reorganization still under consideration:** Zinke expects to complete an evaluation of whether to combine the Bureau of Safety and Environmental Enforcement and Bureau of Ocean Energy Management within the next couple months. He's also mulling the possibility of establishing Interior offices according to 13 watershed areas and moving BLM and Bureau of Land Reclamation headquarters out West. More here.

-**Zinke's report on national monuments remains** under review by the White House. "We're working on it. Most people will find it to be a very reasoned approach," he said.

-**Perry touts benefits of energy industry:** After being interrupted several times by protesters, Perry launched an extended diatribe against environmentalists criticizing the industry's record on climate change. "If you want to talk to something that saves lives, it's energy across the globe. You're involved in an industry that saves lives, lots of them, every year, around the globe," he said.

-**On loyalty to the administration:** Zinke said about a third of his workforce remained loyal to the previous administration. "I know that when I assumed Interior that I have 30 percent of the crew that's not loyal to the flag," he said. "I had a Fish & Wildlife Service that hated people to a degree."

** **A message from the U.S. Chamber's Global Energy Institute:** Insightful analysis is an important part of our mission. From economic modeling of proposed policies to our groundbreaking energy security index, the Global Energy Institute's reports and analysis are helping to shape the discussion on energy policy. Click here to learn more: http://bit.ly/2huaJ4F **

DEMOCRATS CALL FOR FOCUS ON PUERTO RICO: FEMA Director Brock Long and Homeland Security adviser Tom Bossert arrived Monday on the devastated island, but congressional Democrats expressed concern the administration wasn't doing enough. "Puerto Rico has taken a serious punch to the gut and they need our help. They need it now," Senate Minority Leader Chuck Schumer said. "The administration must quickly prepare an appropriate aid package for Florida, Puerto Rico, the U.S. Virgin Islands and the Western States for

Congress to act on in the near future," he added. Speaker Paul Ryan said: "Our fellow citizens in Puerto Rico remain in our prayers as we make sure they have what they need."

Jones Act waiver sought: Seven House Democrats requested a one-year waiver from the Jones Act to expedite hurricane relief aid to Puerto Rico, Pro Transportation's Tanya Snyder reports. An Energy Department status report Monday found nearly all of the island remained without power.

POLITICO's Jacqueline Klimas reports from San Juan that political leaders on the island are once again afraid their needs are an afterthought in Washington. "The important part is to make sure it's not forgotten," Sen. Marco Rubio said. "We have a fundamental obligation to a U.S. territory and American citizens to respond to a hurricane there the way we would anywhere in the country."

Governor assumes dam will collapse: Puerto Rico Gov. Ricardo Rosselló said he's operating under the assumption the Guajataca Dam will collapse, a fear that led to the evacuation of tens of thousands of area residents. "Some of the dam has fallen apart," he told CNN Monday. "I'd rather be wrong on that front than do nothing and having it fail and costing people their lives."

The president tweets: "Texas & Florida are doing great but Puerto Rico, which was already suffering from broken infrastructure & massive debt, is in deep trouble," President Donald Trump said in a statement released via his Twitter account Monday night. "It's (sic) old electrical grid, which was in terrible shape, was devastated. Much of the Island was destroyed, with billions of dollars...owed to Wall Street and the banks which, sadly, must be dealt with. Food, water and medical are top priorities - and doing well." he added in a pair of follow-up tweets.

Trump's first words on Puerto Rico since Sept. 20 came after the White House forcefully defended his fixation with NFL players' protests, which generated more than a dozen tweets since Friday.

U-TURN ON CLIMATE RULE: Reversing course, DOT told a federal judge in New York in a letter it will publish a regulation requiring states to track emissions from highways and craft reduction goals, Pro's Alex Guillén reports . Once published, the regulation takes effect immediately. Environmental groups and Democratic attorneys general had sued Federal Highway Administration for placing the rule on hold indefinitely. "Our lawsuit held the Trump administration accountable for illegally halting a common-sense tool to curb carbon pollution from transportation," said the NRDC's Amanda Eaken in a statement. The regulation is expected to run in the Federal Register Sept. 28.

ZINKE, PERRY SPEAK AT NATIONAL CLEAN ENERGY WEEK: It's a day of events as National Clean Energy Week kicks off in earnest today with a breakfast discussion at 8 a.m. featuring Perry and Zinke (hosted by former GOP Sen. Kelly Ayotte). Also expected to speak throughout the day are Sen. Lindsey Graham, House Republican Conference Chair Cathy McMorris Rodgers and Reps. Derek Kilmer and Ryan Costello. Full details here.

But greens cry foul: Twelve environmental organizations sent a letter to Congress arguing that

technologies like biomass, carbon capture or nuclear energy should not be considered clean. "The sponsors of 'National Clean Energy Week' include some of the dirtiest actors in the energy industry," the groups, which include 350.org, Food & Water Watch and Oil Change International, wrote.

HEARING ROUNDUP - TWO DOE NOMINEES IN SPOTLIGHT: Murkowski's push to quickly advance agency nominees continues today as her committee examines Steven Winberg's nomination to be assistant Energy secretary for fossil energy and Bruce Walker's selection to be assistant Energy secretary for electricity, delivery and energy reliability. Winberg previously headed up research and development for CONSOL Energy and also was a member of DOE's National Coal Council, while Walker's resume includes stints at National Grid and Consolidated Edison. Things get going at 10 a.m. in Dirksen 366.

E&C LOOKS AT ADVANCED ENERGY TECHNOLOGIES: The House Energy and Commerce Energy Subcommittee holds the latest in its "Powering America" series of hearings today with an examination of "the role advanced energy technologies play in empowering the nation's electricity consumers." Witnesses include representatives from Advanced Energy Economy, Holy Cross Energy, ComEd and LO3 Energy, among others. The hearing is set for 10 a.m. in Rayburn 2123.

GATHERING INPUT ON WATER INFRASTRUCTURE NEEDS: The House Transportation and Infrastructure Subcommittee on Water Resources and Environment hosts a hearing at 10 a.m. today with a panel of public and private sector witnesses on what they'd like to see for water infrastructure in a forthcoming legislative package. The full list of witnesses for the hearing in Rayburn 2167 is available here.

MAIL CALL! CEQ VETERANS CALL OUT NEPA SHORTCUTS: Trump's efforts to streamline environmental reviews leave his administration's decisions more vulnerable to being overturned in court because they don't allow for enough input from the public, four veterans of the Council on Environmental Quality warned in a letter to the White House Monday. "Emphasizing speed over quality sends the wrong message to agencies and creates significant legal risk that future environmental reviews of federal actions will be rejected by the courts and need to be redone," wrote Katie McGinty, Nancy Sutley, Christy Goldfuss and Brenda Mallory, all of whom served in Democratic administrations.

STATE AGs DISCUSS TRUMP-ERA ENVIRONMENTAL LITIGATION: A session at 2:45 p.m. with three attorneys general - Maryland's Brian Frosh, Illinois' Lisa Madigan and New York's Eric Schneiderman - discussing ongoing environmental litigation fighting White House efforts to weaken environmental protections is among the highlights of the Institute for Policy Integrity's state climate action conference today. Follow along here.

DEMOCRATS SEEK INFORMATION ON MINE SAFETY PICK: Sens. Sheldon Whitehouse and Bob Casey released a letter Monday seeking information on Mine Safety and Health Administration's investigations into Rhino Resource Partners, which mine safety nominee David Zatezalo worked at in a variety of senior roles between 2007 and 2014. They asked for the records no later than Sept. 29.

FAA, FLOOD INSURANCE FLOPS: Democrats blocked a Republican push to fast-track an FAA extension that also included additional provisions on flood insurance and tax credits for victims of recent hurricanes, POLITICO's Heather Caygle and Lauren Gardner report. The chamber is expected to consider the measure again later this week under a rule, which requires a simple majority, unlike Monday's fast-track procedure that required a two-thirds vote.

STUDY: RAIL DAMPENING PIPELINE INVESTMENTS: New research out from the National Bureau of Economic Research finds the flexibility associated with crude-by-rail shipping has led to decreased investments in long-term pipeline projects given the high upfront costs of such infrastructure. "The ability to ramp rail shipments up and down is valuable to crude oil shippers, and it reduces incentives to make long-run investments in pipeline capacity," Ryan Kellogg, a professor at the Harris School of Public Policy who co-authored the study, said in a statement.

CHAMBER URGES REJECTION OF GARRETT: Count the U.S. Chamber of Commerce as the latest group urging senators to reject former Rep. Scott Garrett's nomination to head the Export-Import Bank, Pro Financial Services' Zachary Warmbrodt reports. In a Monday letter, senior executive vice president Suzanne Clark expressed concern Garrett could use his position to prevent the agency from properly functioning while voicing strong support for four other nominees: Kimberly Reed, Claudia Slacik, Judith Pryor and Spencer Bachus.

ZINKE SPENT $2.5K ON TRAVEL IN MARCH: Zinke spent $2,508 in flights, lodging and meals meet with members of the Blackfeet Nation, agency staff and toured national parks in Wyoming and his home state of Montana in his first month in office in March, according to public records the agency released Monday. Zinke stayed at his home in Whitefish for most of his first trip, according to the secretary's trip itinerary for March through July the agency released earlier this month. Unlike Health and Human Services Secretary Tom Price who POLITICO earlier reported took private jets, Zinke's flights were commercial.

GRID-CONNECTED BATTERIES TAKING OVER RESIDENTIAL STORAGE MARKET: Homeowners are increasingly installing electricity batteries that connect to the grid instead of closed systems that feed power only to the residence, GTM Research says in a report out today. The report does not cite a specific reason for the change but notes customers are looking for back-up power in case of electric outages and to save money, while utilities are encouraging adoption to mitigate the impacts of growing solar power. Grid-connected projects will make up 57 percent of annual deployments by the end of this year, the report says.

DOESN'T LOOK STRESSED: Murkowski doesn't look like the heated health care debate is getting to her in this picture with a pink polar bear she tweeted out Monday from her visit over the weekend to the Anchorage Museum.

ALL-TIME HIGH: Bolstered by more than 500,000 people who've joined since last November, the Natural Resources Defense Council tells ME it now has three million-plus members and online activists.

MOVER, SHAKER: Ann Bartuska has joined Resources for the Future as vice president in its newly formed land, water, and nature program. She comes after serving as deputy undersecretary for research, education and economics as well as chief scientist at USDA.

QUICK HITS

- In World's Hottest Oil Patch, Jitters Mount That a Bust Is Near. Bloomberg.

- After Hurricane Maria, what will it take to turn Puerto Rico's power back on? The Verge.

- OPEC's Efforts Pay Off: Oil is Back in Bull Market. Wall Street Journal.

- Companies building failed nuclear project 'were looking to cut corners' as state's top cop asked to investigate. The Post and Courier.

- FPL, JEA to shut down Jacksonville coal electric plant. Palm Beach Post.

THAT'S ALL FOR ME!

A message from the U.S. Chamber's Global Energy Institute: Today, America's diverse energy resources are providing abundant, reliable and affordable electricity that is critical to our economy. Unfortunately, that mix is at risk. A new report by IHS Markit cosponsored by the Global Energy Institute explains just how important a diverse set of resources really is. Our current energy mix, including nuclear and coal, is saving us $114 billion per year in electricity costs-lowering the average price by 27%. Without all of our resources, America could lose 1 million jobs within 3 years and $158 billion in GDP, and each American household could see a loss of up to $845 in income each year. To read the report and learn more about how a balanced set of electricity resources is key to our economy and security, click here: http://bit.ly/2huaJ4F

Subject: Playbook Power Briefing, presented by PhRMA: Senate Democrats call on FRANKEN to resign after another allegation -- TRUMP says shutdown 'could happen' -- SHERMAN/BADE SCOOP: RYAN shuffles another 2 mil to the NRCC

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by PhRMA

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

COMING ATTRACTIONS -- EMAIL to the Washington press corps from Sen. Al Franken's (D-Minn.) office at 12:26 p.m.: "Wanted to let you know that Senator Franken will be making an announcement tomorrow. More details to come.

SENATE DEMOCRATS TOSS FRANKEN TO THE CURB -- Democratic Sens. **MAZIE HIRONO (HAWAII), KIRSTEN GILLIBRAND (N.Y.), CLAIRE MCCASKILL (MO.), MAGGIE HASSAN (N.H.), PATTY MURRAY (WASH.), KAMALA HARRIS (CALIF.), TAMMY BALDWIN (WISC.), HEIDI HEITKAMP (N.D.), DEBBIE STABENOW (MICH.), MARIA CANTWELL (WASH.)** have all called on Sen. Al Franken (D-Minn.) to step down after POLITICO's Heather Caygle reported on another allegation against Franken from a former Democratic congressional aide in 2006, when he was a radio host. **THE FIRST MAN** was **SEN. BOB CASEY (PA.),** followed by **SHERROD BROWN (OHIO), JOE DONNELLY (IND.), DICK DURBIN (ILL.), ED MARKEY (MASS)** and **MICHAEL BENNET (COLO.). DNC CHAIR TOM PEREZ** also called on Franken to resign.

-- HEATHER'S SCOOP: "A former Democratic congressional aide said Al Franken tried to forcibly kiss her after a taping of his radio show in 2006, three years before he became a U.S. senator. The aide, whose name POLITICO is withholding to protect her identity, said Franken (D-Minn.) pursued her after her boss had left the studio. She said she was gathering her belongings to follow her boss out of the room. When she turned around, Franken was in her face. The former staffer ducked to avoid Franken's lips. As she hastily left the room, she said, Franken told her: 'It's my right as an entertainer.'

"'He was between me and the door and he was coming at me to kiss me. It was very quick and I think my brain had to work really hard to be like 'Wait, what is happening?' But I knew whatever was happening was not right and I ducked,' the aide said in an interview. 'I was really startled by it and I just sort of booked it towards the door and he said, 'It's my right as an entertainer.'" ...

"Franken, who has been accused by six other women of groping or trying to forcibly kiss them, denied the accusation. 'This allegation is categorically not true and the idea

that I would claim this as my right as an entertainer is preposterous. I look forward to fully cooperating with the ongoing ethics committee investigation,' Franken said in a statement to POLITICO." http://politi.co/2BNoJQh

-- Gillibrand: "I have been shocked and disappointed to learn over the last few weeks that a colleague I am fond of personally has engaged in behavior towards women that is unacceptable. I consider Senator Franken to be a friend and have enjoyed working with him in the Senate in our shared fight to help American families.But this moment of reckoning about our friends and colleagues who have been accused of sexual misconduct is necessary, and it is painful. We must not lose sight that this watershed moment is bigger than any one industry, any one party, or any one person." *Full statement* http://bit.ly/2BPzK3l

MURRAY is a member of Senate Democratic leadership. It's tough to see how Franken hangs on now. **INTERESTING LINE FROM MURRAY'S STATEMENT:** "I believe service in politics and government is a noble pursuit, and all those who pursue it are flawed in some way. But I also believe public service demands higher standards - standards we choose to live by the moment we enter public life." *Full statement* http://bit.ly/2ktb9NO

-- @seungminkim: "Chris Coons reminds us, as he will about 47 times later today, that he is the vice chair of Ethics and can't comment on matters that may be pending before committee".

FAIR QUESTION: WHAT'S THE FREEDOM CAUCUS DOING? -- THE HOUSE FREEDOM CAUCUS , the group of 30 or so conservative Republican lawmakers who have outsized influence over the House floor, are asking leadership to plus up defense spending -- but leave domestic spending untouched. This is a non-starter, and many of them privately know this. But the Freedom Caucus wants the leadership to hold strong. This does not bode well for Washington's December.

-- BUT MARK YOUR CALENDARS: It is beginning to look like Congress will be here between Christmas and New Years.

AP'S KEN THOMAS (@KThomasDC): "I asked POTUS if we're going to have a shutdown. Trump: 'It could happen. The Democrats are really looking at something that is very dangerous to our country. They are looking at shutting down ... they want to have illegal immigrants pouring into our country.'"

Good Wednesday afternoon. DON'T FORGET to get your tickets to our first live podcast taping tomorrow at 7 p.m. at Sixth & I. Our guests include "The Daily" host Michael Barbaro, DCCC Executive Director Dan Sena and NRCC Executive Director John Rogers plus a panel of POLITICO stars Rachael Bade, Seung Min Kim and Annie Karni. ***On sale here*** http://bit.ly/2i1rlM4

SCOOP, from Jake and Rachael Bade **: SPEAKER PAUL RYAN** is transferring $2

million to the NRCC in November. Ryan has transferred $32 million to the NRCC this year.

FLYNN UPDATE -- "Flynn texted partners about nuclear plan during inauguration, whistleblower says," by Kyle Cheney: "Congressional Democrats said Wednesday they have evidence from a confidential whistleblower that within minutes of President Donald Trump's inauguration, then-national security adviser Michael Flynn sent assurances to former business partners that a plan to build nuclear reactors across the Middle East was 'good to go.' Democrats on the House oversight committee said in a letter dated Wednesday that the whistleblower reported attending an inauguration day event with Flynn's former business associate Alex Copson, the managing partner of ACU Strategic Partners." http://politi.co/2BQNX0j

HMM... -- "Romney and Trump spoke following trip to Utah, Conway says," by CNN's Maegan Vazquez: "White House counselor Kellyanne Conway said Wednesday that President Donald Trump and Mitt Romney spoke by phone following the President's trip to Utah on Monday. 'The President and Gov. Romney spoke, I don't know, 10 hours ago, less than 12 hours ago, and people should know that because otherwise there's speculation,' Conway told CNN's Chris Cuomo on CNN's 'New Day.' Conway said that the two have a 'great relationship' and discussed tax cuts and Trump's recent decision to shrink the Bears Ears monument." http://cnn.it/2AWcXW9

PAGING CORY GARDNER -- @BenSasse, quote-tweeting a report that the RNC transferred cash to the Alabama Republican Party to boost Roy Moore: "This is a bad decision and very sad day. I believe the women--and RNC previously did too. What's changed? Or is the party just indifferent? ... If the political committee that I'm a part of (the NRSC) decides to contribute here, I will no longer be a donor to or fund-raiser for it."

****** **A message from PhRMA**: A medicine's path from the biopharmaceutical company to the patient involves many entities across the supply chain. A new report examines how money flows through this system - which includes wholesalers, pharmacy benefit managers, pharmacies and insurers - and how that impacts what patients pay at the pharmacy. Read more. http://onphr.ma/2kgd6Nu ******

IT'S OFFICIAL -- @DHSgov: "Today, Kirstjen Nielsen was sworn-in as the sixth Secretary of Homeland Security." ***Pic -- with John Kelly holding the bible*** http://bit.ly/2BPK23Q

TIME'S PERSON OF THE YEAR -- "THE SILENCE BREAKERS" -- by Stephanie Zacharek, Eliana Dockterman and Haley Sweetland Edwards: "This reckoning appears to have sprung up overnight. But it has actually been simmering for years, decades, centuries. Women have had it with bosses and co-workers who not only cross boundaries but don't even seem to know that boundaries exist. They've had it with the fear of retaliation, of being blackballed, of being fired from a job they can't afford to lose. They've had it with the code of going along to get along. They've had it with men who

use their power to take what they want from women. These silence breakers have started a revolution of refusal, gathering strength by the day, and in the past two months alone, their collective anger has spurred immediate and shocking results: nearly every day, CEOs have been fired, moguls toppled, icons disgraced. In some cases, criminal charges have been brought." http://ti.me/2BMtF7P

ON THE WORLD STAGE -- THE MOSCOW TIMES: "Putin Announces 2018 Presidential Bid, Surprising No One": "Vladimir Putin on Wednesday announced he is running for the presidency in upcoming elections, seeking a fourth term next year that would extend his rule into 2024. The longtime president is practically guaranteed to win. A September poll by the independent Levada Center put his approval ratings at 83 percent. Next year's elections on March 18 are timed to coincide with the anniversary of Russia's annexation of Crimea from Ukraine - an event which largely consolidated Putin's popularity at home." http://bit.ly/2AWhFmI

DATA DIVE -- "We Got Government Data On 20 Years Of Workplace Sexual Harassment Claims. These Charts Break It Down," by BuzzFeed's Lam Thuy Vo: "BuzzFeed News received a trove of data on every sexual harassment claim filed between fiscal years 1995 and 2016 with the US Equal Employment Opportunity Commission, a federal agency that enforces laws meant to protect workers from discrimination. The more than 170,000 claims, which didn't include identifying details, represent just a sliver of the countless incidents in the everyday workplace that don't receive prominent attention or go unnoticed. Overall, women filed 83% of the claims; men filed 15%. The remaining 2% didn't specify a gender." http://bzfd.it/2BNFpHj

BEYOND THE BELTWAY -- California Republicans weather super PAC ads -- Massachusetts Republicans flip longtime Dem state Senate seat http://politi.co/2BM9WoW

-- "As Trump looms, Cuomo and Murphy tiptoe toward a perilous relationship," by POLITICO New York's Dana Rubinstein and Ryan Hutchins: "In their first press conference together -- a media call-cum-tirade against the Trump tax plan -- Gov. Andrew Cuomo of New York and Gov.-elect Phil Murphy of New Jersey expressed a chumminess that bordered on hokey. ... Their gestures of public affection belie a more precarious reality. As Cuomo tacks left in preparation for a potential presidential run in 2020, a Democrat is ascending to office in Cuomo's backyard with none of the baggage Cuomo carries from his seven years as a triangulating Democrat. ...

"If Murphy's expected, out-of-the-gate liberalism underscores Cuomo's own vulnerabilities on the progressive front, it's not the only potential pitfall in their formative relationship. There's also the state of the region's infrastructure and the limited pool of money available to address it. 'They're gonna kill each other,' said David Wildstein, the admitted mastermind of the George Washington Bridge scandal and a former Christie appointee at the Port Authority." http://politi.co/2AVlojd

VALLEYTALK -- "Inside Oracle's cloak-and-dagger political war with Google," by

Recode's Tony Romm: "For the past year, the software and cloud computing giant [Oracle] has mounted a cloak-and-dagger, take-no-prisoners lobbying campaign against Google, perhaps hoping to cause the company intense political and financial pain at a time when the two tech giants are also warring in federal court over allegations of stolen computer code.

"Since 2010, Oracle has accused Google of copying Java and using key portions of it in the making of Android. Google, for its part, has fought those claims vigorously. More recently, though, their standoff has intensified. And as a sign of the worsening rift between them, this summer Oracle tried to sell reporters on a story about the privacy pitfalls of Android, two sources confirmed to Recode. ... Still, Oracle's campaign is undeniable. In Washington, D.C., for example, it has devoted a slice of its $8.8 million in lobbying spending so far in 2017 to challenging Google in key policy debates. It has sought penalties against Google in Europe, meanwhile, and it even purchased billboard ads in Tennessee just to antagonize its tech peer, sources said." http://bit.ly/2kt70cl

SPORTS BLINK -- NYT'S JERE LONGMAN: "Did Russia Get Off Easy in Olympic Ban? Read the Fine Print": "Despite hyperbolic language that Russia had been barred from the 2018 Winter Olympics, in truth it may have gotten off fairly lightly for undermining the previous Winter Games, which it hosted, with systematic doping. Russian athletes will still be allowed to compete in February in South Korea if they can show they have passed rigorous drug screening protocols. And they will wear uniforms that identify them as an 'Olympic Athlete From Russia' instead of as an independent athlete.

"Yes, the Russian Olympic Committee has been suspended. And its athletes would not march under the Russian flag at the opening ceremony or hear the Russian anthem played if they win gold medals (they will hear the Olympic anthem). But the punishment would have been much harsher with a prohibition of all Russian athletes." http://nyti.ms/2AWghAw

PLAYBOOK METRO SECTION -- "Spies, Dossiers, and the Insane Lengths Restaurants Go to Track and Influence Food Critics," by Washingtonian's Jessica Sidman: "A vast and complex Underworld is devoted to identifying and understanding critics. Some of it is pretty obvious. You'll find photos of food writers plastered in restaurant kitchens or embedded in staff training manuals. Many restaurants go further, applying CIA-level tactics to tracking personal information and preferences of the people who might write about them. One dossier -- or 'critic bible' -- I reported on a few years ago noted that [WaPo critic Tom] Sietsema 'tends to get wrapped up in his conversations,' among other observations about the local food-writer set.

"The handbook went on to list likes, dislikes, and which type of server would be best matched to which writer ('most personable,' 'engaging but hands off'). It rated each journalist's writing skill and food-and-beverage knowledge. The dossier's creator, it turned out, came from politics -- he considered the information to be opposition research of sorts. 'When you're in a field where somebody's there to criticize you,' he told me,

'you need as much information about that person as you can get to understand their position.'" http://bit.ly/2BMQMz7

TRANSITIONS -- Mellody Hobson, Sharon Percy Rockefeller, and retired Adm. **James Stavridis** have been named to the Rockefeller Foundation board of trustees. ... **Kris Kitto** has started as a VP in the San Francisco office of Brooklyn-based PR firm Ditto where he will oversee West Coast account teams and help managing director Blain Rethmeier with business development. Kitto was most recently a director at SHIFT Communications. ... **Paris Dennard** has been named as a member of the President's Commission on White House Fellowships.

REMEMBERING MICKEY CARROLL -- The longtime journalist, professor and spokesman for the Quinnipiac Poll died today at his home in New Jersey after a short illness. A memorial mass will be held December 14, at 10:30 a.m. at St. Thomas More Roman Catholic Church in Morristown, NJ. ***Matt Friedman's obituary in POLITICO New Jersey*** http://politi.co/2kqrcvN

HOLIDAY PARTY WATCH -- VICE PRESIDENT MIKE PENCE will be the special guest at America First Action's Christmas party at the Trump International Hotel next Wednesday.

SPOTTED: Audrey Gelman at breakfast this morning with Giovanna Lockhart at the Four Seasons

SPOTTED at Third Way's annual holiday party last night at their new offices: Matt Bennett, Jim Kessler, and Nancy Hale, Jeremy Joseph, Elizabeth Falcone, James Leuschen, Izzy Klein, Mark Henson, Jason Rae, Jonathan Stahler, Jonathan Kott, Erin Simpson, Loren Schulman, Lauren Oppenheimer, Ben Chang, Eric Spiegelman.

SPOTTED at the U.S. Global Leadership Coalition's Tribute Dinner last night honoring U.N. Ambassador Nikki Haley, retired Gen. Tony Zinni and retired Adm. James Stavridis: Sens. Lindsey Graham (R-S.C.) and Todd Young (R-Ind.), Reps. Joaquin Castro (D-Texas), Steve Cohen (D-Tenn.), David Cicilline (D-R.I.) and Sheila Jackson Lee (D-Texas), David Abney, Sean Callahan, retired Gens. Michael Hayden and George Casey, retired Adms. James Loy, William Fallon and Eric Olson, Ambassador Deborah Birx, Kathy Calvin, Sherrie Westin, Joe Johns, Amanda Carpenter, Michelle Kosinski, Dan Reilly, Elise Labott, Matt Mowers, John Rader, Everett Eissenstat, Rob Blair, Rich Ashooh, Bill Steiger, Clete Willems, and Bill Inglee.

BONUS BIRTHDAY -- Evelyn Farkas, who is celebrating with a dinner party thrown by her friends ... Smyth Fleming, the pride of Public Citizen's Amanda Fleming and STG's Chris Fleming, is 13.

****** **A message from PhRMA** : In the competitive marketplace for medicines, negotiations between pharmacy benefit managers (PBMs) and biopharmaceutical companies result in substantial rebates and fees. According to a new report, in many

cases, this system often creates incentives for PBMs to prefer medicines with higher list prices and higher rebates. Read more about how money flows through the supply chain here: http://onphr.ma/2kgd6Nu ******

Driving the Day

BULLETIN -- CHICAGO TRIBUNE: "Richard Thaler of the University of Chicago wins Nobel for work in behavioral economics": "The Nobel Prize in economics has been awarded to Richard Thaler of the University of Chicago for research showing how people's choices on economic matters - whether on savings or game shows like 'Deal or No Deal' - are not always rational. The 9-million kronor ($1.1 million) prize was awarded to the academic for his 'understanding the psychology of economics,' Swedish Academy of Sciences secretary Goran Hansson said Monday." http://trib.in/2wI35tG

Good Monday morning and happy Columbus Day. **EXTRAORDINARY TIMES -- WHERE WE ARE --** The president tried to convince Chuck Schumer to repeal and replace Obamacare, and is in a war with Sen. Bob Corker, a Tennessee Republican key to his agenda. Jared Kushner and Ivanka Trump have been hosting dinners with some Senate Republicans and Democrats, with the quaint notion they can push an agenda that "should be above partisan politics," per Axios's Jonathan Swan. http://bit.ly/2y430EB

-- CORKER UNCORKED -- WHAT EVERYONE IS TALKING ABOUT: JONATHAN MARTIN and **MARK LANDLER** on **A1: "Bob Corker Says Trump's Recklessness Threatens 'World War III'":** "Senator Bob Corker, the Republican chairman of the Senate Foreign Relations Committee, charged in an interview on Sunday that President Trump was treating his office like 'a reality show,' with reckless threats toward other countries that could set the nation 'on the path to World War III.'

"In an extraordinary rebuke of a president of his own party, Mr. Corker said he was alarmed about a president who acts 'like he's doing 'The Apprentice' or something.' 'He concerns me,' Mr. Corker added. 'He would have to concern anyone who cares about

our nation.'" http://nyti.ms/2z8dY9V

-- OTHER KEY POINTS: "I know for a fact that every single day at the White House, it's a situation of trying to contain him."

-- "[Corker], who is close to Mr. Tillerson, invoked comments that the president made on Twitter last weekend in which he appeared to undercut Mr. Tillerson's negotiations with North Korea. 'A lot of people think that there is some kind of 'good cop, bad cop' act underway, but that's just not true,' Mr. Corker said. Without offering specifics, he said Mr. Trump had repeatedly undermined diplomacy with his Twitter fingers. 'I know he has hurt, in several instances, he's hurt us as it relates to negotiations that were underway by tweeting things out,' Mr. Corker said."

-- THIS WILL PROBABLY ANGER TRUMP: "'Look, except for a few people, the vast majority of our caucus understands what we're dealing with here,' he said, adding that 'of course they understand the volatility that we're dealing with and the tremendous amount of work that it takes by people around him to keep him in the middle of the road.'"

REAL TALK -- Corker is right in that many Republicans share these thoughts about Trump. No, it doesn't mean they're going to impeach him. It just means they feel like they can't deal with him on the level. That impacts things like tax reform, health care, etc.

THERE ARE 32 LEGISLATIVE DAYS left in 2017.

WHAT SENATE REPUBLICANS ARE BUZZING ABOUT -- IN THE LAST 24 HOURS , several very senior Senate Republicans have reached out to us with the following theory: The White House's top legislative priority -- tax reform -- fails. Republicans lose the House, and keep the Senate by a razor-thin margin at best. Trump blames Senate Republicans, who have not dismantled the Senate filibuster rules. He runs in 2020 against Senate Republicans, and uses Pelosi and Schumer as a foil.

TODAY AT 4:08 P.M. -- Nationals vs. Cubs in Chicago. On TBS. A terrific rainy-day, federal holiday activity.

CNN'S PHIL MATTINGLY -- "Puerto Rico Gov. asks Congress for more aid, citing 'unprecedented catastrophe'": "Puerto Rico Gov. Ricardo Rosselló, citing an 'unprecedented catastrophe,' is lobbying Capitol Hill for a significant new influx of money in the near term as the island sits on the brink of 'a massive liquidity crisis,' according to a letter obtained by CNN.

"In a three-page letter sent to congressional leaders , Rosselló is requesting more than $4 billion from various agencies and loan program to 'meet the immediate emergency needs of Puerto Rico.' 'We are grateful for the federal emergency assistance that has been provided so far,' Rosello wrote. 'However, absent extraordinary measures

to address the halt in economic activity in Puerto Rico, the humanitarian crisis will deepen, and the unmet basic needs of the American citizens of Puerto Rico will become even greater.'" http://cnn.it/2ySCjj5

BANNON WATCH -- "Bannon Plans to Back Challengers to Most GOP Senators," by Bloomberg's Jen Jacobs and Bill Allison: "Steve Bannon plans to back primary challengers to almost every Republican senator who runs for re-election next year in an effort to depose Majority Leader Mitch McConnell and streamline Senate voting procedures, three people familiar with his plans said. Only Senator Ted Cruz of Texas is safe from the nascent political organization led by Donald Trump's former chief strategist, the people said -- because Cruz is considered conservative enough and is thought to be moving toward the more populist approach Bannon favors. ...

"Bannon plans to support as many as 15 Republican Senate candidates in 2018, including several challengers to incumbents, the people said. He'll support only candidates who agree to two conditions: They will vote against McConnell as majority leader, and they will vote to end senators' ability to block legislation by filibustering." https://bloom.bg/2wIwILH

-- THE REPUBLICAN senators up for reelection next year are John Barrasso (Wyo.), Orrin Hatch (Utah), Ted Cruz (Texas), Dean Heller (Nev.), Deb Fischer (Neb.), Roger Wicker (Miss.) and Jeff Flake (Ariz.).

SUSAN GLASSER talks with **SEN. TOM COTTON (R-ARK.)** in the latest Global Politico podcast: **"Cotton to the Defense":** "This is a moment of truth for President Trump's national security team. He is set to overrule both his secretaries of State and Defense on the Iran nuclear deal this week, declaring it no longer in the U.S. 'national interest' in explicit contradiction to their public position. And if they don't like it, Senator Tom Cotton says, then they should get out.

"Their 'job is now to move out and execute,' Cotton, the Arkansas Republican and national security hawk who is one of Trump's closest remaining congressional advisers on foreign policy, says in a new interview for The Global Politico, our weekly podcast on world affairs. Or, 'if you feel strongly enough, then you have to resign.'

"Cotton, who has personally advised Trump in recent days about the new Iran strategy he is set to release this week, stopped short of saying either embattled Secretary of State Rex Tillerson or Defense Secretary Jim Mattis should in fact resign. But his comments were nonetheless a striking acknowledgement of the giant rift that has opened up in the midst of the Trump team over foreign policy." http://politi.co/2g4AjAj ... ***Subscribe to the podcast*** http://apple.co/2kAoZfH ... ***The full transcript*** http://politi.co/2z93mrg

WHAT BRAD PARSCALE IS READING -- "Trump's popularity is slipping in rural America: poll," by Reuters' Chris Kahn and Tim Reid: "[President Donald] Trump, who inspired millions of supporters last year in places like Morgan County, has been losing

his grip on rural America. According to the Reuters/Ipsos daily tracking poll, the Republican president's popularity is eroding in small towns and rural communities where 15 percent of the country's population lives. The poll of more than 15,000 adults in 'non-metro' areas shows that they are now as likely to disapprove of Trump as they are to approve of him.

"In September, 47 percent of people in non-metro areas approved of Trump while 47 percent disapproved. That is down from Trump's first four weeks in office, when 55 percent said they approved of the president while 39 percent disapproved. The poll found that Trump has lost support in rural areas among men, whites and people who never went to college. He lost support with rural Republicans and rural voters who supported him on Election Day." http://reut.rs/2xtCtw7

ABOUT THAT DACA DEAL ... -- "Trump lists immigration demands that could derail 'Dreamers' deal," by Seung Min Kim: "President Donald Trump laid out his immigration principles for Capitol Hill on Sunday - a list of hardline policies that could seriously complicate the prospects of striking a deal with Democrats over the future of hundreds of thousands of young undocumented immigrants. ... [S]ome of the key provisions run counter to an agreement Democratic leaders believed they'd struck with Trump during a White House dinner last month. On Sunday, Trump called on Congress to build a wall along the southern border - a centerpiece of his presidential campaign, which was premised on tougher immigration policies.

"But Democratic leaders left the dinner believing that Trump would not demand a border wall in exchange for signing legislation to provide legal status to immigrants who obtained protection from deportation and work permits under the Deferred Action for Childhood Arrivals program." http://politi.co/2g5HXdQ ... ***"The immigration principles and policies"*** http://politi.co/2y69AIt

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2y5XNvF ******

THE BIG READ -- NYT'S MATT FLEGENHEIMER in Santa Monica**: "Stephen Miller, the Powerful Survivor on the President's Right Flank:** Mr. Miller, who was a conservative trapped in a liberal California high school, has rocketed to the upper reaches of White House influence, especially on immigration": http://nyti.ms/2yaGs4s

THE NEVER-ENDING STRUGGLE -- "Republicans privately admit defeat on Obamacare repeal," by Jen Haberkorn: "For the first time, rank-and-file Republicans are acknowledging Obamacare may never be repealed. After multiple failures to repeal the law, the White House and many GOP lawmakers are publicly promising to try again in early 2018. But privately, both House and Senate Republicans acknowledge they may never be able to deliver on their seven-year vow to scrap the law.

"'Personally, I don't see it,' Rep. Phil Roe (R-Tenn.) said. 'I just don't know how you can reconcile a bill you've taken two whiffs at already and couldn't get the votes.' Some sound almost resigned to the new reality. 'I'd say it's 50-50,' Rep. Kevin Cramer (R-N.D.) said of the prospect the law will remain in place.

"Republicans are torn between the potency of their longtime rallying cry against Obamacare - so popular with GOP donors and their base that it helped flip both houses of Congress and the White House - and the reality they've wasted nine months of what is supposed to be the most productive time of a new administration failing to get it done. With few legislative accomplishments so far to show voters, failure on Obamacare repeal could prove to be a major liability in the 2018 midterm elections." http://politi.co/2y4Natf

ANOTHER JOSH DAWSEY SCOOP -- "White House believes Kelly's personal phone possibly compromised at transition office": "White House officials have homed in on President Donald Trump's Washington transition headquarters as a likely location where chief of staff John Kelly's personal cellphone could have been compromised in late 2016, two U.S. officials familiar with the matter said. Kelly ... reported the phone had stopped working properly in December after he entered the transition office space, which was made available by the General Services Administration ... Kelly said it functioned well before that time. ... Officials have tried to determine whether Kelly signed onto an insecure wireless network there or whether a hacker, foreign government or some other outside force could have accessed the phone there." http://politi.co/2yzmth1

-- THE JET BEAT: "Traveling in style: Trump's White House wrestles with Cabinet costs," by WaPo's Drew Harwell, Lisa Rein and Jack Gillum: "The Trump administration, one of the wealthiest in modern U.S. history, is facing widening criticism over travel expenditures among some of the billionaires, budget hawks and business executives who head federal agencies. Inspectors general have opened at least five investigations into charter or military flights by Cabinet officials amounting to millions in federal spending. Their decisions to veer away from cheaper commercial flights have led to criticism from Democrats in Congress and government accountability groups about a culture of entitlement in Trump's administration." http://wapo.st/2yavM6b

PROGRESS ON THE KOREAN PENINSULA -- "U.S. Pressure on North Korea's Global Ties Bears Fruit," by WSJ's Paul Sonne and Felicia Schwartz: "Over 20 nations have curbed the diplomatic or business operations of the North Korean government following a more-than-yearlong effort by the State Department, an indication of the kind of behind-the-scenes pressure the U.S. is using to tackle an emerging nuclear standoff. U.S. officials have asked countries to shut down businesses owned by the North Korean government, remove North Korean vessels from ship registries, end flights by the country's national air carrier and expel its ambassadors.

"At the Association of Southeast Asian Nations summit earlier this year, U.S.

diplomats made sure North Korea couldn't secure any bilateral meetings. Mexico, Peru, Spain and Kuwait all expelled their North Korean ambassadors after the U.S. warned that Pyongyang was using its embassies to ship contraband and possibly weapons components in diplomatic pouches and earn currency for the regime. Italy became the latest country to do so on Oct. 1. Kuwait and Qatar, among other countries, have agreed to reduce the presence of North Korean guest workers, according to U.S. officials and people familiar with the matter." http://on.wsj.com/2xs9wWg

THE LATEST ON NATE -- "Nate marches across U.S. East Coast, dumping heavy rains," by AP's Jeff Amy in Biloxi, Mississippi: "Nate slogged its way across the U.S. East Coast on Monday, dumping heavy rains and bringing gusty winds to inland states as a tropical depression, a day after Hurricane Nate brought a burst of flooding and power outages to the U.S. Gulf Coast. Nate spared the region the kind of catastrophic damage left by a series of hurricanes that hit the southern U.S. and Caribbean in recent weeks.

"Nate -- the first hurricane to make landfall in Mississippi since Katrina in 2005 -- quickly lost strength Sunday, with its winds diminishing to a tropical depression as it pushed northward into Alabama and Georgia with heavy rain. It was a Category 1 hurricane when it came ashore outside Biloxi early Sunday, its second landfall after initially hitting southeastern Louisiana on Saturday evening. ... By dawn, however, Nate's receding floodwaters didn't reveal any obvious signs of widespread damage in the city where Hurricane Katrina had leveled thousands of beachfront homes and businesses." http://bit.ly/2wHcstv

VALLEY TALK - "Russians in Silicon Valley Can't Shake Hacking's Shadow," by NYT's Nellie Bowles: "Pavel Cherkashin, a Russian investor based in this city, thought he had the perfect name for a Catholic church that he is spending $11.5 million converting into a tech palace. It would be called Hack Temple. But that was before the nearly daily deluge of news about Russian efforts to influence the 2016 presidential election ... Some Russian venture capitalists said start-ups were more wary about taking their funding, while several Russian-born engineers said they were being treated differently socially and in their companies. Lawyers also said some tech firms were installing tighter security measures restricting what data foreign-born coders can see." http://nyti.ms/2yyJ8Kq

-- WAPO'S ELIZABETH DWOSKIN in San Francisco and **ADAM ENTOUS: "Google uncovers Russian-bought ads on YouTube, Gmail and other platforms":** "Google for the first time has uncovered evidence that Russian operatives exploited the company's platforms in an attempt to interfere in the 2016 election, according to people familiar with the company's investigation.

"The Silicon Valley giant has found that tens of thousands of dollars were spent on ads by Russian agents who aimed to spread disinformation across Google's many products, which include YouTube, as well as advertising associated with Google search, Gmail, and the company's DoubleClick ad network, the people said, speaking on

condition of anonymity to discuss matters that have not been made public. Google runs the world's largest online advertising business, and YouTube is the world's largest online video site.

"The discovery by Google is also significant because the ads do not appear to be from the same Kremlin-affiliated troll farm that bought ads on Facebook -- a sign that the Russian effort to spread disinformation online may be a much broader problem than Silicon Valley companies have unearthed so far." http://wapo.st/2xtW9ES

ABOUT THAT PENCE TRIP -- AP: "Trump says VP 'long planned' attending NFL game": "President Donald Trump says Vice President Mike Pence's attendance at a 49ers-Colts game this weekend was 'long planned.'

"Trump's comment on Twitter Monday appears to respond to questions about whether Pence's brief attendance at the NFL game was a political stunt. Pence left the stadium after some San Francisco players took a knee during the national anthem. Trump tweets that Pence 'is receiving great praise for leaving game after the players showed such disrespect for country!'

"The former Indiana governor flew in to Indianapolis so he could watch Peyton Manning's jersey retirement ceremony. But he did not stay long. Around kickoff, Pence wrote on Twitter that he left because he would not 'dignify any event that disrespects our soldiers, our Flag, or our National Anthem.'" http://bit.ly/2yzFQXs

-- PENCE WORLD'S VIEW: The VP's inner circle also contends the trip had been planned for weeks and he was planning to stay through the game. He's now in California for a tax-reform event and fundraiser with House Majority Leader Kevin McCarthy.I

HOLLYWOODLAND -- "Harvey Weinstein Forced Out of His Own Company," by Variety's Brent Lang: "The Weinstein Company's board of directors has voted to remove Weinstein from the studio, leaving control of the company in the hands of Weinstein's brother, Bob Weinstein, and chief operating officer David Glasser ... It is a stunning fall from power for the mogul, whose tenacity and ruthlessness put him at the nexus of Hollywood, Wall Street, and the Beltway. Not just a movie producer, Weinstein was also a political player and major force in New York City and Hollywood's cultural and corporate life. ... Weinstein did not agree to leave the company, and there is no financial settlement in place, according to an insider. He has been fired for cause after the board met on Sunday, having spent most of the weekend trying to hammer out a deal for Weinstein to leave." http://bit.ly/2wHcj9B

--"Harvey Weinstein Is the (Whispered) Talk of Hollywood," by NYT's Brooks Barnes: "Welcome to Hollywood, where people love to wag self-righteous fingers - over the past year, awards shows have become a platform for industry bigwigs to rail against the Trump administration - but run for cover whenever the topic casts show business in an unflattering light. From Thursday to Saturday, I called more than 40 entertainment industry players, and almost all refused to speak for the record. Some said it was because their companies (or publicists) needed to approve anything they would say, while others gave reasons that painted a picture of a community hobbled by fear, self-interest and hypocrisy." http://nyti.ms/2kzWD6z

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 14, 2017

Latest News

Canada May Be Little-Noticed Wild Card In Battle Over Vehicle GHG Rules

Canada may be an under-appreciated wild card in the emerging battle over light-duty vehicle greenhouse standards -- as the nation that historically follows U.S. federal vehicle emissions standards grapples with a response to Trump administration plans that could weaken light-duty GHG standards Canada has already adopted.

California, Other Defenders Take Hard Line As EPA Re-Opens Vehicle Review

California, consumer advocates and other defenders of vehicle greenhouse gas limits are pouncing on EPA's formal re-opening of light-duty vehicle GHG standards -- including its move to expand the scope to possible changes in model year 2021 standards -- suggesting it could signal an unnecessary retreat from the standards that could cost consumers money and retard innovation in the sector while allowing higher GHG emissions.

9th Circuit Muddies Landscape On When CERCLA 113 Claims Are Viable

The U.S. Court of Appeals for the 9th Circuit, in a ruling of first impression, is adding to a circuit split on when potentially responsible parties may seek contribution claims under the Superfund law while also creating its own definition of when a potentially responsible party (PRP) resolves its liability that “falls in the middle” of other court's definitions.

Pruitt's Reluctance To Increase RFS Goals May Get Help From Court Ruling

EPA Administrator Scott Pruitt is signaling reluctance to increase future renewable fuel standard (RFS) production goals for advanced and cellulosic biofuels based off what he sees as limited infrastructure and demand for the fuels, and his position may get a boost from an appellate ruling backing EPA's method for setting some RFS targets.

EPA Urges 6th Circuit To Limit Reach Of High Court CWA 'Jurisdiction' Ruling

EPA is urging a federal appeals court to reject a Michigan road commission's suit

challenging the agency's objection to a proposed state-issued Clean Water Act (CWA) permit for a new road, saying the commission is wrong to claim that a Supreme Court ruling allowing judicial review of CWA jurisdiction findings extends to permit objections.

Daily Feed

D.C. Circuit rejects requests for en banc review of methane NSPS suit

In an 8-3 vote, the court rejected rehearing of its ruling vacating EPA's stay of methane limits on new drilling operations.

D.C. Circuit suspends briefing in suit over CSAPR update

The U.S. Court of Appeals for the District of Columbia Circuit has granted power companies' request to postpone litigation over Obama-era revisions to the Cross-State Air Pollution rule.

Environmentalists resist EPA bid to extend landfill-methane delay case

Any extension would allow EPA the “benefit” of continuing the rule's delay, environmentalists say.

Ewire: Surprise opposition to Pruitt's climate science review

In today’s Ewire: Some conservative and industry groups are questioning whether EPA Administrator Scott Pruitt’s “red-team, blue-team” exercise is a good idea. Plus: Utah seeking $1.9 billion over Gold King Mine spill.

Senate EPW Democrats seek immediate RMP implementation

Democratic members of the Senate environment committee say immediate implementation of the Risk Management Program revisions would help save lives.

Subject: Senate energy panel sets September hearing for FERC, Interior nominees

By Darius Dixon

08/03/2017 10:17 AM EDT

The Senate Energy and Natural Resources Committee has scheduled a September hearing for President Donald Trump's next two FERC nominees, along with an official for the Interior Department.

The hearing for FERC nominees Rich Glick, a Democrat, and Kevin McIntyre, Trump's pick for the agency's chairmanship, has been set for Sept. 7 at 10 a.m.

Joseph Balash's nomination to be Interior assistant secretary for Land and Minerals Management will also testify at the hearing.

WHAT'S NEXT: Lawmakers in the Senate are negotiating a package of nominees to be confirmed before the recess, which may including two pending FERC nominees Neil Chatterjee and Rob Powelson, who have already cleared the energy committee.

Peabody Mine Survival May Rest on Navajo Coal Gasification Plan

Posted August 04, 2017, 7:30 A.M. ET

By Stephen Lee

The biggest coal-fired generating station west of the Mississippi could be replaced by a coal gasification plant, raising concerns among environmentalists as well as questions from financial analysts about the economic costs and risks.

The tribe "has considered the development of potential energy industries, including [a] gasification plant," Navajo Nation presidential spokesman Mihio Manus told Bloomberg BNA Aug. 3. He added that the tribe hasn't committed to the technology, which chemically transforms the fossil fuel into synthetic natural gas.

Manus' remarks echo those of Navajo Nation President Russell Begaye, who indicated to local reporters in early July that the tribe wants to build a coal-to-gas generating station. "We'll have a new plant there that will take advantage of the price of natural gas, but still use coal," Begaye told Lake Powell Communications, a local news site in Lake Powell, Ariz.

Begaye did not respond to Bloomberg BNA's request for an interview.

The Navajo Generating Station, on tribal land near Page, Ariz., provides power to customers in Arizona and Nevada. The plant's owners—which include the Salt River Project, one of Arizona's largest utilities, and the Interior Department's Bureau of Reclamation—have a lease with the Navajo Nation that expires in 2019. That plant will shut down at the end of 2019 unless a new buyer steps forward to keep it running beyond then, a possibility that energy analysts say seems increasingly remote.

Should the gasification plans come to fruition, one beneficiary could be Peabody Energy, which operates the large Kayenta coal mine 78 miles to the southeast that employs many tribal members. Analysts, however, say they're skeptical a coal gasification plant will be realized because of a range of economic and technological challenges.

Peabody spokeswoman Beth Sutton told Bloomberg BNA in an email that the Navajo's coal gasification plan "seems speculative."

The Kayenta coal mine will likely shut down at the end of 2019, because it only serves the massive Navajo Generating Station. Further, no outside rail link can deliver the coal to other customers.

Duke's and Southern's Experiences

Two recent stumbles in the coal gasification industry serve to illustrate the economic risk the Navajo Nation would be courting by embracing the technology, said David Schlissel, director of resource planning analysis at the Institute for Energy Economics and Financial Analysis.

Duke Energy's Edwardsport coal gasification plant in Indiana has cost $1.5 billion more than originally planned and still doesn't run reliably, Schlissel said. More recently, Mississippi regulators concerned about the rising costs of Southern Co.'s Kemper plant ordered the company last month to transition the plant to natural gas.

"If Duke and Southern Co. couldn't do it, who is the Navajo Nation going to find who can do it?" Schlissel said. "There's no evidence that this can be done economically or reliably."

A coal gasification plant would generate power at roughly $100 per megawatt hour, but the Navajo Nation would only be able to sell it into the grid in Arizona or Nevada at $30 a megawatt hour, according to Schlissel.

"It doesn't make sense," he said. "You're quickly going to go down."

'Costly and Risky'

Similarly, Bill Corcoran, western campaign director for the Sierra Club's Beyond Coal campaign, told Bloomberg BNA that a "costly and risky coal gasification plant would only aggravate the underwater economics of coal-fueled power in the region. It's a loser for a tribe that can't afford a misstep in profiting from the ongoing transition of the energy market."

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., parent of Bloomberg BNA.

"With natural gas prices at current levels, including the recent uptick, coal gasification can't be economic," added Vincent Brisini, director of environmental affairs at investment and management firm Olympus Power. "Too much energy is needed to gasify the coal, plus the price of the coal alone is already two-thirds the cost of natural gas."

Other options on the table for the Navajo Nation include a solar farm and the development of thermal energy, Manus said. Indeed, the tribe launched a 27-megawatt solar farm in June. Manus did not respond to questions about why the Navajo Nation was considering coal gasification technology given Southern Co.'s and Duke's experiences.

Interior Department spokesman Dan DuBray told Bloomberg BNA that he couldn't weigh in on the coal gasification question, or whether the agency would provide funding to help the tribe get any plans off the ground. Rather, DuBray said, the agency is "focused on helping [Navajo Generating Station] operate beyond 2019."

The tribe has flirted with coal gasification before. In 2012, for example, the Navajo agreed to work with Lawrence Livermore National Laboratory on developing the technology.

Two years later, the tribe won a $1 million Interior Department grant to study coal gasification's economic potential.

Duke Energy Ash Lawsuit Tossed Over 'Forum Shopping'

Posted August 04, 2017, 02:01 P.M. ET

By Andrew M. Ballard

A federal district judge in Virginia tossed a Duke Energy coal ash lawsuit over what he said is "strategic forum shopping" by the utility.

Duke Energy's effort to obtain a court ruling saying it was in compliance with the Clean Water Act at its Roxboro, N.C., facility would undercut potential contrary rulings by other jurisdictions and represent "an improper race to the courthouse," Norman K. Moon, U.S. District Court Judge for the Western District of Virginia, wrote in an order of dismissal filed Aug. 3 (Duke Energy Progress LLC v. Roanoke River Basin Assn., W.D. Va., No. 4:17-cv-00032, opinion 8/3/17).

Duke Energy filed its lawsuit in Virginia May 11, two days before a citizen suit could be filed in the Middle District of North Carolina. Case law shows that the North Carolina court "may have been a less favorable venue for Duke Energy to litigate these issues," Moon wrote.

Allowing the case to go forward would "render useless" a 60-day notice requirement for citizen suits, which gives state and federal regulators the option to supersede "the citizen suit with their own enforcement action," he said.

Citizens' Lawsuits

Frank Holleman, an attorney with the Southern Environmental Law Center (SELC) in Chapel Hill, told Bloomberg BNA Aug. 4 that Duke Energy sought to dismiss the claims pending in North Carolina because the action in Virginia was "first filed."

Holleman, who represents the plaintiffs in the case, said he expects the North Carolina jurisdiction to allow the Clean Water Act claims to proceed there now.

A Duke Energy representative told Bloomberg BNA that the conservation group's litigation was undermining the utility's effort to effectively manage its coal ash.

"While Duke Energy continues to work with its federal and state regulators to close ash basins in a manner that is fully protective of human health and the environment, SELC has filed a flurry of lawsuits across the Southeast aimed at disrupting those efforts and promoting their extreme agenda and 'draconian' remedies," said Danielle Peoples, a Duke Energy spokeswoman.

SELC recently filed a separate lawsuit alleging violations of the Resource Conservation and Recovery Act over coal ash management activities at the Roxboro facility, which is located in Person County.

Holleman said he believes that that lawsuit, along with a similar one filed against Duke Energy over activities at the Mayo Plant, also in Roxboro, are the only citizen suits seeking enforcement of the federal coal combustion residuals rule. Clean Water Act claims involving the Mayo facility also are pending, and coal ash management by Duke Energy is the subject of lawsuits in state court.

EPA Widens Superfund Cleanups Near Public Housing

Posted August 04, 2017, 9:16 A.M. ET

By Sylvia Carignan

The EPA's discovery of lead contamination near low-income public-housing units has expanded some investigations and broadened its collection of Superfund site location data.

The Environmental Protection Agency and Department of Housing and Urban Development prioritized 13 lead-contaminated sites following a data review late last year. The EPA is using that data to urge site project managers to identify potential contamination at HUD housing near Superfund sites, an EPA spokesperson told Bloomberg BNA Aug. 2.

The EPA has removed lead-contaminated dirt from low-income neighborhoods in Chicago, Indianapolis, and Chattanooga, Tenn. as a result of the review. In addition, the agencies prioritized 10 Superfund sites where nearby residents might be exposed to lead.

"Awareness of the proximity of public housing has enabled project managers at several sites—not just the top 10 priorities—to identify nearby public housing that needed to be prioritized for investigation or cleanup," the spokesperson said. At the majority of the sites, EPA said, HUD residents ultimately "were not at any elevated risk from their proximity to these sites." EPA has not yet provided details on where lead posed risks to residents.

Location, Location, Location

Many of those 10 locations, on a list obtained by Bloomberg BNA, are large Superfund sites where housing properties fall within the site's boundaries. Others had actions already planned to address contamination, according to the EPA. HUD chose the 10 sites in November as locations where lead exposure was likely, in order to ask EPA to collect more information on them.

Before the EPA and HUD partnership began in January, the agencies' investigations and assessments were often separate.

"When we asked our regions about this project, they said it was hard to get access to subsidized properties because of who handled them," Alicia Frame, an EPA biologist, said at a meeting of the EPA's Children's Health Protection Advisory Committee July 19.

But outside the Superfund program's assessments, contamination may go unrecognized. "If contamination near HUD housing is not on a Superfund site, there is no set policy for cleaning up that site," said Lauren Hayes, who represented HUD at the meeting.

Site Boundaries

The EPA decided to take action at low-income housing properties near lead-contaminated sites to reduce the chances of another public health crisis such as the problems in East Chicago, Ind. A

former industrial site there is contaminated with lead and arsenic. Public housing was built decades ago atop a lead smelter. In 2009, the site was added to the Superfund National Priorities List, which contains the most contaminated sites in the country.

Indiana Gov. Eric Holcomb (R) declared a disaster emergency at the site in February.

Debbie Chizewer, environmental advocate at the Northwestern University Pritzker School of Law's Environmental Advocacy Clinic, tracks progress at the East Chicago site. Chizewer told Bloomberg BNA that she has been concerned about lead contamination in similar neighborhoods around the country.

"There are many cases where the boundaries are not drawn correctly to start with, and East Chicago is a perfect example," Chizewer said.

According to Frame, the agency's only internal requirement for recording the locations of Superfund sites is latitude and longitude.

"Superfund does not have a national policy for the collection of geospatial data describing site boundaries," she said at the July 19 meeting.

Chizewer said EPA had not tested enough East Chicago homes for indoor and outdoor lead-based paint, lead in drinking water, or indoor lead dust. "The fact that that wasn't done in East Chicago makes me wonder if it's being done at other sites," she said. "They're missing a whole swath of exposure pathways."

The agencies' findings should lead to stricter health standards, said Emily A. Benfer, distinguished visiting scholar at Yale Law School's Solomon Center for Health Law & Policy. "At a minimum, children and pregnant women should not be exposed to elevated lead and arsenic levels in the soil at any of the identified sites," she told Bloomberg BNA.

New National Priorities

There are 1,390 proposed and finalized sites on the National Priorities List. Of those, 36 percent—or 505 sites—are within a mile of a HUD public housing building or HUD-subsidized multifamily building, according to the EPA.

"Superfund cannot sample public housing that is not expected to be impacted by a release, or threat of a release, but we can prioritize identifying and sampling housing that falls within our authorities," an EPA spokesperson told Bloomberg BNA.

Tom Neltner, chemicals policy director at the Environmental Defense Fund, notes that the EPA and HUD data review doesn't include people living near contaminated sites on housing vouchers, also known as Section 8 vouchers. Low-income individuals or families using the vouchers must find private owners willing to rent under the program.

"There's no easy inventory of them, but they're still important," he told Bloomberg BNA.

The EPA is working on a broader Superfund data review, in addition to its partnership with HUD. According to the agency, it will review National Priorities List sites to address gaps in data on contaminants, remedies, site size, and site location.

The agency also has begun to incorporate the size of local populations into its Superfund data, according to an EPA spokesperson.

Runway Expansion at Portland, Ore., Airport Upheld by Court

Posted August 04, 2017, 03:40 P.M. ET

By Paul Shukovsky

Federal aviation officials didn't act arbitrarily when they decided to forgo a full environmental impact statement on a third runway at a Portland, Ore.-area airport, a federal appeals court ruled.

Five individuals and the Oregon Aviation Watch, a non-profit group, challenged the Federal Aviation Administration's finding that the runway project at Hillsboro Airport wouldn't cause a significant impact (Barnes v. Federal Aviation Administration, 9th Cir. App., No. 14-71180, opinion 8/3/17).

The group and individuals said the FAA didn't take a "hard look" at the environmental impacts of the runway under requirements of the National Environmental Policy Act. Petitioners contended lead emissions from aviation operations were not adequately considered.

The Ninth Circuit Court of Appeals panel rejected those arguments and denied the petition for review, finding that "the FAA did not act in a manner that was arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with the law," Judge Richard R. Clifton wrote in the panel's Aug. 3 opinion.

Petitioners also argued that the agency violated the Airport and Airway Improvement Act, which requires that before approving a project grant, the FAA must ensure the project is consistent with local public agency plans.

Waste Industry to Save Millions Under EPA Monitoring Proposal

Posted August 04, 2017, 10:45 A.M. ET

By Catherine Douglas Moran

Waste storage and processing facilities would save $28 million under an EPA proposal to ease air pollution monitoring requirements.

The Environmental Protection Agency's proposed changes (RIN:2060-AT48) would ease monitoring requirements for pressure relief devices on containers. The notice, to be published Aug. 7, said the action would "not substantially change the level of environmental protection" provided under the toxic air pollution standards for waste processors.

Those standards cover 49 facilities that store, treat, recover, or dispose of certain wastes, used oil, and used solvents. The agency projected that the existing monitoring requirements for containers require the average facility to make about $570,000 in capital investments to comply.

The EPA issued its proposal in response to a request from the Eastman Chemical Co. and the American Chemistry Council. The American Chemistry Council declined to comment to Bloomberg BNA. Eastman Chemical, a manufacturer of chemicals, fibers, and plastics that runs multiple facilities affected by the regulation, could not be reached for comment.

In May 2015, the two organizations jointly petitioned the EPA to reconsider certain provisions of the toxic pollutant emissions limits, including monitoring requirements for portable containers.

"It is extremely challenging, if not impossible for these facilities to design and implement a monitoring system for portable containers," the organizations said.

James Pew, a staff attorney for Earthjustice, told Bloomberg BNA that the proposal would weaken enforcement of the toxic pollutant standards by allowing facilities to conceal their emissions. States would have difficulty enforcing the standards because they won't know what the emissions are without monitoring, he said.

"The rule is really about letting these sources hide their actual emissions as much as it is about saving them money," Pew said.

Interior to Kill Obama Rule Raising Coal, Oil Royalties

Posted August 04, 2017, 11:25 A.M. ET

By Ari Natter

An Obama-era regulation governing how royalties are calculated for coal, natural gas and oil extracted on federal lands will be repealed by the Trump administration.

The Interior Department's Office of Natural Resources Revenue issued a public notice that it plans to scrap the valuation rule in a final rule set to be published Aug. 7 in the Federal Register, and it is set to go into effect 30 days after that. The agency proposed scrapping the rule in April, several months after it went into effect on Jan. 1.

The change would benefit coal companies that extract the fossil fuel on federal land, such as Cloud Peak Energy, which had lobbied against the regulation. It previously had been estimated to increase royalty collections by at least $78 million.

U.K. Batteries for Residential Solar to Get Tax Discount

Posted August 04, 2017, 9:22 A.M. ET

By Jessica Shankleman

The U.K. government will offer a tax discount to homes installing batteries at the same time as solar panels, a move that could make renewable energy investments more attractive, according to an industry organization.

The Solar Trade Association lobbied Her Majesty's Revenue and Customs, the tax authority, to apply a value-added tax of 5 percent to energy storage systems used with solar, instead of the standard 20 percent rate.

The STA said it received an email from HMRC that confirmed the discount rate would apply to batteries and solar, if they are installed together. Batteries sold separately and added to existing

solar systems would have the standard 20 percent VAT, according to the email seen by Bloomberg News.

A spokesman for HMRC confirmed the decision by email, saying that it applies if all qualifying conditions are met. The British government is reviewing tax rates after the European Commission said discounts for certain energy-saving materials didn't comply with its VAT Directive.

"Reduced VAT on new systems will encourage homeowners to embrace storage technologies alongside solar," said Seb Berry, vice chairman at the STA and head of external affairs at Solar Century Holdings Ltd. The panel provider on Aug. 2 announced a partnership with IKEA of Sweden AB to sell battery packs alongside solar systems.

The U.K. recently announced a plan to invest 246 million pounds in battery technology research and changed a law to define energy storage as a form of generation in a bid to spur investment into the sector.

Keystone XL Foes Avoid Climate in Red State Pipeline Battle

Posted August 04, 2017, 7:49 A.M. ET

By Meenal Vamburkar

You won't hear much about climate change coming from Keystone XL foes as they argue against TransCanada Corp.'s push to get the final state approval needed to build the pipeline.

Instead, they're spotlighting TransCanada's use of eminent domain, which Republicans traditionally oppose in support of landowner rights. Supporters, meanwhile, are pressing another issue close to Republican hearts: Jobs.

As Keystone XL faces its final hurdle in Nebraska, the starkly different political landscape under President Donald Trump versus Barack Obama is bringing new shape to a debate that will be overseen by the state's Republican-dominated Public Service Commission, set to hear a week of arguments starting Aug. 7. With Trump in the White House, a positive nod from Nebraska could remove the final regulatory barrier.

Property rights "might be the thing that stops this," said Art Tanderup, who owns farmland on the pipeline's route that's been in his wife's family for 100 years. Even some pipeline supporters say the company shouldn't be able to "take their land away," he said.

Still, the jobs issue carries weight among Republicans as well, particularly in the age of Trump, who has focused on the energy industry's ability to spark the U.S. economy. While the 2016 Republican platform says the Supreme Court's 2005 ruling in support of eminent domain undermines the Constitution's Fifth Amendment, Trump has in the past praised the decision.

Red State

Designed to carry 830,000 barrels of oil a day, the $8 billion Keystone XL pipeline will span 1,179

miles (1,897 kilometers), running through Montana, South Dakota and Nebraska. From there, the oil can flow south on existing lines to the Gulf Coast, which is an export hub and where refineries are built to process heavy crude.

Nebraska is a decisively red state: It hasn't voted for a Democratic president since 1964 and four of the last five governors have been Republican. Still, the state has been an impediment to progress on the project, with lawmakers and landowners challenging the route with legislation and lawsuits. The company eventually agreed to a PSC review instead of waging further court battles, setting up this month's hearing

Now, final approval will be decided by a commission board made up of four Republicans and a single Democrat.

"Before, knowing Obama's philosophy, we hoped it would be stopped" at the federal level, Tanderup said in a telephone interview. "But no longer can I write a letter to the president of the United States, because it will do absolutely nothing. No longer is there that hope."

Presidential Permit

In 2015, the Obama administration denied the presidential permit necessary for cross-border pipelines after a State Department review found Keystone didn't serve the national interest. But Trump, who came into office vowing to support the oil industry, quickly revived it.

Among proponents, the economic argument for jobs hasn't changed from the very start of the debate. TransCanada, the president and labor unions have long touted the project is a job creator that will help the state's economy. The state will benefit from 4,400-4,500 jobs, during the two-year construction period, and $12 million in property tax revenues, according to the Calgary-based company.

"We were very excited about it. It was an opportunity to get our people back to work," said Ron Kaminski, a member of the Laborers' International Union of North America. Kaminski, after running the local union in the state for about 10 years, shifted his focus to outreach.

In his view, this fight has revolved around the same facts and arguments for nine years: "There's nothing new."

Opponents, not surprisingly, disagree. They argue that many of the jobs promised by TransCanada are just temporary, and in the past have said that clean-energy projects can also carry the promise of added jobs.

'Not Main Thing'

Jane Kleeb, of activist group Bold Alliance, was a key figure in the first fight against Keystone, which centered around its potential to add to global warming. While Kleeb continues to support investment in clean energy, and voices concern about the tar sands oil that will come from Canada, she hasn't made it the focal point of the discussion.

"Climate has not been the main thing," she said in an interview.

She, alongside groups such as the Sierra Club and 350.org, have been working with landowners, highlighting the issue of eminent domain. They argue the pipeline isn't economic anymore, citing

speculation the company has had trouble securing customers. TransCanada counters that it still expects commercial support for the project, and has had discussions with existing and new shippers.

Canadian Natural Resources Ltd. President Steve Laut said the company has 150,000 barrels of space contracted on the line. Suncor Energy Inc. also said it will be a shipper on the project.

Pipelines in western Canada, which holds the world's third-largest oil reserves, can carry about 3.3 million barrels of crude a day, according to the Canadian Association of Petroleum Producers. The area's drillers are expected to produce 3.92 million barrels a day this year, rising to 4.2 million next year, which the industry says proves the need for more ways to get their product into the U.S. market.

Unfair Takeaways

Kleeb and others argue this urgency won't exist by the time the project comes online, roughly two years after the regulatory approvals. The result, they say, is that it's unnecessary and unfair to take private property for the pipeline using eminent domain, particularly given certain liability provisions the company is putting into landowner easements. TransCanada says 91 percent of landowners in the state have agreed to allow the project on their land, and the terms are consistent with industry standards.

"People do value private property," said David Corbin, vice-chair of state's Sierra Club, which is planning to testify before the PSC against the pipeline. "It's not a red or blue issue in Nebraska."

Nonetheless, the political climate is bound to make it an uphill battle for the activists, said Katie Bays, an analyst at Height Securities LLC in Washington D.C. The PSC leans conservative and the governor "has significant influence over the process from a political perspective, and he is a major advocate for the project," she said.

Even if the outcome favors TransCanada, opponents have vowed to keep litigating. The next step would be the state's court of appeals, said Kenneth Winston, an attorney working for Bold and the Sierra Club. While the company said it's taking the process step-by-step, any decision is likely to be appealed, according to the Sierra Club's Corbin.

"The longer it takes," Corbin said, the more the "economic argument is going to say: Why would we want this thing?"

—With assistance from Kevin Orland.

Australian Prime Minister Calls Crisis Meeting with Power Bosses

Posted August 04, 2017, 8:50 A.M. ET

By Perry Williams

Australian Prime Minister Malcolm Turnbull has called a meeting with the nation's major power companies citing concerns over soaring electricity prices and a lack of transparency in the market.

Companies including the three largest retailers Origin Energy Ltd., AGL Energy Ltd. and EnergyAustralia have been asked to appear in Canberra on Aug. 9 to discuss whether consumers are receiving adequate information on costs and consumption in their bills. About half of residential customers haven't switched electricity retailers or changed usage plans in the past five years, according to the Australian Energy Market Commission.

"Australia is blessed with abundant energy so it is simply not good enough that some families and businesses cannot always afford to turn on their lights, heating and equipment," Turnbull said in a letter sent Aug. 3 to Energy Australia Managing Director Catherine Tanna. "The situation must be addressed urgently and directly."

AGL Chief Executive Officer Andy Vesey tweeted his support for the meeting with Turnbull, saying energy affordability was an issue that needs "urgent attention."

Consumers were last month slugged with annual increases in power bills of as much as 20 percent due to soaring gas prices and the closure of aging coal-fired power stations including Hazelwood in the state of Victoria. Turnbull convened a similar meeting with oil and gas executives in March where he extracted pledges to boost gas supplies for local use over concern exports were threatening the nation's domestic energy security.

Week Ahead: Groundwater Group Hears EPA's Superfund Plans

Posted August 04, 2017, 12:29 P.M. ET

By Chuck McCutcheon

The National Ground Water Association, Ecological Society of America, and other groups are taking advantage of August's legislative lull in Washington to hold large-scale environment and energy events during the week of Aug. 7.

The Ground Water Association's Tuesday-Wednesday meeting in Arlington, Va., will feature a speech from James Woolford, director of the Environmental Protection Agency's Office of Superfund Remediation and Technology Innovation. Woolford is expected to discuss Superfund sites' remediation programs that protect groundwater by balancing regulation, science, and technology.

Another speaker will be Maureen Sullivan, the deputy assistant secretary of defense for environment, safety, and occupational health. Sullivan is expected to discuss new ways that federal agencies can work with others to address groundwater treatment.

One example Sullivan may cite is a Navy-California state government partnership to treat and manage groundwater that yielded roughly $60 million in savings. David Schultz will cover the meeting.

In Other News

Food and agricultural research: The National Academies of Sciences, Engineering and Medicine will hold a meeting and town hall on Tuesday and Wednesday in Washington in connection with a study that would identify research with high potential for scientific breakthrough in agriculture. Scheduled speakers include Pamela Starke-Reed of the Agriculture Department's Agricultural Research Service. Tiffany Stecker will cover.

Chemical dispersants: The academies also will hold a Monday-Tuesday meeting on how chemical dispersants can be used in treating oil spills. Dispersants are sprayed on oil slicks to break down oil into droplets that more readily mix with water.

Communicating science: The Ecological Society of America's annual meeting in Portland, Ore., which runs Sunday through Friday, focuses on training and connecting ecologists who seek to engage the public about climate change or other research. It will offer special sessions on case studies of successful engagement approaches. Rep. Suzanne Bonamici (D-Ore.) will speak on Monday.

Cap and trade webinar: The Center for Climate and Energy Solutions will hold a Thursday webinar on the California Legislature's recent decision to extend the state's greenhouse gas cap-and-trade program through 2030. Scheduled speakers include Aimee Barnes, a senior adviser to California Gov. Jerry Brown, and Katie Sullivan, managing director of the International Emissions Trading Association. Carolyn Whetzel will monitor.

Sage grouse review: An Interior Department review of land-use conservation plans for the greater sage grouse may be made public during the week. The greater sage grouse is protected by federal, state, and local land-use plans to keep it from being listed as threatened or endangered. Interior Secretary Ryan Zinke in early June ordered a review of federal policy on protecting it, specifically in regard to coordination with states. The review was scheduled to be completed in the first week of August. Alan Kovski will track.

Climate and coasts: Germany's Hamburg University of Applied Sciences, the International Climate Change Information Programme, and the Universite du Quebec a Montreal will hold a Thursday-Friday symposium in Montreal on how coastal areas can cope with the threat of climate change.

Subject: Morning Media: NYT breaks with Boies over Weinstein spying -- Disney caves after media pressure -- 2020 Dems flock to glossy mags -- 280-character Twitter begins!

By Michael Calderone | 11/08/2017 05:34 AM EDT

"AS OUR FOUNDERS UNDERSTOOD, and as we know today, without a free press we can have no guarantees of our freedoms. Without a free press, we can have no guarantee of justice," David Boies told attendees at the Committee to Protect Journalists' 2012 International Press Freedom Awards. "And yet just as the free press is critical to justice, so is justice critical to a free press."

- The superstar lawyer best known for representing former Vice President Al Gore in Bush v. Gore and for helping lead the legal fight for marriage equality had also enjoyed a reputation as a press champion. That latter role has been called into question after The New Yorker reported how, as Harvey Weinstein's attorney, Boies contracted an Israeli intelligence firm in an attempt to squash a New York Times investigation into sexual misconduct allegations against the film mogul. Boies did this while his firm, Boies Schiller Flexner LLP, was representing The Times on a libel case.

- The Times ripped Boies on Monday for what it called his firm's "grave betrayal of trust," and officially severed ties on Tuesday night. "We never contemplated that the law firm would contract with an intelligence firm to conduct a secret spying operation aimed at our reporting and our reporters," The Times said in a statement. "Such an operation is reprehensible, and the Boies firm must have known that its existence would have been material to our decision whether to continue using the firm."

- Boies told employees Tuesday that he executed the contract for Weinstein's private investigators believing that the purpose was to ascertain the specific accusation against Weinstein "and to try to find facts that would prove the charge to be false and thereby stop the story." It seemed like "a reasonable accommodation for a longtime client," Boies wrote, although he now admits it was "a mistake." The famed attorney said he "would never knowingly participate in an effort to intimidate or silence women or anyone else. ... That is not who I am."

- Still, Boies' role in the Weinstein saga has opened him up to scrutiny over a couple of recent instances of working against the interests of the press. While representing Sony in 2014, he threatened news organizations reporting on leaked documents. And the following year, Boies, working on behalf of Theranos, led an "entourage of lawyers" into The Wall Street Journal's newsroom and threatened legal action against the paper in response to its dogged and award-winning reporting on the troubled company. Indeed, reporters at The Journal and later The Times did what Boies, as chairman of CPJ's 2012 dinner, praised journalists for doing: "to try to present the truth, to try to speak truth to power."

ELECTION 2017: Democratic Lt. Gov. Ralph Northam won Virginia's gubernatorial race, the most watched of the night, and Democrat Phil Murphy will succeed Chris Christie as New Jersey's next governor. New York City Mayor Bill de Blasio won re-election. My colleagues at POLITICO have lots more on the big night in politics.

FOR MORE THAN A YEAR during the 2016 presidential race, Donald Trump's campaign barred reporters from several news organizations from attending his public events. HuffPost, BuzzFeed, Mother Jones, the Daily Beast, National Review and Univision were among the first outlets placed on the blacklist in late 2015 and early 2016. The group kept growing, with POLITICO and The Washington Post added in March and June 2016, respectively. Throughout, news organizations showed no solidarity in pushing back strongly against the Trump campaign's restrictions, the most draconian in U.S. presidential campaign history.

- It took just four days, however, for prominent film critics and news organizations to join together to pressure Disney into backing off its decision to bar the Los Angeles Times from advance film screenings in response to critical coverage. Washington Post critic Alyssa Rosenberg announced Monday that she would skip advance screenings, and the A.V. Club followed. On Tuesday, four prominent critics associations expressed solidarity with the Los Angeles Times, along with rival New York Times, which described Disney's move as "a dangerous precedent and not at all in the public interest."

- Soon after, Disney announced the ban was over. "We've had productive discussions with the newly installed leadership at the Los Angeles Times regarding our specific concerns, and as a result, we've agreed to restore access to advance screenings for their film critics," the company said in a statement.

SOUND BITES

"All the critics who stood together in solidarity with @latimes just won a huge victory." [Alyssa Rosenberg]

"Glad to hear. And love the show of solidarity. We 'enemies of the people' need to stand together, now more than ever!" [Leonard Pitts, Jr.]

"Disney case shows again how media can influence when they stand solid on what's right. and how often they dont bother to." [Oliver Willis]

"This kind of solidarity should happen on important political/govt stories too." [John Russell]

JACK SHAFER HAS ANOTHER VIEW: "Don't Be Fooled. Disney Won Its Fight With the Press."

RITUALS OF THE WHITE HOUSE PRESS CORPS: Snapchat's Peter Hamby argues that the Trump team knows how to play the press corps day to day. "For the American public, trying

to make sense of the most disruptive moment in American politics since Vietnam and Watergate, little is accomplished," he writes. "The oxygen rush of the 'news of the day'- and the constant need to get the White House to respond to what just happened - has always fueled the Washington press. It's a bad habit that's become a crisis under an administration that has perfected the art of the dodge and cares little about helping news organizations inform their audiences. Getting answers on the news of the day checks a box. Getting answers on what happened a month ago takes hard work."

BEHIND FORBES' WILBUR ROSS BOMBSHELL (AND FORBES): CNN's Tom Kludt reports on the Forbes scoop and raises questions about the methodology of the billionaires list. "The precise worth of billionaires is often shrouded in mystery, especially when a substantial portion of their money comes - as Ross' does - from private companies that do not have to provide public accountings of their finances," Kludt writes. "Rankings like The Forbes 400 are often taken with more than a few heaps of salt as a result."

THE 2020 GLOSSY PRIMARY IS UNDER WAY: National Journal's Hanna Trudo reports how Democratic politicians are engaging with glossy magazines a few years ahead of the next presidential race. "So far, the stack of national bylines in women's magazines reads like a 2020 watch list," she writes. "Former Vice President Joe Biden, along with New York Gov. Andrew Cuomo and Sens. Elizabeth Warren of Massachusetts, Kamala Harris of California, Kirsten Gillibrand of New York, and Cory Booker of New Jersey have written for a mix of Cosmopolitan, Essence, Glamour, Marie Claire, Refinery29, and Teen Vogue, among others."

- "One issue likely to matter to any potential female base voter is sexual assault," wrote Trudo, "which Biden and Gillibrand wrote about individually in Cosmopolitan months before a wave of misconduct allegations brought the issue into the national media's consciousness."

MEET JEFF GLOR: The Hollywood Reporter's Jeremy Barr profiles the new "CBS Evening News" anchor. "One of Glor's primary attributes is his age: 42. Since his appointment was announced, he's been compared to ABC World News anchor David Muir, who is 43 and had a comparably low national profile when picked for the big job. (ABC News does not think the comparison is particularly apt.)," he writes. "Asked in an interview whether he will consciously try to attract younger viewers to the broadcast, Glor told THR simply, 'We want as many people as possible.'"

REMNICK ON RONAN: Washington Post columnist Margaret Sullivan talks to The New Yorker's editor about Ronan Farrow's latest Weinstein bombshell. "David Remnick, editor of the New Yorker, told me that the 29-year-old Farrow has the qualities he looks for in an investigative reporter - including relentless drive, or what he termed 'obsession in the best sense.' And, Remnick said, Farrow offers a rare quality: 'Huge compassion, sympathy and patience' with those whose stories he wanted to tell. On occasions when he observed Farrow interacting with accusers, Remnick said, 'it was really quite moving.'"

EMBATTLED NPR CEO TAKES MEDICAL LEAVE: Jarl Mohn, still dealing with the fallout from a sexual harassment scandal that forced out top editor chief Michael Oreskes, told staff on Tuesday he would be out for at least a month. "[L]ast March I suffered a nearly fatal

ruptured aorta. I returned to work with the blessing of my physician with one important caveat - I cannot allow my blood pressure to rise," Mohn said in an email, according to NPR . "Regretfully, the hypertension has returned to a dangerous level, and I have been instructed to take medical leave until my health returns to normal, at a minimum of four weeks."

SAD NEWS: Wall Street Journal editor Sarah Portlock, who suffered a brain injury while pregnant in March, died suddenly on Monday, editor-in-chief Gerry Baker announced in a memo. "Our thoughts and prayers are with her husband, Sam, and daughter, Aviva, who is beautiful, healthy and home with her father," he wrote. "Aviva recently dressed as Cinderella for Halloween, a costume that I'm told Sarah helped to pick out." Friends and colleagues can support her family here.

VIA POLITICO'S MORNING EDUCATION: Articles are making the rounds online that cite a POLITICO Magazine profile of Education Secretary Betsy DeVos and claim that education "officials" expect her to step down. That is NOT what the POLITICO article said, and there's no reason to believe DeVos is on her way out. What the POLITICO article, written by Tim Alberta, did say: "Anyone betting against DeVos serving all four years of Trump's first term - which, she tells me, she plans to do - is underestimating the sense of duty and moral righteousness deeply embedded in someone who could be doing just about anything else right now."

- **The false reports have gained traction.** Randi Weingarten, the American Federation of Teachers president, who is a constant DeVos critic, tweeted one, calling it "breaking news." The posts appear to be built around a single quote in the POLITICO profile. Thomas Toch, the director of FutureEd, an independent education think tank at Georgetown's McCourt School of Public Policy - not an education "official," as many of the posts claim - said in the POLITICO piece that "in Washington education circles, the conversation is already about the post-DeVos landscape, because the assumption is she won't stay long. ..." Toch took to Twitter to clear the record: "Was tallying DeVos odds in @politico, not suggesting her plane's idling at National with a flight plan to Michigan. I give her a year."

REVOLVING DOOR

Daniel Sieberg is leaving Google News Lab after six years to become co-founder and head of journalism operations for Civil, a "decentralized newsmaking platform."

Tiffany Wu, who has spent nearly 20 years at Reuters in various roles, has been named regional editor, Americas.

Chris Mihal, most recently Variety's creative director, has joined Barron's as editorial design director.

EXTRAS

- Poynter's Daniel Funke reports that at least 20 sites registered to late "fake news" publisher Paul Horner have gone offline.

- Fox News wins the week with a new prime-time lineup.

- Jake Tapper disputes Bill O'Reilly's claim that CNN staff was ordered to "trash" Donna Brazile.

- CJR looks at the best-performing articles on BuzzFeed, CNN, Fox News and other outlets over the past year.

- The Times has received more than 80,000 "Modern Love" submissions over the past 13 years.

- Gay Talese is "sad" that Kevin Spacey's career is damaged amid sexual misconduct allegations.

- Twitter is now giving virtually everyone 280 characters. And the president is already on board.

Climate Reports May Slow Trump's Push to Undo Obama-Era Rules

Posted August 09, 2017, 7:29 A.M. ET

By Christopher Flavelle and Brian K. Sullivan

A pair of highly anticipated government studies, one of them due to be released this week, could complicate President Donald Trump's effort to roll back federal climate regulations, according to people on both sides of the debate over global warming.

A National Oceanic and Atmospheric Administration-backed report summarizing the global effects of climate change in 2016 is scheduled for release Aug. 10. Its conclusion will be similar to previous years' versions, according to people familiar with the report: Climate change is real, it's man-made and it's dangerous.

That report dovetails with a broader National Climate Assessment, which is due next year from the administration. Drafts of the study, compiled by scientists from across the federal government, show that the effects of climate change in the U.S. are severe.

Both reports are at odds with Trump's contention that climate change is a "hoax" and may hinder his moves to undo President Barack Obama's efforts to address the issue, analysts say. Revoking Obama's rules requires agencies to give a legally sound justification for the policy pivots—such as arguing they are no longer necessary.

David Schnare, who worked on Trump's transition team at the Environmental Protection Agency and then advised EPA Administrator Scott Pruitt, said that both reports will make it harder for the agency to reverse the Obama administration's limits on carbon dioxide emissions from power plants, as well as the broader policy that defines those emissions as a danger to the public, called an endangerment finding.

"If the NCA comes out with an unflattering report on carbon dioxide, the only way EPA can change its endangerment finding is to reexamine all that science, and have a reasonable basis for rejecting" it, said Schnare, who left EPA in March. Once those reports become public, "it's hard to dodge," he

said.

Opponents of Trump's climate policies agreed that the reports could slow his administration's repeal of Obama-era regulations.

"It will make it harder for them to justify," said David Hawkins, director of climate programs for the Natural Resources Defense Council. "It's yet another document that weighs against whatever claims Trump political appointees attempt to make about the state of the science."

The Aug. 10 report, which was written by more than 450 scientists in the U.S. and abroad, will show that ice levels in Antarctica have set a record low, according to Keith Seitter, executive director of the American Meteorological Society. Antarctic ice levels had previously been increasing, a point highlighted by those who say climate change is a hoax.

The study will be released in the group's Bulletin of the American Meteorological Society.

Otherwise, the report doesn't contain many surprises, according to Seitter—because the public has become accustomed to continually breaking temperature records. On Aug. 8, NOAA reported that 2017 is so far the second-warmest year to date.

"As a standard practice, NOAA does not discuss leaked or draft reports," said Brady Phillips, a spokesman for the agency.

NOAA's willingness to publicize data about the threat of climate change presents a stark contrast with other agencies. The EPA has removed information about climate change from its website; Pruitt has said human activity isn't the primary contributor to global warming, as has Secretary of Energy Rick Perry. And the Interior Department reassigned dozens of employees, including one scientist who said his transfer to an office processing revenue was in retaliation "for speaking out publicly about the dangers that climate change poses to Alaska Native communities."

An Interior spokeswoman declined to discuss specific personnel matters among the senior executive service and said the reassignments "are being conducted to better serve the taxpayer and the department's operations." The EPA didn't respond to a request for comment.

The difference, according to Schnare, reflects the fact that the Trump administration has yet to assign political appointees to NOAA, which has left the agency—a division of the Department of Commerce—with an unusual degree of independence. Nor has the administration filled key climate positions at the White House; the Office of Science and Technology Policy still has no confirmed director, preventing it from aligning policy across federal agencies.

"This administration has simply not gotten its coordinating process together," said Schnare. Ross Gillfillan, a spokesman for the science office, declined to comment.

National Assessment

A test of that coordinating process will be the National Climate Assessment, which the White House is required by Congress to release every four years. The last report, in 2014, concluded that average global temperatures had increased more than 1.5 degrees Fahrenheit (0.8 Celsius) since 1880, and predicted as much as four feet of sea-level rise by 2100. A draft version of the 2018 report projects temperatures in the U.S. will rise as much as 12 degrees if emissions aren't reduced. The New York Times reported Aug. 8 that scientists involved were worried the Trump administration would suppress that study.

"The White House will withhold comment on any draft report before its scheduled release date," White House spokeswoman Sarah Sanders said in a statement referring to the New York Times story.

Hawkins, of the Natural Resources Defense Council, said the administration could in theory try to stop publication of the final report, which must be approved by 13 federal agencies; it could even go so far as to reassign or fire the scientists working on it. But, he added, those strategies are unlikely to do much good.

"Now that the current draft report is public knowledge, firing people isn't going to undermine the validity of what's written down," Hawkins said. "They can't prevent the understanding of the science anymore than Canute could hold back the seas."

National Grid Modernization Plan May Get Massachusetts Approval

Posted August 09, 2017, 02:38 P.M. ET

By Adrianne Appel

National Grid expects to receive approval from Massachusetts in January on its plan to dramatically change electricity service for customers under a broad grid-modernization plan.

In June 2014, Massachusetts asked major electric suppliers Eversource Energy, National Grid and Unitil Corp. to submit blueprints to modernize their portions of the state's 60-year-old electric grid.

National Grid's plan would give customers real-time data each day about when it would be cheapest to run appliances and cool homes and businesses, Marcy Reed, president of National Grid in Massachusetts, said. The company also would make it easier for wind, solar and other renewable energy to deliver power to the grid.

The upgrades would cause monthly electric rates to rise, though the company estimates customers would save in the long run, Reed told Bloomberg BNA Aug. 8, after addressing state lawmakers attending a national meeting in Boston.

"The benefits will outweigh the costs," she said.

In Eclipse, Natural Gas Sees Its Future as Solar's Backstop

Posted August 09, 2017, 11:23 A.M. ET

By Christopher Martin, Mark Chediak and Naureen S. Malik

Natural gas is about to get a glimpse of its future role in the U.S. power mix as solar energy's backup.

During the upcoming Aug. 21 eclipse, operators of giant solar fields from California to the Carolinas

will rely on power from fast-start natural gas generators as well as hydroelectric plants and other sources to fill the gaps as the sky darkens. The celestial event will provide owners of gas turbines a chance to shine even as the fossil fuel is expected to be displaced over time by solar and wind energy.

The eclipse comes as the U.S. power grid undergoes a transformation that will bring increasing amounts of flexible resources needed to complement growing supplies of solar and wind energy. Solar installations have grown ninefold since 2012 and renewable sources are forecast to supply just as much of America's electricity demand as gas by 2040, according to Bloomberg New Energy Finance.

The "electric grid of tomorrow" will increasingly have to deal with fluctuating power supplies from the wind and sun while incorporating quick-start gas turbines during events like the upcoming eclipse, said Stephen Berberich, president of California ISO, the state's grid operator. Operators will also use new technologies to control demand when the moon will completely block the sun along a 70-mile-wide (113-kilometer) corridor stretching from Oregon to South Carolina.

The eclipse, in which the moon will completely obscure the sun, will cast a shadow along a 70-mile-wide (113-kilometer) corridor stretching from Oregon to South Carolina. Based on a Bloomberg calculation of grid forecasts, more than 9,000 megawatts of solar power may go down. That's the equivalent of about nine nuclear reactors.

To help keep the lights on, the California Independent System Operator will tap the state's network of gas generators and hydroelectric dams to make up for the loss of about 6 gigawatts of solar output over two hours as the sun is obscured by the moon. Duke Energy Corp. said it will utilize gas generators in North Carolina, the biggest solar state after California, to make up for output that is expected to sink 92 percent to about 200 megawatts in 90 minutes.

Reliability Issues Not Foreseen

The North American Electric Reliability Corporation doesn't foresee any reliability issues as grid operators have been planning for the eclipse for months.

"Given that the timing and path of the eclipse are well understood and well reflected in solar generation forecasts by CAISO and other grid operators, generation dispatch or curtailment would be managed as a part of routine operations," said Steve Krum, a spokesman for First Solar Inc., the largest operator of solar plants in the U.S.

AutoGrid Systems Inc. says some utilities will be using its software systems to shut off unnecessary appliances during the height of the eclipse, and bring them on slowly as solar power returns, said Adam Todorski, a director of product technology for the Palo Alto, California-based company.

Shedding Demand

"It's a lot like a planned outage; you know it's coming," Todorski said. "You can get hundreds of megawatts by shedding things like water heaters and pool pumps, and heat pumps."

The California Solar Energy Industries Association is asking residents to "pledge" to turn off lights, unplug microwaves and dial back air conditioners in order to reduce the need for the state to use gas plants and to limit carbon emissions.

Demand for gas is forecast to stop growing by 2040 as new technologies such as battery storage

ramp up to provide backup for wind and solar, according to Bloomberg New Energy Finance.

During a March, 2015 eclipse that crossed Europe, German grid operator TenneT TSO GmbH brought on 8 gigawatts of generating capacity to compensate for the loss of solar power as the sun disappeared, double the usual amount. It also kept hydropower plants that can store energy on standby and coordinated its flows with neighboring grid operators.

Power prices in Germany's wholesale market surged then dipped for a short time as the first eclipse of the emerging solar age passed, briefly switched off thousands of panels that on the brightest days provide 40 percent of Germany's power.

Shale Drillers Spend Less, Produce More in Glut-Gorging Push

Posted August 09, 2017, 7:58 A.M. ET

By Joe Carroll, Giacomo Tognini and Alex Nussbaum

Shale drillers are greeting the fourth year of a historic oil-market slump in a curious fashion, promising to generate even more price-killing production as 2017 progresses.

Second-quarter reports in the last two weeks show producers led by ConocoPhillips, EOG Resources Inc. and Diamondback Energy Inc. plan to pump 50,000 barrels a day more than prior forecasts, easily offsetting modest production cuts by other peers. At the same time, full-year drilling budgets were largely curbed, some by hundreds of millions of dollars.

Investors, though, were unimpressed, erasing as much as 11 percent from an index of Permian shale explorers since the updates began on July 26. Meanwhile, crude futures, once seemingly ready to breach $50 a barrel in New York on OPEC-led cutbacks, are up just 0.8 percent.

Here are three charts on production forecasts, capital expenditures and hedging showing the status of U.S.-based drillers heading into the second half:

Apache Corp. was an outlier among shale players, cutting its production forecast for the year by 30,000 barrels a day to adjust for its exit from Canada. The producer sold its assets there earlier this year, choosing to focus on operations in the U.S., U.K., and Egypt.

Overall, the companies said they would cut about $1.25 billion from their capital expenditures for 2017. The reasons varied company-by-company, with some executives citing shortages of fracking crews in some regions that will delay some planned wells until early 2018. At least seven more companies were due to disclose quarterly earnings this week.

"This is reflective of cautious capital budgeting, continued operational efficiencies in the field, and perhaps in some cases, service costs not meeting inflation expectations built into budgets," David Tameron, an analyst at Wells Fargo Securities LLC, said in a note to clients. "In addition, capex reductions are also a nice tag line for companies to address Street concerns about capital discipline."

One reason drillers have been sanguine about pumping more crude even as an existing glut weighs on prices is that they've been able to lock in profits for future barrels with hedging instruments such

as swaps and options.

Pioneer Natural Resources Co., Devon Energy Corp. and Antero Resources Corp.are among the shale drillers amassing hedges that protect their future proceeds as far out as 2023, according to data compiled by Bloomberg. With U.S. crude futures getting closer to a new bull market, the pace of hedging by energy producers is poised to accelerate.

One of the most-active drillers in the Permian Basin, Pioneer has been closely following Energy Information Administration tallies of crude inventories that are released every Wednesday. Recently, the data has been lifting prices, and Pioneer's risk-management team has been swooping in to lock in the upticks, said Chief Executive Officer Tim Dove. So far, about half of the oil Pioneer expects to pump next year is covered.

"I'm pleased about that, of course," Dove said in a conference call. "We'll look to do more hedges in 2018 as we look for attractive opportunities to do so in the next few months, to actually be significantly higher than 50 percent."

Gas Sellers Warn Hard-Bargaining Buyers: Market Is Turning

Posted August 09, 2017, 8:36 A.M. ET

By Naureen S. Malik

A worldwide glut of natural gas has buyers of the fuel driving hard bargains and pushing for shorter supply contracts. The only problem with that, according to their sellers: The market's about to turn against them.

Gas buyers have become too focused on the short-term, turning away from long-term contracts, said Greg Vesey, chief executive officer of Liquefied Natural Gas Ltd., an Australian developer of terminals that liquefy and export gas. If they keep it up and don't lock in enough contracts next year to encourage the construction of more export terminals, the market could end up short supplies as soon as 2021, he said.

"Things come to a head in late 2018," Vesey said in an interview at Bloomberg's headquarters in New York Aug. 8. "By the end of 2018, people will realize they have to make a decision."

The global glut of LNG supplies and an ensuing plunge in prices have already killed plans for export terminals around the world. Just last month, Malaysia's Petroliam Nasional Bhd. decided to scrap a $27 billion export complex in Canada, citing low prices. And more could follow as buyers take advantage of excess supplies to renegotiate contracts.

"The reality is that a new facility needs to be backed by a 20-year contract," Kathleen Eisbrenner, chief executive officer of export terminal developer NextDecade Corp., said in an interview late Tuesday. "There is starting to be a realization that, if those contracts aren't signed soon, we will go into a shortage."

There is an appetite among some buyers, such as large Asian utilities, for 20-year contracts, with one counter-party interested in a 25-year deal, she said.

And yet Anatol Feygin, chief commercial officer of Cheniere Energy Inc., the U.S. shale gas exporter searching for long-term contracts to back an export terminal in Texas, noted a "good appetite" among buyers to lock in supplies for three to seven years rather than 20. He said in a call with investors Aug. 8 that "market conditions continue to be challenging for long-term deals."

Spot LNG in Northeast Asia, the biggest LNG-buying region, tumbled about 70 percent from its peak in February 2014, according to industry publication World Gas Intelligence.

Cut-Rate Prices

Increasing volumes of gas from Australia to America's shale gas formations have hit the water in recent years, inundating the market with so much supply that analysts say demand may not catch up until the next decade. Raymond James said last month that export projects will probably continue to be shelved.

That has escalated the competition among LNG suppliers to score the long-term contracts they need to expand capacity, and some sellers are trying to entice buyers with cut-rate prices, Vesey said.

They are putting "ridiculously low prices out there" with the hopes of raising them in future contracts, he said. Liquefied Natural Gas is developing an export project in Louisiana that has already gained regulatory approval but needs supply agreements.

"There is a disruptive nature to what's happening," Vesey said.

Samarco Executives' Homicide Charges Suspended in Brazil Spill

Posted August 09, 2017, 02:48 P.M. ET

By Michael Kepp

A Brazilian judge suspended and could potentially dismiss homicide charges against 21 officials of Samarco mining company, Vale SA and BHP Billiton Ltd., in connection with the rupture of an iron-ore tailings dam two years ago that killed 19 people.

The judge suspended criminal proceedings to determine whether wiretapping of the officials' phones by prosecutors was legal. If not, it "could result in the annulment of the case," the judge wrote.

The case stems from the Nov. 5, 2015, rupture of a Samarco tailings dam in Minas Gerais state that sent 62 million cubic meters of iron-ore waste into the valleys below, flattened a village of 600, left 19 dead and polluted the Doce River. Brazil's Environment Ministry called the spill "the country's worst environmental catastrophe."

The executives are charged with qualified homicide, which in Brazil means homicide aggravated by certain factors. When the charges were filed last year, prosecutor Jose Leite Sampaio said the Samarco executives knew or should have known that the dam was unsafe and at risk of failing.

Illegal Wiretapping?

Judge Jacques de Queiroz Ferreira of the first regional federal court in the Minas Gerais state municipality of Ponte Nova suspended the criminal case (No. 0002725-15.2016.4.01.3822) July 4, but the court just publicly confirmed the suspension, a court spokeswoman said Aug. 8. It is not known when the judge will decide how to proceed.

Former Samarco President Ricardo Vescovi and ex-director of Samarco operations and infrastructure Kleber Luiz de Mendonca Terra allege that phone wiretaps between executives charged in the case took place outside the time frame that the judge had authorized.

Those charged include 16 current or former executives of Samarco, the reservoir's operator, and five current or former executives of Samarco's two co-owners, the Brazilian iron-ore giant Vale S.A. and the Anglo-Australian BHP Billiton Ltd, on Samarco's board of directors. VOGBR, a geotechnical auditor that does reservoir safety inspections, and one of its employees were also criminally charged with presenting false reservoir stability reports.

Civil Settlement Pending

If convicted, the executives and officials each face up to 54 years in prison: 45 years of that sentence would be related to the homicide and nine would be linked to environmental crimes. The companies also face fines.

Samarco, Vale, and BHP Billiton declined to comment to Bloomberg BNA on the ruling suspending criminal proceedings.

This criminal case is unrelated to civil lawsuits against Samarco and its co-owners seeking billions of dollars. Last month, another Minas Gerais federal judge gave Samarco and its co-owners until Oct. 30 to finalize a settlement-for-damages agreement that would dismiss both civil suits.

Pearl-Diving Licenses Introduced in Bahrain to Protect Heritage

Posted August 09, 2017, 11:18 A.M. ET

By Matthew Kalman

Bahrain introduced a new licensing system for pearl diving beginning Aug. 9 in the oyster-rich waters of the Gulf archipelago.

The initiative aims to revive the country's ancient heritage of pearl diving by encouraging sustainable catching activities, ensuring Bahrain retains its position as an international center for an industry that was central to the country's economy, said Works, Municipalities Affairs and Urban Planning Minister Essam bin Abdulla Khalaf in a report by the Bahrain News Agency on Aug. 6.

Bahrain's marine environment has been under threat from land filling and dredging operations that smother the microscopic species that sustain fisheries, corals, mangroves and pearl-forming oysters. The numbers of fish and other sea creatures have been depleted by overfishing and bottom trawling. In 2012, Muharraq Island in the north of the country and its offshore oyster beds known as the Bahrain Pearling Trail were declared a U.N. World Heritage Site.

"Regulating pearl-diving is important," said Diane Klaimi, the U.N. Environment Programme regional coordinator for ecosystems in West Asia told Bloomberg BNA by phone from Bahrain. She said it helped people realize that care for the marine environment could result in better pearls for the industry. "This is how we drive the attention of decision-makers in countries who do not make the

link between managing the environment and services like better pearls, or better trade, or better GDP," she said.

Trade Dominated Economy

The pearl trade dominated the Persian Gulf economy, creating enormous prosperity, from the 2nd century to the 1930s, when it was eclipsed by the rise of cultured pearls from Japan.

Under Resolution No. 43 of 2017, pearl diving will be restricted to individual permit-holders on official diving trips in permitted areas by licensed operators, who must provide a list of participants to the coast guard. Each diver will be limited to 60 oysters per trip. The first official dive will be on Aug. 26.

Diving centers, instructors, diving masters and crew members must obtain annual licenses to be able to take part in pearling trips, which must leave from the Ras Rayah fishing harbor in Muharraq and return there. Individual applicants can obtain a license for 25 BD ($66) and are required to attend a pearl diving workshop which will be held by the Supreme Council of Environment. The fee for each diving center is 1,000 BD ($2,652). Holders of previous licenses, whether expired or not, must apply for a renewal.

An official at the Fisheries Department did not immediately respond to Bloomberg BNA's request for comment.

Summaries

AIR
Energy Conservation Standards/Certification and Compliance Requirements
AIR

Notice announces the intention of the Energy Department, Office of Energy Efficiency and Renewable Energy, to seek OMB approval for a revised information collection request regarding certification and compliance requirements for consumer products and commercial/industrial equipment subject to federal energy or water conservation standards. The collection addresses the gathering of data and submission of certification and compliance reports for basic models distributed in commerce in the U.S., including supplemental testing instructions for certain commercial equipment, recordkeeping, applications for test procedure waivers, applications for extension of the date by which representations must be made in compliance with a new or amended test procedure, and labeling. The revisions modify the online Compliance and Certification Management System (CCMS) to allow the California Energy Commission to accept a CCMS report in satisfaction of the state reporting requirement. Comments are due Oct. 23, 2017. Contact: Ashley Armstrong; DOE, Office of Energy Efficiency and Renewable Energy; 202-287-1445; ApplianceStandardsQuestions@ee.doe.gov. Citations: 10 CFR 429, 430, 431

Regulatory Update

AIR
Georgia SIP/Minor New Source Review
AIR

Notice of the EPA announces the withdrawal of a June 29, 2017, direct final rule (82 FR 29418) that would have approved revisions to the Georgia SIP to clarify that existing exemptions from minor new source review permitting do not extend to sources that are subject to NSPS for stationary sources or NESHAP. The revisions also add a definition of "pollution control project" and provide that such projects are exempt from minor new source review construction permit requirements. The withdrawal, which is due to the receipt of an adverse comment, is effective

Regulatory Update

AIR
NESHAP for Portland Cement Manufacturing Industry
AIR

Direct final rule of the EPA deletes NESHAP provisions adopted in a June 23, 2017, direct final rule (82 FR 28562) that extended a compliance alternative specified in a July 25, 2016, final rule (81 FR 48356) for Portland cement manufacturing sources. The rule restores the July 25, 2017, expiration date for the compliance alternative for sources required to use a hydrogen chloride (HCl) continuous emissions monitoring system (CEMS) to demonstrate compliance with the HCl emissions limit through a three-run stack test. The alternative was provided due to the unavailability of National Institute of Standards and Technology traceable calibration gases for HCl. The current action is due to the receipt of adverse comments. A concurrent proposed rule would adopt the provisions and address the adverse comments. The rule is effective Aug. 22, 2017. Contact: Brian Storey; EPA, Office of Air Quality Planning and Standards; 919-541-1103; storey.brian@epa.gov. Citations: 40 CFR 63.1349, 63.1350

Regulatory Update

AIR
NESHAP for Portland Cement Manufacturing Industry
AIR

Proposed rule of the EPA would extend a NESHAP compliance alternative for Portland cement manufacturing sources specified in a July 25, 2016, final rule (81 FR 48356). The rule would allow owners and operators to demonstrate compliance with the hydrochloric acid (HCl) emissions limit through a three-run stack test. The alternative was provided due to the unavailability of National Institute of Standards and Technology traceable calibration gases for HCl. The current proposal replaces a June 23, 2017, direct final rule (82 FR 28562), which is reversed concurrently due to the receipt of adverse comments. If requested by Aug. 29, 2017, a hearing will be held Sept. 6, 2017, in Washington, D.C. Comments are due Oct. 6, 2017. Contact: Brian Storey; EPA, Office of Air Quality Planning and Standards; 919-541-1103; storey.brian@epa.gov. Citations: 40 CFR 63.1349, 63.1350

ENDANGERED SPECIES
Hawaii/Marine Mammals Incidental Take
ENDANGERED SPECIES

Final rule of the National Marine Fisheries Service authorizes the take of marine mammals

incidental to the U.S. Air Force 86 Fighter Weapons Squadron's Long Range Strike Weapons System Evaluation Program activities in the Barking Sands Underwater Range Expansion area of the Pacific Missile Range Facility, off Kauai, Hawaii. The final rule reduces the authorized take in the proposed rule based on significant decreases to the amount of live weapon explosions per year. The rule authorizes take in the form of Level B harassment of 16 species of marine mammals, and by Level A harassment of four of those species. The rule is effective Aug. 21, 2017, and expires Aug. 22, 2022. Contact: Jaclyn Daly; NMFS, Office of Protected Resources; 301-427-8401. Citations: 50 CFR 218.50 through 218.57 (Subpart F)

Regulatory Update

FOOD SAFETY
Food Additive Petition/Calcium, Vitamin D3 in Juice Products
FOOD SAFETY

Notice of the FDA announces a correction to a July 26, 2017, notice (82 FR 34615) of filing of a food additive petition by the Juice Products Association, of Washington, D.C., to replace the current recommended daily intake percentage values of calcium in fruit juices and fruit juice drinks for vitamin D3 with absolute values and to update the specifications for vitamin D3. The changes would allow manufacturers of fruit juices and fruit juice drinks that are fortified with calcium to maintain the absolute level of added calcium at 330 milligrams and 100 mg, respectively. The correction clarifies that the absolute level of added calcium for fruit juice drinks is 100 mg, not 130 mg. WATER
Definition of Waters of the U.S. Under the CWA
WATER

Notice of the U.S. Army Corps of Engineers and the EPA announces the extension of the comment period for a July 27, 2017, proposed rule (82 FR 34899) that would reinstate the definition of "waters of the United States" that existed prior to a June 29, 2015, final rule (80 FR 37054). The 2015 rule clarified the scope of waters that are protected under the Clean Water Act and therefore are within U.S. regulatory jurisdiction, in light of U.S. Supreme Court decisions in 2001 and 2006. The rule is issued in response to a stay of the final rule by the U.S. Court of Appeals for the Sixth Circuit and Executive Order 13778 (82 FR 12497; 03/03/2017). The executive order directed the agencies to review the final rule for consistency with certain policies and to issue a proposed rule amending or rescinding the final rule. The rule is the first of a two-step process for the substantive reevaluation of the definition of "waters of the United States." Comments now are due Sept. 27, 2017. Contact: Donna Downing; EPA, Office of Water; 202-566-2428; CWAwotus@epa.gov. Citations: 33 CFR 328.3, 40 CFR 110.1 through 401.11 (nonconsecutive)

WATER
Mid-Atlantic Region Regulated Navigation Areas
WATER

Final rule of the U.S. Coast Guard establishes 11 safety zones on ice-covered waterways in the Fifth Coast Guard District, which includes the Mid-Atlantic Region. A July 19, 2015, proposed rule (80 FR 39403) would have established one regulated navigation area (RNA) on the navigable waters of the district to allow the USCG to impose and enforce restrictions on vessels operating within the RNA where a threat to navigation exists due to ice covered waterways. The final rule instead adopts the provisions of a Feb. 9, 2017, supplemental proposed rule (82 FR 9978). The final rule also requires vessels to gain permission from the cognizant captains of the ports (COTP) or district commander to enter or continue transiting a zone if the vessel encounters ice of a given thickness, unless the COTP or district commander has set an ice condition for the zone and the vessel meets the associated requirements to transit the zone. In addition, the final rule specifies the three ice conditions and vessel requirements to transit, establishes restrictions on nonsteel-hull-vessels in such conditions, and provides an exemption for vessels that must transit in protected waters. The rule is effective Sept 21, 2017. Contact: Doug Simpson; USGC, Fifth Coast Guard District; 757-398-6346; douglas.c.simpson@uscg.mil. Citations: 33 CFR 165.550

82 FR 39665 (08/22/2017)

Subject: Morning Energy, presented by ExxonMobil: Ryan heads to Puerto Rico amid latest Trump dustup — Is Perry abandoning free market principles? — Trump taps climate skeptic White to run CEQ

By Anthony Adragna | 10/13/2017 05:40 AM EDT

With help from Alex Guillén

DIRE SITUATION IN PUERTO RICO GETTING HELP: Amid the latest controversy over President Donald Trump's tweets about the devastation in Puerto Rico, Congress is stressing its commitment to helping the nearly 3.5 million U.S. citizens still in dire need of assistance. Speaker Paul Ryan leads a bipartisan delegation to tour the devastated island today, a day after the House overwhelmingly passed a bill H.R. 2266 (115) that would aid Florida, Texas, Puerto Rico, the U.S. Virgin Islands and other sites of recent severe weather. All 69 lawmakers voting against the bill were Republicans. Senate leaders plan to take up the measure once they finish work on a budget resolution.

Meanwhile, the administration sought to walk back Trump's suggestions he might pull the plug on aid to the island. "Our country will stand with those American cities in Puerto Rico until the job is done," Chief of Staff John Kelly said in a press conference. And a FEMA spokeswoman, Eileen Lainez, tweeted: ".@fema will be w/Puerto Rico, USVI, every state, territory impacted by a disaster every day, supporting throughout their response & recovery."

Democrats condemned Trump's comments: "Mr. President, do not send a message to any American that we will turn our backs on them. That is not fair; it's not right; and you ought to correct the statement you made this morning," House Minority Whip Steny Hoyer said on the floor. The island's governor, Ricardo Rossello, took a more measured tone: "The U.S. citizens in Puerto Rico are requesting the support that any of our fellow citizens would receive across our Nation," he tweeted. Meanwhile, two House Democrats — Nydia Velazquez and Bennie Thompson — asked DHS to investigate whether the death toll of 45 currently associated with Hurricane Maria is far lower than the actual toll.

Situation on the ground: Amid reports residents were trying to drink from wells on Superfund sites, EPA said in a status update that it sent crews to Dorado, Caguas, and San Germán to post signs and attempt to ensure water truck deliveries to those neighborhoods. More than three weeks after the hurricane arrived, 83 percent of the island lacks electricity and 36 percent of residents lack potable drinking water, according to government figures.

Meanwhile, California continues to battle wildfires that have devastated wine country and claimed at least 29 lives. Smoke from the fires has resulted in the production of as much as pollution in two days as all of the state's cars produce in a year, according to USA Today, and the Bay Area has experienced its worst air quality week in recorded history.

TGIF EVERYBODY! I'm your host Anthony Adragna, and FERC's Joe McClelland was first to identify Rep. John Moolenaar as the only chemist currently serving in Congress. For today: Who

is the tallest U.S. senator in history? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

WHAT ARE YOU THINKING? A rising chorus of conservative voices are accusing Energy Secretary Rick Perry of betraying free market principles that have long been a GOP hallmark as he presses FERC to fast-track a new regulation that would directly benefit coal and nuclear power plants, Pro's Darius Dixon reports. "This is inconsistent with a longstanding policy of fiscal responsibility and open markets that have always been espoused by what I thought of as the Republican Party. I'm not sure that we're in the same place today," said former Republican FERC commissioner Nora Mead Brownell, adding that Perry's plan "undoes 20 to 25 years of really hard work."

Republicans have long bashed the Obama administration's Clean Power Plan as an example of the government picking winners and losers, but many conservatives are finding it hard to celebrate that regulation's rescission this week as Perry plots a new government intervention. "There is no free market, but you don't fight intervention with intervention," said Tom Pyle, president of the pro-market Institute for Energy Research who led Trump's DOE transition team. "He's recognized the symptoms but he's not proposing the right cure."

Perry defended his proposal Thursday before a House Energy and Commerce Subcommittee, arguing the federal government had provided financial support to various sectors for a long time and that power markets were never really fair. "We have subsidized the energy industry for a long time. I, frankly, don't have a problem with that," he said. Asked about the cost of his proposal on consumers, Perry also shot back that the issue was crucial for the nation's security: "What's the cost of freedom? What does it cost to build a system to keep America free?"

WHITE ON SCHEDULE: The White House announced late Thursday night that Kathleen Hartnett White, an outspoken critic of climate change science, will be nominated as chair of the Council on Environmental Quality. That shouldn't shock Pros who recall the April story from POLITICO's Alex Guillén and Andrew Restuccia previewing her nomination. Expect White to have one of the more contentious nominations of the year as Senate Democrats assail her longtime attacks on climate change science. "Carbon dioxide is not a pollutant," White wrote in an op-ed last year, a major departure from established climate science. She also called for a government commission to review climate science, something Pruitt is carrying out at EPA. ME would also not be surprised if Democrats bring up the 2014 piece in which White argued fossil fuels helped end slavery.

Plus: The White House said Alex Beehler will be nominated to be assistant secretary of the Army for energy, installations and environment. Beehler, a senior Defense Department official during the Bush administration, now runs his own energy consultancy. He worked at Koch Industries from 2000 to 2003 as director of environmental and regulatory affairs, according to his LinkedIn profile.

NOAA PICK CAUSES A STORM: Barry Myers' push to place restrictions on the information on the National Weather Service releases as CEO of AccuWeather is raising concerns for how

he'd approach such matters as the head of NOAA, POLITICO's Andrew Restuccia reports. "There seems to be a huge conflict of interest considering his business background and belief system," Daniel Sobien, the president of the National Weather Service Employees Organization, said. Sens. Bill Nelson and Brian Schatz are among the Democrats who've also expressed concerns with the pick.

HOUSE READY FOR A PRUITT APPEARANCE: Energy and Commerce Republicans are getting antsy for EPA Administrator Scott Pruitt to make his first appearance before their committee. "There's a lot of interest in him coming," Rep. John Shimkus, who chairs the Environment Subcommittee, tells ME. "[Chairman Greg Walden] is now convinced that it's time the administrator try to make time for us in his schedule." A committee aide said the panel was "currently working" to determine Pruitt's availability, a standard line for the last month.

CONGRESS TO GOVERNOR: DID YOU LIE UNDER OATH? The top House Oversight Republican and Democrat formally asked Michigan Gov. Rick Snyder in a letter Thursday whether he lied to them under oath about when he learned of an outbreak of Legionnaires' disease connected to the Flint water crisis. "If necessary, you may also choose to amend or supplement your testimony," Trey Gowdy and Elijah Cummings wrote. But Snyder shot back with his own letter shortly afterward defending his testimony as "truthful."

EXPANDED WHISTLEBLOWER PROTECTIONS PASS: The House unanimously — by a 420-0 vote — sent legislation S. 585 (115) expanding whistleblower protections for federal workers to the White House. It would also provide training to employees so they're aware of their rights. The chamber rejected a push from Democrats to expand the measure to include employees who call out superiors for "improper use of air transportation" after the resignation of former HHS Secretary Tom Price.

CASE STUDY IN WATER INFRASTRUCTURE WOES: Dilapidated infrastructure has forced the closure of a key lock on the Ohio River in southern Illinois that's led to a 57-mile backup of 51 towboats and 564 barges waiting to pass, Pro's Eric Wolff and Tanya Snyder report . The closure of Lock 52 highlights the need for the major cash infusion that Trump promised during a speech along the banks of the same river earlier this year. Deb Calhoun, a spokeswoman for the Waterways Council, said the advocacy group for water infrastructure would "hold the administration's feet to the fire," noting "the president said we need to fix it."

Situational awareness: Eric and Tanya note Trump himself hasn't spoken much about his infrastructure package recently — and that the fall timeline for Congress to craft a legislative infrastructure package has slipped away.

BACK IN THE DEEP SOUTH: Pruitt was in Mississippi Thursday where he met with Gov. Phil Bryant and held a roundtable to discuss the agency's recent proposal to pull back the Obama-era Waters of the U.S. regulation. "Our job at EPA is not to look at folks in Mississippi as adversaries, but as partners," Pruitt said in a statement. ME would note Pruitt does not appear to have held anything resembling this type of meeting in either the Northeast or Pacific Northwest to date.

MAIL CALL! THEY FOUND SOME BEEF: Four top House Democrats — Peter DeFazio, Betty McCollum, Frank Pallone and Elijah Cummings — sent a letter Thursday asking GAO to investigate whether EPA violated the Antideficiency Act and other federal laws when Pruitt appeared in National Cattleman's Beef Association video urging members' to speak up as the agency considered whether to repeal WOTUS. "We request that GAO provide a legal opinion that addresses whether the Administrator's appearance in the promotional NCBA video in connection with the hyperlinked material on the NCBA website complies with the relevant limitations on the use of appropriated funds for lobbying and publicity or propaganda purposes and the Antideficiency Act," they wrote.

CONCERNED OVER SCIENTIFIC INTEGRITY: Two senior House Science Republicans — Lamar Smith and Andy Biggs — sent a letter to Pruitt on Thursday seeking a briefing, documents and other information about EPA's Integrated Risk Information System program, which establishes a federal database of the risks of various chemicals. "The Committee is concerned about persistent issues regarding the difficulty to correct IRIS assessments that appear to use low-quality science to justify results," they wrote.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

FROM THE DEPARTMENT OF GOOD LUCK WITH THAT: Sen. Dianne Feinstein sent a letter to Pruitt Thursday asking him to reconsider his move to rescind the Clean Power Plan. "Your decision to begin repealing the Clean Power Plan not only endangers the lives of Americans, it also undermines America's international credibility," she wrote.

GAMEPLAN FOR TACKLING SEXUAL HARASSMENT: Interior Secretary Ryan Zinke and National Park Service acting Director Mike Reynolds will today announce a strategy for eliminating sexual harassment, discrimination and intimidation during an all-employee meeting at the Grand Canyon National Park. Zinke's opening remarks will be public, though an employee question and answer session will be closed.

DEMOCRATIC CONSERVATION GROUP LAUNCHES: A new grassroots organization, Democratic Conservation Alliance, launches today with the goal of electing and defending Democratic politicians who will fight against anti-conservation policies. "On behalf of America's public land owners, the Democratic Conservation Alliance will help kick anti-park politicians out of office and replace them with champions of conservation who will make Teddy Roosevelt proud," Matt Lee-Ashley, a board member, said in a statement.

AU REVOIR? All fossil fuel powered vehicles would be off the streets of Paris by 2030 under a plan the city unveiled Thursday, POLITICO Europe's Marion Solletty reports. "The target is by no means written as a 'ban' by 2030 in the climate plan, but rather as a trajectory which seems both credible and tenable," a press release said. Mayor Anne Hidalgo wants diesel cars off the street by 2024 and gasoline cars gone by 2030.

House passes second massive disaster package Back

By Sarah Ferris | 10/12/2017 03:29 PM EDT

The House overwhelmingly passed a $36.5 billion emergency funding package Thursday intended to aid hurricane recovery in Puerto Rico and several mainland states, as well as wildfire response efforts in California.

In approving (353-69) their second tranche of hurricane aid in less than five weeks, House lawmakers agreed to the largest disaster package since Hurricane Sandy. But members from both parties describe the latest infusion as a down payment for a much more costly and comprehensive response.

"We've had some incredible tragedies and natural disasters," House Appropriations Chairman Rodney Frelinghuysen (R-N.J.) said on the House floor Thursday. "We must act quickly to make sure the federal government fulfills its duties to millions of people in need."

The legislation (H.R. 2266 (115)) now heads to the Senate, where leaders plan to take it up once the chamber has finished work on a budget resolution.

In the wake of three deadly hurricanes that pounded the U.S. this season, the aid bill would send another $18.7 billion to replenish the Federal Emergency Management Agency's disaster relief fund. That money is used for urgent recovery efforts like power restoration and debris removal, as well as individual needs like housing and child care assistance.

The measure also includes $4.9 billion in loans to help Puerto Rico's government make payroll for emergency services like police and fire departments.

The federal government has declared a dozen major disasters since August, from the hurricane-battered Florida coastline to California wine country.

More than three weeks after Hurricane Maria hit, Puerto Rico and the U.S. Virgin Islands are still reeling from their most devastating disaster in decades and could remain largely without power through the end of the year.

The bill mostly mirrors the White House's request, including a contentious $16 billion to partially wipe out the National Flood Insurance Program's debt.

Several House Republicans, particularly on the Financial Services Committee, balked at the idea of backing a longtime Democratic priority. Other conservatives, fueled by criticism from groups like Heritage Action and Club for Growth, condemned the idea of including a flood program "bailout" in an emergency spending bill without reforms to help reach long-term solvency.

The GOP opposition was not enough to endanger the bill, however. Leadership ultimately fast-tracked the legislation, using a process for non-controversial bills that requires the support of two-thirds of those voting to achieve passage.

Hours before the House began debate, the disaster relief bill took on fresh urgency as President Donald Trump threatened to pull back federal resources from Puerto Rico. "We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!" he tweeted.

Using their debate time to condemn those remarks, several House Democrats were warned by the presiding officer not to barrage the president on the floor of the House.

"Mr. President, do not send a message to any American that we will turn our backs on them," the House's No. 2 Democrat, Rep. Steny Hoyer (D-Md.), said before the passage vote. "That is not fair, that is not right, and you ought to correct the statement you made."

Rep. Nita Lowey (D-N.Y.), the top Democrat on the House Appropriations Committee, called the president's outburst "reckless" at a time when "Americans are suffering and simply trying to survive." And Rep. Debbie Wasserman Schultz (D-Fla.) accused Trump of "indifference and soft bigotry."

Congress has already enacted $15 billion in emergency aid for hurricane-battered states like Florida and Texas — a bill (H.R. 601 (115)) signed more than a week before Maria made landfall in Puerto Rico.

Democrats have for weeks demanded another cash infusion for the Caribbean territory, where the Trump administration has been accused of responding too slowly.

GOP leaders initially argued that manpower — not cash — was FEMA's most essential resource in the immediate wake of Maria. And a formal funding request was not expected until mid-to-late October.

But as public pressure mounted, the White House ultimately sped up its timeline and submitted a request last week.

Adding to that wish list on Tuesday, the Trump administration called for $4.9 billion to stave off what Puerto Rico Gov. Ricardo Rosselló warned could become a "liquidity crisis."

Lawmakers from both parties, including the full 38-member Texas delegation, have pressed for funding beyond FEMA aid and debt relief for the flood insurance program. Local lawmakers say they desperately need cash for other rebuilding tools, like the Community Development Block Grant program and the Army Corps of Engineers.

House appropriators have said those programs will likely see boosts in a future aid package, while the current bill is intended for the most urgent, life-saving efforts.

"This is the second step. This is not going to be the last one. We are going to need a lot of more help in the coming months," Resident Commissioner Jenniffer González-Colón, who represents Puerto Rico, said on the floor. "It will take a lot of resources, a lot of money and a lot of commitment of U.S. citizens like we are."

Trump sparks new backlash after threatening Puerto Rico aid Back

By Matthew Nussbaum and Louis Nelson | 10/12/2017 07:57 AM EDT

President Donald Trump on Thursday suggested that U.S. citizens on the hurricane-ravaged island of Puerto Rico shouldn't get used to assistance from the federal government — a statement that sparked new outrage and left the White House on the defensive.

"Electric and all infrastructure was disaster before hurricanes," Trump wrote on Twitter in a series of posts. "Congress to decide how much to spend. We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!"

Trump has come under fire for appearing to blame Puerto Rico for neglecting its infrastructure and financial health in recent years, while sparring with local officials and initially giving the U.S. territory less attention than hurricane victims in Texas and Florida.

The tweets on Thursday — which landed as nearly 90 percent of the island was still without power and nearly 40 percent of residents lack access to clean drinking water — particularly touched a nerve.

"It is not that you do not get it; you are incapable of fulfilling the moral imperative to help the people of PR. Shame on you.![sic]" Carmen Yulín Cruz, the mayor of San Juan, wrote on Twitter. In recent weeks, she has been a target of severe criticism from Trump, who dismissed her and other critics as "politically motivated ingrates."

Puerto Rico's governor, Ricardo Rosselló, sought a less fiery path, writing on Twitter: "The U.S. citizens in Puerto Rico are requesting the support that any of our fellow citizens would receive across our Nation."

House Minority Leader Nancy Pelosi (D-Calif.) said at a news conference that Trump's broadside "is heartbreaking and it lacks knowledge."

Two other Democrats, Reps. Nydia Velazquez (D-N.Y.) and Bennie Thompson (D-Miss.), even asked the Department of Homeland Security to investigate the possible underreporting of deaths

caused by Hurricane Maria in Puerto Rico.

The concern was not contained to Democrats. House Speaker Paul Ryan echoed Trump's comment that the island needs fiscal reforms, but suggested now was not the time for that debate.

"At the moment, and it's why I'm going down there tomorrow, there's a humanitarian crisis that needs to be attended to and this is an area where the federal government has a responsibility, and we're acting on it," Ryan said.

The White House sought to clean up the comments later on Thursday, with chief of staff John Kelly telling reporters later that "the U.S. military and FEMA can't be there forever."

"The minute you go anywhere as a first responder, and this would apply certainly to the military, you are trying very hard to work yourself out of a job," Kelly said during a surprise appearance at the White House briefing, adding that FEMA and the military can be withdrawn "hopefully sooner rather than later."

He said he had spoken with Rosselló earlier Thursday and that the White House enjoys a "great relationship" with the governor. "Our country will stand with those American cities in Puerto Rico until the job is done," Kelly added.

The White House also released a statement from press secretary Sarah Sanders on Thursday afternoon.

"Our job in any disaster affected location is to help the community respond and recover from that disaster. We continue to do so with the full force of the U.S. government and its resources in Texas, Florida, Puerto Rico and the US Virgin Islands and other affected areas," Sanders said. "Successful recoveries do not last forever; they should be as swift as possible to help people resume their normal lives. We are committed to helping Puerto Rico. Our Administration is working with Governor Rossello and Congress to identify the best fiscally responsible path forward."

And a White House official stressed that Puerto Rico's debt crisis would be addressed independently of the disaster relief process.

Trump's morning warning came after White House officials had stressed for weeks their intention to work with Puerto Rico throughout the recovery process. And Trump himself had said last month that "we will not rest ... until the people of Puerto Rico are safe."

"These are great people. We want them to be safe and sound and secure, and we will be there every day until that happens," Trump said at a manufacturing event on Sept. 29.

Puerto Rico has struggled with the devastation from a particularly heavy hurricane season, one that included a direct hit from Hurricane Maria late last month that devastated large swaths of the island. The official death toll from the storm has risen to 45, CNN reported Wednesday, and at least 113 people are unaccounted for.

Reports of desperation are piling up, including from federal government officials. The Environmental Protection Agency on Wednesday warned Puerto Rican residents against breaking into industrial waste sites in search of drinking water. And The New York Times reported that medical care remains a challenge on the island, with just 43 of the island's 72 open hospitals currently operating with power.

Still, Trump has asserted that his administration's handling of the storm has been a great success, and he has rejected any criticism of the effort as "fake news."

Even as the president has continued to rail against the territory, Congress on Thursday moved forward on hurricane relief funds, which the White House has also advocated for.

The U.S. House passed a $36.5 billion aid package, much of it targeted at Puerto Rico, by a vote of 353-69. The legislation marks the largest disaster package since the one provided for Hurricane Sandy victims in 2013.

The money would replenish the Federal Emergency Management Agency's coffers by roughly $18 billion, which lawmakers say is enough to last for several more weeks. That includes $4.9 billion in emergency loans to ensure the cash-strapped island government can pay its workers and other debts.

But GOP leaders have been clear that another installment of aid will be needed before the end of this year. Emergency responders from all federal agencies, from FEMA to the Defense Department, have been going quickly through their cash reserves in Puerto Rico's worst disaster in decades.

And Democrats are saying that Trump's rhetoric is not helping.

"The President of the United States' most solemn duty is to protect the safety and the security of the American people. By suggesting he might abdicate this responsibility for our fellow citizens in Puerto Rico, Mr. Trump has called into question his ability to lead," Velázquez said in a statement.

Sarah Ferris, Colin Wilhelm, Rachael Bade and Heather Caygle contributed to this report.

Conservatives fret Perry's grid rule runs counter to market goals Back

By Darius Dixon | 10/12/2017 05:24 PM EDT

Energy Secretary Rick Perry hardened his position Thursday calling for changes to electricity

markets to support coal-fired power plants, even as a rising chorus of conservative voices accused him of abandoning the free market principles that have been a cornerstone of the Republican Party.

Testifying before a House Energy and Commerce subcommittee, Perry rejected the notion that power markets were fair, and he pointed to financial support that has been doled out to other energy sources for years.

"I don't think that you have this perfect free-market world," Perry told lawmakers. "We subsidize a lot of different energy sources. We subsidize wind energy. We subsidize ethanol. We subsidize solar. We subsidize oil and gas. The question is how do you make it as fair as you can?"

Perry's proposal, made public late last month, directed FERC to fast-track a new regulation in power markets overseen by the agency that would allow full cost recovery for power plants that keep 90 days' worth of fuel on-site, a threshold that would only include coal and nuclear power plants.

"We have subsidized the energy industry for a long time. I, frankly, don't have a problem with that," he said.

Perry's plan quickly drew opposition from the renewable energy industry and many power generators, as well as the oil and natural gas sector, which has been the biggest competitor for coal in recent years. Market advocates have also criticized Perry, saying that he has turned his back on the market mechanisms that have been at the heart of Republican economic policies — and that his home state of Texas implemented under former Gov. George W. Bush.

"This is inconsistent with a longstanding policy of fiscal responsibility and open markets that have always been espoused by what I thought of as the Republican Party. I'm not sure that we're in the same place today," said former Republican FERC commissioner Nora Mead Brownell. "This doesn't feel like draining the swamp to me. It feels like the swamp is expanding and oozing, and now is tinged with coal dust."

Perry's proposal "undoes 20 to 25 years of really hard work," she said.

Republican Rob Powelson, a new FERC commissioner, told a gathering of state regulators last week that he didn't "sign up to blow up the markets," according to S&P Global Market Intelligence. He later added in an email to POLITICO that the agency was "looking to address some of these market issues but not looking to [undo] the organized markets by picking winners and losers or creating moral hazards in the marketplace."

Critics contend that if FERC adopted Perry's proposal, the electricity markets that dictate prices for tens of millions of Americans from New Jersey to Illinois would be fundamentally altered to anchor coal and nuclear plants to the electric grid at great cost without a clear guarantee that they wouldn't lose power when the next natural disaster swings through.

But Perry has cast the issue as critical for ensuring the security of the country.

"What's the cost of freedom? What does it cost to build a system to keep America free?" Perry asked Rep. Paul Tonko (D-N.Y.), who had pressed him on whether DOE had considered how much his recent proposal to aid coal and nuclear power might cost consumers.

Coal is the nation's most abundant power-plant fuel, but a combination of environmental regulations, huge surges in natural gas and renewable-energy production and slumping demand for electricity have prompted power companies to shutter many coal-burning plants over the past decade. As recently as 2007, coal provided more than half the electric power sector's net electricity generation — but as of this summer, that share had fallen to less than a third.

Still, other members of the administration are still using free-market arguments to attack former President Barack Obama's climate change policies. At a Monday event in Kentucky's coal country with Senate Majority Leader Mitch McConnell, EPA chief Scott Pruitt stuck to complaints Republicans have long used to bash the Obama EPA's Clean Power Plan, decrying it as something that "really was about picking winners and losers."

But for many conservatives, it's hard to savor the victory of dismantling Obama's Clean Power Plan when the Trump administration is standing up a new government intervention.

"It certainly came out of left field for me," Nick Loris, an energy and environment fellow for The Heritage Foundation, said of Perry's proposal. "When I think about what 'all of the above' energy looks like, it shouldn't mean subsidize all of the above. And this DOE regulation is pushing us down that pathway, and not to limited government."

Loris was also unhappy with DOE's recent decision to increase federal loan guarantees for over-budget Vogtle nuclear reactors in Georgia by $3.7 billion.

"For an administration that is intent on wanting to drain the swamp, this is certainly not helping," Loris said.

Perry, who President Donald Trump has pressed to keep Ohio coal-fired power plants open, has said he was interested in a "conversation" about how to increase the resilience of the grid, but he emphasized on Thursday it was imperative that FERC take quick action.

"We can have a conversation and I think [FERC] must move. I think they must act. We've kicked this can down the road," he told lawmakers.

But some conservatives say even though U.S. energy markets are far from perfect, Perry's approach is the wrong one.

"There is no free market, but you don't fight intervention with intervention," said Tom Pyle, president of the pro-market Institute for Energy Research who led Trump's DOE transition team. "He's recognized the symptoms but he's not proposing the right cure."

Other critics pointed to the irony of a Texan seeking to undermine the power markets, since the

Lone Star state runs perhaps the most free-wheeling electricity system in the country.

"If you've just joined the conversation today, I think you'd be knocked over by the irony of a Republican — indeed a Texas Republican — advocating for getting in the way of market competition and directly imposing a winner-picking outcome," said Joe Goffman, a senior EPA air adviser under Obama.

"To say that there's no free market in electricity is so beside the point as to border on the disingenuous," he added. "Nobody's arguing that there's a free market. What people are arguing for is an unrigged market."

Even other conservatives find Perry's position particularly awkward.

"There's no free market for electricity, but the one example you could find that might actually call that into question is the state of Texas," said Travis Kavulla, a Republican who is a vice chairman of Montana's utility regulator. "It's certainly dissonant with both his reputation, but also the policies of his state, which is really unique among the states and has an extremely vibrant and competitive wholesale and retail market for electricity."

Perry had the power to fast-track the issue but the proposal's fate decision will ultimately fall to five commissioners at FERC, an agency made up largely of technocrats that has long sought to safeguard the energy markets. But a DOE official said that the proposal was not shared with federal regulators before it was filed but also emphasized that DOE expects — and is almost counting on — FERC to make major changes to the proposal.

"It is impossible to actually foresee this being implemented as-written," Kavulla said. "It's inconceivable that FERC would adopt this. In some ways, this is just DOE lighting a firecracker and throwing it in FERC's direction and saying, 'These coal people have really been on our case. Do something about it!'"

Trump eyes climate skeptic for key White House environmental post Back

By Alex Guillén and Andrew Restuccia | 04/12/2017 06:00 PM EDT

President Donald Trump may tap a vocal critic of climate change science to serve as the highest-ranking environmental official in the White House.

Kathleen Hartnett White, who says carbon emissions are harmless and should not be regulated, is a top contender to run the Council on Environmental Quality, the White House's in-house environmental policy shop, sources close to the administration told POLITICO.

White House officials brought White in for an interview late last month, according to a person familiar with the hiring process, and Trump met with White at Trump Tower in November when she was under consideration to lead the Environmetal Protection Agency.

Adding White to the administration would be a major win for Steve Bannon, Trump's chief strategist, and other hard-line conservatives in the White House, who have been feuding behind the scenes for weeks with the more moderate forces in the West Wing over issues like climate change. And her nomination could appease Trump's climate skeptic supporters, who have criticized EPA Administrator Scott Pruitt for hesitating to revisit his agency's conclusion that global warming threatens public health.

Trump administration officials are divided over whether White is the best person for the job, and they are also considering other candidates to lead CEQ, sources said. A White House spokeswoman declined to comment, saying, "We will let you know when we have an announcement."

Like Pruitt, the former Oklahoma attorney general and fossil fuel ally, White would be another voice from a large oil and gas producing state in charge of climate change and environmental policy.

White is a former chairwoman of the Texas Commission on Environmental Quality who now works for a conservative think tank in the Lone Star State. Energy Secretary Rick Perry, a former Texas governor, is said to be advocating on White's candidacy behind the scenes.

Tapping White would only deepen environmentalists' fears that the new administration will implement a wholesale reversal of former President Barack Obama's approach to climate change as a serious, long-term threat to the environment and national security.

White sat on Trump's economic advisory council during his campaign and since 2008 has worked at the Austin-based conservative think tank Texas Public Policy Foundation, which has received funding from Koch Industries, ExxonMobil, Chevron, ConocoPhillips, Devon Energy and other energy companies and utilities. White, who was a registered lobbyist with the group until Nov. 29, has long been a major voice in the niche industry of public figures who question climate science data or downplay the risks of global warming.

"Carbon dioxide is not a pollutant, and carbon is certainly not a poison. Carbon is the chemical basis of all life on earth. Our bones and blood are made out of carbon," White wrote in a June op-ed. She added that CO_2 is the "gas of life" because it is a nutrient used by plants — an argument frequently raised by climate skeptics that most scientists say distracts from the climate-changing components of the gas.

White's position contrasts sharply with established climate science. In its most recent comprehensive report, the United Nations' Intergovernmental Panel on Climate Change, the leading scientific body on global warming, concluded that the Earth is warming because of human-generated emissions — and that time is running short to stave off the worst risks of climate change, including increased temperatures, more extreme weather, sea level rise and

ocean acidification.

Similar findings have been reached by U.S. authorities, including EPA, NASA and NOAA — all agencies that would be subject to guidance White would issue as CEQ chair, if she were confirmed by the Senate.

In an interview with POLITICO in September, White proposed establishing a "blue ribbon commission" to relitigate climate science, underscoring her unorthodox belief that the science showing human-induced climate change is unsettled.

The commission, she said, would develop an "alternative scientific methodology" to the IPCC, whose usefulness she said has "reached its peak."

If nominated, White would likely be an advocate within the administration of reopening the foundation of Obama's climate change agenda: EPA's 2009 "endangerment finding," a scientific conclusion that greenhouse gases constitute a threat to public health or welfare.

Trump told an industry-backed think tank last year that he will "review" the endangerment finding, a potentially difficult task given the scientific consensus on the issue. Any withdrawal of the finding would be challenged by environmentalists in court.

Pruitt has so far declined to reopen the endangerment finding, a decision that has infuriated some of Trump's conservative supporters.

White would be able to play a key role in shaping the Trump administration's overall approach to climate change, and she has been clear that she does not think the issue should be addressed by EPA. In 2015, she argued that Obama's rules to limit carbon emissions from power plants marked "an unprecedented expansion of federal administrative power" with "no measurable climate benefits." And last May, she urged House Speaker Paul Ryan to pass a bill that would block EPA from regulating carbon dioxide, methane, hydrofluorocarbons or other greenhouse gases.

At CEQ, White could direct other agencies to turn their attention away from climate change, and she would be in charge of implementing recent executive orders on energy development and regulatory streamlining. Last month, Trump ordered the council to revoke recently issued guidance directing all federal agencies to consider climate change when they conduct environmental reviews under the National Environmental Policy Act, a decision that would be difficult to challenge in court. And in January, the president told CEQ to come up with a plan to expedite environmental reviews for major infrastructure projects.

While environmentalists have long accused GOP officials of dragging their feet on climate change, White is by far the most outspoken critic of the underlying science — and the most ardent defender of fossil fuels — that Trump has considered to serve in his administration.

In a 2014 blog post, White took aim at an article in The Nation by MSNBC host Chris Hayes, whose "recommendation to avert global warming, like most warmist policies, toys with the

greatest advance made by mankind," she wrote. In White's view, there is a connection between "the abolition of slavery and humanity's first widespread use of energy from fossil fuels." The rise of coal and oil, she argued, provided economic incentive to end the practice of slavery in the U.S. and elsewhere. (One critic fired back that the industrial revolution actually "exacerbated" slavery by increasing the demands for slave-produced goods such as cotton.)

Putting a permanent CEQ chair in place would also raise the question of where Trump wants decision-making on environmental issues to happen — in the White House or at agencies.

The Obama administration shifted major environmental responsibilities from CEQ to EPA and some other agencies as it sought aggressive action on climate change. It remains unclear whether Trump's CEQ will continue in that vein or have a greater role in policymaking, though outside Republicans have encouraged Trump aides to grant the council wide latitude.

The council was run from 2015 through the end of Obama's term by Christy Goldfuss, an unconfirmed managing director. Obama never nominated a replacement for his first CEQ chair, Nancy Sutley, who left in 2014.

White's criticisms of Obama environmental regulations go beyond climate change.

She said in 2015 that EPA's Waters of the U.S. rule, which determines which bodies of water are subject to federal oversight, "is about amending the definitions of well understood words into tortured versions of themselves so that the EPA can seize control of dry land where water may flow after heavy rains."

She also criticized the new ozone standard of 70 parts per billion, calling the rule's scientific conclusions "a statistical house of cards" and predicting it "may be the straw that breaks the back of our struggling economy."

White, who received her bachelor's and master's degrees from Stanford University, was a commissioner at the Texas Commission on Environmental Quality from 2001 to 2007, serving as chairman for the last four years of that term. She previously sat on the Texas Water Development Board.

Environmentalists do give White some credit for advances made during her tenure at TCEQ.

Luke Metzger, director of Environment Texas, told POLITICO that she helped implement a legislative order to create an online reporting system for major emissions events, which is still used by green activists to track noncompliance by major energy companies. Metzger also credited her with a "slightly improved" enforcement policy, though he noted that she blocked an effort by a fellow TCEQ commissioner in 2006 to boost penalties.

In 2008, White joined the Texas Public Policy Foundation, where she directs its Armstrong Center for Energy & the Environment.

Trump's pick for NOAA chief causes a storm Back

By Andrew Restuccia | 10/12/2017 07:52 PM EDT

As a top executive at AccuWeather, Barry Myers has pushed for limits on the kinds of products that the National Weather Service offers to the public, saying they offered unfair competition to his industry.

Now, President Donald Trump's nomination of Myers to lead the weather service's parent agency could allow him to make those kinds of restrictions mandatory — to the benefit of his family-run forecasting company.

The AccuWeather CEO's nomination to head the National Oceanic and Atmospheric Administration is stirring criticism from people who worry he would hobble the weather service, which provoked an industry backlash more than a decade ago by making hour-by-hour forecasts, cellphone alerts and other consumer-friendly data widely available online. A bill that Myers supported 12 years ago, sponsored by then-Sen. Rick Santorum, would have prohibited the agency from competing with private providers in most circumstances.

Myers, who has served as a NOAA adviser, has more recently spoken of cooperation with the agency, including industry's advocacy for Congress to fund its budget. But his critics expressed misgivings nonetheless.

"I fear that he'll do irreparable harm to an agency whose primary mission is to save lives," said Daniel Sobien, the president of the National Weather Service Employees Organization, which strongly opposes Myers' nomination. "There seems to be a huge conflict of interest considering his business background and belief system."

Sen. Brian Schatz (D-Hawaii) agreed, calling Myers a "questionable" choice.

"As the CEO of AccuWeather, Barry Myers views NOAA as a direct competitor that provides high-quality forecasts for free," Schatz said in a statement Thursday. He added that "Mr. Myers will have to work very hard to persuade me that he will run NOAA for the public good."

Myers' defenders say they hope he'll use his long experience running a major weather enterprise to modernize NOAA, which also oversees fisheries, marine sanctuaries, endangered species, climate research, satellite data and its own uniformed officer corps.

"In past decade, AccuWeather has embraced 'Big Data' and become an advertising & digital innovation behemoth under Myers' leadership," wrote Ryan Maue, the chief operations officer at the website Weather.us, in a post on Twitter. Maue separately told POLITICO: "I expect Myers to bring that same vision to NOAA and enhance collaboration with the private sector especially

in the role of space-based remote sensing and satellites."

Myers did not return a call to his office Thursday, and a lobbyist who works with AccuWeather did not respond to emails seeking comment.

Myers, whose brother Joel founded AccuWeather in 1962, would join a roster of other business leaders whom Trump has installed atop his agencies — many of them bringing considerable potential conflicts of interest to the job. He has degrees in law and business, not the science and math degrees that Bush's and President Barack Obama's NOAA chiefs had.

Richard Painter, who served as the top ethics official for President George W. Bush, said Myers can probably meet the legal requirements to separate himself from his business. But, he added: "The appearances are awful. He should recuse from any matter that could have a financial impact on the company. And he should sell the stock."

Myers indeed "will be liquidating all of his private sector holdings," said a spokesman for NOAA's parent agency, the Commerce Department, adding that he'll "be subject to the same ethics and recusal requirements as any federal official."

The spokesman also rejected suggestions that Myers would clamp down on the weather service's public offerings. He said Commerce Secretary Wilbur Ross, who chose Myers for the job, "sees the provision of timely, accurate data to the public as one of the Department's core missions. This includes weather data provided by the NWS, so there is no risk that Myers will restrict NWS provision of data to the public."

"Myers has also been a strong proponent of free and open weather data to the public," the spokesman added.

But in 2005, Myers supported Santorum's widely panned bill, which would have prohibited the weather service from offering a product or service "that is or could be provided by the private sector" — a provision that would have benefited companies like AccuWeather.

The bill made some exceptions, including information needed to protect life and property, but weather entrepreneurs, hobbyists, airline pilots and open-government advocates said it would have choked off a wealth of data that the National Weather Service had begun making widely available. The legislation would have countered a 2004 policy change by the Bush administration that had eased restrictions on the weather service's ability to offer new products and services.

"It is not an easy prospect for a business to attract advertisers, subscribers, or investors when the government is providing similar products and services for free," Santorum said when introducing his bill. Critics, including Sen. Bill Nelson (D-Fla.), noted that taxpayers had already paid for the weather service's data.

Myers told The Palm Beach Post at the time that he wanted the weather service to return to its "core mission ... which is protecting other people's lives and property," rather than spending

"hundreds of millions of dollars a year, every day, producing forecasts of 'warm and sunny.'"

"We work hard every day competing with other companies and we also have to compete with the government," he told ABC News a month later.

Myers had donated $1,000 to Santorum's Senate campaign in 2004 and 2005, though the executive also has a track record of donating to both Democratic and Republican politicians, including Trump, Hillary Clinton and Mitt Romney. Santorum and Myers are both prominent alumni of Penn State University, and AccuWeather is based near the school's main campus in State College, Pa.

Santorum's bill went nowhere, however — an outcome that Maue said turned out to be "the best thing that could have happened for Accuweather as they were on the ground floor of the digital/smart phone App revolution for weather apps."

More recently, Myers testified to the House Science Committee last year about the need for "embracing free and open data in all situations," while maintaining that "the best public facing forecasts and information comes from the weather industry." Still, he said government, industry and academia each bring their own strengths to the relationship, adding that "NWS need not do everything to keep Americans safe. Others can share the load."

Myers estimated that cooperation among the federal government, the private weather industry and academic researchers had saved 1 million to 2 million lives since the late 1950s.

But Sobien, the union chief, expressed skepticism about the kind of partnership Myers envisions.

"In the past, he has supported proposals that essentially made it so the National Weather Service's only function was to provide data to companies like AccuWeather who would then repackage that data and sell them," Sobien said.

AccuWeather, which says its forecasts appear on more than 200 major television stations, 900 radio stations and 180,000 websites, has also been aggressive over the years in criticizing the weather service for what it sees as its shortcomings. Among other incidents, the company complained that the weather service had underestimated the strength of Hurricane Claudette before it hit Texas in 2003, and it said the federal agency was late to issue warnings about a 2015 tornado in Oklahoma.

As recently as February, AccuWeather's website highlighted an incident in which some of NOAA's weather data suffered a "significant outage," while noting that "AccuWeather-produced services remained available and reliable."

AccuWeather's sharp-elbowed approach also extends to competition with its rival The Weather Channel, which it replaced two years ago on Verizon's FiOS television lineup. AccuWeather's website has also inspired eye-rolling among some in the weather community by offering 90-day forecasts, which one meteorologist blogging for the American Geophysical Union dismissed as "scientifically indefensible" and "even worse than the Farmer's Almanac."

Members of the small community of weather watchers, who never forgot AccuWeather's support for Santorum's bill, contend it will be nearly impossible for Myers to fully eliminate his conflicts of interest.

Myers' brother Joel still serves as the company's president and chairman of the board. Their brother Evan is the chief operating officer.

"His family owns the business and he knows the decisions he makes are going to affect the business for years and potentially decades to come," said Andrew Rosenberg, director of the Union of Concerned Scientists' Center for Science and Democracy. He added, "My biggest concern is not that somebody has a business background, but do they genuinely recognize that a job in government is a fundamentally different one from managing and running a private business for profit."

Others are reserving judgment.

David Titley, a former NOAA official during the Obama administration, said he prefers not to comment on personnel decisions. "We will all have to wait & see in what direction Barry wants to take NOAA," he said in an email.

Dems move to shield whistleblowers who report pricey travel Back

By Kyle Cheney | 10/12/2017 03:08 PM EDT

House Democrats on Thursday sought to expand whistleblower protections for federal workers who call out superiors for "improper use of air transportation," following the mounting questions about Trump administration officials' use of expensive forms of travel.

Lawmakers offered the proposal as part of a debate over broader whistleblower protection. It was rejected by Republicans, as expected, but forced GOP lawmakers to vote on an issue that has drawn increasing scrutiny, as several Trump Cabinet members have faced criticism for regular use of chartered or military jets.

Health and Human Services Secretary Tom Price resigned last month after a POLITICO investigation revealed he took hundreds of thousands of dollars' worth of chartered flights, sometimes to go short distances. And other Cabinet members — including Treasury Secretary Steve Mnuchin and Interior Secretary Ryan Zinke — have faced questions about expensive travel at taxpayer expense.

A bill under consideration — the Chris Kirkpatrick Whistleblower Protection Act — would

prohibit federal employees from accessing medical records of job applicants or subordinates and includes punishment for supervisors who retaliate against whistleblowers. The bill also offers more training to supervisors about whistleblower protections.

Democrats offered their proposal as a "motion to recommit," which would have sent the bill back to the House Committee on Oversight and Government Reform to be changed to include their proposed amendment.

Ohio River jam highlights absence of Trump's infrastructure plan Back

By Eric Wolff and Tanya Snyder | 10/12/2017 06:59 PM EDT

Shipments of coal and grain are paralyzed at a critical chokepoint on the Ohio River due to dilapidated infrastructure, highlighting the need for the kind of major capital investment that President Donald Trump promised, in a speech along the banks of the same river, three months ago.

Lock 52 on the Ohio River in southern Illinois closed Oct. 9 because its infrastructure is too decrepit to function effectively in high water, and it could be several more days before the U.S. Army Corps of Engineers reopens it. The closure has created a 57-mile backup of 51 towboats and 564 barges waiting to pass, according to the Waterways Council, an advocacy group for water infrastructure.

Trump visited this key inland waterway in June, emphasizing the importance of waterways and promising investment. But Trump's fiscal 2018 budget proposal called for cuts to civil works spending. And his campaign promise of $1 trillion for infrastructure is so far unrealized, even as the New Deal-era locks and dams on the Ohio River degrade and unscheduled delays balloon.

That's left commodities producers, who depend on waterways for bulk transportation, in the lurch. In 2015, companies shipped 575 million tons of commodities worth $302 billion via waterways. Of that total, coal makes up the largest single industry at 23 percent, with grains following at 15 percent.

Waterways infrastructure, much of which was built in the 1920s and 1930s and some as part of President Franklin Roosevelt's public works programs, is long past its expected lifespan. The Waterways Council says unscheduled delays have grown by 700 percent over the last decade. The closure of a single lock on the Mississippi River during harvest season could cost $933 million, according to a University of Tennessee study.

Carol Labashosky, a spokeswoman for the Louisville district of the Army Corps of Engineers, said having to close Lock 52 isn't unique historically, but there have been frequent intermittent

closures at this lock as well as another one downriver throughout September and October. "This fall we've had quite a few closures," Labashosky said. "Some of them have only been a couple of days or one day, but this is a lengthy delay."

Labashosky said they'll reopen the lock "as soon as the river cooperates," which she estimated would happen Friday or Saturday. Others are betting on Oct. 15 or 16.

Industries reliant on waterways are looking to Trump's promises of infrastructure investment to help modernize and update the locks and dams. The Waterways Council agrees. Deb Calhoun, a spokeswoman for the group, said they want to "hold the administration's feet to the fire.

"The president said we need to fix it," she said.

In June, Trump spoke on the banks of the Ohio River, in front of a barge filled with West Virginia coal, to proclaim that "America must have the best, fastest and most reliable infrastructure anywhere in the world." Noting the "dilapidated system of locks and dams that are more than half a century old" and the "$8.7 billion maintenance backlog that is only getting bigger and getting worse," Trump declared: "We cannot accept these conditions any longer."

But in May the administration released a fiscal 2018 budget that proposed to cut the Corps' civil works budget by about 17 percent. The amount proposed would fund only a small number of the 25 congressionally authorized priority projects, which have a combined portfolio value of $8.8 billion.

Calhoun said they are "trying to move forward and not stop and go backwards," and observed that the budget came out when Trump was "pretty new on the job."

Trump's budget did address the urgent bottleneck at Locks and Dams 52 and 53. Though it proposed to shut down work on four ongoing Corps waterways projects, it requested $26 million out of the Inland Waterways Trust Fund for the Olmsted Locks and Dam project, which was supposed to solve the problems at Locks and Dams 52 and 53 years ago, but has been mired in delays due to a misguided attempt at a new dam-building method.

The Olmsted project, authorized in 1988, was supposed to be finished in 10 years for $775 million. The Corps claims it will be done next summer, nearly 30 years later — with a final cost close to $3 billion.

For the remainder of the 25 projects Congress wants to see built, industries are waiting on the infrastructure package Trump promised during the campaign.

Trump himself hasn't spoken much about his infrastructure package since proposing that $1 trillion in spending could be leveraged by $200 billion from the federal government. In fact, he has since indicated he may be souring on public-private partnerships, which administration officials and Republican lawmakers had long said would fund 80 percent of the plan. The battle over health care has pushed back the promised tax overhaul, which is not expected to be quick business either. The fall timeline for Congress to craft a legislative infrastructure package has

slipped away, and no one knows to when.

Ohio-based coal producer Murray Energy depends on inland waterways to move its product, and is calling for more spending.

"We certainly support President Trump's commitment to rebuild America's infrastructure, particularly the locks and dams along the Ohio, Monongahela and Mississippi Rivers," spokesman Gary Broadbent told POLITICO.

Even if the Olmsted Locks and Dam opens on time next summer, the project won't be finished until 2022, when the existing Lock 52 and 53 are finally pulled out of the river.

Subject: Mattis warns of 'massive military response' if North Korea threatens attack

Defense Secretary James Mattis on Sunday warned of a "massive military response" if North Korea threatens an attack against the United States, after the rogue nation said it completed the test of a hydrogen bomb.

"We have many military options, and the president wanted to be briefed on each one of them," Mattis told reporters outside the White House. "Any threat to the United States or its territories, including Guam, or our allies, will be met with a massive military response - a response both effective and overwhelming.

Mattis promised an "ironclad" American committment to its regional allies. The escalation in rhetoric comes after President Donald Trump tweeted Sunday morning that North Korea is "very hostile and dangerous" and called on South Korea to end its "talk of appeasement."

See http://www.politico.com/story/2017/09/03/trump-north-korea-nuclear-242289 for full coverage of the situation.

NESHAP/Chemical Recovery Combustion Sources at Pulp Mills

AIR

Final rule of the EPA revises the NESHAP for chemical recovery combustion sources at kraft, soda, sulfite, and stand-alone semichemical pulp mills to address the results of the residual risk and technology review. The rule modifies opacity monitoring provisions, requires recovery furnaces and lime kilns to maintain proper operation of the electrostatic precipitator (ESP) automatic voltage control, and adds a five-year periodic emissions testing requirement. The rule also requires facilities to meet the standard at all times, including during periods of startup, shutdown, and malfunction, and adds alternative monitoring parameters for wet scrubbers and ESPs during such periods. In addition, the rule requires electronic submission of various compliance reports. The rule, which is based on comments and updated analysis, does not finalize proposed revisions to the opacity limits or ESP parameter monitoring requirements. The rule is effective Oct. 11, 2017, and facilities must be in compliance by Oct. 11, 2019. Contact: Kelley Spence; EPA, Office of Air Quality Planning and Standards; 919-541-3158; spence.kelley@epa.gov. Citations: 40 CFR 63.14 through 63.868, Table 1 to Subpart MM

82 FR 47328 (10/11/2017)

Regulatory Update

AIR
Oregon SIP
AIR

Final rule of the EPA partially approves revisions to the Oregon SIP and approves certain of the revisions to apply in Lane County. The revisions update particulate matter emission standards, revise permitting requirements for emergency generators and small natural gas or oil-fired equipment, and establish sustainment and reattainment state air quality area designations. The revisions also update the major and minor source preconstruction permitting programs, address public notice procedures for informational meetings, and revise the woodstove replacement program for small commercial solid fuel boilers. In addition, the revisions update the Source Sampling Manual and Continuous Monitoring Manual. Finally, the revisions reorganize the SIP and remove outdated and duplicative provisions. The rule does not approve certain revisions that are inconsistent with Clean Air Act requirements or inappropriate for SIP approval or revisions concerning annual reporting requirements for small gasoline dispensing facilities that were approved in an Oct. 27, 2015, final rule (80 FR 65655). The EPA is deferring action on proposed approval of changes to the state's excess emissions and emergency provisions. The rule is effective Nov. 13, 2017. ENDANGERED SPECIES
California Tiger Salamander, California Red-Legged Frog Incidental Take Permit
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application from Betteravia Ranches LLC, of Santa Maria, Calif., for an incidental take permit for the California tiger salamander and California red-legged frog in connection with activities associated with the Curletti Farming Project draft low-effect habitat conservation plan. The potential taking would occur as a result of activities necessary for the implementation of the installation, operation, and maintenance of row crop agriculture. The notice also announces the agency's preliminary determination that the project is "low-effect" and is eligible for a categorical exclusion under the National Environmental Policy Act. Comments are due Nov. 13, 2017. Contact: Rachel Henry; USFWS, Ventura Fish and Wildlife Office; 805-677-3312

GENERAL ENVIRONMENT AND SAFETY
Land Use Plans/Greater Sage-Grouse Conservation
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Bureau of Land Management to consider whether to amend land use plans that were amended or revised in 2014 and 2015 regarding greater sage-grouse conservation in 10 states. The current action is in response to a court ruling that the BLM failed to prepare a supplemental EIS for the designation of sagebrush focal areas in the Nevada and Northeastern California greater sage-grouse resource management plan amendment in Nevada. Comments are requested on greater sage-grouse land management issues that could warrant land use plan amendments. Comments are due Nov. 27, 2017. GENERAL ENVIRONMENT AND SAFETY
Maryland/Chesapeake Bay Crossing Study
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Federal Highway Administration, with the Maryland Transportation Authority (MDTA) as local project manager, to prepare a Tier 1 environmental impact statement for the Chesapeake Bay Crossing Study in Maryland. The EIS will identify the preferred corridor alternative for addressing congestion at the Chesapeake Bay Bridge and evaluate its financial viability. The study will include a review of existing roadway infrastructure and environmental conditions along both shores of the bay to identify potential crossing corridors in Maryland. If the final Tier 1 EIS identifies an action (build) alternative, the MDTA will complete a Tier 2 environmental review document evaluating site-specific project level impacts and required mitigation commitments. A cooperating agency meeting is scheduled for Oct. 25, 2017, in Annapolis, Md. A webinar is expected to be scheduled for November 2017, and additional meetings will be announced on the project webpage. Comments are requested, but a due date is not specified. TRUMP'S EPA: Agency at a crossroads -- Complete coverage

October 17, 2017

Latest News

Pruitt Order Ending 'Sue-And-Settle' Could Increase Litigation, Critics Say

EPA Administrator Scott Pruitt's new directive ordering the agency to end so-called "sue-and-settle" suits is being met with concern by industry attorneys and skepticism by environmentalists, who say the order could make settlements impossible, even in cases where the agency has a mandatory duty to act, and will likely result in more litigation and court orders providing the agency with less time to act.

Region 8's Benevento Aims To Bolster Pruitt's Push For Superfund Reform

EPA Region 8 Administrator Doug Benevento says he hopes to assist Administrator Scott Pruitt in achieving his "laudable" policy goals including overhauling the Superfund program to accelerate cleanups, citing his prior experience on cleanup issues as a Colorado state official as offering useful relevant experience.

Pruitt's Plan To Repeal CPP Poses Legal Risk For EPA Due To GHG Mandates

EPA Administrator Scott Pruitt's decision to repeal the Clean Power Plan (CPP) without formally proposing a replacement appears aimed at minimizing political blowback from conservatives hostile to any greenhouse gas controls but could pose a legal risk for the agency if the courts interpret it as dilatory given mandates to regulate GHGs, industry sources and former officials say.

Carper Criticizes Trump's EPA Nominees Over Ethics Responses

The top Democrat on the Senate Environment & Public Works Committee (EPW) is attacking four Trump administration nominees to EPA for what he says are inadequate responses to questions on ethical and regulatory issues, underscoring the minority's opposition to the nominees ahead of an Oct. 18 business meeting where senators will vote on them.

Texas Coal Plant Closures Raise Questions Over Future Of Haze Plan Suit

The announcement of the impending closure of three Texas coal-fired power plants is raising questions over the future of litigation environmentalists are pursuing against

the state's EPA-backed plan for curbing regional haze-forming emissions, because the plan relies in part on the facilities' participation in an emissions trading program.

Capito Poised To Be Key Player In Vote On Trump's EPA Toxics Nominee

As the Senate environment committee prepares to vote on a slate of EPA nominees, Sen. Shelley Moore Capito (R-WV) appears poised to play a key role in determining whether Michael Dourson, President Donald Trump's nominee to lead EPA's toxics office, wins confirmation.

Pruitt Signs Directive Barring Use Of 'Sue And Settle' Agreements

EPA Administrator Scott Pruitt has signed a directive he says will end “sue and settle” agreements through which he says special interest groups such as environmental organizations have forced the agency into legal agreements that impose binding deadlines for issuing discretionary regulations.

States, Industry Seek Rehearing on Methane Lawsuit

Posted July 28, 2017, 11:59 A.M. ET

By Catherine Douglas Moran

A full federal appellate court should reconsider a decision that forced the EPA to implement methane emissions limits for the oil and gas industry that it plans to revise, states and industry groups said.

The U.S. Court of Appeals for the District of Columbia Circuit July 3 struck down the Environmental Protection Agency's plan to halt implementation of the methane regulator for 90 days, finding the delay an abuse of agency authority.

The industry groups and states, including the American Petroleum Institute and the Interstate Natural Gas Association of America, filed two petitions—one July 28 and the other July 27—that ask for the full court to rehear the case .

Trump May Have to Boost Biofuel as Court Deals Blow to Oil

Posted July 28, 2017, 01:37 P.M. ET

By Mario Parker, Andrew Harris and Ari Natter

The Trump administration may have to reconsider its proposal from earlier this month to curb biofuel use after a U.S. appeals court in Washington ruled that the Environmental Protection Agency doesn't have the authority to cut quotas while citing inadequate domestic supply.

Issued July 28, the unanimous ruling by a three-judge panel comes amid conflicting legal challenges to actions taken by the EPA. Some factions claim the agency set renewable fuel requirements too high, while others said they're too low. Shares of ethanol producers rose on the news while refinery stocks declined.

U.S. Circuit Judge Brett Kavanaugh wrote that EPA isn't allowed "to consider the volume of renewable fuel that is available to ultimate consumers or the demand-side constraints that affect the consumption of renewable fuel by consumers."

The ethanol industry hailed the court's move as a victory Ams. for Clean Energy v. EPA, D.C. Cir., 7/28/17.

Earlier this month, the Trump administration issued a proposal that for the first time would cut the amount of renewables that must be blended into the fuel supply under a 12-year-old law known as the Renewable Fuel Standard.

The court ruling is a blow to oil refiners, including billionaire Carl Icahn, who have argued that there are constraints to blending the fuels into petroleum. The American Petroleum Institute said in a statement it was "disappointed" with the court's decision, which the trade group said highlighted the need for congressional action to reform the renewable fuel standard—a move congressional analysts have said is unlikely to happen.

"We are still reviewing the decision, but the fact the court has affirmed our position that EPA abused its general waiver authority by including factors such as demand and infrastructure in a waiver intended to be based solely on available supply is a great victory for consumers and the RFS program," said Bob Dinneen, the chief executive officer of the Renewable Fuels Association, an ethanol industry trade group.

The EPA didn't immediately respond to a request for comment. In a July 5 statement, the agency, which administers the program, said that the proposal was "consistent with market realities focused on actual production and consumer demand while being cognizant of the challenges that exist in bringing advanced biofuels into the marketplace."

"This is pretty huge," said Gene Gebolys, CEO of biofuel producer World Energy Alternatives LLC. "This gives the Trump administration clear guidance on what the legislative branch intended when they passed the law and what the judicial branch meant when they upheld the law."

Green Plains Inc., one of the biggest U.S. ethanol producers, rose 1.3 percent to $19.70 at 12:44 p.m. in New York. CVR Energy Inc., an independent oil refiner that counts Carl Icahn as its biggest investor, slumped 3.8 percent.

Renewable Identification Numbers (RINs), biofuel credits that track 2017 ethanol consumption quotas, rose 1.2 percent to 82 cents apiece, the highest in a week, data compiled by Bloomberg show.

EPA Argument

The court heard the argument on April 24. The case dealt with Obama-era EPA actions to cut quotas for ethanol and other biofuels for the years 2014, 2015 and 2016 below statutory levels, reducing totals set forth in 2007 legislation, with the regulator taking the position it had the power to do so under a provision allowing it to adapt to a production shortfall.

There was no shortfall, but the EPA argued that "production" could include the fact that the market couldn't absorb the additional fuel, government lawyer Samara Spence told the court.

The EPA "misunderstood its assignment under the mandate," former U.S. Solicitor General Seth Waxman countered, arguing on behalf of biofuels proponent Americans for Clean Energy, adding that the agency "screwed up."

"The salient point here is that EPA agrees there is more than adequate supply," Waxman said.

From the bench, Kavanaugh indicated he agreed.

"I understand the difficulty EPA is in here, but the statute doesn't seem to give EPA the authority to fix everything that is not working right," he told Spence, the government's attorney. "If this thing is totally screwed up, Congress should fix it."

Joining in the opinion were U.S. Circuit Judges Patricia Ann Millett and Janice Rogers Brown.

Funding for Russia Pipeline to EU at Risk With U.S. Sanctions

Posted July 28, 2017, 9:01 A.M. ET

By Elena Mazneva and Angeline Benoit

The financing of Russia's $11 billion natural gas pipeline through the Baltic Sea could be affected by sanctions that just passed the U.S. Senate, according to one of project's backers.

Engie SA's current legal view is that if the sanctions were implemented its backers could "stop and not continue to fund this project in order not to be subject to any sanction whatsoever," the French utility's Executive Vice President Pierre Chareyre said July 28 on a conference call.

The Kremlin-backed project, known as Nord Stream 2, has been at the center of a disagreement between the U.S. and European Union in the past month. While the bill on extending U.S. sanctions against Russia, which passed the Senate July 27 but has yet to be signed by President Donald Trump, could affect any energy export pipeline in which a Russian company has a significant role, it also says that America would specifically "oppose" the pipeline led by Gazprom PJSC.

The 1,220 kilometer (758-mile) undersea link to Germany would cost 9.5 billion euros ($11 billion). Engie, Royal Dutch Shell Plc together with Germany's BASF SE and Uniper SE, as well as Austria's OMV AG agreed in April to provide 10 percent of the funding each to see the link started by the end of 2019. The EU warned earlier this week that it could retaliate against the U.S. "within a matter of days" should its companies and their plans be targeted by the sanctions.

Uncertain Impact

OMV continues to monitor the situation "very carefully and will make an assessment when all of the facts are on the table," its press service said by email on Friday.

"In general, sanctions have not proven to be an instrument that achieves its given goal as we have seen in the last years," OMV said. "From a European standpoint, the additional quantities of natural gas from Russia are necessary."

If the sanctions bill is enacted, Shell would "have to go through the phase of rule making to understand exactly how that bill should be implemented," before understanding the full implications for Nord Stream 2, Chief Executive Officer Ben Van Beurden said on a conference call July 27.

As the project to some extent would compete with U.S. exports of liquefied natural gas to Europe, the Nord Stream 2 participants, including Russia and Germany, have said the measures sought to

bolster U.S. economic interests.

The U.S. bill says the president may impose sanctions against companies that invest in or supply a Russian export pipeline. This relates to construction, modernization or maintenance entailing a minimum of investment of $1 million. Possible penalties included a ban on loans and investments from U.S. institutions, on banking and property transactions, and procurement deals with U.S. firms.

Nord Stream 2 has enough funding at least for this year, with more than 1 billion euros ($1.17 billion) already received from EU partners, Gazprom Deputy CEO Alexander Medvedevsaid last month. While the company has repeatedly said it has enough money to complete the pipeline on its own if needed, in a recent Eurobond prospectus it noted that "difficulties," delays or even failures are theoretically possible because of the curbs.

"Sanction law is not retroactive so only future funding transfer would trigger risks," Engie's Chareyre said. "We are not in that situation yet and advocacy is being pursued very actively by Engie, other companies and the EU."

Transcanada Still Sees Producer Support for Keystone XL Line

Posted July 28, 2017, 02:48 P.M. ET

By Kevin Orland

TransCanada Corp. said it still expects commercial support for its controversial Keystone XL oil pipeline, tamping down speculation that it was having trouble finding customers for the long-delayed line.

Keystone XL, which was rejected by the Obama administration before being revived by President Donald Trump this year, would boost TransCanada's dividend growth, the company said in a statement July 28. Media reports in recent weeks said that the company was having trouble signing up customers for the pipeline, conceived to help move crude from Alberta's oil sands to refineries on the U.S. Gulf Coast.

TransCanada said earlier this year that it was working to sign new shippers following years of delays. Given the time it took to gain federal approval, TransCanada said it expected some shippers to reduce their volume commitments and that other new customers would be introduced. The company said July 27 that it's soliciting additional commitments to ship oil on Keystone XL.

"We've had good support from our legacy shippers, which gives us a good base to launch this open season," Paul Miller, TransCanada's president of liquids pipelines, said on a conference call.

The open season closes on Sept. 28, with the results of the process expected to be final in late November, Miller said. The company should also receive its regulatory decisions from Nebraska around that time and will weigh both of those factors in determining whether to proceed with the line, he said. If TransCanada decides to move ahead on Keystone XL, it would need six to nine months to prepare for construction and about two years to build it, he said.

Dividend Growth

Success in advancing Keystone XL or other growth initiatives such as the Bruce Power life extension may "augment or extend the company's dividend growth outlook," Chief Executive Officer Russ Girling said in the statement. The company plans to increase its annual dividend at the upper end of an 8 percent to 10 percent range through 2020.

Keystone won votes of confidence from the chief executive officers of Canadian oil producers Cenovus Energy Inc. and Suncor Energy Inc. this week. The CEOs both said they support Keystone and that the Canadian energy industry needs more pipeline capacity. Suncor confirmed that it plans to ship its products on Keystone.

Alberta's oil producers have long warned that a lack of pipeline space was hurting their prospects. That pipeline pinch may start to hit the industry later this year as Suncor's massive Fort Hills oil-sands project starts to produce oil and Canadian Natural Resources Ltd. completes another phase of expansion at its Horizon mine.

Beyond Keystone

Looking beyond Keystone, TransCanada is spending C$2 billion ($1.6 billion) to expand its natural gas pipeline network in Western Canada. The upgrades to the Nova Gas system will include 171 miles (275 kilometers) of new pipeline, additional compression and new metering stations.

The company said July 28 that it was applying to the National Energy Board to expand capacity on its Canadian Mainline, which carries natural gas from producers in Alberta to markets in the nation's east. The company would spend about C$160 million ($129 million) on the project, which is underpinned by 15-year contracts.

TransCanada's second-quarter profit was 76 Canadian cents a share, excluding some items. The average estimate of analysts surveyed by Bloomberg was 68 cents.

More Charging Stations Coming to California in Initial VW Deal

Posted July 28, 2017, 7:44 A.M. ET

By Carolyn Whetzel

Volkswagen subsidiary Electrify America will spend $200 million over the next 30 months to build California's electric vehicle infrastructure and boost use of zero-emission vehicles in the state.

The investment is the initial phase of the court-ordered $800 million program VW must implement in the state after the automaker was found to have equipped 2009-2016 model year diesel-engine vehicles with illegal software to mask emissions during certification tests.

The California Air Resources Board approved the first of four investment plans Electrify America must submit over the next 10 years. It calls for 400 new charging stations in Fresno, Los Angeles, Sacramento, San Diego, San Jose, and San Francisco and fast charging systems along highways. Other elements of the plan and a supplement CARB requested in March, focus on giving low-income and disadvantaged communities access to zero-emission vehicles and public outreach.

Mexico's Ethanol Boost Fuels Cross-Border Environmental Debate

Posted July 28, 2017, 7:16 A.M. ET

By Emily Pickrell

Mexico's decision to nearly double the amount of ethanol permitted in gasoline is pitting two big winners—U.S. corn growers and ethanol producers—against some environmental activists and Mexico's own auto industry.

Last month Mexico's Energy Regulatory Commission (CRE) announced it was immediately boosting the maximum amount of ethanol that could be blended in Mexican gasoline supplies from 5.8 percent to 10 percent, and that the change would bring Mexico (outside of its three biggest cities) in line with U.S. gasoline standards.

The U.S. Grains Council—which represents ethanol producers such as Cargill, John Deere, Dow AgroSciences, and Kansas Ethanol—welcomed the decision, as did former commission president Francisco Salazar.

"I think that the CRE has made the right move," Salazar, the agency's president from 2005 to 2015, told Bloomberg BNA. "The standard on the other side of the border is a good one."

While the U.S. already supplies about half of Mexico's gasoline and is the primary producer of ethanol used in Mexico, the change, which took effect June 26, also could expand gasoline imports from the U.S. because retailers won't need to sell gasoline with different ethanol levels on either side of the border.

Cross-Border Cooperation

Despite feuding with Mexico over a border wall, President Donald Trump promised to support ethanol while campaigning for president, and he reiterated that position in a speech in Iowa last month. The ethanol industry is "under siege," but the Trump administration is saving it, the president told an Iowa crowd in June.

Earlier this month, Energy Minister Joaquin Coldwell and U.S. Energy Secretary Rick Perry agreed to work on standardizing energy regulations between the countries, as a way of moving toward a single North American energy region. The Trump administration has listed this integration as one of its objectives in renegotiating the North American Free Trade Agreement, and Mexican President Enrique Pena Nieto has identified it as a key priority.

"We are pleased to see this [ethanol] decision, which is the culmination of significant work by Mexican authorities and industry as they continue to diversify and improve their fuel supplies," Tom Sleight, the U.S. Grains Council's president and chief executive officer, told Bloomberg BNA in a statement.

U.S. Winners

U.S. corn growers had pushed hard for their southern neighbor to adopt the U.S. ethanol standards, according to George Baker, publisher of Mexico Energy Intelligence, a Houston-based research group.

"There was a big effort on the part of U.S. refineries to lobby Mexico," Baker said. "It basically is an effort to prop up the Iowa corn industry by exporting gasoline."

And U.S. companies are likely to become the big ethanol suppliers for Mexico, which currently produces about 66 million gallons per year of ethanol, according to the Grains Council. By contrast, the largest U.S. ethanol plants alone make as much as 300 million gallons per year of ethanol.

Whether the council's efforts should be seen as lobbying or helping a neighbor develop its own market is a matter of perspective, said Mike Dwyer, the Grains Council's chief economist and head of the global ethanol program. The mission of his program, he explained, is to provide regulators around the world with information on the benefits of ethanol and the science that supports its impact on the environment.

"We are working with the Mexican ethanol industry and helping them develop a resource," Dwyer told Bloomberg BNA. "Mexico has the necessary feedstocks to produce ethanol; they have plenty of sugar and sorghum. What they don't have is the knowledge, and that is what is the focus of our engagement—education."

Environmental Dissent

Research on the health impacts of ethanol in gasoline are mixed. The addition of ethanol reduces two types of carcinogens, benzene and butadiene, according to a 2009 Stanford University report, but may increase ozone, which has been linked to asthma and other lung ailments, depending on the characteristics of the atmosphere.

Ethanol in gasoline has not been permitted for sale in Mexico's three most heavily populated cities—Mexico City, Guadalajara or Monterrey—because of their significant air quality issues. And this ban continues, at least for now.

Mexican environmental groups argue the decision to increase the percentage of ethanol in the rest of the country overlooks the potential environmental and health damage it could inflict, in part by increasing ozone in the atmosphere.

Ethanol advocates point to research—such as a January 2017 report from the U.S. Department of Agriculture— that ethanol gasoline produces fewer greenhouse gases and thus benefits climate change reduction goals.

But some environmental groups question the actual environmental benefits of ethanol, including as it relates to greenhouse gas emissions. They point to the fossil resources that are invariably required to grow these crops and then process them into an additive for fossil fuel, which they say can largely neutralize the carbon footprint benefit.

High-Altitude Cities

In Mexico, the environmental issues have focused mostly on air quality.

The concerns that ethanol gasoline would be especially problematic for high-altitude cities, such as Mexico City, have not been proven by the experience of other cities who once raised the same concerns, Dwyer said. He listed Denver and Bogota, Colombia, as examples.

"They have not had any reported problems of ozone going up," Dwyer said. "The Mexicans will find the same thing that is found everywhere else on the planet—that ethanol is a great additive for improving air quality, for reducing GHG emissions in the transportation market and is a great low carbon source of octane."

And while a 2014 Northwestern University study on air quality in Sao Paulo, Brazil, showed that ozone levels dropped when drivers switched from ethanol to gasoline in flexible-fuel vehicles, the study also noted that the impact of ethanol versus gasoline on air quality depends on the characteristics of the local atmosphere.

'Waiting For the Data'

The Energy Regulatory Commission commissioned the Mexican Petroleum Institute to study the health implications of increasing ethanol to 10 percent in gasoline, and to conduct a cost-benefits analysis. But the study's findings have yet to be released.

"Right now, we are waiting for the data," said Anaid Velasco, an air quality analyst with the Mexican Center for Environmental Law. "We do not think that we have enough data to make that kind of decision."

Carmakers Unhappy

The Mexican Auto Industry, or AMIA, which represents some of the most powerful international auto producers in Mexico, such as General Motors Co., Honda Motor Co., Audi and Volkswagen, has also expressed concern about the new rules.

AMIA contends that because Mexico's auto emissions standards—especially for its older cars—are less stringent than those in the U.S., a larger portion of its fleet is potentially less capable of processing the higher percentage of ethanol in gasoline.

"The older vehicles in circulation lack the same emissions control capacity as the more recent vehicles," wrote Osvoldo Belmont Reyes, the technical director of AMIA, in a June 22 letter to the Energy Regulatory Commission. "The resulting increase of particles would eliminate the same air quality improvements that the government is trying to achieve, with consequential health implications for the public."

VW, GM and Audi told Bloomberg BNA they support the AMIA position.

But former CRE president Salazar said the idea in Mexico that ethanol is more harmful for air pollution is based on older research that used cars with no catalytic converters.

"Ethanol is used in areas with an altitude even higher than Mexico City and it is not a problem," Salazar said. "Why would Mexico have a different standard when the U.S. standards have been approved by the EPA? It doesn't really make sense to counter the tough environmental standards of the U.S."

Wind Projects in Peril as Indian States Rethink Purchase Pacts

Posted July 28, 2017, 8:17 A.M. ET

By Anindya Upadhyay

Two Indian states at the forefront of adding renewables to their power mix are backtracking on agreements for at least one gigawatt of wind project and are seeking lower prices, potentially dealing a blow to Prime Minister Narendra Modi's green energy goals.

The southern states of Andhra Pradesh and Karnataka, which account for a quarter of the country's installed wind capacity, are renegotiating or scrapping purchase agreements with developers and want power at prices lower than what had been stipulated in contracts already signed, developers said.

"We have lost 75 megawatts of our project pipeline as Karnataka has canceled 400 megawatts of PPAs and there seems to be no other option than taking legal recourse for this," London-listed Mytrah Energy Ltd. Chief Executive Officer Vikram Kailas said in a phone interview.

The developments are a fallout of India's shift toward auctions to buy electricity from wind that brought tariffs to record lows, prompting states to renegotiate feed-in tariffs that guarantee a fixed price to producers for their power. This puts at risk the developers' financial health if price agreements are renegotiated and could threaten Modi's resolve to install 175 gigawatts of renewables by 2022.

Andhra Pradesh wants to pay a lower price for wind power projects than what was agreed to for 684 megawatts of capacity, people with knowledge of the matter said, asking not to be identified citing rules. Neighboring Karnataka scrapped power purchase agreements, or PPAs, signed earlier this year for 400 megawatts of wind projects, said P. Krishnamoorthy, general manager for power purchase at state electricity retailer Bangalore Electricity Supply Co Ltd.

Auction Impact

While Mytrah's projects are yet to be built, Bangalore-based Atria Power has lost investments of 1.9 billion rupees ($30 million) to build a 24-megawatt project in Karnataka, a company official said. International Finance Corp.-backed Hero Future Energies Ltd. faces renegotiation of the tariff for its 70 megawatts of commissioned projects out of a planned 120 megawatts in Andhra Pradesh.

"Andhra Pradesh should honor what they have signed," Hero Future Energies Chief Executive Officer Sunil Jain said. "If all these PPAs are renegotiated, you could have bad debts of millions of dollars and what's worse is that you'll drive investors away."

The first wind auction held in February brought wind tariffs to the lowest level in the country. Various states are now seeking the same from developers and are even reneging on previous pacts. By March, states stopped signing PPAs with projects either in development or commissioned and now the situation has escalated to reopening the pacts.

Southern Power Distribution Company of Andhra Pradesh Ltd., the state's power retailer, has decided to renegotiate the PPAs because the same developers building projects at record-low tariffs through auctions in one state shouldn't be selling clean energy at higher tariffs in another, people said. Negotiations are underway to resolve the impasse, they said.

An email seeking comment sent to H.Y. Dora chairman of Southern Power Distribution remained unanswered.

Wind Additions

According to ratings agency India Ratings and Research, there could be a substantial dip in wind capacity additions in the current financial year ending March 31. Installations could fall to 1 gigawatt to 1.5 gigawatts from an all time high of 5.4 gigawatts last financial year, the rating agency said in a recent note.

As of June, India had 32 gigawatts of wind capacity. The nation is aiming to raise that to 60 gigawatts by 2022 as part of the country's climate pledge.

Subject: Morning Media: Reading the Sinclair tea leaves -- Wall Street Journal editor taking heat -- The Guardian still waiting on Gianforte

By Alex Weprin | 08/24/2017 06:07 AM EDT

With Cristiano Lima

READING THE SINCLAIR TEA LEAVES: Sinclair Broadcasting has filed a document with the FCC responding to critics of its proposed acquisition of Tribune Broadcasting. You can read the whole thing here, but I thought it would instructive to look at it through the lens of recent coverage of the company.

-Is Sinclair trying to launch a Fox News competitor? Rumors of Sinclair taking on Fox have been rampant since the Tribune deal was announced, and recent reports have suggested that Sinclair might be talking to Steve Bannon about a partnership with Breitbart. Fox has also suggested that it may strip the Fox affiliation from the Tribune stations Sinclair is seeking to acquire. So is a Fox News competitor in the works? The filing gives little away, but it does note that Sinclair wants to be able to compete with the likes of Fox for advertising dollars: "By increasing the national footprint in which Sinclair stations broadcast and sell advertising, particularly by adding stations in the largest markets, such as New York, Los Angeles and Chicago, Sinclair will be better situated to sell advertising to national advertisers who are seeking a national platform. This will create an additional competitor in the network advertising space..."

-Is Sinclair biased, and does it force conservative programming on its local stations? Sinclair does not directly address its own political leanings, but it does imply that the rest of the broadcast media tilts one way, and that they are providing "a new voice" to the market. Sinclair has a large D.C. bureau, and uses it to funnel national news stories to its local affiliates.

"The Washington D.C. news bureau contributes not only to the quantity and quality of information available to local viewers around the country, but adds to the diversity of viewpoints on national issues by providing a new voice in addition to those of ABC, NBC and CBS, which currently dominate the national broadcast news offerings in most local markets," the filing says. "Petitioners further allege that the transaction is against the public interest because Sinclair presents biased or 'conservative' news coverage. Taken at face value, petitioners arguments would suggest that Sinclair's acquisition of Tribune would increase diversity, because it is adding a different 'voice' to the marketplace, just a voice with which petitioners apparently disagree."

-As for those "must-run" commentary segments featuring former Trump staffer Boris Epshteyn and conservative commentator Mark Hyman: Sinclair argues that they make up such a small chunk of programming, they don't really matter.

"Petitioners' specious claims about Sinclair programming are mostly limited to one or two brief commentaries that constitute less than 1% of the average total weekly news hours offered by

Sinclair's stations.3 All 'must-run' news programming in total (including news from the Washington, D.C. News Bureau) makes up approximately 2.5% of the total average news minutes per week. The remaining 97.5% of the news program time is devoted to local news, with the rest of each station's schedule consisting of local sports programming, network news and programming, syndicated programming, or other programming purchased or developed by Sinclair employees in the various local markets where Sinclair owns television stations."

-Sinclair is one of the most interesting companies in media today, and its proposed acquisition of Tribune would make it one of the largest media companies in the country. Despite the conventional wisdom that no one watches TV anymore, according to Pew, TV is still the primary news source for most consumers, and local TV news programs have more viewers than the national news broadcasts and cable news channels.

WALL STREET JOURNAL EDITOR GERARD BAKER IS AGAIN UNDER FIRE for his direction of the Journal's coverage of President Trump. Leaked emails obtained by The New York Times show him criticizing reporters for a draft story about the president's divisive Tuesday rally, where he repeatedly berated the media. "Sorry. This is commentary dressed up as news reporting," Baker said in response to an write-up of the rally. He later added: "Could we please just stick to reporting what he said rather than packaging it in exegesis and selective criticism?"

-It's not the first time his leadership on Trump has been questioned. A full transcript of an interview between Baker, the president and other members of his administration obtained by POLITICO last month highlighted the top editor's familiar relationship with the president and his family, again raising concerns about the Journal's coverage of the president. Read more on the latest controversy here.

RALLY RATINGS: President Trump may have told attendees of Tuesday night's rally that the TV cameras were being shut off, but in reality, the rally was a ratings draw for cable news. Fox News averaged 4.4 million viewers during the rally, while MSNBC averaged 2.,4 million and CNN 2 million, according to ratings data from Nielsen. One interesting quirk: MSNBC saw its ratings drop when the rally started, falling from 3.1 million for Rachel Maddow at 9 p.m., to 2.4 million during the rally. CNN meanwhile added 700,000 viewers when the rally started, while Fox News added 1.8 million viewers once the rally began.

-I thought Charlie Warzel's take on the rally was interesting. Warzel argues that Trump, who has no campaign opposition to speak of right now, is setting up the media to be the opposition. "Or, as pro-Trump media personality Jack Posobiec put it to me this morning: 'Trump's a builder. We're now in the demolition phase of this construction project," Warzel wrote.

-I didn't forget about the eclipse. Yesterday I gave you the cable news ratings, today, you get the broadcast numbers. ABC had a pretty incredible 7.9 million viewers tune in. CBS had just shy of 6 million, NBC had 2.6 million.

THE GUARDIAN STILL WAITING ON GIANFORTE INTERVIEW: Rep. Greg Gianforte, the man who body-slammed Guardian reporter Ben Jacobs ahead of a special election earlier this year, still has not sat down for an interview with the outlet, despite seeming to pledge to do so at his sentencing hearing. "Ben Jacobs first reached out to Congressman Gianforte for an on-the-record interview on June 22 and has been in ongoing communication with his office since then," a Guardian spokesperson told The Washington Post's Erik Wemple . "So far, the Congressman has yet to commit to this interview. However, in light of his promise to sit down for an interview with Ben in the courtroom before being sentenced on June 12, we fully expect the Congressman to be a man of his word."

ESPN PRESIDENT WEIGHS IN ON ROBERT LEE EPISODE: ESPN president John Skipper sent an email to staff at the channel last night, explaining in more detail what led up to broadcaster Robert Lee being moved off of a college football game he was supposed to host in Virginia. "I'm disappointed that the good intentions of our Charlotte colleagues have been intentionally hijacked by someone with a personal agenda, and sincerely appreciate Robert's personal input and professionalism throughout this episode," Skipper wrote. Read the whole thing here.

-Sports Illustrated's Richard Deitsch has even more detail.

"IT'S NOT PROPAGANDA BECAUSE IT'S TRUE" That's what Lara Trump, wife of Eric Trump and daughter-in-law of President Donald Trump, said in defense of her recent "real news" Facebook round-up segments on the president's campaign social media page. Lara Trump, a former "Inside Edition" producer, told the Christian Broadcasting Network that the segments she's hosted are necessary since President Trump doesn't get "a fair shake within the regular news cycle." The segments have also featured appearances from former pro-Trump pundit Kayleigh McEnany, who left CNN last month to join the Republican National Committee. Read on here.

TODAY IN TABS: I haven't picked up a copy of the latest edition of The National Enquirer, but based on the cover, it looks like they have knives out for Megyn Kelly and CNN. "Inside Kelly Ripa & Megyn Kelly's explosive showdown!" one headline blares. "Dirty secrets of CNN: Drugs. Brawls. On-set sex!" another reads. The Enquirer's owner David Pecker is friendly with President Trump, as my colleague Jack Shafer noted.

-Also, is Taylor Swift's new album tabloid themed? The album cover for "Reputation," features Swift in front of newsprint bearing her name. If anyone could make newspapers popular again, it would be her.

MUST WATCH:

-As the father of a toddler, I can relate to this news anchor who stayed remarkably calm even as

two little ones took over the studio.

-Here's the first trailer for Comedy Central's new late night show "The Opposition," which mocks alt-right outlets like InfoWars in the same way "The Colbert Report" mocked cable news.

SOUNDBITE: "Giving people a voice is not enough without having organizations dedicated to uncovering new information and analyzing it. We're going to keep experimenting with different ways to support the news industry and make sure reporters and publishers everywhere can keep doing their important work." -Facebook CEO Mark Zuckerberg, in a post explaining how the site plans to work with journalists and newsrooms moving forward.

REVOLVING DOOR:

-Jay Solomon, who was fired by The Wall Street Journal in June over his relationship with an arms dealer, has joined The Washington Institute for Near East Policy, where he will research North Korea's weapons proliferation in the Middle East.

-Lauren Ramsby has joined Patch as director of news partnerships. Lauren was managing editor of Peter Kaplan's NY Observer, and then was managing editor of the NY Post for 10 years.

-The Daily Beast has named Mia Libby CRO. Libby was previously senior VP of sales at Fusion Media Group.

-Fox Sports baseball reporter Ken Rosenthal will be bringing his writing to subscription sports site The Athletic. He'll still do TV for Fox.

EXTRAS:

-New Los Angeles Times publisher Ross Levinsohn is set to cash in with a starting salary of $1 million, with ample opportunities for performance bonuses. [Poynter]

-Here's a good interview with retiring Fox News correspondent Carl Cameron. [THR]

-In remembrance of Swedish journalist Kim Wall, whose remains were found in the waters near Copenhagen this week. [BuzzFeed]

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Peabody Mine Survival May Rest on Navajo Coal Gasification Plan

Posted August 04, 2017, 7:30 A.M. ET

By Stephen Lee

The biggest coal-fired generating station west of the Mississippi could be replaced by a coal gasification plant, raising concerns among environmentalists as well as questions from financial analysts about the economic costs and risks.

The tribe "has considered the development of potential energy industries, including [a] gasification plant," Navajo Nation presidential spokesman Mihio Manus told Bloomberg BNA Aug. 3. He added that the tribe hasn't committed to the technology, which chemically transforms the fossil fuel into synthetic natural gas.

Manus' remarks echo those of Navajo Nation President Russell Begaye, who indicated to local reporters in early July that the tribe wants to build a coal-to-gas generating station. "We'll have a new plant there that will take advantage of the price of natural gas, but still use coal," Begaye told Lake Powell Communications, a local news site in Lake Powell, Ariz.

Begaye did not respond to Bloomberg BNA's request for an interview.

The Navajo Generating Station, on tribal land near Page, Ariz., provides power to customers in Arizona and Nevada. The plant's owners—which include the Salt River Project, one of Arizona's largest utilities, and the Interior Department's Bureau of Reclamation—have a lease with the Navajo Nation that expires in 2019. That plant will shut down at the end of 2019 unless a new buyer steps forward to keep it running beyond then, a possibility that energy analysts say seems increasingly remote.

Should the gasification plans come to fruition, one beneficiary could be Peabody Energy, which operates the large Kayenta coal mine 78 miles to the southeast that employs many tribal members. Analysts, however, say they're skeptical a coal gasification plant will be realized because of a range of economic and technological challenges.

Peabody spokeswoman Beth Sutton told Bloomberg BNA in an email that the Navajo's coal gasification plan "seems speculative."

The Kayenta coal mine will likely shut down at the end of 2019, because it only serves the massive Navajo Generating Station. Further, no outside rail link can deliver the coal to other customers.

Duke's and Southern's Experiences

Two recent stumbles in the coal gasification industry serve to illustrate the economic risk the Navajo Nation would be courting by embracing the technology, said David Schlissel, director of resource planning analysis at the Institute for Energy Economics and Financial Analysis.

Duke Energy's Edwardsport coal gasification plant in Indiana has cost $1.5 billion more than originally planned and still doesn't run reliably, Schlissel said. More recently, Mississippi regulators concerned about the rising costs of Southern Co.'s Kemper plant ordered the company last month to transition the plant to natural gas.

"If Duke and Southern Co. couldn't do it, who is the Navajo Nation going to find who can do it?" Schlissel said. "There's no evidence that this can be done economically or reliably."

A coal gasification plant would generate power at roughly $100 per megawatt hour, but the Navajo Nation would only be able to sell it into the grid in Arizona or Nevada at $30 a megawatt hour, according to Schlissel.

"It doesn't make sense," he said. "You're quickly going to go down."

'Costly and Risky'

Similarly, Bill Corcoran, western campaign director for the Sierra Club's Beyond Coal campaign, told Bloomberg BNA that a "costly and risky coal gasification plant would only aggravate the underwater economics of coal-fueled power in the region. It's a loser for a tribe that can't afford a misstep in profiting from the ongoing transition of the energy market."

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., parent of Bloomberg BNA.

"With natural gas prices at current levels, including the recent uptick, coal gasification can't be economic," added Vincent Brisini, director of environmental affairs at investment and management firm Olympus Power. "Too much energy is needed to gasify the coal, plus the price of the coal alone is already two-thirds the cost of natural gas."

Other options on the table for the Navajo Nation include a solar farm and the development of thermal energy, Manus said. Indeed, the tribe launched a 27-megawatt solar farm in June. Manus did not respond to questions about why the Navajo Nation was considering coal gasification technology given Southern Co.'s and Duke's experiences.

Interior Department spokesman Dan DuBray told Bloomberg BNA that he couldn't weigh in on the coal gasification question, or whether the agency would provide funding to help the tribe get any plans off the ground. Rather, DuBray said, the agency is "focused on helping [Navajo Generating Station] operate beyond 2019."

The tribe has flirted with coal gasification before. In 2012, for example, the Navajo agreed to work with Lawrence Livermore National Laboratory on developing the technology.

Two years later, the tribe won a $1 million Interior Department grant to study coal gasification's economic potential.

Keystone XL Foes Avoid Climate in Red State Pipeline Battle

Posted August 04, 2017, 7:49 A.M. ET

By Meenal Vamburkar

You won't hear much about climate change coming from Keystone XL foes as they argue against TransCanada Corp.'s push to get the final state approval needed to build the pipeline.

Instead, they're spotlighting TransCanada's use of eminent domain, which Republicans traditionally oppose in support of landowner rights. Supporters, meanwhile, are pressing another issue close to Republican hearts: Jobs.

As Keystone XL faces its final hurdle in Nebraska, the starkly different political landscape under President Donald Trump versus Barack Obama is bringing new shape to a debate that will be overseen by the state's Republican-dominated Public Service Commission, set to hear a week of arguments starting Aug. 7. With Trump in the White House, a positive nod from Nebraska could remove the final regulatory barrier.

Property rights "might be the thing that stops this," said Art Tanderup, who owns farmland on the pipeline's route that's been in his wife's family for 100 years. Even some pipeline supporters say the company shouldn't be able to "take their land away," he said.

Still, the jobs issue carries weight among Republicans as well, particularly in the age of Trump, who has focused on the energy industry's ability to spark the U.S. economy. While the 2016 Republican platform says the Supreme Court's 2005 ruling in support of eminent domain undermines the Constitution's Fifth Amendment, Trump has in the past praised the decision.

Red State

Designed to carry 830,000 barrels of oil a day, the $8 billion Keystone XL pipeline will span 1,179 miles (1,897 kilometers), running through Montana, South Dakota and Nebraska. From there, the oil can flow south on existing lines to the Gulf Coast, which is an export hub and where refineries are built to process heavy crude.

Nebraska is a decisively red state: It hasn't voted for a Democratic president since 1964 and four of the last five governors have been Republican. Still, the state has been an impediment to progress on the project, with lawmakers and landowners challenging the route with legislation and lawsuits. The company eventually agreed to a PSC review instead of waging further court battles, setting up this month's hearing

Now, final approval will be decided by a commission board made up of four Republicans and a single Democrat.

"Before, knowing Obama's philosophy, we hoped it would be stopped" at the federal level, Tanderup said in a telephone interview. "But no longer can I write a letter to the president of the United States, because it will do absolutely nothing. No longer is there that hope."

Presidential Permit

In 2015, the Obama administration denied the presidential permit necessary for cross-border pipelines after a State Department review found Keystone didn't serve the national interest. But Trump, who came into office vowing to support the oil industry, quickly revived it.

Among proponents, the economic argument for jobs hasn't changed from the very start of the debate. TransCanada, the president and labor unions have long touted the project is a job creator that will help the state's economy. The state will benefit from 4,400-4,500 jobs, during the two-year construction period, and $12 million in property tax revenues, according to the Calgary-based company.

"We were very excited about it. It was an opportunity to get our people back to work," said Ron Kaminski, a member of the Laborers' International Union of North America. Kaminski, after running the local union in the state for about 10 years, shifted his focus to outreach.

In his view, this fight has revolved around the same facts and arguments for nine years: "There's nothing new."

Opponents, not surprisingly, disagree. They argue that many of the jobs promised by TransCanada are just temporary, and in the past have said that clean-energy projects can also carry the promise of added jobs.

'Not Main Thing'

Jane Kleeb, of activist group Bold Alliance, was a key figure in the first fight against Keystone, which centered around its potential to add to global warming. While Kleeb continues to support investment in clean energy, and voices concern about the tar sands oil that will come from Canada, she hasn't made it the focal point of the discussion.

"Climate has not been the main thing," she said in an interview.

She, alongside groups such as the Sierra Club and 350.org, have been working with landowners, highlighting the issue of eminent domain. They argue the pipeline isn't economic anymore, citing speculation the company has had trouble securing customers. TransCanada counters that it still expects commercial support for the project, and has had discussions with existing and new shippers.

Canadian Natural Resources Ltd. President Steve Laut said the company has 150,000 barrels of space contracted on the line. Suncor Energy Inc. also said it will be a shipper on the project.

Pipelines in western Canada, which holds the world's third-largest oil reserves, can carry about 3.3 million barrels of crude a day, according to the Canadian Association of Petroleum Producers. The area's drillers are expected to produce 3.92 million barrels a day this year, rising to 4.2 million next year, which the industry says proves the need for more ways to get their product into the U.S. market.

Unfair Takeaways

Kleeb and others argue this urgency won't exist by the time the project comes online, roughly two years after the regulatory approvals. The result, they say, is that it's unnecessary and unfair to take private property for the pipeline using eminent domain, particularly given certain liability provisions

the company is putting into landowner easements. TransCanada says 91 percent of landowners in the state have agreed to allow the project on their land, and the terms are consistent with industry standards.

"People do value private property," said David Corbin, vice-chair of state's Sierra Club, which is planning to testify before the PSC against the pipeline. "It's not a red or blue issue in Nebraska."

Nonetheless, the political climate is bound to make it an uphill battle for the activists, said Katie Bays, an analyst at Height Securities LLC in Washington D.C. The PSC leans conservative and the governor "has significant influence over the process from a political perspective, and he is a major advocate for the project," she said.

Even if the outcome favors TransCanada, opponents have vowed to keep litigating. The next step would be the state's court of appeals, said Kenneth Winston, an attorney working for Bold and the Sierra Club. While the company said it's taking the process step-by-step, any decision is likely to be appealed, according to the Sierra Club's Corbin.

"The longer it takes," Corbin said, the more the "economic argument is going to say: Why would we want this thing?"

Duke Energy Ash Lawsuit Tossed Over 'Forum Shopping'

Posted August 04, 2017, 02:01 P.M. ET

By Andrew M. Ballard

A federal district judge in Virginia tossed a Duke Energy coal ash lawsuit over what he said is "strategic forum shopping" by the utility.

Duke Energy's effort to obtain a court ruling saying it was in compliance with the Clean Water Act at its Roxboro, N.C., facility would undercut potential contrary rulings by other jurisdictions and represent "an improper race to the courthouse," Norman K. Moon, U.S. District Court Judge for the Western District of Virginia, wrote in an order of dismissal filed Aug. 3 (Duke Energy Progress LLC v. Roanoke River Basin Assn., W.D. Va., No. 4:17-cv-00032, opinion 8/3/17).

Duke Energy filed its lawsuit in Virginia May 11, two days before a citizen suit could be filed in the Middle District of North Carolina. Case law shows that the North Carolina court "may have been a less favorable venue for Duke Energy to litigate these issues," Moon wrote.

Allowing the case to go forward would "render useless" a 60-day notice requirement for citizen suits, which gives state and federal regulators the option to supersede "the citizen suit with their own enforcement action," he said.

Citizens' Lawsuits

Frank Holleman, an attorney with the Southern Environmental Law Center (SELC) in Chapel Hill, told Bloomberg BNA Aug. 4 that Duke Energy sought to dismiss the claims pending in North

Carolina because the action in Virginia was "first filed."

Holleman, who represents the plaintiffs in the case, said he expects the North Carolina jurisdiction to allow the Clean Water Act claims to proceed there now.

A Duke Energy representative told Bloomberg BNA that the conservation group's litigation was undermining the utility's effort to effectively manage its coal ash.

"While Duke Energy continues to work with its federal and state regulators to close ash basins in a manner that is fully protective of human health and the environment, SELC has filed a flurry of lawsuits across the Southeast aimed at disrupting those efforts and promoting their extreme agenda and 'draconian' remedies," said Danielle Peoples, a Duke Energy spokeswoman.

SELC recently filed a separate lawsuit alleging violations of the Resource Conservation and Recovery Act over coal ash management activities at the Roxboro facility, which is located in Person County.

Holleman said he believes that that lawsuit, along with a similar one filed against Duke Energy over activities at the Mayo Plant, also in Roxboro, are the only citizen suits seeking enforcement of the federal coal combustion residuals rule. Clean Water Act claims involving the Mayo facility also are pending, and coal ash management by Duke Energy is the subject of lawsuits in state court.

Interior to Kill Obama Rule Raising Coal, Oil Royalties

Posted August 04, 2017, 11:25 A.M. ET

By Ari Natter

An Obama-era regulation governing how royalties are calculated for coal, natural gas and oil extracted on federal lands will be repealed by the Trump administration.

The Interior Department's Office of Natural Resources Revenue issued a public notice that it plans to scrap the valuation rule in a final rule set to be published Aug. 7 in the Federal Register, and it is set to go into effect 30 days after that. The agency proposed scrapping the rule in April, several months after it went into effect on Jan. 1.

The change would benefit coal companies that extract the fossil fuel on federal land, such as Cloud Peak Energy, which had lobbied against the regulation. It previously had been estimated to increase royalty collections by at least $78 million.

As Trump Sings Coal's Praises, Mine Fatalities Are on the Rise

Posted August 04, 2017, 9:12 A.M. ET

By Tim Loh

Ray Hatfield Jr. was six months into his latest coal job when he was crushed to death in a Kentucky mine.

Hatfield, a 23-year industry veteran, was cleaning a conveyor belt that shuttled coal to the surface of the Appalachian mine on the morning of Jan. 26. When his clothing got caught, he was pulled into the machine and killed. Hatfield, 42, left behind a wife and three kids.

The fatality was preventable, investigators from the Labor Department's Mine Safety and Health Administration determined, citing a host of safety violations at the facility near Pikeville.

"Hatfield was working in a deathtrap, with not even minimal safety requirements being met," said Tony Oppegard, a Lexington, Kentucky-based attorney who represents mining families and has studied the government's report and been in touch with the Hatfield family's attorney. "This is what a lot of Appalachian coal miners have to put up with."

Ten other U.S. coal workers have died on the job this year, marking the first uptick in fatalities since 2010. The deaths come at a time when the Trump administration is promising to roll back federal regulations that it says were part of a "war on coal." There have already been more fatalities so far this year than in all of 2016, as U.S. production of the fossil fuel rises.

Production Rebound

Industry leaders say the rash of fatalities is a result of increased mining activity. They point out that almost all of the coal deaths—including Hatfield's—have involved workers who'd been employed at their current mine for less than a year. Overall U.S. coal output is up 15 percent through the end of July compared with a year ago amid higher prices for natural gas—a competing power plant fuel—and increased demand from China.

In June, there were 50,800 U.S. coal miners, up 3.7 percent from the same time in 2016, according to the Bureau of Labor Statistics.

"You hear the president and others in his administration talk about there being too many regulations, promoting coal jobs and bringing back coal, but never a peep about making sure those jobs are safe," said Celeste Monforton, a lecturer at Texas State University in San Marcos, who during the Clinton administration served as policy adviser to MSHA's director.

White House spokeswoman Lindsay Walters, speaking aboard Air Force One as Donald Trump flew to West Virginia Aug. 3 for a rally, said the president isn't lowering safety standards and that the administration's "main focus" is on "creating and growing jobs" in coal country.

West Virginia has had a challenging year in coal safety, leading the nation with five fatalities. There have also been two deaths in Kentucky and one each in Alabama, Montana, Pennsylvania and Colorado. The victims ranged in age from their 20s to their 60s and had on average more than a decade's worth of experience, according to fatality reports from MSHA, which oversees the sector.

Different Roles

"They may be experienced miners, but they're coming into different job settings from when they worked previously," said Bruce Watzman, the National Mining Association's senior vice president for regulatory affairs. "No two mines are exactly alike. Even if it's the same company, there are differences in the geology and the environment."

MSHA in June started a new program to stem the increase in fatalities, in which inspectors visit mines to help operators improve training for people new to their jobs. That sort of good-cop approach is favored by industry leaders including Robert E. Murray, chief executive officer of Murray

Energy Corp., who in an interview earlier this year called for a "radical" change at MSHA. He criticized the agency for having too many inspectors handing out violations at a time when the coal industry had been shrinking. Murray hasn't experienced a mine fatality this year.

'Highest Priority'

"Safety is, and always has been, the absolute highest priority at Murray Energy," Murray said in an emailed statement this week. "There is no pound of coal that is worth getting hurt over.''

On the other hand, the United Mine Workers of America has blasted MSHA's latest program for being too industry-friendly. The union would rather see federal mine inspectors punishing coal operators found violating safety laws. In a letter last month, union President Cecil Roberts pointed out that the agency's staffers in the compliance assistance program can't even issue citations if they see problems.

In an email, MSHA said its inspectors address any "imminent danger hazard" and require that it be corrected. It also said it has issued 24,377 violations through June 30, up 26 percent from a year ago.

The last time coal fatalities spiked was in 2010, when an explosion at Massey Energy Co.'s Upper Big Branch mine in West Virginia killed 29 workers. In the aftermath, MSHA came under scrutiny from lawmakers for being too soft on chronically misbehaving coal companies. In response, the agency initiated a campaign of "inspection blitzes" designed to keep mine operators from covering up violations. In the years that followed, coal fatalities kept falling, reaching an all-time low of eight last year.

The agency still carries out these types of inspections. For the third year in a row, none of America's 13,000 mines—coal and other types—were found to be bad enough to face its toughest enforcement, according to a statement this week. Some problem mines had corrected recurring issues with MSHA's help. "Those efforts are paying off," Patricia W. Silvey, MSHA's deputy assistant secretary for operations, said.

Oppegard, the miners' attorney, is skeptical. Even today, a certain segment of the coal industry is run by "complete outlaws" who cut corners on safety, he said. Oppegard fears that such operators will create mining conditions that could lead to the next Upper Big Branch disaster.

"They don't care for the health and safety of the people that work for them," Oppegard said. "All they care about is getting more coal out as fast as they can."

Australian Prime Minister Calls Crisis Meeting with Power Bosses

Posted August 04, 2017, 8:50 A.M. ET

By Perry Williams

Australian Prime Minister Malcolm Turnbull has called a meeting with the nation's major power companies citing concerns over soaring electricity prices and a lack of transparency in the market.

Companies including the three largest retailers Origin Energy Ltd., AGL Energy Ltd. and EnergyAustralia have been asked to appear in Canberra on Aug. 9 to discuss whether consumers are receiving adequate information on costs and consumption in their bills. About half of residential customers haven't switched electricity retailers or changed usage plans in the past five years, according to the Australian Energy Market Commission.

"Australia is blessed with abundant energy so it is simply not good enough that some families and businesses cannot always afford to turn on their lights, heating and equipment," Turnbull said in a letter sent Aug. 3 to Energy Australia Managing Director Catherine Tanna. "The situation must be addressed urgently and directly."

AGL Chief Executive Officer Andy Vesey tweeted his support for the meeting with Turnbull, saying energy affordability was an issue that needs "urgent attention."

Consumers were last month slugged with annual increases in power bills of as much as 20 percent due to soaring gas prices and the closure of aging coal-fired power stations including Hazelwood in the state of Victoria. Turnbull convened a similar meeting with oil and gas executives in March where he extracted pledges to boost gas supplies for local use over concern exports were threatening the nation's domestic energy security.

U.K. Batteries for Residential Solar to Get Tax Discount

Posted August 04, 2017, 9:22 A.M. ET

By Jessica Shankleman

The U.K. government will offer a tax discount to homes installing batteries at the same time as solar panels, a move that could make renewable energy investments more attractive, according to an industry organization.

The Solar Trade Association lobbied Her Majesty's Revenue and Customs, the tax authority, to apply a value-added tax of 5 percent to energy storage systems used with solar, instead of the standard 20 percent rate.

The STA said it received an email from HMRC that confirmed the discount rate would apply to batteries and solar, if they are installed together. Batteries sold separately and added to existing solar systems would have the standard 20 percent VAT, according to the email seen by Bloomberg News.

A spokesman for HMRC confirmed the decision by email, saying that it applies if all qualifying conditions are met. The British government is reviewing tax rates after the European Commission said discounts for certain energy-saving materials didn't comply with its VAT Directive.

"Reduced VAT on new systems will encourage homeowners to embrace storage technologies alongside solar," said Seb Berry, vice chairman at the STA and head of external affairs at Solar Century Holdings Ltd. The panel provider on Aug. 2 announced a partnership with IKEA of Sweden AB to sell battery packs alongside solar systems.

The U.K. recently announced a plan to invest 246 million pounds in battery technology research and changed a law to define energy storage as a form of generation in a bid to spur investment into the sector.

Week Ahead: Groundwater Group Hears EPA's Superfund Plans

Posted August 04, 2017, 12:29 P.M. ET

By Chuck McCutcheon

The National Ground Water Association, Ecological Society of America, and other groups are taking advantage of August's legislative lull in Washington to hold large-scale environment and energy events during the week of Aug. 7.

The Ground Water Association's Tuesday-Wednesday meeting in Arlington, Va., will feature a speech from James Woolford, director of the Environmental Protection Agency's Office of Superfund Remediation and Technology Innovation. Woolford is expected to discuss Superfund sites' remediation programs that protect groundwater by balancing regulation, science, and technology.

Another speaker will be Maureen Sullivan, the deputy assistant secretary of defense for environment, safety, and occupational health. Sullivan is expected to discuss new ways that federal agencies can work with others to address groundwater treatment.

One example Sullivan may cite is a Navy-California state government partnership to treat and manage groundwater that yielded roughly $60 million in savings. David Schultz will cover the meeting.

In Other News

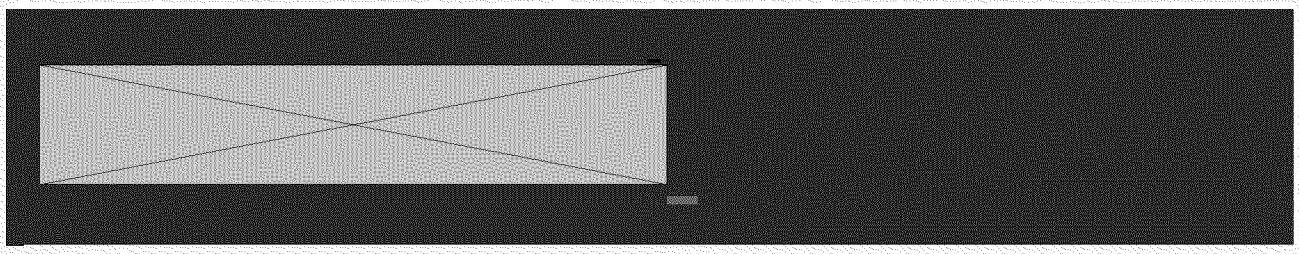
Food and agricultural research: The National Academies of Sciences, Engineering and Medicine will hold a meeting and town hall on Tuesday and Wednesday in Washington in connection with a study that would identify research with high potential for scientific breakthrough in agriculture. Scheduled speakers include Pamela Starke-Reed of the Agriculture Department's Agricultural Research Service. Tiffany Stecker will cover.

Chemical dispersants: The academies also will hold a Monday-Tuesday meeting on how chemical dispersants can be used in treating oil spills. Dispersants are sprayed on oil slicks to break down oil into droplets that more readily mix with water.

Communicating science: The Ecological Society of America's annual meeting in Portland, Ore., which runs Sunday through Friday, focuses on training and connecting ecologists who seek to engage the public about climate change or other research. It will offer special sessions on case studies of successful engagement approaches. Rep. Suzanne Bonamici (D-Ore.) will speak on Monday.

Cap and trade webinar: The Center for Climate and Energy Solutions will hold a Thursday webinar on the California Legislature's recent decision to extend the state's greenhouse gas cap-and-trade

program through 2030. Scheduled speakers include Aimee Barnes, a senior adviser to California Gov. Jerry Brown, and Katie Sullivan, managing director of the International Emissions Trading Association. Carolyn Whetzel will monitor.



Sage grouse review: An Interior Department review of land-use conservation plans for the greater sage grouse may be made public during the week. The greater sage grouse is protected by federal, state, and local land-use plans to keep it from being listed as threatened or endangered. Interior Secretary Ryan Zinke in early June ordered a review of federal policy on protecting it, specifically in regard to coordination with states. The review was scheduled to be completed in the first week of August. Alan Kovski will track.

Climate and coasts: Germany's Hamburg University of Applied Sciences, the International Climate Change Information Programme, and the Universite du Quebec a Montreal will hold a Thursday-Friday symposium in Montreal on how coastal areas can cope with the threat of climate change.

Subject: Federal Insider: Hill's workplace rights agency points to Congress for lack of transparency

Hill's workplace rights agency points to Congress for lack of transparency

By Joe Davidson

Susan Tsui Grundmann, executive director of the congressional Office of Compliance. (Office of Compliance)

When Rep. Jackie Speier (D-Calif.) described the ordeal congressional employees face when reporting sexual harassment as "not a victim friendly process … an institution-protection process," shade fell on the congressional Office of Compliance.

Known as OOC, it's the agency charged with protecting the workplace rights of 30,000 congressional employees with a 20-person staff. Located behind the Library of Congress, the office was largely unknown before the tsunami of sexual misconduct allegations hit Congress and almost anywhere men work.

But if Speier's characterization is accurate — there's no real rebuttal to it — Congress itself is mostly to blame, not the little office it created.

"That's the process Congress designed," executive director Susan Tsui Grundmann told the Federal Insider Thursday. The Congressional Accountability Act of 1995 outlines the duties of the Office of Compliance.

One of the main complaints about the process concerns confidentiality requirements. Before starting required mediation to resolve disputes, "the employee must agree to a nondisclosure agreement … one that forbids them from mentioning anything at all to anyone," Speier complained in testimony to a November House Administration Committee hearing. "Employees are entirely alone for at least another 30 days, with no support from their families, friends or religious leaders."

The emphasis on confidentiality extends to a particularly relevant question —

At the hearing, Speier said she has heard from accusers who have gone forward, some with allegations against Rep. Al Franken (D-Minn.) and Rep. Jeff Fortenberry (R-Neb.), who denied the allegations. Also at the hearing, Rep. Barbara Comstock (R-Va.) told Speier she is not alone, urging her to "keep fighting."

Speier has said she has been contacted by dozens of women who have experienced sexual misconduct on Capitol Hill. Some of those women have told their stories to Speier's staff, but not to the Office of Compliance, which would be the first step toward a case in front of the Congressional Boards.

Rep. Speier details harassment incidents in Congress and steps to prevent them

Asked if any case in her agency involves a member of Congress, Grundmann was CIA-esque: "We can neither confirm nor deny."

ADVERTISEMENT

Out of 77 claims of discrimination and/or harassment the office dealt with in 2016, 19 concerned sex, gender or pregnancy, according to the agency's State of the Congressional Workplace Annual Report for 2016. That's less than half the 31 cases involving race, the largest category.

The numbers don't reflect a jump in sexual misconduct, but reports could increase with the heightened state of awareness.

Confidentiality is central to the work of the office, but to the extent it is a problem, Grundmann suggests Congress should look in the mirror.

"We've had the process referred to as byzantine, shrouded in secrecy, opaque. Yet this is the process that Congress designed, a process that not only demands confidentiality, but strict confidentiality. This is the system we're tasked to administer," Grundmann said.

"This is the process Congress is now seeking to change and it's a change that is welcome."

She discussed various changes, some the office has proposed for years, some proposed in legislation offered by Speier and others.

- Cooling off period: Like Speier's "ME TOO" bill, Grundmann sees no need for a 30- to 90-day cooling off period after mediation.

  "We don't know why that's there," Grundmann said.

  While it gives time for accusers to find a lawyer and build a case, the cooling off need not be mandatory. "It doesn't impact our process," she said.

- Counseling: Accusers are required to have 30 days of counseling, though they can request a shorter period. Called counseling, it's more like an intake process where options are identified. Grundmann said making this process more interactive is under discussion. One possible

recommended training. This is a first because the House has never had a harassment. Grundmann wants it to cover everyone employed by Congress, including those not directly involved in the legislative process, like the Capitol Police. “The requirement for mandatory training, we have recommended over and over again since 2010,” she said, “and they are hearing us finally.”

Currently, only one staffer is assigned to training, among other duties.

ADVERTISEMENT

House to vote on lengthening trial period for

- Posting of rights: Few know about congressional workplace protections, despite a poster outlining them. “Our law requires that we create the poster. There is no requirement that anyone post it,” Grundmann said, until a recent House resolution passed. With the new attention, “our posters have been flying off the shelf,” a testament to the rising interest in workplace harassment. “Somebody came by the other day and picked up 250. We’re about out at this point.”

- Name change: The current name says little. “Compliance with what,” Grundmann asked. She thinks something like “Office of Workplace Rights” is better.

- Expanded investigative authority: How this would work remains to be seen, but it, too, would require more staff.

- Victims’ counsel: The “ME TOO” bill creates a position that would represent employees during the complaint process.

One thing Grundmann hopes will come from the growing attention is a better understanding by the public about what her office does and does not do.
“We’re getting calls from angry taxpayers chewing out our employees” about taxpayer money going to settle misconduct cases, she said. “They need to call their congressman.”

Today on Climate Beat . . .

. . . we faced a logjam, reporting that Democratic plans to block Senate votes on several controversial Trump administration nominees for EPA slots are spurring some Republicans to retaliate with their own procedural holds, ensnaring multiple nominations for various energy and environment-related agencies.

In oil news, a coalition of 10 large international oil and gas companies formed to develop an industry response to climate change is announcing its first investments in low-carbon technology, with funds slated to go toward a low-emission cement production company, efficient vehicle engines and a natural gas with carbon capture project.

We highlighted some of this week's top stories, including news about EPA's GHG endangerment finding, environmentalists' pressure campaign on vehicle GHG rules, Trump's nomination battles and more.

And our daily news roundup looked at a new $10 billion annual cost estimate for the Energy Department's coal and nuclear tarriff plan, as well as oil sector and offshore wind updates.

Subject: BREAKING NEWS: Trump will scrap critical Obamacare subsidy

President Donald Trump plans to cut off critical subsidy payments to insurers selling Obamacare coverage, according to two people familiar with the matter.

The decision to end the payments, worth an estimated $7 billion this year, marks Trump's most aggressive move yet to dismantle Obamacare after months of failed GOP repeal efforts on Capitol Hill. The move is likely to draw lawsuits and may put pressure on Congress to appropriate funding for the subsidies, which help insurers reduce out-of-pocket costs for low-income Obamacare customers.

The decision follows Trump's signing of an executive order earlier today that directs federal agencies to rewrite regulations to encourage the rise of a raft of cheap, loosely regulated health insurance plans that don't have to comply with certain Obamacare consumer protections and benefit rules. Trump touted the move as a step toward unwinding Obamacare.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Peabody Mine May Survive if Railroad Extension Built

Posted August 18, 2017, 7:03 A.M. ET

By Stephen Lee

A group of business and government representatives are exploring the possibility of keeping alive a troubled coal mine in northern Arizona.

The Kayenta mine, operated by Peabody Energy, appears likely to shut down at the end of 2019, when the nearby Navajo Generating Station is also scheduled to close. The two are linked because the power plant is Kayenta's only customer. No rail line exists to ship the Kayenta coal to the outside world.

But now, a group of stakeholders that includes Peabody, the Bureau of Reclamation, and Rep. Tom O'Halleran (D-Ariz.) have come together to study the cost of building a rail extension to a Burlington Northern Santa Fe line 115 miles to the south.

The group's first step is to identify what a project like this would cost, O'Halleran told Bloomberg BNA. That work is under way now.

"They're kind of isolated," O'Halleran said. "The infrastructure is all geared towards pushing two trains of coal a day to the power plant, and that's not going to be available to them. But is a railroad tie feasible? How much time would it take to build? The delivery system is just not in place right now."

Environmentalists said a rail extension was unrealistic.

"The coal industry is in a permanent decline, and investors have fled and aren't coming back," Bill Corcoran, western campaign director for the Sierra Club's Beyond Coal campaign, told Bloomberg BNA. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., an affiliate of Bloomberg BNA.

Corcoran also pointed to recent public comments from Hunter Harrison, chief executive of rail giant CSX Transportation, about no longer investing in new infrastructure for coal.

Peabody spokeswoman Beth Sutton declined to comment on the rail spur, but said the company continues working with stakeholders that would allow NGS to stay open "well beyond 2019." That includes "engaging a globally recognized firm to identify a new ownership structure," Sutton said.

Gasification Plans Alive

O'Halleran also said the possibility of building a coal gasification plant to replace the Navajo Generating Station is on the table, corroborating statements made by Navajo Nation presidential spokesman Mihio Manus to Bloomberg BNA earlier this month.

Those comments have taken many industry watchers by surprise, in light of two recent high-profile stumbles in the coal gasification industry. Duke Energy's Edwardsport coal gasification plant in Indiana cost $1.5 billion more than originally planned and still doesn't run reliably, according to David Schlissel, director of resource planning analysis at the Institute for Energy Economics and Financial Analysis (IEEFA).

More recently, Mississippi regulators concerned about the rising costs of Southern Co.'s Kemper plant ordered the company last month to transition the plant to natural gas.

On Aug. 11, the IEEFA said coal gasified power at Edwardsport costs $64.40 per megawatt hour, compared to $44.37 at the Navajo Generating Station.

"The federal government should stop feeding fantasies about gasifiying or exporting coal and start investing in a diversified economic transition that has a plausible future," Corcoran said.

Energy Nominees' Industry Ties May Pose Conflict: Watchdog Groups

Posted August 18, 2017, 01:10 P.M. ET

By Rebecca Kern

Financial disclosure forms for two Energy Department undersecretary nominees show income from energy companies, including Southern Co. and TransCanada Corp., raising concerns from government watchdog groups of potential conflicts of interest.

Mark Menezes, nominated to the No. 3 position at the Energy Department, works in energy sector investment at Berkshire Hathaway Energy Co., while Paul Dabbar, nominated as the undersecretary for science, works in energy sector investment at J.P. Morgan. Both have personal investments in large energy companies. Menezes also previously lobbied for energy clients.

Menezes and Dabbar have said in agreements to the Office of Government Ethics that upon confirmation they will resign from their current jobs and divest from energy-related investments within 90 days. Both are awaiting a Senate floor vote on their nominations.

Government watchdog groups are concerned nonetheless with the potential for the nominees to be influenced by their past energy industry ties once they are confirmed.

"The financial or personal ties that a lobbyist or investor develops in the course of their previous employment may affect their ability to be impartial when making decisions as a representative of the public in the federal government," Brendan Fischer, director of federal and Federal Election Commission reform at the Campaign Legal Center, a nonprofit organization focused on election law,

told Bloomberg BNA.

Menezes is vice president of federal relations for Berkshire Hathaway Energy Co., and has received income exceeding $5,000 in the previous two calendar years from Southern Co. and Berkshire Hathaway Energy Co., which includes the businesses of PacifiCorp and MidAmerican Energy Co., according to his public financial disclosure form.

Menezes previously was a partner at the law firm Hunton & Williams LLP, heading its energy practice group, where he was a registered lobbyist for energy companies such as Southern Co., Duke Energy Corp., Xcel Energy Inc., and Entergy Corp., according to the Center for Responsive Politics. He also previously worked as vice president and associate general counsel for American Electric Power Co. Inc., one of the largest electric utilities in the U.S., and participates in its pension plan. He said in his disclosure that he would not participate "personally or substantially" in a matter that has a "direct or predictable effect" on AEP unless he first obtained a written waiver. He also said he would divest from Alphabet Inc. and other entities. Dabbar is the managing director for mergers and acquisitions at J.P. Morgan, overseeing energy investments, and has received income exceeding $5,000 in the previous two calendar years from TransCanada and Sempra Energy, along with 19 other large to mid-sized energy companies. He is invested in ConocoPhillips Co. Inc., Chevron Corp. and Phillips 66 Co., according to his public financial disclosure form. He said in his ethics agreement he would divest from these and other companies. Nick Loris, a fellow in environmental and energy policy at the conservative Heritage Foundation, said he's not too concerned about a perception of conflict of interest for the nominees.

"The federal government does robust checks and tries to have as much transparency as possible to ensure those types of activities don't happen whether it's a Democrat or Republican," Loris told Bloomberg BNA.

While the Office of Government Ethics is in charge of signing off on presidential nominees' ethics and financial disclosure forms, each federal agency has a designated ethics official who makes sure a new employee follows through on ethics agreements, an OGE staff member told Bloomberg BNA on background.

Setting Example

"It starts at the top, President Trump himself has an abundant number of conflicts of interest," Paul Seamus Ryan, vice president of policy and litigation at Common Cause, a nonpartisan good-government group, told Bloomberg BNA.

"President Trump ran on the promise of draining the swamp of corruption in Washington, but he instead only filled the swamp...and has brought a bunch of financially conflicted individuals into his administration," Ryan said.

While the president isn't subject to certain conflict of interest statutes, others in his administration must abide by them, he said.

In their ethics forms Menezes and Dabbar said they will exempt themselves from participating "personally or substantially" in any particular matter that would have a direct or predictable effect on their own financial interests, their families or former employers.

One way to avoid legal problems is to sell conflict-producing investment assets, which Menezes and Dabbar said they would do, he said.

The Campaign Legal Center's Fischer said his main concern is when representatives from the energy industry are taking on government posts "it suggests that the regulated are becoming the regulators." A concern is "that there will be an incentive to go on easier on their former friends and colleagues," he said.

The Trump administration has provided a number of waivers to political appointees in office. Walter Shaub, the former director of the Office of Government Ethics, resigned in July due to concerns that the Trump administration's ethics program was too weak.

Sheila Krumholz, executive director of the Center for Responsive Politics, told Bloomberg BNA that she agreed that the oversight and enforcement of conflict of interest waivers isn't as strong as it should be. She said the OGE is a small agency that's responsible for the entire federal government, and that "it's an onerous task to attempt to hold all political appointees accountable."

Ban on Toxic Acid May Test Californians' Thirst for Cheap Fuel

Posted August 18, 2017, 9:52 A.M. ET

By Hailey Waller and Robert Tuttle

Californians are used to paying more for gasoline, but that may be tested soon if a pair of Los Angeles-area refineries are forced to stop their use of a toxic chemical.

The local air-quality regulator indicated this month that it may ban hydrofluoric acid from both PBF Energy Inc.'s Torrance refinery and one owned by Valero Energy Corp. eight miles away. The chemical, used by 35 percent of all U.S. refineries, boosts octane to make cleaner-burning gasoline. But some residents fear that if it were ever released, it could form a poisonous cloud that would threaten a quarter-million area lives.

Phasing out the acid may cause a surge in pump prices that dwarfs one seen in 2015, when an explosion at the Torrance refinery, then owned by Exxon Mobil Corp., raised California's retail gasoline price by a dollar in three months. Fuel demand on the West Coast is near a 10-year high, government data show. And the price for regular gasoline at California's pumps is already pushing $3 a gallon, more than 60 cents above the U.S. national average, according to data from AAA, the largest U.S. motoring group.

"There's a more-than-passing chance that it could create a scarcity situation for octane," said Vikas Dwivedi, senior analyst at Macquarie Capital Inc. in Houston. "A big pinch in octane could take prices way up. It would be pretty substantial and everybody would feel it in their wallets."

The 150,000 barrel-a-day Torrance plant is the second-biggest in Southern California, producing a fifth of the area's gasoline. Only California's 19 refineries, plus a handful overseas, are able to produce gasoline that meets the state's strict environmental fuel standards.

The 2015 explosion spurred some of the concern about using the acid, which has been controversial since the 1980s. The U.S. Chemical Safety Board called the incident, which injured four workers and almost halted fuel production for more than a year, a "near miss" after the explosion hurled a piece of machinery toward a tank of the acid.

"There's a real crisis of confidence with the Torrance refinery," state Assemblyman Al Muratsuchi said in a telephone interview, pointing to a series of mishaps including fires, power cuts and heavy flaring that have plagued the refinery since PBF took it over in June 2016. He has proposed

legislation to phase out use of the acid in California by the end of the decade.

If limits on the acid create a scarcity in locally made fuel, Southern California would have to buy as much as 25 percent of its gasoline from places as far away as India and the U.K., driving prices higher, Dave Hackett, president of Irvine, California-based Stillwater Associates LLC, said in a report last month that was commissioned and reviewed by PBF. Gasoline imports could rival or surpass 2015 levels, when they rose more than 10-fold to almost 70,000 barrels a day, he said.

"This is not an end-of-the-world scenario," said Sally Hayati, a community resident and president of the Torrance Refinery Action Alliance, the largest activist organization, who added that a short-term price increase would be a small price to pay. "It's an annoyance, an interruption in production, but it's not a game changer."

Price fears may also be overblown, Patrick Dehaan, a senior analyst at pump-price monitor Gasbuddy, said by telephone. A switch away from hydrofluoric acid "is one of those things that refineries know in advance" and the market can plan for, unlike explosions, he said.

Safety Question

Breathing hydrogen fluoride can damage the lungs causing swelling and fluid accumulation and can cause severe burns to skin, according to the U.S. Centers for Disease Control and Prevention. Breathing in high amounts can be fatal.

A phaseout would cost about $500 million per refinery, according to an estimate by Gordon Schremp, senior fuels analyst for the California Energy Commission. That's almost equal to the $538 million PBF agreed to pay for Torrance.

The acid at Torrance has been modified since 1997 with an additive that makes it less likely to spread through the air and making it safe to use, Mike Karlovich, a spokesman at PBF's headquarters in Parsippany, N.J., said by telephone.

The company's assurances haven't convinced the South Coast Air Quality Management District, the local regulator, which said in an Aug. 2 presentation that a phaseout would be a "preventative measure." It stated that PBF "did not sufficiently demonstrate" that a hydrofluoric acid cloud could be prevented.

PBF expressed disappointment in the stance, and a Valero statement issued after it alleged the regulator was "seeking drastic changes when there have been no HF related safety issues."

Dutch Fire

A late July fire at Royal Dutch Shell Plc's Pernis refinery in the Netherlands which released a hydrofluoric acid cloud heightened fears of a similar event in California, even though Shell said the cloud stayed within the refinery and wasn't in hazardous concentrations.

"The fire and acid release at the Shell refinery in Rotterdam is the latest sign that an accident could create a deadly acid plume," Hayati said, while acknowledging there could be a "temporary impact on gasoline prices."

Gasbuddy's Dehaan noted that while an acid phaseout might be reassuring for the refineries' neighbors, others in the state may not be so happy.

"For Californians who aren't in the immediate proximity of the refiners, they want to fill their tanks with as cheap gasoline as possible," he said. "Nobody likes spending money on gas."

Fracking Jobs Prove Elusive for Coal Miners Looking to Switch

Posted August 18, 2017, 8:09 A.M. ET

By Daniel Flatley

Robert Dennis has mined coal in West Virginia for 10 years but a recent evening found him in a classroom at his local community college. He came to learn about opportunities in fracking, a drilling technique used to produce natural gas—the very fuel that is threatening coal's future.

"I know mining inside and out," said Dennis, a 41-year-old shift foreman from Wetzel County, adjusting the black Adidas cap on his head. But now, "I just want more doors to be open."

He has earned a certificate in chemical and industrial operations, diligently searched job boards and filled out applications. So far, no luck.

Dennis is learning a hard lesson of fracking: While it has created a bonanza of jobs, displaced coal miners and their communities are sometimes left out of the boom. That's because many of the jobs require highly technical skills and are often going to experienced workers brought in from out of state who then move on to the next job without sinking roots.

"There are positive employment and wage effects," said Timothy M. Komarek, a professor of economics at Old Dominion University in Virginia. But, he said, they are "not as big as first thought when the boom first started."

Komarek concluded in a 2016 study that total employment in a county rises by 7 percent and wages by 11 percent in the three years after fracking comes—but the gains then taper off.

When the "shale gale" hits, hotels, trailer parks and restaurants get a boost. And some landowners make money for letting drillers extract oil and gas from their property.

Millionaires Created in West Virginia

In that way, fracking has "created a lot of millionaires in West Virginia," said Jeff Kessler, a former state senator from the state's northern area that has both coal and natural gas. "But it has not created the employment opportunities" area residents had hoped for, he said. "The ongoing benefits are relatively minute compared to the amount of land under lease."

That's bad news for towns like Wetzel County's New Martinsville where Dennis attended the community college session. While coal mines provide decades of steady work and sustain communities, a crew can frack a well in a month and leave behind automated machinery to recover the oil and gas.

The process, also known as hydraulic fracturing, involves injecting water and chemicals deep underground to break up rock and free trapped oil and gas.

It's unlocked vast stores of previously unobtainable fossil fuel and spurred a renaissance in energy production in states that had once been coal bastions. Coal, oil and natural gas are formed from the same plant matter and other forms of prehistoric life and can be found in the same places.

Fracking Eroded Status of Coal

But fracking has eroded the status of coal, which used to generate more than half the electricity in the U.S. but had slipped to just 30 percent last year. "If there was a War on Coal, it was really declared by natural gas," said Robert Godby, an economist at the University of Wyoming.

While some miners are hoping President Donald Trump will rescue their industry—West Virginia gave Trump 69 percent of its vote in 2016, the greatest share of the total in at least a century and a half—others are eyeing gas as an alternative employment opportunity.

The U.S. Bureau of Labor Statistics doesn't specifically count fracking jobs, but says there were more than 422,000 jobs directly associated with oil and gas extraction in the U.S. at the end of 2016. That has far eclipsed the number of jobs in underground coal mining: about 50,000 nationwide, down from 200,000 in the 1970s.

In West Virginia, there were 11,404 coal miners last year, about half the 23,000 who were working in 2011. There are about 6,000 working in oil and gas extraction.

To be sure, the fracking boom provided a much-needed economic boost in the years following the Great Recession. Fracking supported more than half a million jobs across the Marcellus Shale, an energy-rich geological formation that stretches from New York state to Virginia, according to a report commissioned by the American Petroleum Institute, a trade association. The group's numbers exceed the Labor Department estimates because they include workers at natural gas distribution facilities, petroleum refineries, petroleum product wholesalers and gas stations.

And much as coal and the Ohio River once lured steel plants and manufacturers to the area, cheap natural gas may bring chemical and other manufacturers to areas near shale drilling. Residents of New Martinsville, for example, are rooting for an ethane processing facility that may be built on the site of an old coal plant nearby.

Quick Boom Then Dropoff

In North Dakota, for example, the fracking boom allowed it become the fastest-growing economy in the nation by 2014. Even now, it has one of the lowest unemployment rates in the nation at 2.3 percent. But a downturn in the oil market brought drilling to a crawl and slowed investment in training and education programs.

"The boom was so quick and dropped off so quickly afterwards and the bust came so quickly that they really didn't get it done," said William Caraher, an associate professor of history at the University of North Dakota, of the state's education push.

Don Riggenbach is the president of the Chamber of Commerce in Wetzel County, where New Martinsville is located, and the owner of a tile and carpet installation company. He measures the economic effect of fracking in square feet of new flooring installed. So far, he says, something has been missing.

"In my business I need houses being built," he said. "You'd think that because of the gas and oil business they'd be hiring people. They do, but they're out-of-state workers ... They're not putting down roots."

Still, former miners who have made the transition to fracking, often with the assistance of government or industry-funded programs, say they are happy.

Robert Walker says he was shocked when he was laid off from his job at a Murray Energy Corp. coal mine in Marshall County in April 2015.

Flash forward a couple of years and Walker is working for The Williams Companies Inc., a company with extensive operations in the oil and gas field. He is making less money, down to $24 an hour from $30 when he was working in the mines. But he likes the work, and prefers his new coworkers. He says he is "a lot happier now."

Mine Skills Transfer Well

Curt Hippensteel, the director of the West Virginia Community College petroleum technology program, said miners have skills that transfer well to other trades, including safety training, welding and electrical work. Plus, miners are used to working long hours in austere conditions, which fits the profile of roustabout work quite nicely, he said.

But fracking, which requires the application of precise measurements of chemicals, sand and water applied under extreme pressure at specific times, requires its own set of unique skills.

And its job outlook is far from certain.

Technological improvements to fracking processes and practices have made the industry more efficient. In late 2016 and early 2017, more gas was produced using fewer workers in West Virginia than ever before.

Since 2014, gas production in the state has grown 50 percent while oil and gas employment has fall from 9,000 to less than 6,000, according to West Virginia University Bureau of Business and Economic Forecasting.

The recent recovery in prices has spurred companies to begin exploring for gas again, which may mean more hiring soon, according to Brian Lego, a West Virginia University assistant professor of economic forecasting. "But the overall level won't be a substantial amount," he said.

Dennis, the coal miner looking for fracking work, hopes to gain a few years experience in the oil and gas fields near New Martinsville until his children finish school.

After that, he's ready to give up on energy altogether and seek employment in North Carolina, where he feels there is more opportunity.

"What I want is a chance to move out of the area," he said. "There's more industry down there."

Southern Seeks Expanded Loan Guarantees for Troubled Plant

Posted August 18, 2017, 8:21 A.M. ET

By Mark Chediak, Ari Natter and Jennifer A. Dlouhy

Developers of a troubled nuclear plant in Georgia are seeking more federal support for the project, potentially increasing a record $8.3 billion loan guarantee it has already been promised, according to the two companies leading the project.

Southern Co. and Oglethorpe Power Corp., which are the lead owners of two new reactors under construction at Plant Vogtle, said they are in talks with the Energy Department to rework the terms of their guarantee, including increasing government financing.

"We have filed an application to potentially increase the amount of funds available for the Vogtle project under our DOE loan guarantee agreement to keep all options open for customers," Georgia Power spokesman Jacob Hawkins said in an email. Georgia Power, a unit of Southern, is the lead developer of the project with a 46 percent stake.

The growing costs of the project mean the companies could qualify for more federal support, according to people familiar with the discussions. The loan agreements required changes after the bankruptcy of Westinghouse Electric, the lead contractor. The Energy Department has been encouraging the companies to apply, they said. The people asked not to be identified because the talks are ongoing.

"The Department of Energy continues to have daily conversations with our borrowers about the status of Plant Vogtle," Shaylyn Hynes, a spokeswoman for the Energy Department, said in an email.

The Energy Department has already committed to back $8.3 billion in loans for the venture, which is the last new nuclear plant under construction in the U.S., after developers stopped work on a separate project in South Carolina. President Donald Trump has proposed killing the loan guarantee program, which provides a government guarantee that loans to the project will be repaid, and Congress may follow suit, and so the additional financing may need to be rushed through to beat any cutoff.

Oglethorpe said in a filing earlier this month that it estimated the cost to complete the reactors had increased from $5 billion to as much as $7.3 billion. The company has already withdrawn $1.7 billion in federal aid out of $3.1 billion promised.

"We have applied for a potential increase in our DOE loan amount to keep our financing options open while we continue to evaluate the future of Vogtle 3 and 4," Greg Jones, an Oglethorpe spokesman said in an email.

Southern is set to tell regulators in Georgia by month's end whether it plans to continue with construction plans for the plant. Regulators in the state signaled their support for the project, which is years delayed and billions dollars over budget, voting Aug. 15 to review a new cost estimate.

Earlier this month Southern said it estimated its portion of the cost to be at least $11.5 billion. Given Southern's 46 percent stake in the project, that would put the total cost of building the two reactors at $25 billion. "We need the administration to engage sooner than later," Tim Echols, the vice chairman of the Georgia Public Service Commission and a proponent of the project, said in an

email.

Silk Road Cities Tap German Ingenuity to Tackle Climate in China

Posted August 18, 2017, 9:09 A.M. ET

By Bloomberg News

China is tapping German ingenuity to help cities at the farthest reaches of its ancient silk road adapt to climate change.

Scores of advisers from Germany and the European Union are working with officials in China to help transform hundreds of cities into oases of green power. Cleaning up China's cities has become a test for whether President Xi Jinping's government can hit pollution targets in the 2015 Paris agreement while spurring economic growth tied to its new silk road.

"The role of cities is crucial for reaching the Paris goals," said Beijing-based Sandra Retzer, who leads urban sustainability programs at GIZ China. The German state-owned group is working in China on projects from standardizing electric vehicle technology to creating new markets for carbon-emission certificates.

At least 1 billion people in China representing 70 percent of the world's population will move into cities by 2030, marking one of the greatest urban migrations in human history. More than $1 trillion investment will be needed by 2020 to help those cities reverse lethal levels of pollution, according to the Green Finance Committee of China's Society for Finance and Banking. Advice from Europe is aimed at helping authorities spend the money wisely.

The changes underway are part of bigger trends extending beyond China, where bicycle sharing services are spreading and sales of electric cars are skyrocketing.

At least 10 Chinese megacities including Guangzhou, Nanjing and Shenzhen take part in the C40 Cities Climate Leadership Group, supported by Bloomberg Philanthropies, which oversees all the charitable giving for Michael Bloomberg, former mayor of New York City. Bloomberg is also founder and majority owner of Bloomberg LP, parent of Bloomberg News and Bloomberg BNA.

Addressing Pollution

Cities like Dunhuang, more than 2,000 years old and once a major trading hub for silk road goods heading to Europe, are trying to reinvent themselves with the help of Fraunhofer Institute researchers based in Kassel, Germany.

Dunhuang's 200,000 people "can't take a path with a large amount of pollution and heavy energy consumption," according to Zhu Kexiang, head of the development and reform bureau in Dunhuang, located 1,467 miles (2,360 kilometers) northwest from Beijing. "Its only path will be green development."

Accordingly, Dunhuang generates all its power from a gigawatt-sized mix of photovoltaic panels, solar-thermal installations and hydropower plants, Zhu told a conference in Beijing last month. Germany's Fraunhofer Institute is trying to take the city even further, making it emissions free by

2025 using heat pumps, biomass and building efficiency measures.

Changing business-as-usual acts "not only as pressure but also as a driver for cities," said Hu Runqing, a director of industrial development research at the China National Renewable Energy Center. Higher demand for clean power along China's Belt and Road Initiative has boosted demand for photovoltaics, Bloomberg New Energy Finance says.

In Yinchuan, a city in northwestern China that's a vital cog on the new silk road, a large amount of solar capacity has been installed. It will hold a Sino-Arab summit next month to discuss economic and commercial cooperation under the belt and road initiative.

Climate adaptation in cities could also sustain flows into the global green bond market, which is expected to hit another record in 2017, according to analysts at HSBC Bank Plc.

"We are seeing a steady rise in green bond issuance to fund climate change mitigation and adaptation in cities," HSBC's Michael Ridley and Charlotte Edwards wrote earlier this month. "We anticipate a rise in local currency green emerging market city bonds, given rapid emerging market population growth and urbanization."

Week Ahead: Chemical Society Event to Explore Industry's Impacts

Posted August 18, 2017, 11:39 A.M. ET

By Chuck McCutcheon

Chemistry's global economic impact is the focus of the American Chemical Society's national meeting Sunday through Thursday, one of several environment and energy events during the week of Aug. 21.

Among the speakers at the Washington conference is Chuck Kahle, a former vice president of coatings research and development for PPG Industries, a global supplier of paints, coatings, optical products, specialty materials, and fiberglass. Kahle is expected to talk about global trends, the growing emphasis on mergers and acquisitions, and strategies to improve success rates for chemical innovations.

Ivica Labuda, a Georgetown University adjunct assistant professor of biomedical graduate education, is expected to discuss research on pesticide detection in food, while George Mason University communications researcher John Kotcher is scheduled to explain ways of engaging different audiences on climate change.

The meeting will cover a broad array of other topics, including turning plant waste into carbon fiber for cars and airplanes, designing nanoparticles to sop up sunblock from oceans to save coral reefs, and redesigning quantum dots—very small semiconductor particles—so they release fewer hazardous metals when used in televisions and other products.

News conferences from the event will be on YouTube starting Monday. Pat Rizzuto and Tiffany Stecker will cover some of the meeting's sessions.

In Other News

Eclipse impacts: Monday's solar eclipse, which is set to bring total darkness to areas of the U.S., will offer power grid operators, utilities and electricity generators a rare opportunity to test an expected dropoff of more than 12,000 megawatts of solar power supplies. Bloomberg BNA staff will monitor.

Monuments changes: Thursday is the deadline for Interior Secretary Ryan Zinke to send a final report to President Donald Trump containing Zinke's recommendations for any changes to national monuments designated since January 1996. The issue springs from two Utah national monuments—Grand Staircase-Escalante, designated that year, and Bears Ears, designated last year. Zinke issued in June his interim suggestion that Bears Ears monument be reduced in size, while Grand Staircase-Escalante—which has coal reserves and may have natural gas reserves—remains to be mentioned. Alan Kovski will track.

Nuclear reactors: The Nuclear Regulatory Commission will hold a Thursday public meeting at its Rockville, Md., offices to get feedback on reactors that do not use light water as the coolant. Both the NRC and Energy Department are interested in helping industry develop technologies for such advanced reactors. Bloomberg BNA staff will monitor.

Drinking water workshop: The Environmental Protection Agency will hold a workshop from Tuesday to Thursday in Cincinnati with the Association of State Drinking Water Administrators on handling small drinking water system challenges.

Non-animal testing: EPA scientists will take part in the Tenth World Congress on Alternatives and Animal Use in the Life Sciences in Seattle on Sunday through Thursday. They will share the EPA's scientific advances in developing alternative, non-animal testing approaches for chemicals.

Climate change gathering: U.K. business and management publisher Allied Academies is holding a Congress on Climate Change Thursday and Friday in Birmingham, England. The event will focus on innovative research supporting effective responses to climate change.

South Korea and carbon: The United States Energy Association will hold a Monday briefing in Washington on South Korea's research on carbon capture, utilization and sequestration technology. South Korean President Moon Jae-in, who took office in May, has pledged a vigorous nuclear-free shift to renewable energy and vowed to use climate change as a driver for economic growth.

WATER
Water Quality Standards for Surface Waters
Arkansas WATER

Final rule of the Pollution Control and Ecology Commission amends Regulation 2 to revise the chloride, sulfate, and total dissolved solids water quality criteria for Chamberlain, Cove, Lucinda, Reyburn, Rusher, and Scull creeks and Clearwater Lake. The rule is issued in response to a third-party petition by Halliburton Energy Services Inc., of Houston, in order to facilitate a 12-year environmental improvement project. The rule is effective Sept. 16, 2017. Contact: Kelly Robinson, Department of Environmental Quality, Public Outreach and Assistance Division; 501-682-0916

California Regions

AIR
NOx Emissions from Portland Cement Kilns
California Regions AIR

Proposed rule of the Eastern Kern Air Pollution Control District amends regulations under Rule 425.3 to reduce Portland cement kiln nitrogen oxide (NOx) emissions limits. The rule sets a 30-operating day rolling average NOx emission limit of 2.8 pounds per ton of clinker produced or 3.4 lb/ton of clinker produced if a low-NOx burner or low-NOx precalciner was installed and made operational by Jan. 1, 2007. The rule also requires Portland cement manufacturing facilities to provide, properly install, maintain, calibrate, and operate a continuous emission monitoring system for each emission point from the kiln. In addition, the rule establishes requirements for monitoring clinker production. A workshop is scheduled for Nov. 2, 2017, in Mojave. Comments

are due Dec. 4, 2017. Contact: Jeremiah Cravens; Eastern Kern APCD; 661-862-5250; cravensj@kerncounty.com

Regulatory Update

AIR
New and Modified Major Stationary Source Review
California Regions AIR

Proposed rule of the Eastern Kern Air Pollution Control District adopts regulations under Rule 210.1A to establish requirements for preconstruction review of all new major stationary sources and major modifications of existing major stationary sources. The rule applies to major stationary sources that emit or have the potential to emit 100 tons per year or more of any regulated new source review pollutant or precursor, unless a specified lower emission threshold is applicable. The rule also requires permit applicants to provide an analysis demonstrating best available control technology for each emission unit and to provide offsets for any significant net emissions increase of a nonattainment pollutant and its precursors. A workshop is scheduled for Nov. 2, 2017, in Mojave. Comments are due Dec. 4, 2017. Contact: Jeremiah Cravens; Eastern Kern APCD; 661-862-5250; cravensj@kerncounty.com

Subject: EPA Response To The AP's Misleading Story

Good afternoon –

Yesterday, the Associated Press' Michael Biesecker wrote an **incredibly misleading story** about toxic land sites that are under water.

Despite reporting from the comfort of Washington, Biesecker had the audacity to imply that agencies aren't being responsive to the devastating effects of Hurricane Harvey. Not only is this inaccurate, but it creates panic and politicizes the hard work of first responders who are actually in the affected area.

Here's the truth: through aerial imaging, EPA has already conducted initial assessments at **41** Superfund sites – **28** of those sites show no damage, and **13** have experienced flooding. This was left out of the original story, along with the fact that EPA and state agencies worked with responsible parties to secure Superfund sites before the hurricane hit. Leaving out this critical information is misleading.

Administrator Pruitt already visited Southeast Texas and is in constant contact with local, state and county officials. And EPA, has a team of experts imbedded with other local, state and federal authorities, on the ground responding to Harvey - none of which Biesecker included in his story.

Unfortunately, the **Associated Press' Michael Biesecker** has a history of letting the facts get in the way of his story. Earlier this summer, he made-up a meeting that Administrator Pruitt had, and then deliberately discarded information that refuted his inaccurate story – ultimately prompting a nation-wide correction. Additionally, the Oklahoman took him to task for sensationalized reporting.

- Correction: EPA-Dow Chemical story
- Associated Press Engulfed in CNN-Level Scandal as It Covers Up Invention of Imaginary Pruitt Meeting

If you're reporting on this misleading story then below is a statement from the EPA.

"Once again, in an attempt to mislead Americans, the Associated Press is cherry-picking facts, as EPA is monitoring Superfund sites around Houston and we have a team of experts on the ground working with our state and local counterparts responding to Hurricane Harvey. Anything to the contrary is yellow journalism." - EPA Associate Administrator, Liz Bowman

BACKGROUND ...

The Hill reports EPA finds 13 Superfund sites possibly damaged after Harvey. "The Environmental Protection Agency (EPA) said Saturday that 13 Superfund sites have been flooded or could be facing damage as a result of Hurricane Harvey. The agency said that two of the sites, which are areas that are polluted with hazardous material and require extensive cleanup, had been

inspected and do not require immediate cleanup. Eleven sites have proven to be inaccessible for response teams, however the agency said teams are in place to inspect the areas once flooding from the storm subsides. In total, the EPA said that it had conducted initial assessments at 41 Superfund sites in impacted areas using 'aerial images' and contact with with those responsible for regular cleanup activities." (The Hill, 09/02/17)

In June, the editorial board at the Oklahoman reminded their readers of the sensationalized reporting that comes from the Associated Press' Michael Biesecker. "The disdain that some in the media have for President Trump and members of his administration is evident regularly. Recent coverage related to EPA administrator Scott Pruitt provides an example of interest to locals because of Pruitt's Oklahoma ties. … An Associated Press story from Washington last week about emails Pruitt sent and received as attorney general did what it could to further establish Pruitt as a minion for the oil and gas industry — which environmentalists see as dead set on ruining the earth as we know it. The AP, a wire service used by media outlets around the world including The Oklahoman, said the emails 'underscore just how closely' Pruitt 'coordinated with fossil fuel companies' as Oklahoma's AG, 'a position in which he frequently sued to block federal efforts to curb planet-warming carbon emissions.' That's quite an opening paragraph. Pruitt didn't just work with energy companies while attorney general — he worked 'closely' with 'fossil fuel companies' (the ultimate bogey men) to essentially keep global warming from abating. … The fact Pruitt regularly corresponded and dealt with energy industry officials as attorney general of a state where energy is the No. 1 industry should not be surprising nor should it, by itself, be considered nefarious."

Regulatory Update

California Regions

AIR

Boilers, Water Heaters, Steam Generators, and Process Heaters

California Regions AIR

Proposed rule of the Santa Barbara County Air Pollution Control District amends regulations under Rule 360 regarding control of nitrogen oxide (NOx) emissions from boilers, water heaters, steam generators, and process heaters with a rated heat capacity of between 75,000 and 2 million British thermal units per hour. The rule reduces the NOx emission limit to 20 parts per million by volume for all units supplied, sold, installed, or modified, effective Jan. 1, 2019. The rule also adds an exemption for recreational vehicles, manufactured homes, hot water pressure washers, and portable water heaters used for underwater diving activities. In addition, the rule clarifies the standard source test methods and compliance demonstration requirements for all applicable fuel types. A workshop is scheduled for Nov. 1, 2017, in Santa Barbara. A hearing is scheduled for March 15, 2018, at a location to be determined. Comments are due Nov. 15, 2017. Contact: Timothy Mitro; Santa Barbara County APCD; 805-961-8883; MitroT@sbcapcd.org

Regulatory Update

Connecticut

AIR

VOC Limits for Maintenance Coatings and Consumer Products

Connecticut AIR

Final rule of the Department of Energy and Environmental Protection amends regulations under RCSA 22a-174-1, -3a, -20, -40 and -41 and adopts regulations under RCSA 22a-174-41a regarding architectural and industrial maintenance coatings. The rule revises the volatile organic compounds (VOC) content limits for consumer products by making some existing limits more stringent. The rule also updates categories and limits for coatings manufactured after May 1, 2018. In addition, the rule provides procedures and test methods for classification and compliance with VOC limits and establishes reporting requirements. In addition, the rule revises definitions and modifies the prevention of significant deterioration permit program to address permit program maintenance. Finally, the rule addresses container labeling, record keeping, and reporting requirements. The rule is effective Oct. 5, 2017. Contact: Paula Gomez; DEEP; 860-424-3000; paula.gomez@ct.gov

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Boilers and Pressure Vessels/Inspections and Maintenance Standards
Kentucky OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Housing, Buildings and Construction, Division of Plumbing, amends regulations under 815 KAR 15:026 regarding testing, repairs, inspection, and safety factors of existing boilers and pressure vessels. The rule incorporates by reference the 2015 edition of the National Boiler Inspection Code and expands the inspection frequency for vessels exceeding 200 psi of maximum allowable working pressure to every five years. The rule also expands the inspection frequency for hot water storage tanks, sterilizers, and autoclaves to every four years and for pressure vessels for human occupancy and hyperbaric chambers to every two years. In addition, the rule expands the inspection frequency for jacketed kettles and deaerators to every two and 10 years, respectively. A hearing is scheduled for Oct. 24, 2017, in Frankfort. Comments are due Oct. 31, 2017. Contact: David Startsman; Department of Housing, Buildings and Construction; 502-573-0365; david.startsman@ky.gov

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Boilers and Pressure Vessels/Standards, Initial Inspections
Kentucky OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Housing, Buildings and Construction, Division of Plumbing, amends regulations under 815 KAR 15:025 regarding standards for boilers and pressure vessels and requirements for the initial inspections of new boilers, pressure vessels, and pressure piping. The rule incorporates by reference the 2015 edition of the National Boiler Inspection Code and exempts pressure vessels with an American Society of Mechanical Engineers "UM" stamp from the requirement for a manufacturer's data report. The rule also clarifies the hours when inspections are conducted. In addition, the rule requires any new boiler added to an existing boiler room to be connected to an emergency off switch; allows such switches to be located inside or outside of a boiler room; and provides that the boiler must indicate the boiler is disabled when the switch is activated. A hearing is scheduled for Oct. 24, 2017, in Frankfort. Comments are due Oct. 31, 2017. Contact: David Startsman; Department of Housing, Buildings and Construction; 502-573-0365; david.startsman@ky.gov

WATER
Public Water Supply/Definitions
Kentucky WATER

Final rule of the Department for Environmental Protection, Division of Water, amends regulations

under 401 KAR 8:010 regarding definitions relating to public and semipublic water supplies. The rule adds a definition for "submeter." The rule is effective Sept. 8, 2017. Contact: Carole Catalfo; DEP, Division of Water; 502-564-3410; water@ky.gov

—Administrative Register of Kentucky (10/01/2017)

Regulatory Update

WATER
Public Water Supply/General Provisions
Kentucky WATER

Final rule of the Department for Environmental Protection, Division of Water, amends regulations under 401 KAR 8:020 regarding general provisions for public and semipublic water supplies. The rule exempts properties that use submeters from being considered a public water system under specified conditions, corrects references to federal standards under 40 CFR 141 and 142, and allows notifications to be made by social media and email. The rule also adds the average daily water treatment time to reporting requirements, adds advisory procedures to operations plans, and requires public water systems to establish a flushing program. In addition, the rule removes provisions concerning recommended practices for water supply reservoirs and updates incorporated forms and standards. The rule is effective Sept. 8, 2017. Contact: Carole Catalfo; DEP, Division of Water; 502-564-3410; water@ky.gov

Regulatory Update

Maryland

AIR
Control of VOCs from Consumer Products
Maryland AIR

Final rule of the Department of the Environment amends regulations under COMAR 26.11.32.01 through .16 (nonconsecutive) and adopts regulations under COMAR 26.11.32.05-1 regarding controlling volatile organic compound (VOC) emissions from consumer products. The rule implements requirements from the 2010 and 2014 Ozone Transport Commission model rules for consumer products to establish VOC standards for 11 consumer products and update VOC standards for 15 consumer products. The rule also prohibits the sale, offer for sale, supply, or manufacturing for use in the state of specified products that contain methylene chloride, perchloroethylene, or trichloroethylene. The rule will be submitted to the EPA as a revision to the state implementation plan. The rule is effective Oct. 9, 2017. HAZARDOUS WASTE MANAGEMENT
Disposal of Controlled Hazardous Substances
Maryland HAZARDOUS WASTE MANAGEMENT

Notice announces of the Department of the Environment, Lands and Materials Administration, announces a meeting on proposed amendments to regulations under COMAR 26.13 regarding the disposal of controlled hazardous substances (CHS). The rule removes obsolete requirements for drivers of vehicles transporting CHS to be certified by the department and for vehicles transporting CHS or special medical waste to have a certificate affixed to the exterior of the vehicle. A meeting is scheduled for Oct. 13, 2017, in Baltimore. A comment due date is not specified. Contact: Edward Hammerberg; MDE; 410-537-3314

—Maryland Register (09/29/2017)

Regulatory Update

WATER
General Discharge Permit from Oil Terminals, Oil Contaminated Ground Water Sources
Maryland WATER

Notice of the Department of the Environment, Lands and Materials Administration, announces a tentative determination to reissue the National Pollution Discharge Elimination System (NPDES) general discharge permit for stormwater and hydrostatic test water from oil terminals and to reissue the NPDES Permit for discharges of treated groundwater from oil contaminated groundwater sources. The first permit authorizes the discharge of stormwater from storage tank dikes and loading rack areas and hydrostatic test water to surface or groundwaters from petroleum tunnels and sets limits on the concentration of the petroleum product contamination following treatment. The second permit authorizes the discharge of treated groundwater previously contaminated by petroleum products as the result of leaks or spills and sets limits on the effluent concentration of the petroleum production contamination following treatment. A hearing is scheduled for Oct. 26, 2017, in Baltimore. Comments are due Nov. 2, 2017. Contact: Thomas Yoo; MDE, Oil and Control Program; 410-537-3403

Nevada

PESTICIDES
Control of Insects, Pests, and Noxious Weeds
Nevada PESTICIDES

Notice of the Department of Agriculture announces changes to a July 9, 2017, proposed rule to amend regulations under NAC 555.280 through .700 (nonconsecutive) regarding the custom application of pesticides and certified applicators. The rule establishes requirements for licensing of consultants and revises the categories established for the licensing of pest control personnel and licensed primary principal commercial applicators. The rule also revises the definition of "termiticide" and sets forth registration and labeling requirements for termiticides. In addition, the rule establishes requirements for transport of undiluted pesticide material, revises the term "spot treatment," and adds soil fumigation to the categories for licensing pest control personnel. Finally, the rule addresses prohibited materials and uses of pesticides, updates and expands the schedule of fines, and clarifies language. The changes specify that the licensed consultants may not write or otherwise prepare a plan for the conservation, preservation, or reclamation of property. Contact: James Barbee; Department of Agriculture; 775-353-3601

Regulatory Update

New Hampshire

AIR
Regulated Toxic Air Pollutants
New Hampshire AIR

Proposed rule of the Department of Environmental Services amends and readopts regulations under NHAR Env-A 1401.01 through 1450.01, Table 1450-1, and adopts regulations under NHAR Env-A 1405.07 regarding regulated toxic air pollutants (RTAPs). The rule revises the list of RTAPs and their ambient air limits (AALs) to reflect updates by the American Conference of Governmental Industrial Hygienists and the EPA's Integrated Risk Information System. The rule adds 28 chemical substances to the RTAP list, removes 4 chemical substances, and revises the occupational exposure limit or reference concentration for 20 substances. The rule also adds definitions, adds and clarifies exemptions, aligns chemical classification criteria for health related assessments with EPA requirements, and corrects the table of RTAPs. A hearing is scheduled for Nov. 3, 2017, in Concord. Comments are due Nov. 10, 2017. Contact: Karla McManus; DES; 603-271-6854; karla.mcmanus@des.nh.gov

GENERAL ENVIRONMENT AND SAFETY

Environmental Hearing Board/Practice and Procedures

Pennsylvania GENERAL ENVIRONMENT AND SAFETY

Final rule of the Environmental Hearing Board amends regulations under 25 PAC 1021.21 through .201 (nonconsecutive) and adopts regulations under 25 PAC 1021.13 and .153 regarding practice and procedures of the board. The rule clarifies provisions concerning electronic filing and service to reflect the electronic registration form. The rule also specifies that when a filing deadline falls on a Saturday, Sunday, or legal holiday, the document filing and motion response deadline is the next business day. In addition, the rule establishes the format and time period for filing requests for certification of interlocutory orders for appeal and addresses filing of requests for certification of such orders. Finally, the rule provides for the institution of appeals filing of a notice of appeal or complaint depending on the underlying statute, eliminates the 20-day time frame for filing a petition for review with the Commonwealth Court, and clarifies that the board makes the determination of a dismissal with or without prejudice on a case-by-case basis. The rule is effective Oct. 7, 2017. Contact: Maryanne Wesdock; EHB; 412-565-5245; mwesdock@pa.gov

HAZARDOUS WASTE MANAGEMENT

Testing and Cleaning Clandestine Drug Manufacturing Sites

Tennessee HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Environment and Conservation, Division of Remediation, repeals and readopts regulations under RRT 0400-15-02-.01 through .09 concerning standards for testing and cleaning clandestine drug manufacturing sites. The rule updates standards for sampling, testing, and remediation of quarantined methamphetamine manufacturing sites and addresses qualifications for cleanup professionals. The rule also provides for maintenance of the list of contaminated sites and the list of qualified professionals and establishes listing fees for certified industrial hygienists. In addition, the rule addresses standards for determining whether a space is safe for human use, variances for property owners to preform remediation, and certificates for demolition for disposal of construction or demolition debris. Hearings are scheduled for Jan 8, 9, and 16, 2018, in Nashville, Jackson, and Knoxville, respectively. Comments are due Feb. 10, 2018. Texas

AIR
Emissions Banking and Trading
Texas AIR

Final rule of the Texas Commission on Environmental Quality amends regulations under 30 TAC 101.300, .302, .303, .304, and .306 regarding emissions banking and trading to align credit generation from area or mobile sources with the requirements of the Clean Air Act. The rule restricts credit generation from inelastic sources and prohibits credit generation from activities that do not result in actual emissions reductions. The rule also requires credited reductions to be certified through federally enforceable documentation procedures. In addition, the rule addresses the uncertainty in the emission calculations techniques for area and mobile sources. The rule will be submitted to the EPA as a revision to the state implementation plan. The rule is effective Oct. 12, 2017. Driving the Day

Good Tuesday morning. WELCOME TO FALL, FOR NOW -- It was a brisk 43 degrees in D.C. early this morning as we started Playbook, and the forecast shows it will climb to just 62 today.

IN MISSISSIPPI -- CHRIS MCDANIEL, the GOP state senator who challenged Mississippi Sen. Thad Cochran in 2014, told us that he has had several conversations with Steve Bannon about his political future over the last month, including meetings at Breitbart's headquarters on Capitol Hill. McDaniel said Bannon told him he would "love to see me enter the U.S. Senate race, and that he'll support me in whatever race I would run." McDaniel has been toying with primarying Mississippi Sen. Roger Wicker.

MCDANIEL SAID MONDAY NIGHT that Cochran's illness and absence from the Senate hasn't changed his thinking about the Wicker race, saying that he is "praying for his full recovery so he can get back to work." McDaniel said Wicker has "failed the people of Mississippi" and that he plans to make a decision by the end of the month on whether to challenge him. McDaniel said entering the race is "much more compelling than even a month ago" after seeing Roy Moore win in Alabama.

-- KEVIN MCCARTHY AND STEVE BANNON ON THE SAME PAGE -- THE JOURNAL GAZETTE, of Fort Wayne, Indiana: House Majority Leader Kevin "McCarthy did not mention any GOP senators by name when he said, 'But if you're not strong enough to say you're going to repeal Obamacare and then vote that way, you don't deserve to stay in the office.' The line drew applause." http://bit.ly/2yvxak8

-- BREITBART: "Stephen K. Bannon to Attend Kelli Ward Event with Laura Ingraham in Arizona" http://bit.ly/2zgnKpx

THE MCCAIN SPEECH EVERYONE IS BUZZING ABOUT -- ISAAC DOVERE: "Sen. John McCain delivered a condemnation of 'spurious nationalism' on Monday night in Philadelphia, using his acceptance speech for the National Constitution Center's Liberty Medal to issue a call to American ideals. ...

"'**To fear the world we have organized** and led for three-quarters of a century, to abandon the ideals we have advanced around the globe, to refuse the obligations of international leadership and our duty to remain 'the last best hope of earth' for the sake of some half-baked, spurious nationalism cooked up by people who would rather find scapegoats than solve problems,' McCain said, 'is as unpatriotic as an attachment to any other tired dogma of the past that Americans consigned to the ash heap of history.'" http://politi.co/2kUx1l6

ABOUT THAT KUMBAYA MOMENT ... -- "Trump White House fed up with the Senate," by Burgess Everett and Josh Dawsey: "President Donald Trump and Mitch McConnell stood side-by-side at the White House Monday afternoon to declare they're 'together totally' and 'very united' heading into this fall's tax reform battle. But behind the scenes, Trump, his administration and even some senators are increasingly worried that taxes will go the way of Obamacare repeal in the Senate: Months of bickering ending in extreme embarrassment.

"The debate hasn't even started on the GOP's plan, yet some senators are pushing their own tax proposals, while others are increasingly emboldened to defy the Republican president. It's a dangerous mix considering that McConnell can only lose two votes assuming Democrats band together in opposition. 'We look at the Senate and go: "What the hell is going on?"' White House budget director Mick Mulvaney said in an interview Friday.

"'**The House passed health care,** the House has already passed its budget, which is the first step of tax reform. The Senate hasn't done any of that. Hell, the Senate can't pass any of our confirmations,' Mulvaney fumed in an interview, slapping a table for emphasis. 'You ask me if the Republican-controlled Senate is an impediment to the administration's agenda: All I can tell you is so far, the answer's yes.'" http://politi.co/2kVbWXr

-- IF YOU'RE just realizing the Senate is slow acting, then you've not been watching Congress for the last decade or so.

****** **A message from JPMorgan Chase & Co.: What's the Word** It's been more than 30 years since we reformed our tax code, putting good jobs and higher wages at risk. In fact, 90% of CEOs believe that inaction by lawmakers could slow hiring and wage growth. Learn more about what tax reform could mean for American workers: http://politi.co/2gBVNBD ******

JOSH DAWSEY: "Trump gives his own performance a Trump-sized

endorsement": "Friends say President Donald Trump has grown frustrated that his greatness is not widely understood, that his critics are fierce and on TV every morning, that his poll numbers are both low and 'fake,' and that his White House is caricatured as adrift. So on Monday, the consummate salesman ... gave the Trump White House a Trump-sized dose of brand enhancement. ... [H]e mixed facts and mirage, praise and perfidy in two head-spinning, sometimes contradictory performances designed to convince supporters and detractors alike that everything's terrific, moving ahead of schedule and getting even better. His opponents were cast as misguided, deluded or even unpatriotic." http://politi.co/2xKFfx6

-- THE CLAIM INFURIATING OBAMA ALUMNI: "Trump Falsely Claims Obama Didn't Contact Families of Fallen Troops," by NYT's Mark Landler: "President Trump falsely asserted on Monday that his predecessor, Barack Obama, and other presidents did not contact the families of American troops killed in duty, drawing a swift, angry rebuke from several of Mr. Obama's former aides. Mr. Trump was responding to a question about why he had not spoken publicly about the killing of four Green Berets in an ambush in Niger two weeks ago when he made the assertion. Rather than answering the question, Mr. Trump said he had written personal letters to their families and planned to call them in the coming week.

"Then he pivoted to his predecessors. 'If you look at President Obama and other presidents, most of them didn't make calls,' Mr. Trump said during a news conference in the Rose Garden with the Senate majority leader, Mitch McConnell. 'A lot of them didn't make calls. I like to call when it's appropriate.' Mr. Trump's assertion belied a long record of meetings Mr. Obama held with the families of killed service people, as well as calls and letters, dating to the earliest days of his presidency. Before he decided to deploy 30,000 troops to Afghanistan, Mr. Obama traveled to Dover Air Force Base in Delaware to greet the coffins of troops." http://nyti.ms/2yOt5s2

-- @ericholder: "Stop the damn lying - you're the President. I went to Dover AFB with 44 and saw him comfort the families of both the fallen military & DEA."

-- Longtime Obama aide Alyssa Mastromonaco **(@alyssamastromonaco):** "that's a f***ing lie. to say president obama (or past presidents) didn't call the family members of soldiers KIA - he's a deranged animal."

-- Former Chairman of the Joint Chiefs of Staff **(@martin_dempsey):** "POTUS 43 & 44 and first ladies cared deeply, worked tirelessly for the serving, the fallen, and their families. Not politics. Sacred Trust."

MCCONNELL'S LATEST PROBLEM -- "Cochran's absence creates unexpected budget hurdle," by Seung Min Kim, Burgess Everett, and Sarah Ferris: "Senate Republicans are scrambling to lock down the necessary votes for a budget that would unlock the a tax overhaul -- facing unforeseen absences and still-wavering GOP votes. The chamber is aiming for a vote on Thursday regardless of whether Sen. Thad Cochran, whose office announced Monday that he would not return to Washington as

planned, remains absent, according to GOP sources.

"That means Senate Republicans have little room for error, and GOP leaders are laboring to win over both Sens. Rand Paul of Kentucky and John McCain of Arizona. Paul, who was the only Republican senator to vote against a budget that would fast-track an Obamacare repeal measure earlier this year, stressed Monday that he was still undecided on the Republican blueprint. 'We're in discussions on it,' Paul told reporters on Monday. 'We're trying to get it to a document that we think represents what we stand for. I'm not gonna go into the details right now but I'm working with the White House on it.'

"A spokeswoman for McCain, who was not in Washington for votes on Monday night, did not respond to a request for comment on how he intends to vote on the budget. Passage of the long-delayed fiscal blueprint would mark a critical step for the GOP toward the first major tax rewrite in a generation. The Senate's budget unlocks procedural powers to advance a tax plan without Democratic support. GOP leaders are aiming to pass tax reform by December." http://politi.co/2xISX3q

WAPO/60 MINUTES GET RESULTS -- "Trump declines to express confidence in drug czar nominee in wake of Post/'60 Minutes' probe," by Ed O'Keefe, Scott Higham and Lenny Bernstein: "President Trump said Monday that he will declare a national emergency next week to address the opioid epidemic and declined to express confidence in Rep. Tom Marino (R-Pa.), his nominee for drug czar, in the wake of revelations that the lawmaker helped steer legislation making it harder to act against giant drug companies. ...

"Trump said 'we're going to be looking into' the [Washington Post/60 Minutes investigation], while many Democrats and at least one Republican called for modification or outright repeal of the law. Democrats also urged Trump to drop Marino as his pick to lead the Office of National Drug Control Policy. ... Trump said he would have a 'major announcement, probably next week' about how his administration plans to tackle opioid addiction in the United States, a 'massive problem' that he wants to get 'absolutely right.'" http://wapo.st/2xKBJCP ... ***The WaPo piece*** http://wapo.st/2x0WFpz ... ***The 60 Minutes segment*** http://cbsn.ws/2x0Jq8o

READY TO MAKE A DEAL? -- "Trump said to want bipartisan Senate Obamacare deal," by Jen Haberkorn: "President Donald Trump urged Republican Sen. Lamar Alexander to seek out an Obamacare deal with Democrats -- encouragement that might help sway Republicans who are skeptical of a bipartisan agreement. Alexander said Trump told him by phone Oct. 14 he'd like to see a bill that funds the Obamacare cost-sharing subsidies that he abruptly cut off last week. In return, he wants to see 'meaningful flexibility for the states in providing more choices,' Alexander (R-Tenn.) said.

"'He said he wanted to make sure that in this interim period while we're still arguing about the long-term direction of health care, that people aren't hurt -- those were his words,' Alexander said of Trump. Alexander, the chairman of the Senate health

committee, has been working with ranking Democrat Patty Murray for weeks on an Obamacare stabilization bill with similar parameters. But the talks had stalled over how to define state flexibility: Republicans want to let states modify their health systems under Obamacare, and Democrats are wary of anything that could unwind any of the consumer protections in the law." http://politi.co/2yn54YF

TRADE WARS -- "Canadian firm could dodge 300 percent tariff by building jets in Alabama," by WaPo's Aaron Gregg: "Canadian jet-maker Bombardier announced Monday that it is selling a controlling stake in its 100- to 150-seat C-series jetliner to European manufacturer Airbus, just weeks after the Commerce Department moved to impose 300 percent tariffs on the plane. The companies also said they will expand the plane's production to a new facility in Mobile, Ala., a move that could help it avoid the import duty. Executives from Airbus and Bombardier touted the deal's U.S. job-creation potential. 'This is a win-win for everybody,' Airbus chief executive Tom Enders said in a statement. 'Not only will this partnership secure the C Series and its industrial operations in Canada, the U.K. and China, but we also bring new jobs to the U.S.'" http://wapo.st/2xKGRa0

BANNON WATCH -- "Pro-Trump group endorses in key Senate primaries," by McClatchy's Katie Glueck: "A prominent pro-Donald Trump super PAC with ties to ex-White House chief strategist Steve Bannon is rolling out its official endorsements in the Wisconsin and Arizona GOP Senate primaries. Great America PAC will announce that in Wisconsin, it is supporting Kevin Nicholson, a Marine veteran running in a hotly contested primary to challenge Sen. Tammy Baldwin, a Democrat running for re-election in a state President Donald Trump won. ... According to a Bannon source with direct knowledge of Nicholson's conversation with Bannon, the Wisconsin candidate indicated that he would not support Republican Senate Majority Leader Mitch McConnell as leader." http://bit.ly/2xLkAxG

TRUMP'S TUESDAY -- Trump is meeting with Defense Secretary James Mattis. He is having a working lunch with Greece's Prime Minister Alexis Tsipras and the two will hold a joint press conference. Trump will participate in a Diwali ceremonial lighting of the Diya. This evening he is scheduled to speak at the Heritage Foundation's president's club meeting at the Marriott Marquis in D.C.

HQ2 -- WSJ: "New Jersey Offers $7 Billion in Incentives to Lure Amazon to Newark," by Keiko Morris and Mike Vilensky: "New Jersey is offering Amazon $5 billion in tax incentives over the next 10 years and upon the creation of 50,000 jobs, Mr. Christie said. In addition, Newark is offering a property-tax abatement potentially worth $1 billion and another $1 billion that Amazon's new Newark workers would gain over 20 years from the city waiving its local wage tax, the governor said." http://on.wsj.com/2kT0yeR

IN LAS VEGAS -- "Jesus Campos, Vegas security guard shot before rampage, appears to have vanished," by L.A. Times' Melissa Etehad, Ruben Vives and Jaweed Kaleem: "The story seemed straightforward: The unarmed security guard approached Stephen Paddock's room on the 32nd floor of the Mandalay Bay Resort and Casino, distracting the gunman and potentially saving lives. With a gunshot wound to his leg, he helped point officers to the gunman's location and stayed behind to evacuate hotel guests. He was hailed a hero by many, even as the story changed. Twice.

"Now, the man that many want to honor and who can help bring clarity about the timeline of the shooting has vanished from the public eye, less than two weeks since the Oct. 1 massacre, which left 58 people dead and more than 500 others injured." http://lat.ms/2zfa2DF

CRITICS NOTEBOOK -- NYT'S ROBERTA SMITH: "Why the Obamas' Portrait Choices Matter": "In their selection of Kehinde Wiley, for Mr. Obama's likeness, and Amy Sherald, for Mrs. Obama's, announced Friday, the Obamas continue to highlight the work of contemporary and modern African-American artists, as they so often did with the artworks they chose to live with in the White House, by Glenn Ligon, Alma Thomas and William H. Johnson, among others. Their choices then and now reflect the Obamas' instincts for balancing the expected and the surprising, and for being alert to painting's pertinence to the moment." http://nyti.ms/2hLN8MH

THE LATEST ON THE TRAVEL BAN -- "Federal judge hears challenge to third

version of Trump's travel ban," by Josh Gerstein: "A federal judge in Maryland is deciding whether the third time's the charm for President Donald Trump's travel ban. Judges blunted the impact of the first two executive orders Trump issued earlier this year, measures that critics said were thinly disguised versions of the Muslim ban he promised on the campaign trail. The latest iteration of the presidential proclamation dropped one majority Muslim country, Sudan, from an earlier list of countries that faced travel restrictions, added another largely Muslim nation, Chad, and included Venezuela and North Korea. The travel limits in the new policy are set to take effect early Wednesday morning.

"During a 90-minute session in a Greenbelt, Md., courtroom Monday, U.S. District Court Judge Theodore Chuang heard many of the same arguments that were leveled at the previous iterations of Trump's policy: that it is premised on discrimination against Muslims and that it exceeds his authority under a complex set of immigration laws." http://politi.co/2yov9Xg

ISAAC DOVERE emails us his latest "Off Message" Podcast: "'Shocking' is the word Puerto Rico Congresswoman Jenniffer Gonzalez used over and over about President Trump's tweets, talking to Isaac Dovere for the latest Off Message podcast. Does the president get what is going on? 'You know what?' the first term Republican said. 'Maybe I'm going to be nice here: I don't know.' She said the president's hostile statements make even less sense in light of the action on the ground: 'He's sending the resources. He's granting everything that has been asked. He's having daily briefings on the island. He's sending the troops.'

"'This is not the time to be talking about withdrawing the help,' she continued, a flash of anger in her voice. 'This is not the time to talk about how much it's costing the U.S., because we are American citizens.' And she talked about her own experience living through Hurricane Maria and the continuing aftermath: 'Your life,' she said, with tears in her eyes, 'is like stopping without knowing what is going to happen next.'" http://politi.co/2hLUSOQ

States, Industry Seek Rehearing on Methane Lawsuit

Posted July 28, 2017, 11:59 A.M. ET

By Catherine Douglas Moran

A full federal appellate court should reconsider a decision that forced the EPA to implement methane emissions limits for the oil and gas industry that it plans to revise, states and industry groups said.

The U.S. Court of Appeals for the District of Columbia Circuit July 3 struck down the Environmental Protection Agency's plan to halt implementation of the methane regulator for 90 days, finding the delay an abuse of agency authority.

The industry groups and states, including the American Petroleum Institute and the Interstate Natural Gas Association of America, filed two petitions—one July 28 and the other July 27—that ask for the full court to rehear the case .

Trump May Have to Boost Biofuel as Court Deals Blow to Oil

Posted July 28, 2017, 01:37 P.M. ET

By Mario Parker, Andrew Harris and Ari Natter

The Trump administration may have to reconsider its proposal from earlier this month to curb biofuel use after a U.S. appeals court in Washington ruled that the Environmental Protection Agency doesn't have the authority to cut quotas while citing inadequate domestic supply.

Issued July 28, the unanimous ruling by a three-judge panel comes amid conflicting legal challenges to actions taken by the EPA. Some factions claim the agency set renewable fuel requirements too high, while others said they're too low. Shares of ethanol producers rose on the news while refinery stocks declined.

U.S. Circuit Judge Brett Kavanaugh wrote that EPA isn't allowed "to consider the volume of renewable fuel that is available to ultimate consumers or the demand-side constraints that affect the consumption of renewable fuel by consumers."

The ethanol industry hailed the court's move as a victory Ams. for Clean Energy v. EPA, D.C. Cir., 7/28/17.

Earlier this month, the Trump administration issued a proposal that for the first time would cut the amount of renewables that must be blended into the fuel supply under a 12-year-old law known as the Renewable Fuel Standard.

The court ruling is a blow to oil refiners, including billionaire Carl Icahn, who have argued that there are constraints to blending the fuels into petroleum. The American Petroleum Institute said in a statement it was "disappointed" with the court's decision, which the trade group said highlighted the need for congressional action to reform the renewable fuel standard—a move congressional analysts have said is unlikely to happen.

"We are still reviewing the decision, but the fact the court has affirmed our position that EPA abused its general waiver authority by including factors such as demand and infrastructure in a waiver intended to be based solely on available supply is a great victory for consumers and the RFS program," said Bob Dinneen, the chief executive officer of the Renewable Fuels Association, an ethanol industry trade group.

The EPA didn't immediately respond to a request for comment. In a July 5 statement, the agency, which administers the program, said that the proposal was "consistent with market realities focused on actual production and consumer demand while being cognizant of the challenges that exist in bringing advanced biofuels into the marketplace."

"This is pretty huge," said Gene Gebolys, CEO of biofuel producer World Energy Alternatives LLC. "This gives the Trump administration clear guidance on what the legislative branch intended when they passed the law and what the judicial branch meant when they upheld the law."

Green Plains Inc., one of the biggest U.S. ethanol producers, rose 1.3 percent to $19.70 at 12:44 p.m. in New York. CVR Energy Inc., an independent oil refiner that counts Carl Icahn as its biggest investor, slumped 3.8 percent.

Renewable Identification Numbers (RINs), biofuel credits that track 2017 ethanol consumption quotas, rose 1.2 percent to 82 cents apiece, the highest in a week, data compiled by Bloomberg show.

EPA Argument

The court heard the argument on April 24. The case dealt with Obama-era EPA actions to cut quotas for ethanol and other biofuels for the years 2014, 2015 and 2016 below statutory levels, reducing totals set forth in 2007 legislation, with the regulator taking the position it had the power to do so under a provision allowing it to adapt to a production shortfall.

There was no shortfall, but the EPA argued that "production" could include the fact that the market couldn't absorb the additional fuel, government lawyer Samara Spence told the court.

The EPA "misunderstood its assignment under the mandate," former U.S. Solicitor General Seth Waxman countered, arguing on behalf of biofuels proponent Americans for Clean Energy, adding

that the agency "screwed up."

"The salient point here is that EPA agrees there is more than adequate supply," Waxman said.

From the bench, Kavanaugh indicated he agreed.

"I understand the difficulty EPA is in here, but the statute doesn't seem to give EPA the authority to fix everything that is not working right," he told Spence, the government's attorney. "If this thing is totally screwed up, Congress should fix it."

Joining in the opinion were U.S. Circuit Judges Patricia Ann Millett and Janice Rogers Brown.

EPA's Move to Cut 2016 Renewable Fuel Volume Rejected by Court

Posted July 28, 2017, 01:04 P.M. ET

By Andrew Harris, Mario Parker and Ari Natter

The U.S. Environmental Protection Agency didn't have authority to cut 2016 renewable fuel volume standards based on its "inadequate domestic supply" waiver authority, a U.S. appeals court in Washington has ruled.

Issued July 28, the unanimous ruling by a three-judge panel comes amid conflicting legal challenges to actions taken by the agency, with some factions claiming the EPA set renewable fuel requirements too high, while others said too low.

"The 'inadequate domestic supply' provision authorizes EPA to consider supply-side factors affecting the volume of renewable fuel that is available to refiners, blenders, and importers to meet the statutory volume requirements," U.S. Circuit Judge Brett Kavanaugh wrote Ams. for Clean Energy v. EPA, D.C. Cir., 7/28/17.

"It does not allow EPA to consider the volume of renewable fuel that is available to ultimate consumers or the demand-side constraints that affect the consumption of renewable fuel by consumers."

The ethanol industry tentatively hailed the court's move as a victory.

"We are still reviewing the decision, but the fact the court has affirmed our position that EPA abused its general waiver authority by including factors such as demand and infrastructure in a waiver intended to be based solely on available supply is a great victory for consumers and the RFS program,"said Bob Dinneen, the President and chief executive officer of the Renewable Fuels Association, an ethanol industry trade group.

The EPA didn't immediately respond to a request for comment.

The court heard the argument on April 24.

By Renee Schoof

Former EPA enforcement chief Cynthia Giles spearheaded the agency's innovations in improving compliance with environmental laws. Now she's carrying on that work in a new job at the Energy and Environment Lab at the University of Chicago.

Giles started work in July as executive fellow and director of strategic initiatives at the lab, where researchers work with civic and government leaders to test and scale up policies to reduce pollution.

"In the real world, as I said many times when I was working at the EPA, things break—managers don't pay attention, equipment doesn't work as hoped, people cheat. It's important that government policies are designed with knowledge about how the real world works and informed by research that tests that kind of thing," Giles told Bloomberg BNA.

Giles led EPA's development of its Next Generation strategy for better compliance with environmental laws when she was assistant administrator for enforcement and compliance during the Obama administration. Next Generation involves clearer regulations and the use of pollution detection technology such as infrared cameras, electronic reporting of emissions data and making that data available to the public, and new enforcement approaches such as data analysis and the targeting of regulated facilities for inspection.

Michael Greenstone, an economics professor at Chicago and director of the school's Energy and Environment Lab and its Energy Policy Institute, said that Giles' work on Next Generation was important and that her experience would help the lab.

"One key insight from Next Generation is so patently obvious that it seems like a small deal but it's actually an incredibly important deal—and that is the American people are best served by there being transparency about what levels of pollution are being emitted. It's impossible to have effective regulatory policy without an agreement on the basic numbers," Greenstone told Bloomberg BNA.

Giles, he said, was "a tremendous leader and an ardent supporter of making sure we all had a common set of facts on which to base policy."

Giles said her work mainly would involve helping get more research done that answers questions environmental regulators have, and making sure the regulators know about research that they can use.

"You can get better results with no additional cost if you pay attention to how things actually work in the world," she said. "It's the kind of research we need a lot more of, so that people who are designing these programs with the goal of reducing pollution that affects people's health design them in a way that's going to work."

Funding for Russia Pipeline to EU at Risk With U.S. Sanctions

Posted July 28, 2017, 9:01 A.M. ET

By Elena Mazneva and Angeline Benoit

The financing of Russia's $11 billion natural gas pipeline through the Baltic Sea could be affected by sanctions that just passed the U.S. Senate, according to one of project's backers.

Engie SA's current legal view is that if the sanctions were implemented its backers could "stop and not continue to fund this project in order not to be subject to any sanction whatsoever," the French utility's Executive Vice President Pierre Chareyre said July 28 on a conference call.

The Kremlin-backed project, known as Nord Stream 2, has been at the center of a disagreement between the U.S. and European Union in the past month. While the bill on extending U.S. sanctions against Russia, which passed the Senate July 27 but has yet to be signed by President Donald Trump, could affect any energy export pipeline in which a Russian company has a significant role, it also says that America would specifically "oppose" the pipeline led by Gazprom PJSC.

The 1,220 kilometer (758-mile) undersea link to Germany would cost 9.5 billion euros ($11 billion). Engie, Royal Dutch Shell Plc together with Germany's BASF SE and Uniper SE, as well as Austria's OMV AG agreed in April to provide 10 percent of the funding each to see the link started by the end of 2019. The EU warned earlier this week that it could retaliate against the U.S. "within a matter of days" should its companies and their plans be targeted by the sanctions.

Uncertain Impact

OMV continues to monitor the situation "very carefully and will make an assessment when all of the facts are on the table," its press service said by email on Friday.

"In general, sanctions have not proven to be an instrument that achieves its given goal as we have seen in the last years," OMV said. "From a European standpoint, the additional quantities of natural gas from Russia are necessary."

If the sanctions bill is enacted, Shell would "have to go through the phase of rule making to understand exactly how that bill should be implemented," before understanding the full implications for Nord Stream 2, Chief Executive Officer Ben Van Beurden said on a conference call July 27.

As the project to some extent would compete with U.S. exports of liquefied natural gas to Europe, the Nord Stream 2 participants, including Russia and Germany, have said the measures sought to bolster U.S. economic interests.

The U.S. bill says the president may impose sanctions against companies that invest in or supply a Russian export pipeline. This relates to construction, modernization or maintenance entailing a minimum of investment of $1 million. Possible penalties included a ban on loans and investments from U.S. institutions, on banking and property transactions, and procurement deals with U.S. firms.

Nord Stream 2 has enough funding at least for this year, with more than 1 billion euros ($1.17 billion) already received from EU partners, Gazprom Deputy CEO Alexander Medvedevsaid last month. While the company has repeatedly said it has enough money to complete the pipeline on its own if needed, in a recent Eurobond prospectus it noted that "difficulties," delays or even failures are theoretically possible because of the curbs.

"Sanction law is not retroactive so only future funding transfer would trigger risks," Engie's Chareyre said. "We are not in that situation yet and advocacy is being pursued very actively by Engie, other companies and the EU."

The U.S. Interior Department Has a New Mission: to Make Money

Posted July 28, 2017, 8:27 A.M. ET

By Catherine Traywick

Under President Donald Trump, the U.S. agency that manages the national park system is tweaking its mission to include a new priority: Generating cash.

Interior Secretary Ryan Zinke aims to retool the agency into a federal profit center focused on increasing energy production, according to a plan laid out by his special adviser, Vincent DeVito.

"Our objective here is to bring as many resources online as responsibly as we can," DeVito said during an event in Washington July 27. "We are changing the way the government is doing business."

That means running the government as though it actually is a business, according to DeVito, who refers to himself as a "senior manager" within "the Department of Interior Energy."

The agency needs to offer federal leaseholders, whom he calls "investors," a reason to partner with the government, which hasn't been a particularly good business partner in the past, he said. That means opening up more resources, making permitting easier and "aggressively" cutting regulations on private industry.

Easing Rules

Zinke has already taken major steps in that direction, overturning an Obama-era moratorium on new coal leases and starting the process of overhauling rules to curb hydraulic fracturing and methane flaring on public lands. He's also planning to rewrite a five-year offshore leasing plan finalized by President Barack Obama which banned drilling in the Atlantic Ocean and parts of offshore Alaska, and has accepted applications from oil companies seeking to conduct seismic testing off the Atlantic coast.

It's only the tip of the iceberg, according to DeVito, who was an early Trump supporter and a member of the president's transition team before joining the Interior Department.

The ultimate goal is to bring in more money by changing the way federal lands are managed. Royalty revenues from gas and coal leasing fell significantly under the Obama administration. Coal production on federal lands fell 39 percent between 2008 and 2016, while gas production declined by 30 percent, according to data from the Office of Natural Resources Revenue. Oil production, by contrast, rose 32 percent during the same period.

Oil, gas and coal production are obvious revenue opportunities, but DeVito said that solar and wind on federal lands are fair game, too, as long as the result is "a marked increase in dollars into the federal government. That is kind of the metric that we are judging ourselves by."

Royalty Rates

DeVito's remarks echo those made by Zinke in recent months. The Interior chief has advocated raising royalty rates to help fund the National Park Service and other programs. Any new revenue will ultimately benefit conservation, DeVito said.

But environmental advocates dismiss that argument, pointing instead to the president's 2018 budget request, which seeks to cut dramatically conservation programs.

"Secretary Zinke's job is to steward the national parks and monuments and not turn them over to the oil and gas industry," said Alex Taurel of the League of Conservation Voters. "No one should believe that this drilling and mining has anything to do with conservation."

The agency's new approach, which DeVito characterizes as "aggressive" has already spurred a raft of legal challenges, but DeVito said he's not worried about that: "Being sued is not something we take into serious deliberation when we exercise the secretary's discretion."

More Charging Stations Coming to California in Initial VW Deal

Posted July 28, 2017, 7:44 A.M. ET

By Carolyn Whetzel

Volkswagen subsidiary Electrify America will spend $200 million over the next 30 months to build California's electric vehicle infrastructure and boost use of zero-emission vehicles in the state.

The investment is the initial phase of the court-ordered $800 million program VW must implement in the state after the automaker was found to have equipped 2009-2016 model year diesel-engine vehicles with illegal software to mask emissions during certification tests.

The California Air Resources Board approved the first of four investment plans Electrify America must submit over the next 10 years. It calls for 400 new charging stations in Fresno, Los Angeles, Sacramento, San Diego, San Jose, and San Francisco and fast charging systems along highways. Other elements of the plan and a supplement CARB requested in March, focus on giving low-income and disadvantaged communities access to zero-emission vehicles and public outreach.

Wind Projects in Peril as Indian States Rethink Purchase Pacts

Posted July 28, 2017, 8:17 A.M. ET

By Anindya Upadhyay

Two Indian states at the forefront of adding renewables to their power mix are backtracking on agreements for at least one gigawatt of wind project and are seeking lower prices, potentially dealing a blow to Prime Minister Narendra Modi's green energy goals.

The southern states of Andhra Pradesh and Karnataka, which account for a quarter of the country's installed wind capacity, are renegotiating or scrapping purchase agreements with developers and want power at prices lower than what had been stipulated in contracts already signed, developers

said.

"We have lost 75 megawatts of our project pipeline as Karnataka has canceled 400 megawatts of PPAs and there seems to be no other option than taking legal recourse for this," London-listed Mytrah Energy Ltd. Chief Executive Officer Vikram Kailas said in a phone interview.

The developments are a fallout of India's shift toward auctions to buy electricity from wind that brought tariffs to record lows, prompting states to renegotiate feed-in tariffs that guarantee a fixed price to producers for their power. This puts at risk the developers' financial health if price agreements are renegotiated and could threaten Modi's resolve to install 175 gigawatts of renewables by 2022.

Andhra Pradesh wants to pay a lower price for wind power projects than what was agreed to for 684 megawatts of capacity, people with knowledge of the matter said, asking not to be identified citing rules. Neighboring Karnataka scrapped power purchase agreements, or PPAs, signed earlier this year for 400 megawatts of wind projects, said P. Krishnamoorthy, general manager for power purchase at state electricity retailer Bangalore Electricity Supply Co Ltd.

Auction Impact

While Mytrah's projects are yet to be built, Bangalore-based Atria Power has lost investments of 1.9 billion rupees ($30 million) to build a 24-megawatt project in Karnataka, a company official said. International Finance Corp.-backed Hero Future Energies Ltd. faces renegotiation of the tariff for its 70 megawatts of commissioned projects out of a planned 120 megawatts in Andhra Pradesh.

"Andhra Pradesh should honor what they have signed," Hero Future Energies Chief Executive Officer Sunil Jain said. "If all these PPAs are renegotiated, you could have bad debts of millions of dollars and what's worse is that you'll drive investors away."

The first wind auction held in February brought wind tariffs to the lowest level in the country. Various states are now seeking the same from developers and are even reneging on previous pacts. By March, states stopped signing PPAs with projects either in development or commissioned and now the situation has escalated to reopening the pacts.

Southern Power Distribution Company of Andhra Pradesh Ltd., the state's power retailer, has decided to renegotiate the PPAs because the same developers building projects at record-low tariffs through auctions in one state shouldn't be selling clean energy at higher tariffs in another, people said. Negotiations are underway to resolve the impasse, they said.

An email seeking comment sent to H.Y. Dora chairman of Southern Power Distribution remained unanswered.

Wind Additions

According to ratings agency India Ratings and Research, there could be a substantial dip in wind capacity additions in the current financial year ending March 31. Installations could fall to 1 gigawatt to 1.5 gigawatts from an all time high of 5.4 gigawatts last financial year, the rating agency said in a recent note.

As of June, India had 32 gigawatts of wind capacity. The nation is aiming to raise that to 60 gigawatts by 2022 as part of the country's climate pledge.

Fiat Chrysler Can Resume Sales of Diesel Jeeps, Rams in U.S.

Posted July 28, 2017, 11:29 A.M. ET

By Ryan Beene and Jamie Butters

Fiat Chrysler Automobiles NV can once again sell new diesel-powered pickup trucks and sport utility vehicles in the U.S. after environmental regulators approved modifications to its emissions-control software, the company said.

Approvals from the U.S. Environmental Protection Agency and California Air Resources Board will allow the company to sell 2017 Jeep Grand Cherokee and Ram 1500 diesel models. The agencies had withheld certification that emissions-control software on the vehicles complied with clean-air standards after finding violations in earlier models.

"We appreciate the efforts of the agencies in working with us to achieve this milestone," Fiat Chrysler Chief Executive Sergio Marchionne said in a statement. "We are anxious to build on this progress to make appropriate updates to the emissions control software in our earlier model-year vehicles."

While Fiat Chrysler doesn't break out what portion of its Jeep or Ram model sales are diesels, the powertrains are significant to the company's marketing plans. The diesel Ram 1500 is rated the most fuel-efficient full-size pickup in the U.S., and losing it from the lineup would have been a setback to showrooms.

Fiat Chrysler's U.S.-listed shares reversed declines, climbing as much as 1.9 percent. The stock jumped 1.7 percent to $12.03 as of 10:34 a.m. in New York.

The approval is a partial win for Fiat Chrysler after several months of talks over the emissions software with EPA and California regulators to obtain approvals needed to resume sales. The EPA issued formal notices in January that the 2014 through 2016 models contained software functions that violated clean air rules.

The company still is facing civil suits by the Justice Department and from vehicle owners tied to so-called defeat devices in about 104,000 older diesels it has sold.

"The 2017 certification for the Ram 1500 and Jeep Grand Cherokee vehicles is separate and distinct from the current U.S. litigation in the Northern District of California for the installation of defeat devices in the 2014-2016 models of these vehicles," the EPA said in a statement.

Fiat Chrysler agreed to modify the software on the 2017 models and said no hardware changes will be required. The Italian-American automaker said the updates will have no effect on fuel economy ratings or performance of the vehicles.

Fiat Chrysler resumed production earlier this month of its diesel-powered Ram 1500 pickups.

The vehicles were caught up in agency scrutiny of new diesel models that was intensified in the wake of Volkswagen AG's diesel-cheating scandal.

Transcanada Still Sees Producer Support for Keystone XL Line

Posted July 28, 2017, 02:48 P.M. ET

By Kevin Orland

TransCanada Corp. said it still expects commercial support for its controversial Keystone XL oil pipeline, tamping down speculation that it was having trouble finding customers for the long-delayed line.

Keystone XL, which was rejected by the Obama administration before being revived by President Donald Trump this year, would boost TransCanada's dividend growth, the company said in a statement July 28. Media reports in recent weeks said that the company was having trouble signing up customers for the pipeline, conceived to help move crude from Alberta's oil sands to refineries on the U.S. Gulf Coast.

TransCanada said earlier this year that it was working to sign new shippers following years of delays. Given the time it took to gain federal approval, TransCanada said it expected some shippers to reduce their volume commitments and that other new customers would be introduced. The company said July 27 that it's soliciting additional commitments to ship oil on Keystone XL.

"We've had good support from our legacy shippers, which gives us a good base to launch this open season," Paul Miller, TransCanada's president of liquids pipelines, said on a conference call.

The open season closes on Sept. 28, with the results of the process expected to be final in late November, Miller said. The company should also receive its regulatory decisions from Nebraska around that time and will weigh both of those factors in determining whether to proceed with the line, he said. If TransCanada decides to move ahead on Keystone XL, it would need six to nine months to prepare for construction and about two years to build it, he said.

Dividend Growth

Success in advancing Keystone XL or other growth initiatives such as the Bruce Power life extension may "augment or extend the company's dividend growth outlook," Chief Executive Officer Russ Girling said in the statement. The company plans to increase its annual dividend at the upper end of an 8 percent to 10 percent range through 2020.

Keystone won votes of confidence from the chief executive officers of Canadian oil producers Cenovus Energy Inc. and Suncor Energy Inc. this week. The CEOs both said they support Keystone and that the Canadian energy industry needs more pipeline capacity. Suncor confirmed that it plans to ship its products on Keystone.

Alberta's oil producers have long warned that a lack of pipeline space was hurting their prospects. That pipeline pinch may start to hit the industry later this year as Suncor's massive Fort Hills oil-sands project starts to produce oil and Canadian Natural Resources Ltd. completes another phase of expansion at its Horizon mine.

Beyond Keystone

Looking beyond Keystone, TransCanada is spending C$2 billion ($1.6 billion) to expand its natural gas pipeline network in Western Canada. The upgrades to the Nova Gas system will include 171 miles (275 kilometers) of new pipeline, additional compression and new metering stations.

The company said July 28 that it was applying to the National Energy Board to expand capacity on its Canadian Mainline, which carries natural gas from producers in Alberta to markets in the nation's east. The company would spend about C$160 million ($129 million) on the project, which is underpinned by 15-year contracts.

TransCanada's second-quarter profit was 76 Canadian cents a share, excluding some items. The average estimate of analysts surveyed by Bloomberg was 68 cents.

Diesel Ban Looms in Hometown of Porsche, Mercedes Over Emissions

Posted July 28, 2017, 9:39 A.M. ET

By Elisabeth Behrmann

German carmakers, fighting for diesel's future, faced a setback after a Stuttgart court ruled in favor of banning the technology in the home city of Mercedes-Benz and Porsche.

Diesel driving bans are the only adequate solution to quickly clean up the air, said Judge Wolfgang Kern of Stuttgart's administrative court, ruling on a case brought by an environmental group over the city's failure to comply with emissions levels for smog-inducing nitrogen oxide. Kern's decision is likely to influence other judicial cases coming in Germany on the matter.

"From 2010 until today, authorities have failed to meet their duty on lowering emissions levels," Kern said. "Driving restrictions are legally enforceable and in the court's view a proportionate measure because protection of health outweighs the right to property and freedom to act for vehicle owners."

Automakers, the federal government and some German states are seeking to avoid bans by instead pursuing recalls to improve emissions as the diesel-cheating scandal that erupted two years ago at Volkswagen AG continues to engulf the industry. Transport Minister Alexander Dobrindt July 27 took a hard-line stance against Porsche, accusing the sports-car maker of using a defeat device in the Cayenne and forcing the VW unit to recall thousands of the sport utility vehicle.

Federal Court

"Driving bans are fundamentally not a solution," Daimler communications chief Joerg Howe said in a statement, adding such a move will impair the economy, trade and commuter traffic. "There are other measures that could more easily, efficiently and quickly reduce fine dust particles and nitrogen oxide."

Kern said any appeal will move immediately to the top federal administrative court. A ruling by a federal judge would give other cities like Munich and Berlin, where local courts are also considering complaints by advocacy group Deutsche Umwelthilfe, a blueprint for their own measures to fight emissions.

"The judge has recommended broad diesel driving bans in Stuttgart—this is a message to the carmakers that selling dirty diesels is finished," Juergen Resch, head of Deutsche Umwelthife, said after the ruling. "Diesel cars must be upgraded beyond software fixes with the carmakers paying for these measures."

While German automakers argue that they need to continue using diesel as an interim step before moving more fully to electric cars, the confidence crisis facing the technology has ballooned in the last two weeks. Daimler AG's Mercedes-Benz on July 18 announced plans to voluntarily recall 3 million diesel vehicles in Europe to upgrade their technology, while VW's Audi brand said three days later it will service 850,000 cars. VW said July 27 it would expand a recall to about 4 million cars to upgrade engine software.

Sales Dropping

The national debate on diesel, which last year made up 46 percent of car deliveries, has unsettled consumers, and sales of models with the technology have been dropping. Adding to the discontent, VW and Daimler are also caught up in another scandal with BMW AG over allegations they colluded on technology. BMW vehemently denies any wrongdoing.

Possible driving bans in some German municipalities clash with an industry that employs tens of thousands to produce vehicles using diesel technology. While states appear willing to strike deals that allow carmakers to upgrade older models, cities and judges are likely to push back. In Munich, a court in March compelled the city to prepare diesel prohibitions to bring down nitrogen oxide levels.

The Stuttgart case considered whether Baden-Wuerttemberg had adequate measures in place to bring down emissions. The city, situated in a valley in the country's southwest, regularly records levels above European Union regulations. To improve air quality, bans shouldn't only be on days with high emissions, but rather applied on a longer-term basis, Kern said.

Political Pressure

The judge recommended preventing diesel cars with the so-called Euro 5 standard—on sale as recently as 2015—from entering much of Stuttgart's center. Such a measure promised the quickest way to cut nitrogen oxide and could be put in place as early as January, he said.

State Prime Minister Winfried Kretschmann, a member of the Greens, recently came out in favor of diesel software fixes rather than an original plan to ban older cars on days with high pollution. If and when people might be forced to leave their cars at home isn't clear and the final ruling, due in August, can be appealed.

Chancellor Angela Merkel's government, which has thus far eschewed the lead of the U.K. and France in setting out timetables for ending the use of combustion engines, is also under pressure to take action. Dobrindt has called an emergency summit of industry executives and government officials July 26 in Berlin. The transport minister said the July 28 ruling didn't take into consideration measures they'll consider then.

"A general diesel ban in cities is the wrong political path," Dobrindt said.

Mexico's Ethanol Boost Fuels Cross-Border Environmental Debate

Posted July 28, 2017, 7:16 A.M. ET

By Emily Pickrell

Mexico's decision to nearly double the amount of ethanol permitted in gasoline is pitting two big winners—U.S. corn growers and ethanol producers—against some environmental activists and Mexico's own auto industry.

Last month Mexico's Energy Regulatory Commission (CRE) announced it was immediately boosting the maximum amount of ethanol that could be blended in Mexican gasoline supplies from 5.8 percent to 10 percent, and that the change would bring Mexico (outside of its three biggest cities) in line with U.S. gasoline standards.

The U.S. Grains Council—which represents ethanol producers such as Cargill, John Deere, Dow AgroSciences, and Kansas Ethanol—welcomed the decision, as did former commission president Francisco Salazar.

"I think that the CRE has made the right move," Salazar, the agency's president from 2005 to 2015, told Bloomberg BNA. "The standard on the other side of the border is a good one."

While the U.S. already supplies about half of Mexico's gasoline and is the primary producer of ethanol used in Mexico, the change, which took effect June 26, also could expand gasoline imports from the U.S. because retailers won't need to sell gasoline with different ethanol levels on either side of the border.

Cross-Border Cooperation

Despite feuding with Mexico over a border wall, President Donald Trump promised to support ethanol while campaigning for president, and he reiterated that position in a speech in Iowa last month. The ethanol industry is "under siege," but the Trump administration is saving it, the president told an Iowa crowd in June.

Earlier this month, Energy Minister Joaquin Coldwell and U.S. Energy Secretary Rick Perry agreed to work on standardizing energy regulations between the countries, as a way of moving toward a single North American energy region. The Trump administration has listed this integration as one of its objectives in renegotiating the North American Free Trade Agreement, and Mexican President Enrique Pena Nieto has identified it as a key priority.

"We are pleased to see this [ethanol] decision, which is the culmination of significant work by Mexican authorities and industry as they continue to diversify and improve their fuel supplies," Tom Sleight, the U.S. Grains Council's president and chief executive officer, told Bloomberg BNA in a statement.

U.S. Winners

U.S. corn growers had pushed hard for their southern neighbor to adopt the U.S. ethanol standards, according to George Baker, publisher of Mexico Energy Intelligence, a Houston-based research

group.

"There was a big effort on the part of U.S. refineries to lobby Mexico," Baker said. "It basically is an effort to prop up the Iowa corn industry by exporting gasoline."

And U.S. companies are likely to become the big ethanol suppliers for Mexico, which currently produces about 66 million gallons per year of ethanol, according to the Grains Council. By contrast, the largest U.S. ethanol plants alone make as much as 300 million gallons per year of ethanol.

Whether the council's efforts should be seen as lobbying or helping a neighbor develop its own market is a matter of perspective, said Mike Dwyer, the Grains Council's chief economist and head of the global ethanol program. The mission of his program, he explained, is to provide regulators around the world with information on the benefits of ethanol and the science that supports its impact on the environment.

"We are working with the Mexican ethanol industry and helping them develop a resource," Dwyer told Bloomberg BNA. "Mexico has the necessary feedstocks to produce ethanol; they have plenty of sugar and sorghum. What they don't have is the knowledge, and that is what is the focus of our engagement—education."

Environmental Dissent

Research on the health impacts of ethanol in gasoline are mixed. The addition of ethanol reduces two types of carcinogens, benzene and butadiene, according to a 2009 Stanford University report, but may increase ozone, which has been linked to asthma and other lung ailments, depending on the characteristics of the atmosphere.

Ethanol in gasoline has not been permitted for sale in Mexico's three most heavily populated cities—Mexico City, Guadalajara or Monterrey—because of their significant air quality issues. And this ban continues, at least for now.

Mexican environmental groups argue the decision to increase the percentage of ethanol in the rest of the country overlooks the potential environmental and health damage it could inflict, in part by increasing ozone in the atmosphere.

Ethanol advocates point to research—such as a January 2017 report from the U.S. Department of Agriculture— that ethanol gasoline produces fewer greenhouse gases and thus benefits climate change reduction goals.

But some environmental groups question the actual environmental benefits of ethanol, including as it relates to greenhouse gas emissions. They point to the fossil resources that are invariably required to grow these crops and then process them into an additive for fossil fuel, which they say can largely neutralize the carbon footprint benefit.

High-Altitude Cities

In Mexico, the environmental issues have focused mostly on air quality.

The concerns that ethanol gasoline would be especially problematic for high-altitude cities, such as Mexico City, have not been proven by the experience of other cities who once raised the same concerns, Dwyer said. He listed Denver and Bogota, Colombia, as examples.

"They have not had any reported problems of ozone going up," Dwyer said. "The Mexicans will find the same thing that is found everywhere else on the planet—that ethanol is a great additive for improving air quality, for reducing GHG emissions in the transportation market and is a great low carbon source of octane."

And while a 2014 Northwestern University study on air quality in Sao Paulo, Brazil, showed that ozone levels dropped when drivers switched from ethanol to gasoline in flexible-fuel vehicles, the study also noted that the impact of ethanol versus gasoline on air quality depends on the characteristics of the local atmosphere.

'Waiting For the Data'

The Energy Regulatory Commission commissioned the Mexican Petroleum Institute to study the health implications of increasing ethanol to 10 percent in gasoline, and to conduct a cost-benefits analysis. But the study's findings have yet to be released.

"Right now, we are waiting for the data," said Anaid Velasco, an air quality analyst with the Mexican Center for Environmental Law. "We do not think that we have enough data to make that kind of decision."

Carmakers Unhappy

The Mexican Auto Industry, or AMIA, which represents some of the most powerful international auto producers in Mexico, such as General Motors Co., Honda Motor Co., Audi and Volkswagen, has also expressed concern about the new rules.

AMIA contends that because Mexico's auto emissions standards—especially for its older cars—are less stringent than those in the U.S., a larger portion of its fleet is potentially less capable of processing the higher percentage of ethanol in gasoline.

"The older vehicles in circulation lack the same emissions control capacity as the more recent vehicles," wrote Osvoldo Belmont Reyes, the technical director of AMIA, in a June 22 letter to the Energy Regulatory Commission. "The resulting increase of particles would eliminate the same air quality improvements that the government is trying to achieve, with consequential health implications for the public."

VW, GM and Audi told Bloomberg BNA they support the AMIA position.

But former CRE president Salazar said the idea in Mexico that ethanol is more harmful for air pollution is based on older research that used cars with no catalytic converters.

"Ethanol is used in areas with an altitude even higher than Mexico City and it is not a problem," Salazar said. "Why would Mexico have a different standard when the U.S. standards have been approved by the EPA? It doesn't really make sense to counter the tough environmental standards of the U.S."

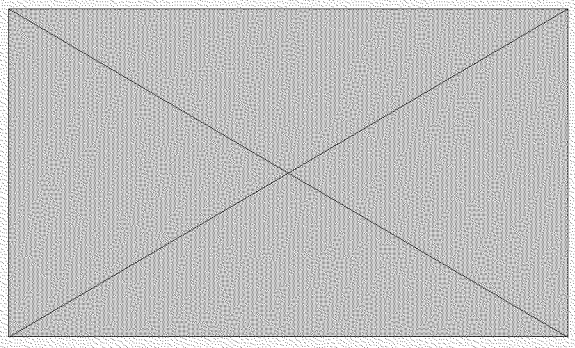
Subject: AEI Today: The dollar is in trouble

President Donald Trump seems to favor measuring his economic performance by the way in which the U.S. stock market is doing. However, a more revealing and less rosy measure of his economic performance might be coming from the currency markets.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



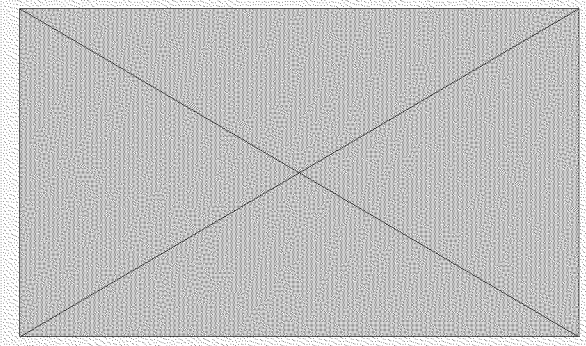
Twenty20

The American dollar is in trouble

Desmond Lachman | US News & World Report

President Trump is fond of measuring his economic performance by how the US stock market is doing. But a more revealing and less rosy measure of his progress might be coming from the currency markets. The dollar has lost as much as 10 percent of its value since the January 2017 inauguration. The recent decline is particularly troubling, as it comes at a time when two historically dollar-supportive

factors are in play.

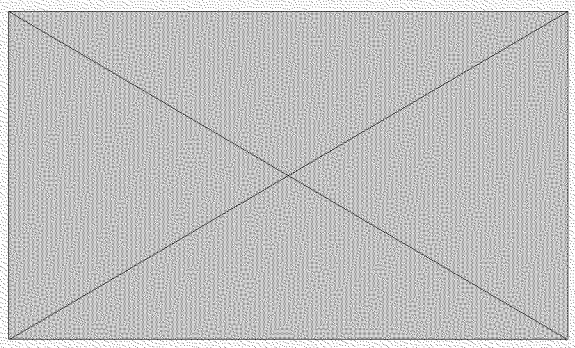


Reuters

Some rare good news from the Middle East

Kenneth Pollack and Firas Maksad | Foreign Affairs

Some of the best news to come from the Middle East in a long time is the recent and long-overdue improvement in relations between Iraq and Saudi Arabia. Washington has been trying in vain since 2003 to convince the Saudis that dissing Iraqis would drive the country's Shiites into the arms of the Iranians — and its Sunnis into the arms of terrorist groups. But for the past 14 years, the kingdom has kept its distance, believing Iraq was already lost.



Reuters

America's private schools aren't what you think they are

Michael Q. McShane | US News & World Report

When we hear the words "private schools," many of us think about tony suburban campuses speckled with lacrosse fields and tennis courts. Others think about single-sex Catholic schools run by the Christian Brothers or Sisters of St. Joseph. Neither of these images represents the diversity of the 34,576 private schools in our nation today. Perhaps most surprisingly, 30.2 percent of these schools were located in rural areas or small towns.

Twenty20

Don't demonize immigrants, my fellow conservatives

Michael R. Strain | Bloomberg View

The public face of the right wasn't always so hostile. Upon hearing that some Muslims felt intimidated by other Americans, President George W. Bush went to a mosque six days after 9/11 and said, "Those who feel like they can intimidate our fellow citizens to take out their anger don't represent the best of America. They represent the worst of

humankind." This comment does not advocate policy by sentiment; it recognizes that the dignity of every person is a central concern of politics.

Driving the Day

Good Monday morning. PRESIDENT DONALD TRUMP is coming back to D.C. He meets with John Kelly at 11:15 a.m. and then signs a "memorandum on addressing China's laws, policies, practices, and actions related to intellectual property, innovation, and technology." At 3:45 p.m., he'll meet with the National Economic Council before heading to New York for a few nights. At 9:30 p.m. he'll speak to Japanese Prime Minister Shinzo Abe by phone from Trump Tower.

LAST WEEK the White House indicated that there would be a press conference today. Trump's schedule does not indicate he's holding a media availability.

ABOUT TODAY -- **@realDonaldTrump** at 6:26 a.m.: "Heading to Washington this morning. Much work to do. Focus on trade and military. #MAGA".

MORE FROM CHARLOTTESVILLE -- WASHINGTON POST: "Alleged driver of car that plowed into Charlottesville crowd was a Nazi sympathizer, former teacher says," by T. Rees Shapiro, Alice Crites, Laura Vozzella and John Woodrow Cox: "A man accused of plowing a car into a crowd of activists here -- killing one person and injuring 19 -- long sympathized with Nazi views and had stood with a group of white supremacists hours before Saturday's bloody crash.

"The alleged driver, James Alex Fields Jr., a 20-year-old who traveled to Virginia from Ohio, had espoused extremist ideals at least since high school, according to Derek Weimer, a history teacher. Weimer said he taught Fields during his junior and senior years at Randall K. Cooper High School in Kentucky. For a class called 'America's Modern Wars,' Fields wrote a deeply researched paper about the Nazi military during

World War II, Weimer recalled. 'It was obvious that he had this fascination with Nazism and a big idolatry of Adolf Hitler,' the teacher said. 'He had white supremacist views. He really believed in that stuff.'" http://wapo.st/2uF9UeE

-- VIRAL TWITTER REACTION -- FORMER REP. JOHN DINGELL (D-MICH.) @JohnDingell: "I signed up to fight Nazis 73 years ago and I'll do it again today if I have to. Hatred, bigotry, & fascism should have no place in this country." (257K retweets and 740K likes)

-- MORE TO COME -- "In blog posts after the violence, the Daily Stormer, a leading white nationalist website that promoted the Charlottesville event, pledged to hold more events. 'We are going to start doing this nonstop,' the post said. 'We are going to go bigger than Charlottesville. We are going to go huge.'" http://bit.ly/2w3bziz

-- **"Charlottesville victim: 'She was there standing up for what was right,'"** by WaPo's Ellie Silverman and Michael Laris: "Heather Heyer was killed Saturday as she pushed back against hatred. ... 'I'm not really surprised my child died this way, because she would stand up for what she believed in,' [mother Susan] Bro said. Despite her pain, Bro said she doesn't want people to hate Fields. It isn't what her daughter would want, she said. 'Our daughter did not live a life of hate and hating this young man is not going to solve anything ... It's not that I think he should go unpunished for his crime. But hate only engenders more hate and there's no purpose in hate,' Bro said. 'Heather's life was about, passionately about, fairness and equality and caring and that's what we want people to take away from this.'" http://wapo.st/2w5tPqv

VICE PRESIDENT MIKE PENCE, at a joint press conference Sunday with Colombian President Juan Manuel Santos: "We have no tolerance for hate and violence from white supremacists, neo Nazis or the KKK. These dangerous fringe groups have no place in American public life and in the American debate, and we condemn them in the strongest possible terms," Pence said, per pooler Phil Rucker of the Washington Post. "The president also made clear that behavior by others of different militant perspectives are also unacceptable in our political debate and discourse."

--TRUMP has not condemned the Nazis or white supremacists by name on the record yet. The White House did issue a statement doing so from a nameless spokesman yesterday. **QUESTION OF THE DAY**: Will the president do it today from D.C.?

MORE FROM PENCE -- ON VENEZUELA: "President Trump is a leader who says what he means and means what he says, but the president sent me here to continue to marshal the unprecedented support of countries across Latin America to achieve by peaceable means the restoration of democracy in Latin America, and we believe it is achievable by those means." ... "You hear in President Trump's words the resolve of the United States of America to see this through, to restore democracy and constitutional government in Venezuela."

FOR YOUR RADAR -- REUTERS: "Chinese state newspaper says Trump trade

probe will 'poison' relations": "In an editorial, the official China Daily said it was critical the Trump administration doesn't make a rash decision it will regret. 'Given Trump's transactional approach to foreign affairs, it is impossible to look at the matter without taking into account his increasing disappointment at what he deems as China's failure to bring into line the Democratic People's Republic of Korea,' the English-language paper said. 'But instead of advancing the United States' interests, politicising trade will only acerbate the country's economic woes, and poison the overall China-U.S. relationship.' An administration official has insisted diplomacy over North Korea and the potential trade probe were 'totally unrelated', saying the trade action was not a pressure tactic." http://reut.rs/2w2COK1

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

CULTURE SHIFT -- Washington has always been a place for people with sharp elbows. The old saying "Politics ain't beanbag" is apt and accurate. The difference: it was done behind closed doors. Trump insiders seem to revel in the credit they get for knifing whoever is on the outs with Trump. Crowing about shoving people under the bus seems more prevalent than ever.

There have been a lot of pieces about how the Trump administration and the various players who have come to Washington have impacted D.C. Cache now comes from hanging out at the Trump Hotel and the stock of pubs like Breitbart has soared as the White House looks to leak info to sympathetic reporters. But the most stunning example of a pervasive culture shift in the past several weeks has been the overt campaign by conservative operatives and factions in the West Wing to take out National Security Adviser H.R. McMaster. Lots of people have told us unflattering and sordid details of people's lives that may, or may not be true. But the steady drumbeat of personal attacks against aides in this White House is stunning.

STRANGE'S STRUGGLES -- "Despite Trump's Support, Alabama Senator Struggles to a Primary Finish," by NYT's Alan Blinder in Homewood, Alabama, and Jonathan Martin in Birmingham: "Senator Luther Strange of Alabama wields an endorsement from the president of the United States, is the beneficiary of a multimillion-dollar campaign from allies of Mitch McConnell, the Senate majority leader, and has the backing of influential conservative interest groups like the National Rifle Association.

"But Mr. Strange is wheezing into Tuesday's Republican Senate primary here. He is grasping to secure a second-place finish and a slot in a September runoff with Roy S. Moore, the twice-deposed former State Supreme Court justice and evangelical-voter favorite who is expected to be the top vote-getter but may fall short of the majority needed to win outright. Mr. Strange is in a political vise, pinched by his links to a pair of Republicans, one local and one national, held in low esteem by many in the party here:

the disgraced former Gov. Robert Bentley, who appointed Mr. Strange, and Mr. McConnell." http://nyti.ms/2w52aGo

-- QUICK PRIMER ON ROY MOORE: "The GOP rebel threatening to snag Sessions' Senate seat," by Seung Min Kim in Homewood, Alabama: "Roy Moore lacks the war chest of two chief rivals in his bid to become the next senator from Alabama. He didn't land the coveted endorsement of President Donald Trump, and doesn't enjoy the advantages of incumbency. Yet the controversial former state Supreme Court justice is coasting over his Republican challengers in Tuesday's closely watched GOP Senate primary. Moore is set to easily secure a place in a September runoff, as the establishment-backed Sen. Luther Strange and Rep. Mo Brooks scrape for the second spot.

"Should Moore become the GOP nominee and the next senator from Alabama, his bombastic personality and antipathy toward Mitch McConnell (R-Ky.) are sure to make more trouble for the GOP leader, who's taking constant flak from Trump as it is. McConnell and his allies are spending millions to elect Strange, and in response, Moore has made McConnell the symbol of everything he opposes in Washington.

"'I resent people from Washington, raising money in Washington, and sending negative ads to Alabama and trying to control the vote of the people,' Moore said in an interview after a GOP executive committee meeting here. "'If the Washington crowd wants somebody, the people of Alabama generally don't.'" http://politi.co/2uFe6ej

-- FOR GOOD MEASURE: @realDonaldTrump at 6:38 a.m.: "Luther Strange of the Great State of Alabama has my endorsement. He is strong on Border & Wall, the military, tax cuts & law enforcement."

COMING ATTRACTIONS -- "Trump aides predicting 'brutal' September," by Josh Dawsey: "Inside President Donald Trump's White House, no one seems to be looking forward to September. Senior officials have described the coming month as 'brutal,' 'bad' or 'really tough' because of the confluence of complicated issues -- but they also say it's pivotal to getting the presidency back on course. Aides hope to have a better blueprint for how the president wants to proceed on a series of thorny issues -- the nation's debt ceiling, the 2018 federal budget, tax reform, infrastructure spending and perhaps another stab at repealing Obamacare -- after a series of meetings in New York this week.

"Their goal is to partially temper Trump's expectations, hammer out some compromises and get a competing band of aides on the same page. The month has taken on outsize importance among some top aides and outside advisers, who view it as key to getting the presidency on a better track. ... Trump, who is impatient, wants it all done immediately, said people close to the president -- and he has ratcheted up pressure on aides in recent weeks, even though he doesn't always engage with the substance of issues." http://politi.co/2wVxqVf

2020 WATCH -- Trump's campaign yesterday released a new TV ad, **"Let President Trump Do His Job,"** which criticizes the president's "enemies" for not wanting him "to succeed." The Trump campaign did not respond to a request about how much they are spending on this ad, and where it is running. http://bit.ly/2fDZaL2

-- THE AD features House Minority Leader Nancy Pelosi (D-Calif.), Sens. Chuck Schumer (D-N.Y.) and Elizabeth Warren (D-Mass.) when the narrator reads "Democrats obstructing." When the narrator says "career politicians," it shows Rep. Steny Hoyer (D-Md.) and Rep. Maxine Waters (D-Calif.). When the narrator says the media is attacking the president and "the president's enemies don't want him to succeed," it shows Mika Brzezinski, Anderson Cooper, Joe Scarborough, Scott Pelley, George Stephanopoulos, Chris Hayes, Dana Bash, John King, Brian Williams, Gloria Borger, Don Lemon, Erin Burnett, April Ryan, Rachel Maddow, Chuck Todd, Brian Stelter and Fareed Zakaria. **NOTE:** The president's campaign is labeling reporters his "enemies."

THE JUICE ...

-- SEN. JEFF FLAKE (R-ARIZ.) is starting to see the opposition. The super PAC supporting his challenger Kelli Ward is up with a $100,000 statewide cable buy. The group just got cash from the Mercer family. The ad blasts Flake and Sen. John McCain for working with Democrats, saying anything to get elected and "blocking the conservative agenda." ***The ad*** http://bit.ly/2vwnGDk

-- CNN'S BRIAN STELTER: "On August 1, one day after the abrupt exit of White House communications director Anthony Scaramucci, President Trump dined with a communications whiz: Rupert Murdoch. The two men had a private dinner at the White House, according to two sources with direct knowledge of the meeting." http://cnnmon.ie/2vwSy6v

DEEP DIVE -- A LOOK BACK AT TILLERSON'S FIRST SIX MONTHS: "Critiques fly as Tillerson struggles to define his mission," by AP's Josh Lederman in Manila and Matt Lee in Washington: "Since taking office in February, Tillerson has earned praise from President Donald Trump despite policy differences, top Cabinet members and even some Democrats, including those who take solace in the tempering role he plays in an otherwise frenetic and unpredictable administration.

"Yet he's also stoked deep doubts about his leadership among many U.S. diplomats and the traditional foreign policy establishment, with a daily drumbeat of editorials like 'Why Has Rex Tillerson Belly-Flopped as Secretary of State?' and 'How Rex Tillerson is Wrecking the State Department.' And so difficult has Trump made Tillerson's job at times that it's sparked talk of a 'Rexit,' a potential early departure from the job. As with the histrionic headlines, Tillerson has brushed it all off, calmly telling reporters last month, 'I'm not going anywhere.'" http://bit.ly/2w2yHNW

TOP OP-ED -- SECRETARY OF DEFENSE JIM MATTIS and **SECRETARY OF STATE REX TILLERSON** in the WSJ: **"We're Holding Pyongyang to Account:** The U.S., its allies and the world are united in our pursuit of a denuclearized Korean Peninsula": "In the past few months, multiple illegal North Korean ballistic-missile and ICBM tests-coupled with the most recent bellicose language from Pyongyang about striking the U.S., Guam, our allies and our interests in the Asia-Pacific region-have escalated tensions between North Korea and America to levels not experienced since the Korean War.

"In response, the Trump administration, with the support of the international community, is applying diplomatic and economic pressure on North Korea to achieve the complete, verifiable and irreversible denuclearization of the Korean Peninsula and a dismantling of the regime's ballistic-missile programs. We are replacing the failed policy of 'strategic patience,' which expedited the North Korean threat, with a new policy of strategic accountability.

"The object of our peaceful pressure campaign is the denuclearization of the Korean Peninsula. The U.S. has no interest in regime change or accelerated reunification of Korea. We do not seek an excuse to garrison U.S. troops north of the Demilitarized Zone. We have no desire to inflict harm on the long-suffering North Korean people, who are distinct from the hostile regime in Pyongyang." http://on.wsj.com/2w57CJg

-- "Top U.S. General Readies Military Plan for North Korea, but Pushes for Diplomacy: Arriving in Asia, Gen. Joe Dunford says he is prepared for war, but supporting Secretary of State Rex Tillerson's efforts," by WSJ's Gordon Lubold at Osan Air Base in South Korea: "'As a military leader, I have to make sure that the president does have viable military options in the event that the diplomatic and economic pressurization campaign fails,' Chairman of the Joint Chiefs of Staff Gen. Joe Dunford said in his first public remarks since the crisis escalated with North Korea's launch of a second intercontinental ballistic missile late last month.

"'Even as we develop those options, we are mindful of the consequences of executing those options, and that makes us have more of a sense of urgency to make sure that we're doing everything we absolutely can to support Secretary Tillerson's current path,' he said. Gen. Dunford began a scheduled swing through the region Sunday, with a stop to meet with South Korean President Moon Jae-in, along with newly appointed defense officials and commanders. Gen. Dunford leaves Monday for Beijing and will also visit Tokyo this week, defense officials said." http://on.wsj.com/2fDX3GI

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

VOLLEY TO BREITBART -- "U.S. National Security Adviser McMaster is a Friend to Israel," by former senior Israeli military officials Yaakov Amidror and Eran Lerman in the Jerusalem Post: "It was sad to see scurrilous and harmful personal attacks launched by some American Jews and even a few Israelis at US National Security Adviser Gen. (ret.) H.R. McMaster. ... But such an attack is not mere opinion; it is an offense against the truth, against basic decency and against the best interests of Israel as we see them. In the opinion of many in the professional Israeli defense establishment who have come to know Gen. McMaster over the years, directly and indirectly, the general is a friend.

"Israeli officers and scholars who have worked with McMaster say that he was always highly appreciative of Israel and of its contributions to the security of the US. They attest to his broad support for and admiration of the IDF. It is absurd to assert that all these years, hidden underneath McMaster's friendliness was a grudge against Israel that the general is now free to act on. We reject this churlish insinuation. And whatever the reasons may have been for his decision to relieve certain senior National Security Council officials of their duties, antisemitic or anti-Israeli sentiments were certainly not part of the calculus." http://bit.ly/2w2RbxJ

NEWT on FoxNews.com -- "America needs to be better prepared for a nuclear attack": http://fxn.ws/2vTPX7C

JUST POSTED - "Julian Assange, a Man Without a Country: From his tiny sanctum in London, the founder of WikiLeaks has interfered with the world's most powerful institutions," by The New Yorker's Raffi Khatchadourian: "Assange ... argued that any attempt to associate WikiLeaks with Guccifer 2.0 was pernicious spin -- trying to turn a coincidence into a conspiracy. ... [But w]hatever one thinks of Assange's election disclosures, accepting his contention that they shared no ties with the two Russian fronts requires willful blindness. Guccifer 2.0's handlers predicted the WikiLeaks D.N.C. release. They demonstrated inside knowledge that Assange was struggling to get it out on time. And they proved, incontrovertibly, that they had privileged access to D.N.C. documents that appeared nowhere else publicly, other than in WikiLeaks publications. ...

"[But members of the intelligence community ... [have affirmed that] Russian military intelligence-the same group that appeared to control Guccifer 2.0 and DCLeaks-released the D.N.C. and the Podesta e-mails to WikiLeaks through a third party. ... Assange once told me that he did not 'accept' the allegation that Russia had provided

him e-mails through a third party, which of course was different from saying that the allegation was untrue. I asked if he was even able to know the chain of custody of his election material before it came to him. He declined to answer." http://bit.ly/2wIrwYy

MEDIAWATCH -- "Pulitzer-Winner James Risen Joins The Intercept And First Look Media," by HuffPost's Michael Calderone: "At the Intercept, Risen will serve as senior national security correspondent, writing a column based on his own reporting, and help steer the site's investigative work. ... Risen, 62, was among the most prominent journalists to leave the New York Times last month in the paper's latest round of buyouts. ... Risen ... was part of a Pulitzer Prize-winning team delving into the aftermath of the Sept. 11, 2001, terrorist attacks and won a second Pulitzer with colleague Eric Lichtblau for their 2005 investigation into the National Security Agency's secret domestic spying program." http://bit.ly/2hYNgft

--NEW DOC ABOUT THE NYT -- per Hadas Gold's Morning Media: "A crew is filming inside the New York Times for a documentary about the paper's coverage of the president, two sources told me. They've filmed meetings, reporters on the phone and other material in both Washington and New York. It's not clear who is behind the film and Times spokespeople declined to comment."

SPOTTED at this weekend's annual Congressional Black Caucus Institute's policy conference in Tunica, Mississippi hosted by Rep. Bennie Thompson (D-Miss.): Rev. William Barber, D.C. Mayor Muriel Bowser, FCC Commissioner Mignon Clyburn, Dr. Michael Lomax, Spencer Overton, Mary Cathryn Ricker, Derrick Figures, Derrick Johnson, Paul Brathwaite, Tracie Washington, DuJuan McCoy, Gwen Brown, Karis Gutter, Cherie Wilson, Barbara Whye, LaKeitha Anderson, Derron Parks, Nichole Reynolds, Alonzo Byrd, LeMia Jenkins, Erica Johnson, Calvin Smyre, Alvin Brown, Steven Horsford, Hassan Solomon, Marcus Jadotte, Wanda Townsend, Curtis Etherly, Franklin Davis, Julia Chaney, Dionna Dorsey, LaQuita Honeysucker, Montee Wynn, Ebony Simpson, Portia White, Earl Jones, Leroy Nix, Albert Wynn and Ibn Salaam.

WEEKEND WEDDING -- Eric Walker, the incoming communications director for the Colorado Democratic Party and former DNC deputy communications director, and **Madison Case,** senior manager of public affairs for The GRODAN Group, were married Saturday in front of family and friends in a traditional Jewish wedding ceremony at the National Museum of Women in the Arts in downtown D.C. "The bride and groom took their pre-wedding photos at the U.S. Capitol, and Eric joined the father of the bride on guitar for a song with the band. The couple are moving to Denver at the end of the month. ... [T]hey've been dating three years and their first date was at the Brixton. They got engaged in Turks and Caicos on the beach in November of 2016." ***Pic*** http://bit.ly/2uEu9Jx

ENGAGED - Adam Janov, analyst at the State Department, proposed yesterday to **Katie Hughes,** account manager at Washingtonian and a Politico alum. "Adam and I met studying abroad our senior year at University of Maryland in New Zealand. He proposed here in Fort Collins, Colorado on vacation visiting his family who recently relocated from the D.C. area." ***Pic*** http://bit.ly/2vUdIfl

TRANSITIONS - Amanda DeBard is joining the National Beer Wholesalers Association as communications director. She has most recently worked as a comms consultant for clients including NAM and was an editor at SmartBrief. ... **ILLINOIS GOV. BRUCE RAUNER** has hired Betsy Ankney as campaign manager. Ankney managed Sen. Ron Johnson's (R-Wis.) campaign. http://bit.ly/2fD9aEf

BIRTHWEEK (was yesterday): Jamestown Associates CEO and Trump ad man Larry Weitzner (hat tip: Barney Keller, who was on time)

BIRTHDAYS OF THE DAY: NYT's **Adam Goldman,** a Pulitzer Prize winner, celebrating on "an undisclosed spot along the coast of North Carolina." **How he got his start in journalism:** "Got a job at a little newspaper called The Daily Progress in Charlottesville, Va. I covered city hall for $8 an hour." Read his Playbook Plus Q&A: http://politi.co/2wIqviT ... **Boris Epshteyn,** chief political analyst at Sinclair Broadcast Group, host of "Bottom Line with Boris" and former special assistant to President Trump, is 35. **A fun fact:** "When my wife [Lauren] and I first started dating at Georgetown University we wrote a 'he says/she says' opinion column in the Georgetown Hoya newspaper about the best places to go on dates in DC. We published our top 100 columns as a book called 'Where to Date in D.C.'" Q&A: http://politi.co/2uC7fWU

BIRTHDAYS: Jen Myers, executive director at Jennifer Bush-Lawson Foundation (hubby tip: Sam) ... Politico's Peter Canellos and Shoaib Qureshi ... Rob Flaherty, deputy digital director at Priorities USA, is 26. He celebrated with friends on Friday night with karaoke and margaritas and then bullpen seats on Sunday at the Nats game ... Bill Couch ... Tim Carney, commentary editor at the Washington Examiner ... Lori Montgomery, WaPo deputy national editor ... Ian Rayder of Cisco gov't affairs ... Katrin Bennhold, NYT correspondent based in London (h/t Ben Chang) ... David Ellis, senior associate at Energy Futures Initiative and a CQ alum ... Rep. Louise M. Slaughter (D-N.Y.) is 88 ... Darren Goode, communications director at ClearPath Foundation, is 43 ... Sean Miles, Florida Gov. Rick Scott's senior adviser, is 5-0 (h/t Bo Ollison) ... Tiffany Stecker, environment reporter at Bloomberg BNA ... Jessica Pavel ... Social Security is 82 ... Rep. Mark Pocan (D-Wis.) is 53 ... former Rep. Tom Campbell (R-Calif.) is 65 ... former Rep. Robin Hayes (R-NC) is 72 ... Gary Endicott ...

... John Meza, Rep. Beto O'Rourke's comms. director, is 31 ... Matt J. Lauer, EVP at Qorvis/MSLGroup (h/t Kevin Chaffee) ... Erik Sperling ... Politico Europe's Maia De La Baume (h/t sister Josephine) ... Paige Decker ... Gray Kinsella ... Melissa Johnson ... Josh Goldberg ... Jeff Krehely ... Colby Bermel, energy reporter at S&P Global Market Intelligence, is 24 ... Spike Whitney ... Mark Mitchell ... Jane Hautanen ... Eric Wohlschlegel ... Nicole Stickel ... Matt Nappe ... Alia Awadallah ... Jon Hoadley ... Jon

Selib is 42 ... Bill Couch ... DCCC's Dan Sena ... Josh Freed ... Catherine Coleman Flowers ... comedian-actor Steve Martin is 72 ... Susan Saint James is 71 ... Kate Carr ... Denise Feriozzi (h/ts Teresa Vilmain)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: POLITICO's Morning Transportation: When is it 'lobbying'? — Senate Commerce advances DOT nominations — DHS on Kelly's departure: We're just fine

By Stephanie Beasley and Brianna Gurciullo | 08/03/2017 10:00 AM EDT

With help from Tanya Snyder and Lauren Gardner

WHEN IS IT 'LOBBYING'? Three House Dems want DOT's inspector general to look into whether administration officials broke federal law by promoting Rep. Bill Shuster's (R-Pa.) bill, H.R. 2997 (115), to split off air traffic control operations from the FAA. In a letter to IG Calvin Scovel, Democratic Reps. Peter DeFazio of Oregon, Nita Lowey of New York and David Price of North Carolina wrote: "It has come to our attention that at least four DOT political appointees have contacted members of Congress, nonfederal stakeholders such as aviation association representatives and airport sponsors, or both to gain support" for the House Transportation Committee chairman's legislation.

Sound familiar? Luckily for you MT readers, you all already knew that some DOT officials had sent emails to lawmakers and trade groups advocating for the bill. FAA told us at the time that it was "providing fact-based information in response to questions and issues that we have been consistently asked over the course of the FAA's reauthorization."

'Highly irregular': DeFazio, Lowey and Price wrote in their letter that folks within DOT also chatted on the phone with "nonfederal stakeholders" to urge the overhaul. And, they pointed out, DOT launched a website on separating air traffic control operations from the FAA. "Even when viewed in the light most favorable, these e-mails, phone calls, and other activities are highly irregular, at best," the trio wrote.

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Steph and Brianna are driving the MT train, so please send along tips, feedback and lyrics to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Orange juice in my ride / Wawa's to the right / They got a beverage inside."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

TWEETS DU JOUR: From our POLITICO colleague Seung Min Kim: "The smell of #jetfumes getting stronger in the Senate." And from Time's Zeke Miller: "FAA has formally issued NOTAMS for POTUS vacation in Bedminster from Aug 4-20."

DOT PICKS MOVE AHEAD: Several nominees moved through the Senate Commerce Committee on Wednesday (including controversial DOT general counsel nominee Steven Bradbury, who barely made it through on a party line vote). Some Democrats, including ranking

member Bill Nelson (D-Fla.), objected to advancing Bradbury's nomination because of his ties to Takata, and because they felt his plans to avoid potential conflicts of interest were insufficient.

Meanwhile: Other Dems balked at Bradbury's history in President George W. Bush's Justice Department, where he authored three memos that helped authorize torture. Sen. Tammy Duckworth (D-Ill.) led that campaign, saying: "When you're stuck bleeding in a helicopter behind enemy lines like I was, you hope and pray that if the enemy finds you first, they treat you humanely." The other three nominees - Mark Buzby for MARAD administrator, Ron Batory for FRA administrator and Robert Sumwalt for NTSB chairman - were approved easily. Our Tanya Snyder has more for Pros.

DRIVERLESS BILL-LESS: At Wednesday's Senate Commerce Committee markup, Chairman John Thune (R-S.D.) announced that his panel's driverless car legislation would have to wait a little longer. The bill - which Sen. Gary Peters (D-Mich.) had promised was coming "very soon" a bit more than a week ago - is being held up until "sometime this fall," Thune said.

NEVER MIND: Qatar Airways has changed its mind about looking to purchase a stake in American Airlines, saying "further review ... has demonstrated that the investment no longer meets our objectives," the Doha-based carrier said in a statement to Reuters. American, which has clashed with Qatar Airways over Open Skies issues, is surely pleased. "We respect Qatar Airways' decision not to proceed with its proposed investment," the U.S. carrier told us in a statement.

MOVING ALONG THE PIPELINE: FTA released on Wednesday the Record of Decision for the Gateway program's Portal Bridge project, putting it closer to the engineering phase of the Capital Investment Grant pipeline. The partners involved with the $1.64 billion project hope to obtain CIG funding totaling $811 million.

AMICABLE DIVORCE: DHS spokesman David Lapan says John Kelly's departure from the agency was smooth and followed the established succession plan to shift power to Elaine Duke. He said during a pen and pad Wednesday that he didn't know how much of a heads-up Duke had before Trump tweeted out the announcement that Kelly would take over as White House chief of staff, but that Kelly had been aware that he was being considered. "I know that there had been conversations between Gen. Kelly and the White House," Lapan said. "But I couldn't tell you how many or over what period of time."

Search party update: It's possible that Duke could hold the top spot at DHS for a while given that there are still no clear front-runners to step in as the permanent head of the agency. Pro Energy's Alex Guillen reports that Energy Secretary Rick Perry doesn't want anyone to add his name to the list of contenders to replace John Kelly. Perry is "happy where he is & focused on carrying out mission POTUS gave him," DOE's press office tweeted.

And I am telling you: Lapan also poo pooed rumors that he might be following Kelly to the White House to take over the freshly vacant communications director position. "I have no plans to move," he said. "I have not been asked by anyone to change jobs and so that's where that stands." Still, Lapan couldn't help but chuckle at reporters' suggestions that he might have to

make some wardrobe changes, like upgrading from his no-frills suits to pinstripes, should he change his mind.

LAW AND ORDER: Possibly joining Lapan at DHS is John Mitnick, who the president nominated Wednesday to be the department's general counsel. Mitnick is currently the chief legal officer at the Heritage Foundation and previously served as associate general counsel for science and technology at DHS.

YEAH, ABOUT THAT: Coast Guard Commandant Adm. Paul Zukunft made some waves earlier this week when he said he would continue to support transgender service members in the face of Trump's threat to ban them. But Lapan said that should an official order come down from the White House, Zukunft would have no choice but to implement it. "This policy, when the Department of Defense develops it, will apply to the Coast Guard," Lapan said. He added: "What I'd say is that the commandant, clearly as a serving military officer, will follow the orders and directions of not only of the commander in chief but the secretary of Defense."

PRIVATE EYES: The Secret Service will use a drone to help keep an eye on the president when he goes on vacation at his golf club in New Jersey later this month, according to a Reuters report. The agency will operate a "small tethered unmanned aircraft system vehicle" during Trump's extended visit to the Trump National Golf Club in Bedminster, N.J., and is considering it a test for using drones as presidential protection. However, the fact that the drone would be flying within range of private residences surrounding the golf course could raise privacy concerns.

SHIFTING GEARS: Lawrence Kluttz is stepping down as communications director for North Carolina Rep. David Price, the top Democrat on the House Appropriations THUD subcommittee, our colleagues at Playbook report. Kluttz begins Aug. 10 as the speechwriter for Vincent Price, the president of Duke University (who isn't related to the House appropriator). ... Tyler Rushforth, formerly counsel to the Senate Environment and Public Works Committee, is now executive director of the American Trucking Associations' Intermodal Motor Carrier Conference.

THE AUTOBAHN:

- "Flying ace Sully makes case against privatization." The Associated Press.

- "California supreme court ruling may delay high-speed rail." The Eno Center for Transportation.

- "Buyers bet on infrastructure, with or without Trump." Bloomberg Gadfly.

- "NTSB finds 'blind spot' in SFO radar system following Air Canada near-disaster." The Mercury News.

- "Evacuations remain in effect after freight train derailment." The Associated Press.

- "German carmakers claim software upgrade deal at diesel summit." POLITICO Europe.

- "Trump's CEO brain trust hasn't done much." Bloomberg.

- "Maryland Gov. Larry Hogan demands answers on airport noise complaints." WAMU 88.5.

- "Hyperloop just broke its speed record. That was the easy part." Quartz.

- "Self-driving cars are confusing drivers - and spooking insurers." Wired.

THE COUNTDOWN: DOT appropriations run out in 58 days. The FAA reauthorization expires in 58 days. Highway and transit policy is up for renewal in 1,154 days.

Subject: U.S. trade commission staff issue pre-hearing report in Suniva solar imports trade case

By Esther Whieldon

08/04/2017 03:18 PM EDT

U.S. International Trade Commission staff today released a report showing that U.S. imports of solar cells have skyrocketed over the past four years as the products got cheaper.

The report summarizes data provided by domestic and international companies in conjunction with a trade case brought by Suniva and SolarWorld Americas. It comes ahead of the agency's Aug. 15 public hearing on whether the influx of cheap solar panels, mostly from Asian countries, has been the primary reason for the domestic manufacturing industry's financial struggles.

The report shows that total U.S. imports of certain crystalline silicon photovoltaic cells were more than five times higher in 2016 than in 2012. Over that time, the average unit value of those imported products declined from $881 per kilowatt in 2012 to a low of $551 per kilowatt in 2016.

It also includes a chart showing that as of last month, less than half of the more than 50 domestic solar manufacturing facilities that had been online in the last four years are still open.

WHAT'S NEXT: Parties in the case have until Aug. 9 to file public versions of their briefs ahead of the Aug. 15 hearing at the agency's Washington headquarters. The commission expects to rule on the case by Sept. 22 and to send its recommendations to President Donald Trump by Nov. 13.

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): THE NEW GOP CIVIL WAR -- TRUMP attacks Flake, Graham -- Terror attack in BARCELONA -- BANNON re-ups with third interview

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BREAKING -- BARCELONA, Spain (AP) at 12:53 p.m.: "Police in Spain call Barcelona van incident a terror attack; local media report up to 13 dead." ***The AP's updating story*** http://bit.ly/2wTeho1

SIREN -- THE NEW CIVIL WAR: INSIDE THE MINDS OF TOP ESTABLISHMENT REPUBLICANS -- FROM JOSH HOLMES, the former chief of staff to Senate Majority Leader Mitch McConnell and the president of Cavalry: "If you took a time machine from ten years ago and arrived this week you would be forgiven for assuming Donald Trump was elected president as a Democrat on a platform of 'the south will rise again!'

"Trump is using the precious capital of the bully pulpit to talk about confederate monuments in between savage attacks on fellow Republicans. Just think about that. Not tax reform. Not repeal and replace. Not North Korean nuclear capabilities. No focused critiques on extremely vulnerable Democrats who have opposed him at every possible turn.

"The reality is that every time he attacks a Republican he invites another member in good standing and another segment of the Republican party to abandon him. When you're eight months in and Republicans are all you have left, chipping away at the remaining few is a helluva strategy. The outpouring of critiques from within the GOP about the President's handling of Charlottesville could serve as a wake up call for the Administration, but if not, it could also be a Republican Party that begins to reassert an identity without Donald Trump."

WHAT JOSH IS TALKING ABOUT -- @realDonaldTrump: "Great to see that Dr. Kelli Ward is running against Flake Jeff Flake, who is WEAK on borders, crime and a non-factor in Senate. He's toxic!" ... "Sad to see the history and culture of our great country being ripped apart with the removal of our beautiful statues and monuments. You.....can't change history, but you can learn from it. Robert E Lee, Stonewall Jackson - who's next, Washington, Jefferson? So foolish! Also.....the beauty that is

being taken out of our cities, towns and parks will be greatly missed and never able to be comparably replaced!"

Good Thursday afternoon. A FRIENDLY REMINDER: We are taking "Playbook on the Road" this August. Send us a photo of yourself, or others reading Playbook during your travels this month and we will feature five photos every Friday. Participating Playbookers will automatically be entered into a drawing to win an signed cartoon by POLITICO's Pulitzer winning cartoonist Matt Wuerker. Email photos to Daniel at daniel@politico.com. Or, Tweet them to @playbookplus with the hashtag #PlaybookLoyal

BACK TO THE NEWS ... IT'S NOT SURPRISING that Trump doesn't want Flake to be reelected -- he has been vocally opposed to the president, his behavior and some of his policies. This is just the latest back-and-forth between the two in the last month. But calling for an incumbent senator's head from your own party is unprecedented. Flake has good relationships with his Senate colleagues and is a reliable Republican vote for Senate Majority Leader Mitch McConnell. This type of intraparty pissing match in public is the exact type of thing McConnell hates. Expect Republican senators to link arms and back Flake.

-- SENATE DEMOCRATS will love this. It's like a free gift. It distracts the GOP and could force McConnell and other outside groups to spend millions of dollars in a costly primary tying up money that could be used elsewhere.

-- @AliABCNews: "'The NRSC unequivocally supports Senator Flake in his reelection bid.' - NRSC Chairman @SenCoryGardner" ... **@SenJohnMcCain:** ".@JeffFlake is a principled legislator & always does what's right for the people of #AZ. Our state needs his leadership now more than ever."

HOUSE MINORITY LEADER NANCY PELOSI called for confederate statues to be removed from the Capitol. To review: Sen. Cory Booker (D-N.J.) said he will draft legislation to remove the statues.

-- @scottwongDC : "NEWS: @SpeakerRyan spox says removing Confederate statues from Capitol not up to Congress: 'These are decisions for those states to make'".

FLASHBACK -- "In Renovation of Golf Club, Donald Trump Also Dressed Up History," by NYT's Nicholas Fandos on Nov. 24, 2015: "When Donald J. Trump bought a fixer-upper golf club on Lowes Island here for $13 million in 2009, he poured millions more into reconfiguring its two courses. ... But that wasn't enough. Mr. Trump also upgraded its place in history. Between the 14th hole and the 15th tee of one of the club's two courses, Mr. Trump installed a flagpole on a stone pedestal overlooking the Potomac, to which he affixed a plaque purportedly designating 'The River of Blood.'

"'Many great American soldiers, both of the North and South, died at this spot,' the inscription reads. 'The casualties were so great that the water would turn red and thus

became known as 'The River of Blood.' ... Like many of Mr. Trump's claims, the inscription was evidently not fact-checked. 'No. Uh-uh. No way. Nothing like that ever happened there,' said Richard Gillespie, the executive director of the Mosby Heritage Area Association." http://nyti.ms/2v4ZKDD

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

TRUMP is meeting with Florida Gov. Rick Scott and SBA Administrator Linda McMahon this afternoon at Trump National Golf Club. Pooler Maggie Haberman of the NYT writes that McMahon "will give an update to the president regarding the agency tax reform and deregulation initiative, per White House spokeswoman Lindsay Walters." Scott is also scheduled to meet with John Kelly.

GARY COHN also intends to stay in his role, per Maggie: "On background from a WH official, 'Nothing has changed. Gary is focused on his responsibilities as NEC Director and any reports to the contrary are 100% false'".

ALWAYS BE SPINNING -- "Steve Bannon says controversial interview with liberal magazine was GOOD for the White House because it 'drew fire away' from Trump," by The Daily Mail's David Martosko: "Bannon told DailyMail.com that his remarks 'drew fire away from POTUS,' meaning President Trump, and that he successfully 'changed the [media] narrative' with a single phone call. It's unclear if there has been any blowback in the West Wing from Bannon's unexpected on-the-record remarks to the magazine, which came in an unsolicited phone call on Wednesday." http://dailym.ai/2v4TSu5

-- IT'S WORTH NOTING: This is Bannon's third interview in 48 hours. It's almost as if he's doing a string of interviews on purpose! Also, he's taking a play straight of his boss's media playbook: flood the zone.

-- LINDSEY WALTERS told the pool that Bannon's comments in the American Prospect "speak for themselves," adding, 'You're going to need to contact Steve Bannon for any further clarification,'" per Haberman.

-- **Yeganeh Torbat** i -- Reuters State Department reporter -- **(@yjtorbati):** "Tillerson pointedly shakes Susan Thornton's hand before sitting down for meetings with Japanese defense/foreign ministers @StateDept".

--THORNTON is the acting head of East Asian and Pacific Affairs at the State Department who Bannon told the American Prospect he was going to get rid of.

SMART STORY -- NYT'S ALEX BURNS in **PHOENIX -- "Southwest Rises as 2018**

Senate Battleground": "Even before President Trump's rise, a pair of Western states foreshadowed some of the consuming clashes of his presidency: the tug of war between traditional conservatives and border-hawk nationalists, and the struggle for power between diverse, booming cities like Las Vegas and Phoenix, and far-flung rural precincts struggling to keep up.

"And in a season of political tumult, Nevada and Arizona have emerged anew as a defining battleground for both parties -- states that encapsulate the evolving politics of the Southwest and may control the balance of power in the Senate....

"The West looms just as large for Democrats, holding out a rare chance to pick up seats in the Senate. More than a dozen House seats are at stake across the broader region, including seats in Texas and California, along with a handful of governorships. Republicans hold a slim majority in the Senate, 52 seats to the Democrats' 48, but the 2018 political map is tilted heavily in their favor.

"Harry Reid, the former Democratic leader in the Senate, said the growing prominence of these states in 2018 portended a longer-term shift. For all the concern about Midwestern states that shifted toward Mr. Trump, it is the Sun Belt and interior West that are expected to gain population, House seats and electoral votes over the coming decades. 'The power has shifted in our country, west of the Mississippi,' Mr. Reid said in an interview. 'It started a couple of cycles ago, but now it's in full force.'" http://nyti.ms/2uTuB6z

TRUMP INC. -- "Gorsuch to headline event at Trump Hotel," by Matt Nussbaum: "Supreme Court Justice Neil Gorsuch is slated to headline a September event at the Trump International Hotel. The 'Defending Freedom Luncheon,' hosted by the non-profit Fund for American Studies, is an invitation-only event to celebrate 'the constitutional framework that has protected our free society and made America exceptional,' according to the group's website. Gorsuch, whose appointment to the Supreme Court is considered to be among Trump's most significant accomplishment in the White House, will deliver the keynote address." http://politi.co/2v5tqA9

-- "Cleveland Clinic pulls fundraiser from Mar-a-Lago," by Negassi Tesfamichael http://politi.co/2v4OhUv

ON THE BENCH -- "From Private Practice to Gorsuch Clerk to Senate Staff: A Denver Lawyer's Career Whirlwind," by National Law Journal's Tony Mauro: "In less than a year, Michael Davis went from managing a two-lawyer firm to clerking for Justice Neil Gorsuch to screening judicial nominations for Senate Republicans. 'I'm glad I did it,' Davis said in a recent interview, 'but it's not something that I sought.' ... Davis helped set up Gorsuch's office in the chambers of the late Justice Antonin Scalia, worked on opinions, and assisted in screening applicants for Gorsuch's staff. He also worked on recruiting Gorsuch clerks for the 2018 term, joking that future clerks 'better learn how to ski,' because Gorsuch clerk reunions take the form of an annual ski trip along with the clerks of Tenth Circuit Chief Judge Timothy Tymkovich. Gorsuch wouldn't be the first

justice to use athletics-based clerk screening. The late Chief Justice William Rehnquist picked his three clerks with an eye toward doubles tennis matches." *Behind a paywall* http://bit.ly/2w49H8E

TIMELY TRIP -- Sen. Ed Markey (D-Mass.) is leading a congressional delegation to China, Japan and Korea. The delegation will visit the China-North Korea border and the Korean DMZ. Sens. Chris Van Hollen (D-Md.) and Jeff Merkley (D-Ore.) and Reps. Ann Wagner (R-Mo.) and Carolyn Maloney (D-N.Y.). They're wheels up now and return late next week, according to a spokesperson.

-- FOR WHAT IT'S WORTH: Rep. Dana Rohrabacher's (R-Calif.) office says that he paid out of pocket for the trip that took him to see Julian Assange. "He's on his way to France to celebrate his 20th," a spokesman said.

AFTERNOON READ -- "How Militias Became the Private Police for White Supremacists," by Casey Michel in POLITICO Magazine: "Despite the militias' public statements of neutrality, evidence has mounted over the past six months that the militias have gravitated decisively toward one side in the street battles that have played out recently in cities across the country. Indeed, during these first months of Trump's presidency, these loose-knit organizations making up America's militia movement are losing their anti-government ideological purity as they grow increasingly close with a segment of the right-wing from which many in the recent past had generally kept their distance. Their presence as a private security force for an increasingly public coalition of white nationalist factions-Ku Klux Klan followers, neo-Nazis, and alt-right supporters-has transformed a movement that has already demonstrated a willingness to threaten violence." http://politi.co/2v4JpP0

Today's Beyond the Beltway -- Emails show close relationship between de Blasio and lobby shop -- LA Mayor Eric Garcetti will go to New Hampshire http://politi.co/2v5zqZI

MEDIAWATCH -- JOE POMPEO in **VANITY FAIR --** "Can Oath, the arrange media marriage of Yahoo and AOL, avoid a rough divorce?": "The fancy digs and generous amenities may seem nice, but they won't necessarily aid in the biggest challenge surrounding Oath, which is not about whether two older assets can be rolled together in harmony. Instead, it seems to be about whether their corporate overlord can actually make use of them. Leaving aside the punishing economics of digital media, the $4.5 billion question is how Verizon, which controls so many phones, can use the array of media now in its possession to boost the margins of a competitive wireless business. Furthermore, is there something within those media brands that's powerful and compelling enough for Verizon to preload it onto the home screen of its tens of millions of mobile devices?" http://bit.ly/2v4Tqfj

-- "Man misidentified as Charlottesville driver had to flee home; plans to sue far-right sites," by CNN's Oliver Darcy http://cnnmon.ie/2v589H0

-- "Mic is laying off staff as it prepares for a pivot to video," by Business Insider's Maxwell Tani http://read.bi/2v5jaYL

SPOTTED: Sen. Susan Collins (R-Maine) in first class on an American flight out of DCA to Portland last night.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: Sources: White House told EPA to back off on biodiesel cuts, export credits

By Eric Wolff

10/18/2017 04:18 PM EDT

The White House has instructed EPA to back off its plans to reduce advanced biofuel volumes and allow credits for exported ethanol, according to biofuel and oil industry sources.

That move indicates the administration is yielding to pressure from the Midwestern senators and governors who are furious over EPA's proposal last month to cut biodiesel requirements for both 2018 and 2019.

"They had no choice," said one refining industry source who had spoken to White House aides.

The White House did not comment.

Corn-state officials were also concerned about internal EPA discussions to allow biofuel credits for exported biofuel, a move that would likely have lowered the market prices for Renewable Identification Numbers.

Neither the biodiesel cuts nor the credits for exported fuel will be in the final rule setting blending requirements for 2018 and 2019, the sources said.

Republican corn-state senators aggressively used their leverage to sway EPA. Iowa Sen. Chuck Grassley forced a meeting with EPA Administrator Scott Pruitt in his office on Tuesday, and Iowa Sen. Joni Ernst had withheld her support for Bill Wehrum to become head of EPA's air office.

Today, Ernst indicated that EPA was moving toward her position, saying "we're closer to reassurances, and once we have those, we can move forward." But she said she wanted a public statement from the administration.
And biofuels backers say they aren't taking anything for granted.

"We are waiting for affirmative, public declarations from WH," a biofuels source said.

Anthony Adragna contributed to this report.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 22, 2017

Latest News

EPA Advisors Split On ETBE Risk Estimates, Raising Doubts On Completion

A panel of science advisors conducting peer review of EPA's draft assessments of the human health risks of exposure to two petro-fuels chemicals is struggling to reach consensus, and appears that it will be unable to do so on risk estimates and underlying health effects that EPA used to estimate the chemicals' potency.

EPA's Push To Delay Texas Haze Plan Spurs Environmentalists' Criticisms

EPA is asking a federal district court to delay from Sept. 9 this year until Dec. 31, 2018, a legal deadline for issuing a plan to reduce regional haze in Texas, spurring criticisms from environmentalists who say that the significant delay would worsen air quality in national parks and increase public health harms from haze-forming pollutants.

States, EPA Eye Collaboration To Overcome Air Inventory Resource Limits

State air regulators and EPA officials say that dwindling budgets and other resource limits are making it harder to undertake vital work developing emissions inventories that underpin their clean air programs, and are suggesting that greater collaboration between states and the agency will be necessary in order to overcome those limits.

Environmentalists Say 'Rule Of Law' Bars EPA's Request To Stay ELG Suit

Environmentalists are urging a federal appeals court to deny EPA's request to indefinitely stay litigation over provisions of the Obama-era Clean Water Act (CWA) effluent rule for power plants that the agency is reconsidering, saying the "rule of law" requires EPA to implement the regulation even while taking steps to potentially revise it.

Despite Vacatur, HFC Rule Backers Find Silver Lining In EPA Climate Finding

Despite an appellate court vacating Obama EPA limits on high global warming potential (GWP) hydrofluorocarbon (HFC) refrigerants, supporters of the rules are claiming a smaller victory because the ruling upheld the agency's finding that

substitute chemicals with a low GWP are friendlier to the environment.

Daily Feed

Pruitt taps controversial former Alabama official to lead Region 4

Trey Glenn served as the head of Alabama's environment department until 2009, is the first regional administrator to be appointed in the Trump administration.

Our most read: debating a wide range of issues

Environmental groups sue over new TSCA rules. . .a potential standard-setting CWA settlement. . .continuing debate over the 2-1 rule.

New York sues EPA over ocean disposal site

New York claims EPA's designation of a permanent open water disposal site in Long Island Sound violates the Ocean Dumping Act and the Coastal Zone Management Act.

California: Regulators eye tighter restrictions on chlorpyrifos use

The state pledges to clamp down on the chemical months after EPA reversed an Obama-era plan to ban the substance, though some environmentalists say the state's plan is too weak.

House Democrats urge Pruitt to drop CWA rule repeal

While the administration is unlikely to drop its planned repeal, Democrats are laying the groundwork for future legal attacks on any final decision to withdraw the 2015 jurisdiction rule.

Ewire: White House reshuffling: what will it mean for EPA?

Steve Bannon and Carl Icahn's departure from the president's inner circle may have different impacts on EPA though the broad outlines of the administration's deregulatory agenda are unlikely to change.

Texas, Luminant seek to shift SO2 designation suit to 5th Circuit

The petitioners say the 5th Circuit is the appropriate venue for their challenge to an EPA sulfur dioxide non-attainment designation.

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Profitable Pickup Trucks, SUVs May Get Break in Trump Review

Posted August 15, 2017, 9:48 A.M. ET

By Ryan Beene and John Lippert

A move under consideration by the Trump administration could ease tough fuel-efficiency standards set to take effect in 2021 on pickups, SUVs and other light trucks, the bulwark of U.S. auto industry sales and profits.

For the 2021 model year, light trucks must average roughly 33 miles per gallon to comply with the current standards, a gain of more than 6 percent from model year 2020, according to estimates from the National Highway Traffic Safety Administration. That's triple the pace of any annual gain for trucks starting in model year 2017, the first year of the current standards, which were finalized in 2012.

President Donald Trump hasn't proposed any changes to the standards yet. But in recent weeks, both NHTSA and the U.S. Environmental Protection Agency signaled a new willingness to alter the rules earlier than originally planned. The EPA formally asked for public comment on whether its 2021 standards are appropriate and NHTSA said it may review the year in an upcoming rulemaking.

"The domestic Big Three are the big winners, and Fiat Chrysler is arguably the most advantaged" if Trump freezes the standards, said Gopal Duleep, president of H-D Systems, a Washington, D.C.-based research company.

General Motors Co., Ford Motor Co. and Fiat Chrysler Automobiles NV derive more than three-quarters of their U.S. sales from light trucks. Even Toyota Motor Corp., which has car and truck sales more closely balanced, would catch a break. For the 2016 model year, Toyota forecasts that its light truck fleet may fall nearly 9 percent below the government's fuel economy target, according to figures released by NHTSA.

Any short-term regulatory relief could handcuff automakers if it allows them to fall behind in a global race to cut emissions with electric motors that either supplement or replace gasoline engines, said Duleep. But in the short run, automakers are likely to welcome any easing of the regulations, he said.

Automakers have been preparing for the rules since they were announced in 2011, and analysts

say they're unlikely to make significant changes even if Trump moved to weaken the rules. Instead, carmakers would see a huge increase in efficiency credits they could use to help them meet stiffer targets in later years, said Dave Cooke, senior vehicles analyst with the Union of Concerned Scientists, an environmental group.

"If their plans are in place and they receive additional credits, it just makes the later years' standards that much easier to meet," Cooke said.

Fiat Chrysler Chief Executive Officer Sergio Marchionne may be bringing out new Ram Pickup and Jeep SUV models, but he's not ignoring electrification. He told investors in July that after 2022, half of his Maserati models will be battery powered.

According to the agreement the Obama administration reached with automakers and announced in 2011, much of the efficiency increase—particularly for trucks—was to come after 2020 to give automakers time to comply. The delay was seen as a crucial factor in the decision by most automakers to endorse the plan. Ford's F-Series pickup trucks alone account for the majority of the company's North American profits.

NHTSA also has said it will study freezing the standards after model year 2020 as a baseline scenario in an environmental review of pending fuel economy requirements for 2022-2025. The deliberations come as part of a so-called mid-term review included in the Obama administration's plan to boost fuel economy to a fleet average of more than 50 miles per gallon by 2025.

A freeze or cut after 2020 would make good on Trump's pledge to the chief executives of Detroit's automakers to slash environmental regulations that he made during his first days in office. It would come as GM is cutting shifts at its passenger-car assembly plants to avoid excessive inventories, Ford is reviving dormant truck nameplates like the Bronco and the Ranger and as Fiat Chrysler has already killed its slow-selling Chrysler 200 sedan.

But for now, automakers say they're simply welcoming Trump's reopening of the review after Obama sought to end parts of it during his last days in office, and are not backing a specific set of revisions.

"Global Automakers has only asked that the mid-term review be conducted in a transparent and deliberate process, based on the facts," said Lauren Boland, communications manager for the trade group, which includes Toyota and Honda Motor Co.

The trade group has not asked to put the already-final 2021 rules under review. Nor has the Alliance of Automobile Manufacturers, which represents GM, Ford, Fiat Chrysler and others, according to spokeswoman Gloria Bergquist.

"Let the facts come in and let the evidence dictate a decision next spring that optimizes our nation's environmental and economic objectives, consistent with affordability," she said in an email.

The EPA plans to determine whether the tailpipe standards for 2021 need to change by next April. That ruling could carry another risk for automakers: driving a wedge between California and Washington regulators, who've been coordinating their rules since 2011 to allow the companies to sell the same vehicles in all 50 states.

The state of California has already said it has no plans to change its 2025 emissions targets, which are followed by several other states that combined account for around 30 percent of U.S. auto sales.

"It was very difficult to get a national standard in the first place," said Stephanie Brinley, senior automotive analyst at IHS Markit. "It's best for the country to have a common standard."

Exxon Mobil's $2.6M Fine for Ruptured Pipeline Tossed

Posted August 15, 2017, 04:09 P.M. ET

By Andrew M. Ballard

Exxon Mobil will get a break on a $2.6 million fine levied against it for a 2013 pipeline spill in Arkansas.

The U.S. Court of Appeals for the Fifth Circuit ordered the Pipeline and Hazardous Materials Safety Administration to reconsider the fine in an Aug. 14 ruling because the company properly complied with certain safety regulations at issue (ExxonMobil Pipeline Co. v. DOT, 5th Cir. App., No. 16-60448, 8/14/17).

Exxon Mobil's Pegasus Pipeline ruptured near Mayflower, Ark., spilling several thousand barrels of crude oil about 22 miles north of the state's capital, Little Rock.

Seam Defect

A PHMSA investigation into the accident identified the cause as a manufacturing defect in the seam of the pipe maintained by Exxon Mobil Pipeline Co., and the agency assessed the $2.6 million fine in October 2015, based on nine alleged regulatory violations. The citations arose from risk factor and pipeline integrity assessments.

Exxon Mobil challenged six of the violations cited by regulators, and the Fifth Circuit found five of those decisions to be "arbitrary and capricious," because it said the company reasonably complied with applicable guidance.

The appeals court did affirm the agency's decision regarding one of the challenged violations, which requires pipeline operators to develop and follow a written integrity management program. But the court said the $783,300 elevated penalty for that cited violation also needed to be lowered as there was no indication the company's failure to use a proper assessment tool was a cause of the spill.

Requirements Followed

"According to the unambiguous text of the pipeline integrity regulations, pipeline operators are required to 'consider' various risk factors when they prioritize pipelines for assessment," according to Judge Jennifer Walker Elrod. "This is a process-based requirement that does not mandate a particular outcome, but rather prescribes a careful, informed decision-making process that pipeline operators must undergo in good faith," Elrod said in her Aug. 14 opinion.

As Exxon Mobil complied with that requirement when it determined the Pegasus Pipeline was not susceptible to seam failure by applying the appropriate methodology, the bulk of the violations were incorrectly cited and the fine required revision, Elrod wrote.

Suann Guthrie, a spokesperson for Exxon Mobil, told Bloomberg BNA Aug. 15 that company officials were "still reviewing the decision" and declined to comment further.

Agency representatives didn't immediately respond to requests for comment.

Southern Wins Early Review of Nuclear Reactor Cost Overruns

Posted August 15, 2017, 02:05 P.M. ET

By Mark Chediak and Margaret Newkirk

U.S. utility owner Southern Co. may have a better idea of how much of an estimated $25 billion nuclear power project it will be allowed to charge Georgia customers before a reactor is even online.

Georgia utility regulators voted 4 to 1 on Tuesday to review a new cost estimate for two delayed reactors under construction in the next few months. The move could offer Southern, which supported the measure, clarity sooner on how much of the billions it's investing in the project are recoverable through customer rates. The state Public Service Commission and Southern had previously agreed to assess expenses once a reactor was finished.

"This would send a message to the company, company's partners, Wall Street and ratepayers that the commission continues to be supportive of this project," Georgia Public Service Commission Chairman Stan Wise said at the meeting.

Although the measure included an amendment that would allow the commission to rescind Tuesday's vote or any others if Southern decides to abandon the project, it signals support among regulators for the project to continue, according to analysts at Guggenheim Securities LLC. Georgia regulators would need to sign off in order for it to go forward given the cost increases and delays.

"While Chairman Wise's motion could be viewed as punitive to the extent it leaves the door open for the commission to re-visit prior approvals, we view it as a push toward proceeding with construction," Shahriar Pourreza, a New York-based analyst for Guggenheim Securities, said in a note.

Costs Spiral

Earlier this month, Southern released new estimates indicating that the costs of the Vogtle reactors may total more than $25 billion, almost double original estimates. In March, the project's lead contractor, Westinghouse Electric Co., filed for bankruptcy, and the first reactor may not be finished until 2022.

The reactors, already years behind schedule, are the only ones actively under construction in the U.S. They've come to represent the last and best hope for a nuclear renaissance that has failed to materialize in the U.S. following Japan's Fukushima accident. Scana Corp. pulled the plug in July on a similar plant in South Carolina after the costs of that project jumped to more than $20 billion.

Southern is slated to decide by the end of this month whether it even wants to move forward with the Vogtle plant. The company's chief executive officer, Tom Fanning, stressed in an Aug. 2 interview that dropping the work altogether would leave the company with "nothing to show" for its investment.

Backers of the troubled nuclear project have meanwhile asked the Trump administration to help get it finished, people familiar with the talks said earlier this month. That could include increasing or speeding up disbursements of $8.3 billion in federal loan guarantees to the companies behind the plant, the people said, asking not to be identified because the negotiations are ongoing.

Georgia Power, the Southern unit building the reactors, said it's required by law to seek approval of new cost and schedule forecasts. "We expect to file our comprehensive schedule, cost-to-complete and cancellation assessments by the end of August and make a recommendation to the Georgia PSC based on that assessment," Jacob Hawkins, a company spokesman, said in an emailed statement on Tuesday.

Authorization for Freeport LNG Export Facility Upheld by Court

Posted August 15, 2017, 11:19 A.M. ET

By Rebecca Kern

A federal appeals court upheld the Energy Department's authorization of a Freeport LNG Development L.P., liquefied natural gas export facility in Texas, rejecting the Sierra Club's assertion that the department didn't go far enough to assess the indirect environmental impacts of the project.

The U.S. Court of Appeals for the District of Columbia Circuit held that "the department offered a reasoned explanation as to why it believed the indirect effects pertaining to increased gas production were not reasonably foreseeable."

The Sierra Club claimed in its lawsuit that the Energy Department didn't assess the indirect effects of LNG exports, including the impacts of a likely increase in natural gas production and usage that will result from the export authorization. However, the D.C. Circuit said the department was not required to "foresee the unforeseeable."

"We cannot say that the department failed to fulfill its obligations under [the National Environmental Policy Act] by declining to make specific projections about environmental impacts stemming from specific levels of export-induced gas production," D.C. Circuit Judge Robert Wilkins wrote in an Aug. 15 opinion.

Last year, the D.C. Circuit denied a Sierra Club lawsuit over the Federal Energy Regulatory Commission's approval of the Freeport LNG terminal, saying the indirect environmental impacts of LNG exports would be better addressed by the Energy Department. It was one of four Sierra Club LNG petitions against FERC that the D.C. Circuit denied.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

The export facility, located on Quintana Island about 70 miles south of Houston, is expected to be completed in 2019 and will produce and export 15 metric tons per annum (MTPA) of LNG, according to the company's website.

How Elon Musk and Cheap Oil Doomed Push for Another Car Fuel

Posted August 15, 2017, 01:31 P.M. ET

By Patrick Martin

The idea was nothing short of revolutionary: convert the nation's millions of trucks, buses and other commercial vehicles to run on natural gas instead of gasoline and diesel.

Back in 2008, the proposal by energy magnate T. Boone Pickens had some appeal. U.S. oil production was plunging, and the world's biggest fuel-consuming country was becoming ever more dependent on foreign crude. Oil jumped to a record near $150 a barrel, while natural gas was comparatively cheap. Pickens co-founded Clean Energy Fuels Corp. to profit from the switch. The maker of natural gas filling stations was once valued at about $1.8 billion.

But there was a different kind of revolution. New drilling techniques led to a boom in oil supplies from the U.S., and electric cars took off. Tesla Inc., which had yet to deliver its first electric car a decade ago, now has 455,000 reservations for its Model 3—almost 20 times the number of natural-gas vehicles on U.S. roads as of 2015. Shares of Clean Energy Fuels are down 90 percent from a 2012 peak, and the company concedes that natural gas may only be a niche market as a transportation fuel.

"I'm not sure America is set up" for widespread use of passenger natural gas vehicles given all the infrastructure needed to get supplies to customers, Andrew Littlefair, Clean Energy Fuels' chief executive officer, said by phone. "There are a lot of reasons it would make sense to look at that again, but I don't know that I'm ready to say that's going to happen."

Pickens, who made his first fortune as an oil wildcatter five decades ago, had high hopes for natural gas because he believed crude supplies were peaking. In op-eds, media interviews and meetings with politicians including then-President Barack Obama, Pickens said the nation's heavy-duty trucks and fleet vehicles should run on natural gas. The U.S. could reduce its reliance on oil imports and use more wind and solar power, he said.

Pickens, 89, wasn't able to comment, according to Jay Rosser, a spokesman for BP Capital LLC, the energy hedge fund Pickens founded.

Shale Boom

By 2011, U.S. oil output began to surge with the shale boom. Three years later, prices for crude, diesel and gasoline were tumbling. While natural gas has become a staple for domestic power plants, supplanting coal, the prospect for cheaper alternatives made it less attractive as a vehicle fuel.

In April, the most recent month for data from the Department of Energy, liquefied natural gas sold for $2.52 per diesel-gallon-equivalent, compared with $2.55 for diesel. That's hardly a bargain, considering Pavel Molchanov, an analyst at Raymond James Financial Inc., estimates that trucks that run on LNG cost about $30,000 to $50,000 more than a comparable diesel rig.

Even though natural gas has remained cheap—trading at $2.948 per million British thermal units at 8 a.m. in New York on Aug. 15—using it to fuel vehicles is "not something that has taken off," said Salim Morsy, an analyst at Bloomberg New Energy Finance in New York. "Gasoline and diesel are undoubtedly the cheapest in total cost of ownership, but as technology improves and batteries get cheaper," the number of electric cars will at least double.

The number of plug-in autos in the U.S. almost tripled between 2008 and 2015, government data show. Tesla, the company founded by billionaire Elon Musk, has introduced three models since 2012, and other manufacturers are jumping into the market. Volvo AB has said all its new cars from 2019 will be hybrid or all-electric, and BMW AG is developing a self-driving electric to replace the 7-Series as the company's flagship in 2021.

Natural gas vehicles have seen their share of the auto market shrink. Chesapeake Energy Corp., one of biggest U.S. gas producers, eliminated the team working on natural-gas vehicles in 2013. Honda Motor Co. discontinued a natural-gas-fueled model of its popular Civic sedan in 2015.

Last year, with oil locked in a prolonged price slump, Pickens sold about 4 million shares of Newport Beach, California-based Clean Energy Fuels, which operates more than 500 natural gas filling stations across the country. While the company has declined in value, Tesla traded at a record high in June.

Still, Littlefair sees opportunities for growth, especially in the fleets of vehicles owned by municipal governments trying to reduce tail-pipe emissions and operating costs. Dallas Area Rapid Transit, which uses 537 buses and 123 shuttles that run on natural gas, this month extended its operation and maintenance contract with Clean Energy Fuels. California cities including Los Angeles and Fresno also have contracts with the company.

Clean Energy Fuels is also seeking a way to expand its reach by using natural gas extracted from landfills and farms to supply filling stations.

Few Stations

While companies including AT&T Inc. and Ryder System Inc. use natural gas in trucks that make short trips and return to the same depot each day, limited infrastructure has prevented wider use. There are 1,828 natural-gas filling stations in the U.S., compared with almost seventy times as many conventional gas stations and around 38 times as many non-residential plug-in stations and charging outlets for electric vehicles, government and industry data show.

It can cost $1.8 million to build a filling station that supplies compressed natural gas, according to the National Renewable Energy Laboratory. Electric vehicles, in contrast, can be plugged into a home outlet.

"The infrastructure would be costly" for widespread use of natural gas vehicles, said Lee Klaskow, a senior analyst for transportation and logistics at Bloomberg Intelligence. "You would have to have some huge cost savings."

Nuclear Power's Woes Imperil U.S. National Security, Moniz Says

Posted August 15, 2017, 7:49 A.M. ET

By Ari Natter

The decline of the U.S. nuclear-power industry puts America's security at risk, according to a report being released Aug. 15 by former Energy Secretary Ernest Moniz that calls for greater federal

investment.

The report from the Energy Futures Initiative and obtained by Bloomberg News says a commercial atomic power sector is necessary to keep uranium-processing technology away from terrorists and other bad actors as well as support nuclear-powered Navy vessels.

The report by Moniz, a nuclear scientist who served as energy secretary under President Barack Obama, calls for expanded government loan guarantees, tax incentives and research on nuclear technology. The report doesn't mention President Donald Trump, who is proposing cutting nuclear research funding and killing the loan guarantee program.

Nuclear power makes up about 20 percent of U.S. electricity generation, but the industry has been struggling. Five nuclear plants, with a combined capacity of 5 gigawatts, have closed early since 2013, and an additional six plants are scheduled to shutter early over the next nine years. Of the two new nuclear plants under construction in the U.S., one was halted by Scana Corp. last month and backers of the other, Southern Co.'s Vogtle plant in Georgia, are seeking additional aid from the federal government.

Westinghouse Electric Co., the nuclear technology pioneer that is part of Toshiba Corp., went bankrupt in March, after it hit delays with its AP1000 reactors at each of those plants. After it declared bankruptcy, Westinghouse—whose technology is used in more than half the world's nuclear power plants—said it shifted its focus from building reactors to helping dismantle them.

Trump pledged to help the industry and Energy Secretary Rick Perry is conducting a study of the electric grid aimed at helping so-called baseload power plants, which includes coal and nuclear. But Trump's budget also proposed deep cuts to the Energy Department, including shuttering the loan guarantee program Moniz says should be expanded and cutting research spending.

Moniz, who served as Energy Secretary from 2013 to January 2017, also serves as CEO of the Nuclear Threat Initiative, a nonprofit organization that works for nuclear disarmament, securing nuclear materials, and nonproliferation.

The U.S. needs companies and engineers that can both build and run nuclear enterprises, Moniz, a nuclear physicist himself, said in the report. The U.S. Navy's reactors require supplies and qualified engineers, and American nuclear scientists fill vital national security roles, it said.

Companies, such as BWX Technologies Inc. of Lynchburg, Virginia manufacture nuclear components for both the commercial nuclear industry and naval reactors. If the commercial business collapses, that may mean one less company able to process highly enriched uranium, according to the report.

Shrinking Enterprise

"A shrinking commercial enterprise will have long term spillover effects on the Navy supply chain, including by lessened enthusiasm among American citizens to pursue nuclear technology careers," according to the report.

In addition to extending a tax credit for new nuclear power and the Energy Department's loan guarantee program, the report says the federal government could also direct the Federal Energy Regulatory Commission to "place a greater emphasis on the national security importance of nuclear power and its associated supply chain."

Coal and nuclear power "need to be properly compensated to recognize the value they provide to the system" and "should be recognized as an essential part of the fuel mix," FERC Chairman Neil Chatterjee said Aug. 14

Brazil's Solar Expected to Grow With State's New Regulation

Posted August 15, 2017, 03:56 P.M. ET

By Michael Kepp

A new solar energy regulation in Brazil's Sao Paulo state is expected to encourage more small and large-scale solar systems to be built and help those under construction come online more quickly.

"The now-clear rules for licensing solar [photovoltatic] systems in Sao Paulo state will lower project risks and boost solar PV investments there," Alexandre Franceschi, project development manager of the Cobra Group, a solar developer building a large-scale system in the state, told Bloomberg BNA.

The regulation is significant because Sao Paulo accounts for over 30 percent of Brazil's gross domestic product and is among the most solar-powered states in a country that's trying to boost usage of the renewable source.

The Sao Paulo State Environmental Secretariat (SMA)'s previously issued solar system licenses on a project-by-project basis without clear or standardized guidelines to inform developers about the need or specific type of license. Under the Environmental Secretariat's new regulation, issued Aug. 4, small-scale solar systems—those with installed capacity of fewer than 5 megawatts—need only be licensed if their installation requires cutting vegetation or if they are to be located in government-protected areas.

Sao Paulo has the second-largest number of such systems in terms of installed capacity among Brazil's 26 states.

Those systems are small rooftop and ground-mounted systems that homeowners and small businesses install to supply their own electricity. The systems sometimes use net metering—a billing mechanism that credits solar energy system owners for the excess electricity they add to the grid.

Developers of medium-to-large–scale solar systems, those ranging in capacity from 5 megawatts to 90 megawatts, must submit a simplified environmental study to get a license under the new regulation. Developers of ultra-large-scale systems—ground-mounted systems with a capacity of over 90 megawatts— must submit a preliminary environmental study (RAP), which has far fewer requirements than an environmental impact assessment for projects with a potentially substantial environmental footprint.

Developers of solar PV systems that need licenses still must first get a preliminary permit and then comply with SMA-imposed conditions to get installation and operating licenses that are required to come online.

The new regulation "is a positive initiative that other states should adopt," Rodrigo Sauaia, CEO of

the Brazilian Photovoltaic Solar Energy Association (Absolar), told Bloomberg BNA Aug. 14.

Cobra Group's solar system, currently under construction, will have an installed capacity of 120 megawatts. The company also has a license to build a second 150-megawatt solar system there.

"Now that SMA analysts have standardized licensing rules to follow, they will be able to more quickly decide if a solar PV project is feasible and should be licensed, and under what conditions," Franceschi told Bloomberg BNA. "And this will speed up the completion of solar PV projects being planned or now underway."

Brazil's latest 10-year energy expansion plan said large-scale (non-rooftop) solar power, which accounted for just .01 percent (21 megawatts) of the electricity mix in 2016, would account for 4.5 percent (9,660 megawatts) by 2026.

Big Oil Follows Silicon Valley into Backing Green Energy Firms

Posted August 15, 2017, 8:20 A.M. ET

By Anna Hirtenstein

Major oil companies are joining Silicon Valley in backing energy-technology start-ups, a signal that that those with the deepest pockets in the industry are casting around for a new strategy.

From Royal Dutch Shell Plc to Total SA and Exxon Mobil Corp., the biggest investor-owned oil companies are dribbling money into ventures probing the edge of energy technologies. The investments go beyond wind and solar power into projects that improve electricity grids and brew new fuels from renewable resources.

While the money involved is small—a fraction of the $7.5 billion that venture capital and private equity injected into the clean energy industry last year—the funds support work that may evolve into major income streams in the decades ahead as governments work to limit fossil-fuel pollution and global warming.

"In the energy industry, small companies have quite a lot of disruptive power," Geert van de Wouw, managing director of Shell Technology Ventures, said in an interview. "We always have to look over our shoulder to make sure that we stay ahead of the game."

Following is a list of the projects the biggest oil companies are supporting:

Shell Technology Ventures

The unit of Royal Dutch Shell Plc splits its spending between oil and gas technology and clean energy equally. The green share may increase to about 60 percent in the years ahead, according to van de Wouw, declining to detail his annual budget. The fund's total size is "hundreds of millions of dollars," he said. It has put money into:

• Kite Power Systems, a maker of a kite that flies on wind currents to generate renewable electricity;

• Glasspoint Solar Inc, a company that has developed a way to make steam for enhanced oil recovery with solar energy; and

• Sense, a start-up that creates devices that monitor home power consumption.

Total Energy Ventures International SAS

The unit of the French oil major Total SA has invested $160 million to date with almost three quarters flowing into North America, according to the fund's CEO Francois Badoual. It only takes minority stakes. It has invested in:

• AutoGrid, a California-based company that designs smart-grid software;

• United Wind, a company that leases wind turbines to retail customers and small businesses; and

• Off Grid Electric, a Tanzania-based installer of rooftop solar panels that works in low energy-access areas in Sub-Saharan Africa.

"We try to detect and invest in innovation," Badoual said. "The shift can accelerate at a pace which is difficult to really foresee, but you have to be ready and to adapt."

BP Ventures Inc.

BP Plc's VC fund has invested $325 million to date. It tends to skew more towards chemicals or fuels, rather than renewable electricity. It has funneled money into:

• Tricoya Technologies, a maker of a technology that changes the chemical structure of wood chips to make a building material that's more durable and energy efficient;

• Fulcrum, a producer of bio-jet fuel made from municipal waste, which raised $30 million from BP; and

• Solidia, a company that is working on reducing the carbon footprint of concrete.

"BP Venture's goal is to be both an investor and an end-user of the technologies in which we invest," said Jonathan Tudor, managing director of the fund. "That requires a longer-term commitment because we look beyond a quick financial return. We take an active role in the evolution of these companies and want to see their new technologies commercialized and deployed into BP's existing businesses."

Exxon Mobil Corp.

Exxon has a different approach to frontier technology. It prefers to conduct research internally and with partners rather than buy minority stakes in start-ups. It's studying biofuels, carbon capture and storage, energy-efficiency processes and energy-saving materials, according to spokesman William Holbrook, and is working with:

• Synthetic Genomics Inc., which studies how to make biofuels from algae; and

• FuelCell Energy Inc., which is developing carbonate fuel cells to capture CO2 emissions from natural gas plants while also producing electricity.

"We conduct R&D through in-house efforts, via partnerships with other industries and by funding academic and other nongovernmental research projects," Holbrook said by email. "These studies help inform the company on emerging technologies, define our potential contribution to the science, and assess the future applicability of the technologies to our businesses."

Chevron Corp.

Chevron has been investing in start-ups since 1999 and divides its portfolio between oil and gas, advanced materials, communications infrastructure and information technologies and emerging and alternative energy. On the latter, it has invested in the following:

• Acumentrics, a fuel cell company that can make its products from ceramics;

• Ensyn, a maker of fuels and chemicals from residue from forests and agriculture; and

• Inventys, a developer of carbon capture technology that traps CO2 from industrial gas streams.

The fund "serves as a window and an on-ramp" for emerging technologies, said Chevron spokesman Kent Robertson by email. The technologies are "well aligned with projected energy needs."

Statoil Energy Ventures

The unit of Norway's state oil company, Statoil ASA, has invested $20 million since February 2016. It only funds renewable start-ups, listing among its investment themes wind, solar, storage, transportation, energy efficiency and smart grids. To date, it has put money into:

• ChargePoint Inc., an electric-vehicle charging point operator based in California;

• Oxford Photovoltaics Ltd., a solar technology company that is developing panels with perovskite. The substance could make traditional photovoltaics as much as 30 percent more efficient; and

• Convergent, a large-scale energy storage developer working on projects with lead acid, lithium-ion and flywheel batteries in the U.S. and Canada.

"In the transition into clean energy, it's not clear who would be the winners and losers," said Bala Nagarajan, investment director at Statoil Energy Ventures. "So for us, the investment is a means to understand which business models and which technologies are likely to be more successful. These investments help us position ourselves in the right part of the value chain."

Of course the oil companies have always dabbled in other forms of energy, backing solar after the 1973 oil crisis. Exxon backed nuclear power in the 1980s. Shell vowed to push into renewables ahead of the landmark Kyoto Protocol on climate change in 1997.

Those efforts fizzled when dips in the oil price sharpened the industry's focus on costs. More recently, Shell has taken big stakes in offshore wind projects, BP revived its wind business and Total pressed into solar through an investment in SunPower Corp.

Big Oil's push into venture capital adds to the sense that technology is moving rapidly in the energy industry, leaving a question mark over what will dominate supply for the first time in almost a century.

"A lot of these companies are still figuring out how to get involved on a larger scale," said Rick Wheatley, head of leadership and innovation at Xynteo Ltd., a consultant that advises Shell, Statoil and Eni SpA on sustainability and long-term planning. "They invest in start-ups to learn and to demonstrate intent. For the cost of a drilling campaign, they can invest in dozens of start-ups."

Dow Pesticide Decision Came 'Down to the Wire,' Emails Show

Posted August 18, 2017, 02:22 P.M. ET

By Tiffany Stecker

EPA Administrator Scott Pruitt made the decision to keep a neurotoxic pesticide on the market in a relatively short timeframe, internal agency emails show.

Pruitt had not been briefed by agency staff on chlorpyrifos as of nine days before a draft order to keep the pesticide legal began to circulate, according to the emails. Pruitt's March 29 order denied a 10-year-old petition from environmental groups to end the use of chlorpyrifos, a widely used insecticide linked to cognitive delays in children.

The emails also show the EPA decided to keep the pesticide legal weeks before Pruitt officially signed the order to do so.

Denying the longtime petition on the pesticide triggered an outcry from environmental groups and support from agricultural interests.

The Environmental Protection Agency made public more than 700 pages of heavily redacted correspondence Aug. 17 under the Freedom of Information Act in the agency's first response to a flood of requests from nonprofit organizations and media outlets. They were seeking details on the denied chlorpyrifos ban, a move that contradicted the EPA's recommendations under President Barack Obama. The agency is expected to released more documents to comply with the FOIA requests.

"Providing regulatory certainty to the thousands of farmers that rely on chlorpyrifos, while still protecting human health and the environment is critical," Amy Graham, EPA spokesperson, told Bloomberg BNA in an email. "We continue to examine the science surrounding chlorpyrifos while taking into account USDA's scientific concerns with the methodology used by the previous Administration."

'We Are Down to The Wire'

In early March, EPA staff began expressing concerns that the agency wouldn't meet a looming court deadline to act on the 2007 petition from the Natural Resources Defense Council and the Pesticide Action Network to revoke the legal tolerances of the pesticide on food.

"I am very concerned that we are down to the wire," Sarah Rees, director of the EPA's Office of Regulatory Policy and Management told Office of Policy associate administrator Samantha Dravis in a March 1 email.

Dravis, then a recent hire to Pruitt's coterie of advisers, asked for a briefing the following day.

It was still unclear by March 7 whether the EPA would meet the March 31 legal deadline for the decision. The agency's lawyers were ready to ask the U.S. Court of Appeals for the Ninth Circuit to extend the cutoff date to either accept or reject the petition.

But Pruitt had yet to hear from staff about the issue by March 7.

"It hasn't gotten on his calendar as far as I can tell," Wendy Cleland-Hamnett, acting chemicals chief, told Dravis. Nine days later, Cleland-Hamnett sent a draft denial of the petition.

Turnaround is "Absurdly Short"

Melanie Benesh, a legislative attorney with the Environmental Working Group, called the turnaround for a chlorpyrifos decision "absurdly short" for such an important decision.

"What is clear from these documents is that Administrator Pruitt's abrupt action to vacate the ban on chlorpyrifos was an ideological, not a health-based decision," Benesh told Bloomberg BNA in an email.

Chlorpyrifos was first registered as a pesticide in 1965 and developed by Dow Chemical Co. more than 70 years ago. It is widely used on corn, soybeans, fruits and vegetables, and on golf courses. The pesticide works by suppressing an enzyme that is essential for nerve function. Exposure in humans can lead to headaches, dizziness, and in some cases convulsions and death.

Several long-term population studies have also linked low exposure of chlorpyrifos to neurological delays in children who came in contact with the pesticide, or whose mothers were exposed while pregnant. Dow and the pesticide industry have rejected these studies as scientifically weak. In denying the petition, the EPA will have to decide how to regulate the insecticide by 2022 when the current registration on chlooriphyros expires.

Dow Agrosciences was not immediately available to comment to Bloomberg BNA on the emails.

EWG and the nonprofit American Oversight sued the EPA in June to compel the release of communications between Pruitt and agricultural interests relating to the order.

"American Oversight will continue to fight in court to combat Scott Pruitt's penchant for secrecy, including on pesticides," the organization's executive director Austin Evers said in a statement to Bloomberg BNA.

Peabody Mine May Survive if Railroad Extension Built

Posted August 18, 2017, 7:03 A.M. ET

By Stephen Lee

A group of business and government representatives are exploring the possibility of keeping alive a troubled coal mine in northern Arizona.

The Kayenta mine, operated by Peabody Energy, appears likely to shut down at the end of 2019, when the nearby Navajo Generating Station is also scheduled to close. The two are linked because the power plant is Kayenta's only customer. No rail line exists to ship the Kayenta coal to the outside world.

But now, a group of stakeholders that includes Peabody, the Bureau of Reclamation, and Rep. Tom O'Halleran (D-Ariz.) have come together to study the cost of building a rail extension to a Burlington Northern Santa Fe line 115 miles to the south.

The group's first step is to identify what a project like this would cost, O'Halleran told Bloomberg BNA. That work is under way now.

"They're kind of isolated," O'Halleran said. "The infrastructure is all geared towards pushing two trains of coal a day to the power plant, and that's not going to be available to them. But is a railroad tie feasible? How much time would it take to build? The delivery system is just not in place right now."

Environmentalists said a rail extension was unrealistic.

"The coal industry is in a permanent decline, and investors have fled and aren't coming back," Bill Corcoran, western campaign director for the Sierra Club's Beyond Coal campaign, told Bloomberg BNA. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., an affiliate of Bloomberg BNA.

Corcoran also pointed to recent public comments from Hunter Harrison, chief executive of rail giant CSX Transportation, about no longer investing in new infrastructure for coal.

Peabody spokeswoman Beth Sutton declined to comment on the rail spur, but said the company continues working with stakeholders that would allow NGS to stay open "well beyond 2019." That includes "engaging a globally recognized firm to identify a new ownership structure," Sutton said.

Gasification Plans Alive

O'Halleran also said the possibility of building a coal gasification plant to replace the Navajo Generating Station is on the table, corroborating statements made by Navajo Nation presidential spokesman Mihio Manus to Bloomberg BNA earlier this month.

Those comments have taken many industry watchers by surprise, in light of two recent high-profile stumbles in the coal gasification industry. Duke Energy's Edwardsport coal gasification plant in Indiana cost $1.5 billion more than originally planned and still doesn't run reliably, according to David Schlissel, director of resource planning analysis at the Institute for Energy Economics and Financial Analysis (IEEFA).

More recently, Mississippi regulators concerned about the rising costs of Southern Co.'s Kemper plant ordered the company last month to transition the plant to natural gas.

On Aug. 11, the IEEFA said coal gasified power at Edwardsport costs $64.40 per megawatt hour, compared to $44.37 at the Navajo Generating Station.

"The federal government should stop feeding fantasies about gasifiying or exporting coal and start investing in a diversified economic transition that has a plausible future," Corcoran said.

Energy Nominees' Industry Ties May Pose Conflict: Watchdog Groups

Posted August 18, 2017, 01:10 P.M. ET

By Rebecca Kern

Financial disclosure forms for two Energy Department undersecretary nominees show income from energy companies, including Southern Co. and TransCanada Corp., raising concerns from government watchdog groups of potential conflicts of interest.

Mark Menezes, nominated to the No. 3 position at the Energy Department, works in energy sector investment at Berkshire Hathaway Energy Co., while Paul Dabbar, nominated as the undersecretary for science, works in energy sector investment at J.P. Morgan. Both have personal investments in large energy companies. Menezes also previously lobbied for energy clients.

Menezes and Dabbar have said in agreements to the Office of Government Ethics that upon confirmation they will resign from their current jobs and divest from energy-related investments within 90 days. Both are awaiting a Senate floor vote on their nominations.

Government watchdog groups are concerned nonetheless with the potential for the nominees to be influenced by their past energy industry ties once they are confirmed.

"The financial or personal ties that a lobbyist or investor develops in the course of their previous employment may affect their ability to be impartial when making decisions as a representative of the public in the federal government," Brendan Fischer, director of federal and Federal Election Commission reform at the Campaign Legal Center, a nonprofit organization focused on election law, told Bloomberg BNA.

Menezes is vice president of federal relations for Berkshire Hathaway Energy Co., and has received income exceeding $5,000 in the previous two calendar years from Southern Co. and Berkshire Hathaway Energy Co., which includes the businesses of PacifiCorp and MidAmerican Energy Co., according to his public financial disclosure form.

Menezes previously was a partner at the law firm Hunton & Williams LLP, heading its energy practice group, where he was a registered lobbyist for energy companies such as Southern Co., Duke Energy Corp., Xcel Energy Inc., and Entergy Corp., according to the Center for Responsive Politics. He also previously worked as vice president and associate general counsel for American Electric Power Co. Inc., one of the largest electric utilities in the U.S., and participates in its pension plan. He said in his disclosure that he would not participate "personally or substantially" in a matter that has a "direct or predictable effect" on AEP unless he first obtained a written waiver. He also said he would divest from Alphabet Inc. and other entities. Dabbar is the managing director for

mergers and acquisitions at J.P. Morgan, overseeing energy investments, and has received income exceeding $5,000 in the previous two calendar years from TransCanada and Sempra Energy, along with 19 other large to mid-sized energy companies. He is invested in ConocoPhillips Co. Inc., Chevron Corp. and Phillips 66 Co., according to his public financial disclosure form. He said in his ethics agreement he would divest from these and other companies. Nick Loris, a fellow in environmental and energy policy at the conservative Heritage Foundation, said he's not too concerned about a perception of conflict of interest for the nominees.

"The federal government does robust checks and tries to have as much transparency as possible to ensure those types of activities don't happen whether it's a Democrat or Republican," Loris told Bloomberg BNA.

While the Office of Government Ethics is in charge of signing off on presidential nominees' ethics and financial disclosure forms, each federal agency has a designated ethics official who makes sure a new employee follows through on ethics agreements, an OGE staff member told Bloomberg BNA on background.

Setting Example

"It starts at the top, President Trump himself has an abundant number of conflicts of interest," Paul Seamus Ryan, vice president of policy and litigation at Common Cause, a nonpartisan good-government group, told Bloomberg BNA.

"President Trump ran on the promise of draining the swamp of corruption in Washington, but he instead only filled the swamp...and has brought a bunch of financially conflicted individuals into his administration," Ryan said.

While the president isn't subject to certain conflict of interest statutes, others in his administration must abide by them, he said.

In their ethics forms Menezes and Dabbar said they will exempt themselves from participating "personally or substantially" in any particular matter that would have a direct or predictable effect on their own financial interests, their families or former employers.

One way to avoid legal problems is to sell conflict-producing investment assets, which Menezes and Dabbar said they would do, he said.

The Campaign Legal Center's Fischer said his main concern is when representatives from the energy industry are taking on government posts "it suggests that the regulated are becoming the regulators." A concern is "that there will be an incentive to go on easier on their former friends and colleagues," he said.

The Trump administration has provided a number of waivers to political appointees in office. Walter Shaub, the former director of the Office of Government Ethics, resigned in July due to concerns that the Trump administration's ethics program was too weak.

Sheila Krumholz, executive director of the Center for Responsive Politics, told Bloomberg BNA that she agreed that the oversight and enforcement of conflict of interest waivers isn't as strong as it should be. She said the OGE is a small agency that's responsible for the entire federal government, and that "it's an onerous task to attempt to hold all political appointees accountable."

Southern Seeks Expanded Loan Guarantees for Troubled Plant

Posted August 18, 2017, 8:21 A.M. ET

By Mark Chediak, Ari Natter and Jennifer A. Dlouhy

Developers of a troubled nuclear plant in Georgia are seeking more federal support for the project, potentially increasing a record $8.3 billion loan guarantee it has already been promised, according to the two companies leading the project.

Southern Co. and Oglethorpe Power Corp., which are the lead owners of two new reactors under construction at Plant Vogtle, said they are in talks with the Energy Department to rework the terms of their guarantee, including increasing government financing.

"We have filed an application to potentially increase the amount of funds available for the Vogtle project under our DOE loan guarantee agreement to keep all options open for customers," Georgia Power spokesman Jacob Hawkins said in an email. Georgia Power, a unit of Southern, is the lead developer of the project with a 46 percent stake.

The growing costs of the project mean the companies could qualify for more federal support, according to people familiar with the discussions. The loan agreements required changes after the bankruptcy of Westinghouse Electric, the lead contractor. The Energy Department has been encouraging the companies to apply, they said. The people asked not to be identified because the talks are ongoing.

"The Department of Energy continues to have daily conversations with our borrowers about the status of Plant Vogtle," Shaylyn Hynes, a spokeswoman for the Energy Department, said in an email.

The Energy Department has already committed to back $8.3 billion in loans for the venture, which is the last new nuclear plant under construction in the U.S., after developers stopped work on a separate project in South Carolina. President Donald Trump has proposed killing the loan guarantee program, which provides a government guarantee that loans to the project will be repaid, and Congress may follow suit, and so the additional financing may need to be rushed through to beat any cutoff.

Oglethorpe said in a filing earlier this month that it estimated the cost to complete the reactors had increased from $5 billion to as much as $7.3 billion. The company has already withdrawn $1.7 billion in federal aid out of $3.1 billion promised.

"We have applied for a potential increase in our DOE loan amount to keep our financing options open while we continue to evaluate the future of Vogtle 3 and 4," Greg Jones, an Oglethorpe spokesman said in an email.

Southern is set to tell regulators in Georgia by month's end whether it plans to continue with construction plans for the plant. Regulators in the state signaled their support for the project, which is years delayed and billions dollars over budget, voting Aug. 15 to review a new cost estimate.

Earlier this month Southern said it estimated its portion of the cost to be at least $11.5 billion. Given Southern's 46 percent stake in the project, that would put the total cost of building the two reactors at $25 billion. "We need the administration to engage sooner than later," Tim Echols, the vice chairman of the Georgia Public Service Commission and a proponent of the project, said in an

email.

Ban on Toxic Acid May Test Californians' Thirst for Cheap Fuel

Posted August 18, 2017, 9:52 A.M. ET

By Hailey Waller and Robert Tuttle

Californians are used to paying more for gasoline, but that may be tested soon if a pair of Los Angeles-area refineries are forced to stop their use of a toxic chemical.

The local air-quality regulator indicated this month that it may ban hydrofluoric acid from both PBF Energy Inc.'s Torrance refinery and one owned by Valero Energy Corp. eight miles away. The chemical, used by 35 percent of all U.S. refineries, boosts octane to make cleaner-burning gasoline. But some residents fear that if it were ever released, it could form a poisonous cloud that would threaten a quarter-million area lives.

Phasing out the acid may cause a surge in pump prices that dwarfs one seen in 2015, when an explosion at the Torrance refinery, then owned by Exxon Mobil Corp., raised California's retail gasoline price by a dollar in three months. Fuel demand on the West Coast is near a 10-year high, government data show. And the price for regular gasoline at California's pumps is already pushing $3 a gallon, more than 60 cents above the U.S. national average, according to data from AAA, the largest U.S. motoring group.

"There's a more-than-passing chance that it could create a scarcity situation for octane," said Vikas Dwivedi, senior analyst at Macquarie Capital Inc. in Houston. "A big pinch in octane could take prices way up. It would be pretty substantial and everybody would feel it in their wallets."

The 150,000 barrel-a-day Torrance plant is the second-biggest in Southern California, producing a fifth of the area's gasoline. Only California's 19 refineries, plus a handful overseas, are able to produce gasoline that meets the state's strict environmental fuel standards.

The 2015 explosion spurred some of the concern about using the acid, which has been controversial since the 1980s. The U.S. Chemical Safety Board called the incident, which injured four workers and almost halted fuel production for more than a year, a "near miss" after the explosion hurled a piece of machinery toward a tank of the acid.

"There's a real crisis of confidence with the Torrance refinery," state Assemblyman Al Muratsuchi said in a telephone interview, pointing to a series of mishaps including fires, power cuts and heavy flaring that have plagued the refinery since PBF took it over in June 2016. He has proposed legislation to phase out use of the acid in California by the end of the decade.

If limits on the acid create a scarcity in locally made fuel, Southern California would have to buy as much as 25 percent of its gasoline from places as far away as India and the U.K., driving prices higher, Dave Hackett, president of Irvine, California-based Stillwater Associates LLC, said in a report last month that was commissioned and reviewed by PBF. Gasoline imports could rival or surpass 2015 levels, when they rose more than 10-fold to almost 70,000 barrels a day, he said.

"This is not an end-of-the-world scenario," said Sally Hayati, a community resident and president of

the Torrance Refinery Action Alliance, the largest activist organization, who added that a short-term price increase would be a small price to pay. "It's an annoyance, an interruption in production, but it's not a game changer."

Price fears may also be overblown, Patrick Dehaan, a senior analyst at pump-price monitor Gasbuddy, said by telephone. A switch away from hydrofluoric acid "is one of those things that refineries know in advance" and the market can plan for, unlike explosions, he said.

Safety Question

Breathing hydrogen fluoride can damage the lungs causing swelling and fluid accumulation and can cause severe burns to skin, according to the U.S. Centers for Disease Control and Prevention. Breathing in high amounts can be fatal.

A phaseout would cost about $500 million per refinery, according to an estimate by Gordon Schremp, senior fuels analyst for the California Energy Commission. That's almost equal to the $538 million PBF agreed to pay for Torrance.

The acid at Torrance has been modified since 1997 with an additive that makes it less likely to spread through the air and making it safe to use, Mike Karlovich, a spokesman at PBF's headquarters in Parsippany, N.J., said by telephone.

The company's assurances haven't convinced the South Coast Air Quality Management District, the local regulator, which said in an Aug. 2 presentation that a phaseout would be a "preventative measure." It stated that PBF "did not sufficiently demonstrate" that a hydrofluoric acid cloud could be prevented.

PBF expressed disappointment in the stance, and a Valero statement issued after it alleged the regulator was "seeking drastic changes when there have been no HF related safety issues."

Dutch Fire

A late July fire at Royal Dutch Shell Plc's Pernis refinery in the Netherlands which released a hydrofluoric acid cloud heightened fears of a similar event in California, even though Shell said the cloud stayed within the refinery and wasn't in hazardous concentrations.

"The fire and acid release at the Shell refinery in Rotterdam is the latest sign that an accident could create a deadly acid plume," Hayati said, while acknowledging there could be a "temporary impact on gasoline prices."

Gasbuddy's Dehaan noted that while an acid phaseout might be reassuring for the refineries' neighbors, others in the state may not be so happy.

"For Californians who aren't in the immediate proximity of the refiners, they want to fill their tanks with as cheap gasoline as possible," he said. "Nobody likes spending money on gas."

India Pressures Businesses to Improve Pollution Monitoring

Posted August 18, 2017, 12:26 P.M. ET

By Madhur Singh

Businesses in India could end up paying millions to comply with new guidelines on selecting and operating equipment to monitor air emissions and wastewater discharges.

India's Central Pollution Control Board found that large and medium-size companies, and shared incinerators wastewater and treatment plants were not properly monitoring emissions including particulate matter, carbon dioxide, sulfur oxides and nitrogen oxides, and discharges, or relaying the real-time information to state or federal regulators. Among the 17 business sectors that did not meet requirements were tanneries, mining and metalworks companies, and power plants.

Despite investments worth billions of rupees to meet the regulator's monitoring requirements, originally issued in February 2014, many businesses failed to achieve significant improvement in pollution control and compliance because they installed substandard devices or incorrectly installed and operated them, Sanjeev K. Kanchan of Delhi-based nonprofit Centre for Science & Environment, told Bloomberg BNA.

The board's new guidelines specify the basic characteristics of continuous emissions monitoring system devices; suggest technologies suitable for various industries; instruct how to install, operate, maintain, and calibrate devices; as well as how much data to send to the regulator and how often. Businesses could spend between 300,000 and 10 million rupees ($4,700 and $155,000) each to comply with guidelines, Sankar Kannan, national manager for product automation at monitoring equipment and services company SICK India, told Bloomberg BNA by phone Aug.16.

Many businesses that already installed analyzers are now worried that their equipment may not meet the new guidelines.

"The guidelines have specified the technology, the analyzer," Pradeep Manoor, a senior manager at JSW Energy, a power producer, told Bloomberg BNA, by phone Aug. 18. "Now the question is, do we install everything again?"

As of May 31, 2016, 1,733 industries had installed continuous emissions and effluent monitoring systems, and 667 were in the process of doing so. As many as 743 had been asked to close down for failing to respond, and the remaining had either shut down on their own or been exempted, according to a July 2016 update from the pollution control board.

Silk Road Cities Tap German Ingenuity to Tackle Climate in China

Posted August 18, 2017, 9:09 A.M. ET

By Bloomberg News

China is tapping German ingenuity to help cities at the farthest reaches of its ancient silk road adapt to climate change.

Scores of advisers from Germany and the European Union are working with officials in China to help transform hundreds of cities into oases of green power. Cleaning up China's cities has become a test for whether President Xi Jinping's government can hit pollution targets in the 2015 Paris agreement while spurring economic growth tied to its new silk road.

"The role of cities is crucial for reaching the Paris goals," said Beijing-based Sandra Retzer, who leads urban sustainability programs at GIZ China. The German state-owned group is working in China on projects from standardizing electric vehicle technology to creating new markets for carbon-emission certificates.

At least 1 billion people in China representing 70 percent of the world's population will move into cities by 2030, marking one of the greatest urban migrations in human history. More than $1 trillion investment will be needed by 2020 to help those cities reverse lethal levels of pollution, according to the Green Finance Committee of China's Society for Finance and Banking. Advice from Europe is aimed at helping authorities spend the money wisely.

The changes underway are part of bigger trends extending beyond China, where bicycle sharing services are spreading and sales of electric cars are skyrocketing.

At least 10 Chinese megacities including Guangzhou, Nanjing and Shenzhen take part in the C40 Cities Climate Leadership Group, supported by Bloomberg Philanthropies, which oversees all the charitable giving for Michael Bloomberg, former mayor of New York City. Bloomberg is also founder and majority owner of Bloomberg LP, parent of Bloomberg News and Bloomberg BNA.

Addressing Pollution

Cities like Dunhuang, more than 2,000 years old and once a major trading hub for silk road goods heading to Europe, are trying to reinvent themselves with the help of Fraunhofer Institute researchers based in Kassel, Germany.

Dunhuang's 200,000 people "can't take a path with a large amount of pollution and heavy energy consumption," according to Zhu Kexiang, head of the development and reform bureau in Dunhuang, located 1,467 miles (2,360 kilometers) northwest from Beijing. "Its only path will be green development."

Accordingly, Dunhuang generates all its power from a gigawatt-sized mix of photovoltaic panels, solar-thermal installations and hydropower plants, Zhu told a conference in Beijing last month. Germany's Fraunhofer Institute is trying to take the city even further, making it emissions free by 2025 using heat pumps, biomass and building efficiency measures.

Changing business-as-usual acts "not only as pressure but also as a driver for cities," said Hu Runqing, a director of industrial development research at the China National Renewable Energy Center. Higher demand for clean power along China's Belt and Road Initiative has boosted demand for photovoltaics, Bloomberg New Energy Finance says.

In Yinchuan, a city in northwestern China that's a vital cog on the new silk road, a large amount of solar capacity has been installed. It will hold a Sino-Arab summit next month to discuss economic and commercial cooperation under the belt and road initiative.

Climate adaptation in cities could also sustain flows into the global green bond market, which is expected to hit another record in 2017, according to analysts at HSBC Bank Plc.

"We are seeing a steady rise in green bond issuance to fund climate change mitigation and adaptation in cities," HSBC's Michael Ridley and Charlotte Edwards wrote earlier this month. "We anticipate a rise in local currency green emerging market city bonds, given rapid emerging market population growth and urbanization."

Fracking Jobs Prove Elusive for Coal Miners Looking to Switch

Posted August 18, 2017, 8:09 A.M. ET

By Daniel Flatley

Robert Dennis has mined coal in West Virginia for 10 years but a recent evening found him in a classroom at his local community college. He came to learn about opportunities in fracking, a drilling technique used to produce natural gas—the very fuel that is threatening coal's future.

"I know mining inside and out," said Dennis, a 41-year-old shift foreman from Wetzel County, adjusting the black Adidas cap on his head. But now, "I just want more doors to be open."

He has earned a certificate in chemical and industrial operations, diligently searched job boards and filled out applications. So far, no luck.

Dennis is learning a hard lesson of fracking: While it has created a bonanza of jobs, displaced coal miners and their communities are sometimes left out of the boom. That's because many of the jobs require highly technical skills and are often going to experienced workers brought in from out of state who then move on to the next job without sinking roots.

"There are positive employment and wage effects," said Timothy M. Komarek, a professor of economics at Old Dominion University in Virginia. But, he said, they are "not as big as first thought when the boom first started."

Komarek concluded in a 2016 study that total employment in a county rises by 7 percent and wages by 11 percent in the three years after fracking comes—but the gains then taper off.

When the "shale gale" hits, hotels, trailer parks and restaurants get a boost. And some landowners make money for letting drillers extract oil and gas from their property.

Millionaires Created in West Virginia

In that way, fracking has "created a lot of millionaires in West Virginia," said Jeff Kessler, a former state senator from the state's northern area that has both coal and natural gas. "But it has not created the employment opportunities" area residents had hoped for, he said. "The ongoing benefits are relatively minute compared to the amount of land under lease."

That's bad news for towns like Wetzel County's New Martinsville where Dennis attended the community college session. While coal mines provide decades of steady work and sustain communities, a crew can frack a well in a month and leave behind automated machinery to recover the oil and gas.

The process, also known as hydraulic fracturing, involves injecting water and chemicals deep underground to break up rock and free trapped oil and gas.

It's unlocked vast stores of previously unobtainable fossil fuel and spurred a renaissance in energy production in states that had once been coal bastions. Coal, oil and natural gas are formed from the same plant matter and other forms of prehistoric life and can be found in the same places.

Fracking Eroded Status of Coal

But fracking has eroded the status of coal, which used to generate more than half the electricity in the U.S. but had slipped to just 30 percent last year. "If there was a War on Coal, it was really declared by natural gas," said Robert Godby, an economist at the University of Wyoming.

While some miners are hoping President Donald Trump will rescue their industry—West Virginia gave Trump 69 percent of its vote in 2016, the greatest share of the total in at least a century and a half—others are eyeing gas as an alternative employment opportunity.

The U.S. Bureau of Labor Statistics doesn't specifically count fracking jobs, but says there were more than 422,000 jobs directly associated with oil and gas extraction in the U.S. at the end of 2016. That has far eclipsed the number of jobs in underground coal mining: about 50,000 nationwide, down from 200,000 in the 1970s.

In West Virginia, there were 11,404 coal miners last year, about half the 23,000 who were working in 2011. There are about 6,000 working in oil and gas extraction.

To be sure, the fracking boom provided a much-needed economic boost in the years following the Great Recession. Fracking supported more than half a million jobs across the Marcellus Shale, an energy-rich geological formation that stretches from New York state to Virginia, according to a report commissioned by the American Petroleum Institute, a trade association. The group's numbers exceed the Labor Department estimates because they include workers at natural gas distribution facilities, petroleum refineries, petroleum product wholesalers and gas stations.

And much as coal and the Ohio River once lured steel plants and manufacturers to the area, cheap natural gas may bring chemical and other manufacturers to areas near shale drilling. Residents of New Martinsville, for example, are rooting for an ethane processing facility that may be built on the site of an old coal plant nearby.

Quick Boom Then Dropoff

In North Dakota, for example, the fracking boom allowed it become the fastest-growing economy in the nation by 2014. Even now, it has one of the lowest unemployment rates in the nation at 2.3 percent. But a downturn in the oil market brought drilling to a crawl and slowed investment in training and education programs.

"The boom was so quick and dropped off so quickly afterwards and the bust came so quickly that they really didn't get it done," said William Caraher, an associate professor of history at the University of North Dakota, of the state's education push.

Don Riggenbach is the president of the Chamber of Commerce in Wetzel County, where New Martinsville is located, and the owner of a tile and carpet installation company. He measures the economic effect of fracking in square feet of new flooring installed. So far, he says, something has been missing.

"In my business I need houses being built," he said. "You'd think that because of the gas and oil business they'd be hiring people. They do, but they're out-of-state workers ... They're not putting down roots."

Still, former miners who have made the transition to fracking, often with the assistance of government or industry-funded programs, say they are happy.

Robert Walker says he was shocked when he was laid off from his job at a Murray Energy Corp. coal mine in Marshall County in April 2015.

Flash forward a couple of years and Walker is working for The Williams Companies Inc., a company with extensive operations in the oil and gas field. He is making less money, down to $24 an hour from $30 when he was working in the mines. But he likes the work, and prefers his new coworkers. He says he is "a lot happier now."

Mine Skills Transfer Well

Curt Hippensteel, the director of the West Virginia Community College petroleum technology program, said miners have skills that transfer well to other trades, including safety training, welding and electrical work. Plus, miners are used to working long hours in austere conditions, which fits the profile of roustabout work quite nicely, he said.

But fracking, which requires the application of precise measurements of chemicals, sand and water applied under extreme pressure at specific times, requires its own set of unique skills.

And its job outlook is far from certain.

Technological improvements to fracking processes and practices have made the industry more efficient. In late 2016 and early 2017, more gas was produced using fewer workers in West Virginia than ever before.

Since 2014, gas production in the state has grown 50 percent while oil and gas employment has fall from 9,000 to less than 6,000, according to West Virginia University Bureau of Business and Economic Forecasting.

The recent recovery in prices has spurred companies to begin exploring for gas again, which may mean more hiring soon, according to Brian Lego, a West Virginia University assistant professor of economic forecasting. "But the overall level won't be a substantial amount," he said.

Dennis, the coal miner looking for fracking work, hopes to gain a few years experience in the oil and gas fields near New Martinsville until his children finish school.

After that, he's ready to give up on energy altogether and seek employment in North Carolina, where he feels there is more opportunity.

"What I want is a chance to move out of the area," he said. "There's more industry down there."

Week Ahead: Chemical Society Event to Explore Industry's Impacts

Posted August 18, 2017, 11:39 A.M. ET

By Chuck McCutcheon

Chemistry's global economic impact is the focus of the American Chemical Society's national meeting Sunday through Thursday, one of several environment and energy events during the week of Aug. 21.

Among the speakers at the Washington conference is Chuck Kahle, a former vice president of coatings research and development for PPG Industries, a global supplier of paints, coatings, optical products, specialty materials, and fiberglass. Kahle is expected to talk about global trends, the growing emphasis on mergers and acquisitions, and strategies to improve success rates for chemical innovations.

Ivica Labuda, a Georgetown University adjunct assistant professor of biomedical graduate education, is expected to discuss research on pesticide detection in food, while George Mason University communications researcher John Kotcher is scheduled to explain ways of engaging different audiences on climate change.

The meeting will cover a broad array of other topics, including turning plant waste into carbon fiber for cars and airplanes, designing nanoparticles to sop up sunblock from oceans to save coral reefs, and redesigning quantum dots—very small semiconductor particles—so they release fewer hazardous metals when used in televisions and other products.

News conferences from the event will be on YouTube starting Monday. Pat Rizzuto and Tiffany Stecker will cover some of the meeting's sessions.

In Other News

Eclipse impacts: Monday's solar eclipse, which is set to bring total darkness to areas of the U.S., will offer power grid operators, utilities and electricity generators a rare opportunity to test an expected dropoff of more than 12,000 megawatts of solar power supplies. Bloomberg BNA staff will monitor.

Monuments changes: Thursday is the deadline for Interior Secretary Ryan Zinke to send a final report to President Donald Trump containing Zinke's recommendations for any changes to national monuments designated since January 1996. The issue springs from two Utah national monuments—Grand Staircase-Escalante, designated that year, and Bears Ears, designated last year. Zinke issued in June his interim suggestion that Bears Ears monument be reduced in size, while Grand Staircase-Escalante—which has coal reserves and may have natural gas reserves—remains to be mentioned. Alan Kovski will track.

Nuclear reactors: The Nuclear Regulatory Commission will hold a Thursday public meeting at its Rockville, Md., offices to get feedback on reactors that do not use light water as the coolant. Both the NRC and Energy Department are interested in helping industry develop technologies for such advanced reactors. Bloomberg BNA staff will monitor.

Drinking water workshop: The Environmental Protection Agency will hold a workshop from Tuesday to Thursday in Cincinnati with the Association of State Drinking Water Administrators on handling small drinking water system challenges.

Non-animal testing: EPA scientists will take part in the Tenth World Congress on Alternatives and Animal Use in the Life Sciences in Seattle on Sunday through Thursday. They will share the EPA's scientific advances in developing alternative, non-animal testing approaches for chemicals.

Climate change gathering: U.K. business and management publisher Allied Academies is holding a Congress on Climate Change Thursday and Friday in Birmingham, England. The event will focus on innovative research supporting effective responses to climate change.

South Korea and carbon: The United States Energy Association will hold a Monday briefing in Washington on South Korea's research on carbon capture, utilization and sequestration technology. South Korean President Moon Jae-in, who took office in May, has pledged a vigorous nuclear-free shift to renewable energy and vowed to use climate change as a driver for economic growth.

Daily Environment Report for EPA

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: InsideEPA/climate
Sent: Mon 12/4/2017 10:22:58 PM
Subject: Today on Climate Beat

December 4, 2017

Today on Climate Beat . . .

. . . we got litigious, reporting that National Association of Manufacturers and other industry groups have quietly launched a new coalition, known as the Manufacturers' Accountability Project, to fight increasing litigation by states, environmentalists and other plaintiffs to force businesses to address climate change.

In advocacy news, members of the American Legislative Exchange Council plan to vote at its annual meeting this week on whether to approve a resolution urging EPA to scrap its greenhouse gas endangerment finding that forms the basis of nearly all its climate regulations.

And our daily news roundup looked at a couple of energy tax issues, including that the Senate's tax overhaul package could significantly undercut private equity financing for wind and solar projects, as well as new lobbying efforts from coal and nuclear backers for new tax breaks for those sectors.

Summaries

AIR
Georgia SIP/Regional Haze Progress Report
AIR

Final rule of the EPA approves a revision to the Georgia SIP regarding the state's regional haze progress report. The agency approves the state's determination that the regional haze plan is adequate to meet the reasonable progress goals for the first implementation period through 2018 and does not currently require substantive revisions. The rule is effective Nov. 3, 2017. Contact: Michele Notarianni; EPA Region 4, Air Planning and Implementation Branch; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 52.570

82 FR 46136 (10/04/2017)

Regulatory Update

AIR
North Carolina SIP/Interstate Transport Good Neighbor Provision
AIR

Final rule of the EPA approves revisions to the North Carolina SIP regarding the good neighbor provisions of the 2008 eight-hour ozone NAAQS. The agency has determined that the SIP contains adequate provisions to prohibit emissions within the state from contributing significantly to nonattainment or interfering with maintenance of the 2008 eight-hour ozone NAAQS in any other state and that the SIP meets the requirements of prongs 1 and 2. The rule is effective Nov. 3, 2017. Contact: Ashten Bailey; EPA Region 4, Air Planning and Implementation Branch; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52.1770

82 FR 46134 (10/04/2017)

Regulatory Update

ENDANGERED SPECIES
Threatened Status for the Trispot Darter
ENDANGERED SPECIES

Proposed rule of the U.S. Fish and Wildlife Service would list the trispot darter as a threatened species. The proposal is in response to the agency's 12-month finding on a petition to list three freshwater fish, the holiday darter, the trispot darter, and the bridled darter, found in Alabama, Georgia, and Tennessee, as threatened or endangered. The agency has determined that listing the holiday and bridled darters is not warranted at this time. Hearing requests are due Nov. 20, 2017. Comments are due Dec. 4, 2017. Contact: Bill Pearson; USFWS, Alabama Ecological Services Field Office; 251-441-5181. Citations: 50 CFR 17.11

82 FR 46183 (10/04/2017)

Regulatory Update

ENDANGERED SPECIES
Virginia, West Virginia/Candy Darter Threatened Status
ENDANGERED SPECIES

Proposed rule of the U.S. Fish and Wildlife Service would list the candy darter, a freshwater fish species from Virginia and West Virginia, as a threatened species. The proposed listing is based on the agency's determination that hybridization with the variegate darter is the primary threat to the candy darter. The agency has prepared a species status assessment report that provides a compilation and assessment of the best scientific and commercial information available concerning the status of the candy darter, including the past, present, and future factors influencing the species. The agency seeks information not already included in the SSA Report regarding the species' biology, range, and population trends; factors affecting continued existence; the potential for additional introductions of the variegate darter into unaffected watersheds; and potential prohibitions and instream and bank habitat restoration activities to benefit the species. Hearing requests are due Nov. 20, 2017. Comments are due Dec. 4, 2017. Contact: John Schmidt; USFWS, West Virginia Ecological Services Field Office; 304-636-6586. Citations: 50 CFR 17.11

FOOD SAFETY
Codex Intergovernmental Task Force on Antimicrobial Resistance
FOOD SAFETY

Notice of the Food Safety and Inspection Service announces a meeting to discuss agenda items and draft positions at the 5th Session of the Ad Hoc Codex Intergovernmental Task Force on Antimicrobial Resistance of the Codex Alimentarius Commission to be held Nov. 27-Dec. 1, 2017, in Jeju, South Korea. The agenda includes discussion of matters of the U.N. Food and Agriculture Organization, the World Health Organization, and other intergovernmental organizations, including a progress report on the request for scientific advice on foodborne antimicrobial resistance. The agenda also includes discussion of a proposed draft revision of the Code of Practice to Minimize and Contain Resistance and the draft guidelines on integrated surveillance of antimicrobial resistance. The meeting is scheduled for Nov. 7, 2017, in Washington, D.C., and via conference call. Comments are due Nov. 7, 2017. Contact: Kenneth Lowery; FSIS, U.S. Codex

Office; 202-690-4042; kenneth.lowery@fsis.usda.gov

GENERAL ENVIRONMENT AND SAFETY
Advisory Committee on Reactor Safeguards Meeting Procedures
GENERAL ENVIRONMENT AND SAFETY

Notice of the NRC announces the availability of procedures for meetings conducted by the Advisory Committee on Reactor Safeguards. The procedures address public participation in ACRS full committee meetings, including the development of agendas. The procedures also remove requirements that ACRS subcommittee meetings apply Federal Advisory Committee Act requirements if the subcommittee's recommendations would be independently reviewed by its parent committee. The procedures also address closed sessions for discussion of proprietary information. Contact: Annette Vietti-Cook; NRC; 301-415-1969; NRCExecSec@nrc.gov

GENERAL ENVIRONMENT AND SAFETY
Drug and Biological Product Pregnancy and Lactation Labeling
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the FDA to seek OMB approval for a continuing information collection request concerning the content and format of labeling for human prescription drugs and biological products relating to pregnancy and lactation. The collection addresses the submission of a summary of the risks of using a drug during pregnancy and lactation and a discussion of the data supporting that summary. The collection also addresses inclusion on the label of information about pregnancy testing, contraception, and infertility to help health care providers make prescribing decisions and counsel patients about the use of drugs during pregnancy and lactation. Comments are due Dec. 4, 2017. Contact: Domini Bean; FDA, Office of Operations; 301-796-5733; PRAStaff@fda.hhs.gov

82 FR 46248 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Maine/American Tissue Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of an application by KEI (Maine) Power Management (III) LLC, of Gardiner, Maine, for a subsequent minor license for the American Tissue Hydroelectric Project, on the Cobbosseecontee Stream in Gardiner. The existing project involves a run-of-river mode with an average annual generation of 5,430 megawatt-hours. The proposed revision alters minimum flows into project facilities, upgrades the existing downstream fish passage facility, and reduces or ceases generation during nighttime hours during the downstream eel passage season if dead/injured or entrained eels are observed. The proposed revision also adds an upstream passage facility for American eel and revises the project boundary by removing most of the bypassed reach. Comments, protests, and motions to intervene are due Nov, 27, 2017. Contact: John Baummer; FERC; 202-502-6837; john.baummer@ferc.gov

82 FR 46228 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Massachusetts/Northfield Mountain Pumped Storage Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application for the Northfield Mountain Pumped Storage Project located on the Connecticut River in Franklin County, Mass. The applicant, FirstLight Hydro Generating Co., of Hartford, Conn., requests a temporary amendment of the minimum and maximum reservoir elevation requirement. The applicant requests an increase to the upper water surface evaluation limit level to 1,004.5 feet mean sea level (msl) and 920 feet msl for the lower limit. FirstLight specifies that the changes would result in an increase in the maximum daily generation to 10,779 megawatt-hours and provide Independent System Operator New England Inc., of Holyoke, Mass., with additional resources to address winter reliability needs. Comments, motions to intervene, and protests are due Oct. 30, 2017. Contact: Christopher Chaney; FERC; 202-502-6778; christopher.chaney@ferc.gov

82 FR 46234 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Patient Engagement Advisory Committee
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a webcast for a previously announced meeting of the Center for Devices and Radiological Health Patient Engagement Advisory Committee (82 FR 34681; 07/26/2017). The committee provides advice and recommendations to the FDA on complex issues relating to medical devices, the regulation of devices, and their use by patients. The agenda includes discussion of patient input into medical device clinical trials. The notice also updates meeting times. The meeting is scheduled for Oct. 11-12, 2017, in Gaithersburg, Md.

Contact: Letise Williams; FDA, Center for Devices and Radiological Health; 301-796-8398; Letise.Williams@fda.hhs.gov

82 FR 46250 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Renewable Fuel Standard Program
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces the availability of supplemental data and a request for comments regarding a July 21, 2017, proposed rule (82 FR 34206) to establish renewable fuel percentage standards for all gasoline and diesel produced or imported in the U.S. The rule would reduce the required volume of all of the fuel categories other than biomass-based diesel from 2017 levels due to an anticipated shortfall in the production of cellulosic biofuel. The EPA seeks additional comments concerning ways to determine the 2018 and 2019 volume requirements for biomass-based diesel (BBD). The supplemental data addresses production, imports, and cost of renewable fuel and provides options for establishing the BBD volume requirements using the EPA's waiver authorities. Comments are due Oct. 19, 2017. Contact: Julia MacAllister; EPA, Office of Transportation and Air Quality; 734-214-4131; macallister.julia@epa.gov; Citations: 40 CFR 80

82 FR 46174 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Small Hydropower Projects/Preliminary Permits
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to seek OMB approval for two continuing information collection requests. The first collection (FERC-505) addresses preliminary permit extensions and licensing exemptions for qualifying small hydropower projects and conduit facilities. The second collection (FERC-512) addresses preliminary permit requirements for hydropower facilities to allow the applicants to conduct surveys to prepare maps, plans, specifications, and estimates; to conduct engineering, economic, and environmental feasibility studies; and to make financial arrangements. Comments are due Dec. 4, 2017. Contact: Ellen Brown; FERC; 202-502-8663; DataClearance@FERC.gov

82 FR 46231 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Southeast Market Pipelines Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of a draft supplemental environmental impact statement for the Southeast Market Pipelines Project. The project involves the construction and operation of three separate but interconnected pipeline systems totaling approximately 685 miles, including the Sabal Trail Project in Alabama, Florida, and Georgia; the Florida Southeast

Connection Project in Florida; and the Hillabee Expansion Project in Alabama. The SEIS is being prepared in response to a 2017 court opinion regarding FERC's environmental review of the project. The draft SEIS estimates the greenhouse gas emissions generated by the project's customers' downstream facilities, describes the methodology used to determine these estimates, addresses the magnitude of the emissions, and addresses the value of using the social cost of carbon tool. The draft SEIS also provides FERC's conclusion that with the applicants' implementation of impact avoidance, minimization, and mitigation measures, the project would not result in a significant impact on the environment. Comments are due Nov. 20, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlineSupport@ferc.gov

82 FR 46233 (10/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Vermont/Great Falls Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application by the Village of Lyndonville Electric Department for the Great Falls Hydroelectric Project on the Passumpsic River in Lyndon, Vt. The applicant requests a new major license to continue operation of the project, install an automatic pond level control system, and develop a minimum flow monitoring plan. The project also would include construction and maintenance of a new carry-in boat access trail downstream of the tailrace, a bank fishing area, and a parking area outside the project gates. Lyndonville operates the existing project in a run-of-river mode with an annual average generation of approximately 3,960 megawatt-hours and is not proposing any changes in project operation. The commission requests comments on Scoping Document 1, which includes information to be addressed in the environmental assessment. Comments are due Oct. 27, 2017. Contact: Bill Connelly; FERC; 202-502-8587; william.connelly@ferc.gov

82 FR 46235 (10/04/2017)

Regulatory Update

HAZARDOUS WASTE CLEANUP
New Mexico/San Mateo Uranium Mine Site
HAZARDOUS WASTE CLEANUP

Notice of the Department of Justice announces a proposed consent decree in United Nuclear Corp. v. United States (Civil Action No. 15-cv-411), lodged on Sept. 22, 2017, with the U.S. District Court for the District of New Mexico. The consent decree resolves claims and counterclaims under CERCLA for contamination associated with past uranium mining operations conducted by United Nuclear Corp., El Paso Natural Gas Co., and Homestake Mining Co. of California at the San Mateo Uranium Mine Site in Cibola County, N.M. The consent decree requires the U.S. to pay $1.595 million to the mining companies and requires the mining companies to pay $25,000 to the Superfund. The U.S. and the mining companies covenant not to sue or bring claims for past and future work concerning implementation of the unilateral administrative order or response costs, and the mining companies will be protected from contribution actions or claims. Comments are due Nov. 3, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

82 FR 46286 (10/04/2017)

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Mine Accident Recordkeeping and Reporting
OCCUPATIONAL SAFETY AND HEALTH

Notice of the Mine Safety and Health Administration announces the submission of a continuing information collection request to the OMB concerning requirements to report mine accidents, injuries, and illnesses within 10 working days of any such incident and requirements to file quarterly mine employment and coal production data reports. The requirements apply to all mine operators and independent contractors working on mine property. The reports are used to improve agency safety and health enforcement programs, focus agency education and training efforts, and establish technical assistance activities in mine safety and health. Comments are due Nov. 3, 2017. Contact: Michel Smyth; Department of Labor; 202-693-4129; dol_pra_public@dol.gov. Citations: 30 CFR 50.20, 50.30

82 FR 46288 (10/04/2017)

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
NRC Notice to Employees
OCCUPATIONAL SAFETY AND HEALTH

Notice of the NRC announces the availability of a revised version of Form 3 that describes certain responsibilities and rights of employers and employees who engage in NRC-regulated activities. The form also describes how employees can report violations or other safety concerns directly to the NRC. The revisions correct the map of the NRC regions and clarify operation of the headquarters operations center. NRC licensees are required to post the revised form at prominent locations at the workplace within 30 days of receipt from the NRC. Contact: Lisamarie Jarriel; NRC, Office of Enforcement; 301-287-9006; Lisamarie.Jarriel@nrc.gov. Citations: 10 CFR 19.11

Subject: STATUS OF WATER SYSTEMS IN AREAS AFFECTED BY HARVEY

CONTACT: press@epa.gov

STATUS OF WATER SYSTEMS IN AREAS AFFECTED BY HARVEY

WASHINGTON (September 3, 2017) – Working together, the U.S. Environmental Protection Agency (EPA) and the Texas Commission on Environmental Quality (TCEQ) continue to coordinate with local, state and federal officials to address the human health and environmental impacts of Hurricane Harvey and its aftermath, especially the water systems in the affected areas. As of Saturday, September 2nd, 2017, the following information is available:

- **Drinking Water:** Half (2300) of the 4500 drinking water systems potentially affected by Harvey have been contacted. Of those: 1514 systems are fully operational, 166 have boil-water notices, and 50 are shut down. The agencies are contacting remaining systems to gather updated information of their status. Assistance Teams are in the field working directly with system operators to expedite bringing systems back to operational status. Additional drinking water assessments should be up and running within the next day.

- **Waste Water and Sewage:** Currently, 1656 of approximately 2469 wastewater treatment plants are fully operational in the affected counties. The agencies are aware that releases of wastewater from sanitary sewers that is occurring, due to the historic flooding and are actively working to monitor facilities that have reported spills, conduct outreach and provide technical guidance to all other wastewater facilities in flood-impacted areas. EPA and TCEQ are working closely with the U.S. Coast Guard, the Texas Military Department, and other local and state agencies to continuously monitor wastewater systems. Houston's unified command will be up and running shortly to support water testing. Assistance Teams will be deployed to work directly with system operators to expedite bringing systems back to operational status.

- **Residential Wells:** EPA is developing a plan for sampling residential wells, and is coordinating with TCEQ to establish several locations where residents can bring water samples from their wells to be tested.

- **Flood Water:** Water quality sampling will be focused on industrial facilities and hazardous waste sites. Floodwaters contain many hazards, including bacteria and other contaminants. Precautions should be taken by anyone involved in cleanup activities or any others who may be exposed to flood waters. These precautions include heeding all warnings from local and state authorities regarding safety advisories. In addition to the drowning hazards of wading, swimming, or driving in swift floodwaters, these waters can carry large objects that are not always readily visible that can cause injuries to those in the water. Other potential hazards include downed power lines and possible injuries inflicted by animals displaced by the floodwaters.

Additional EPA/TCEQ updates include:

- **Superfund Sites:** EPA and TCEQ continue to get updates about the status of specific sites from the parties responsible for ongoing cleanup of the sites. The most recent information can be found here.

- **Air Quality Monitoring:** One of the many preparations for Hurricane Harvey included EPA, TCEQ, and other monitoring entities temporarily removing approximately 75 percent of the stationary air monitoring equipment from the greater Houston, Corpus Christi, and Beaumont areas. Since then, state and local authorities are working to get the systems up and running again. As of Saturday, September 2, over 70 percent of the monitors are up and working again; and authorities expect that the network will be fully operational again by next week. Of the available air monitoring data collected from August 24-September 2, 2017, all measured concentrations were well below levels of health concern. Monitors are showing that air quality at this time is not concerning and local residents should not be concerned about air quality issues related to the effects of the storm.

- **Fires at Arkema Facility in Crosby, Texas:** EPA and TCEQ are coordinating closely with Harris County Officials along with the U.S. Department of Homeland Security, and other local public safety officials. As a result of initial chemical fires while the facility was flooded, EPA has collected downstream surface water runoff samples at four locations outside the evacuation zone, near residential areas. EPA and TCEQ will maintain a 24 hour watch and maintain a 24-hour presence at the incident command operations center near this facility, to support local emergency personnel on the ground. The 1.5 mile radius evacuation zone remains in effect until local emergency response authorities announce it is safe.

- **Refineries/Fuel Waivers:** In addition to waivers for 38 states and D.C., EPA signed four No Action Assurance (NAA) letters on September 1, to help address fuel shortages. NAA will help expedite the distribution of existing gasoline supplies to both Texas and Louisiana, while the refineries work to re-start and resume normal operations. Each is effective until September 15, 2017, and should allow for the distribution in Texas of 10 million or more gallons of gasoline to consumers.

In one key respect, Macron complements President Trump

Paul Zajac and Boris Toucas | The Hill

Strong stances in favor of an integrated Europe are often met with skepticism in Washington, particularly among Republicans. But since President Trump took office, he's complained about the so-called weakness of institutions and political leaders across the pond. Although they articulate opposite worldviews, the US president has high praise for Macron's

personality and resolve. The two men respect each other. Where does that lead us?

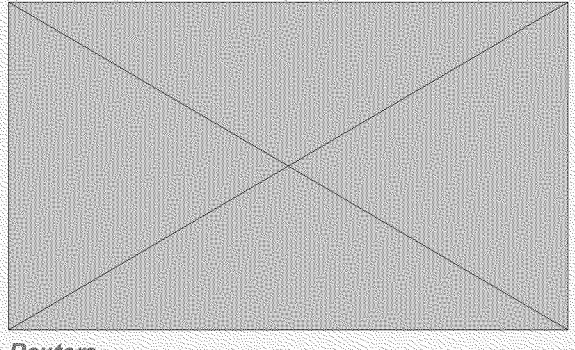
60-second take: The 'Blade Runner' curse of capitalism

Jonah Goldberg | AEI video

Ridley Scott crafted his 1982 film "Blade Runner" with an atmosphere of paranoia about corporate power. The logos of some of the most ubiquitous brands of the 1980s dominate the neon skyline of 2019 Los Angeles. But while it's implied that the companies in the film would endure, AEI's Jonah Goldberg explains that the nature of capitalism is for corporate behemoths to compete for survival as newer, better, more innovative businesses emerge.



Reuters

A slow death for the Iran deal

John R. Bolton | The Wall Street Journal

As Abba Eban observed, "Men and nations behave wisely when they have exhausted all other resources." So it goes with America and the Iran deal. While Congress considers how to respond — or, more likely, not respond — we should focus on the grave threats inherent in the deal. Peripheral issues have often dominated the debate, but the core provisions are the central danger. There are no real "fixes" to this intrinsically misconceived agreement.

Reuters

The new 'New Europe' is within sight

Dalibor Rohac | The American Interest

When the four Visegrad countries joined the

European Union, hopes ran high for a reinvigoration. Today, reforms in Central Europe have not only stalled, but some of the main achievements of the post-1989 era, including independent media, judiciaries, and openness to foreign investment, are now under attack. Yet the tide might be turning again. Across Central Europe, new reformist parties are hoping to emulate Emmanuel Macron's success in France.

Subject: Morning Energy: DOE: Natural gas fueling coal's decline — Verdicts due today on host of national monuments — Energy industry readies for Gulf storm

By Anthony Adragna | 08/24/2017 05:43 AM EDT

With help from Ben Lefebvre and Esther Whieldon

PERRY'S GRID STUDY LAYS BLAME ON NATURAL GAS: Months of breathless anticipation culminated late Wednesday with the release of the Energy Department's grid study that concluded the surge in supplies of cheap natural gas had weighed on power prices and was the key factor in the closure of many coal-fired power plants, Pro's Darius Dixon reports . The report, requested by Secretary Rick Perry, doesn't call for Congress to change any laws or agencies to alter any specific rules but does seek "reforms" — from the Nuclear Regulatory Commission, the EPA and FERC — to power markets that would help bolster the electricity network's resilience and provide support for some plants.

The agency linked four factors — cheap gas, low electricity demand growth over the past decade, government regulations and the influx of renewable energy into the grid — to the struggles of coal and nuclear power, but didn't try to assign a percentage of blame to each of them.

Still, Perry did cast some side-eye at renewables incentives, saying in a letter accompanying the report "[i]t is apparent that in today's competitive markets certain regulations and subsidies are having a large impact on the functioning of markets, and thereby challenging our power generation mix. It is important for policy makers to consider their intended and unintended effects."

But the report takes a softer tone than Perry's April memo that ordered up the study, which said Obama era regulations had "destroyed jobs and economic growth" and threatened the grid**,** and suggested that federal support for renewable power "create[s] acute and chronic problems." That document, energy guru Peter Fox-Penner told Darius, was "looking through a preconceived, political lens broadly at baseload and blaming renewables policy, which is looking at the wrong culprit. The right direction for a solution is market design."

Part of the reason for DOE's call for FERC, EPA and other bodies to help alter electricity market and aid power plants is because the agency has limited power to direct energy policy. "DOE has no authority," former FERC Chairman Jon Wellinghoff, a Democrat, said ahead of the report's release. "It's FERC that has all the authority .. .and DOE does not control FERC. I would say that when I was there, and I'd say it now."

Other voices weigh in: Graham Richard, CEO of Advanced Energy Economy, said grid operators weren't having the troubles adjusting to a wide array of resources as suggested: "This report seriously overstates the challenges associated with new energy resources," he said. Consumer Energy Alliance President David Holt called it an important step in discussing the

future of the energy grid: "While utilities, electric cooperatives, and grid operators have been able to absorb the changes brought about by increases in renewable energy and the abundance of low-cost natural gas, it is clear that they will have significant challenges as the pace of change accelerates," he said in a statement. Others were not so positive. "Coal and nuclear can no longer compete on their own, and they are now pushing Trump to save them. This study is a shoddy attempt to do just that," the Sierra Club's Mary Anne Hitt said.

MONUMENTAL DECISION DAY: Today is Interior Secretary Ryan Zinke's deadline to send President Donald Trump recommendations on the future of 22 national monuments -- 16 of which could be on the chopping block. Zinke earlier this year issued a preliminary recommendation for Trump to reduce the size of the Bears Ears national monument in Utah and one news organization, Utah Policy, reported on Wednesday that Zinke may call for Trump gut the monument's footprint by up to 88 percent.

The secretary made a round of phone calls about the monument report with lawmakers on Wednesday, including House Natural Resources Committee Chairman Rob Bishop who, through a committee spokeswoman, declined to comment on their conversation. Bishop is holding a press briefing on the monuments this morning, and the Sierra Club and public land advocates are holding a rally outside of Interior's Washington headquarters at noon today. Sen. Martin Heinrich will hold his own press conference outside an REI in Albuquerque, N.M. today at 12:15 p.m. MST to oppose any changes to the national monuments.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and NOIA's Nicolette Nye was the first of many to identify Hawaii as the sole state to commercially grow coffee. For today: What country once issued a stamp in the shape of a banana? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

PROGRAMMING NOTE: Morning Energy will not publish from Aug. 28-Sept. 4. Our next Morning Energy newsletter will publish on Sept. 5. Please continue to follow Pro Energy issues here.

HARVEY OVER HOUSTON: Gulf of Mexico oil rigs and refineries are bracing for Tropical Storm Harvey, which looks likely to turn into a full-fledged hurricane. The storm could dump 16.5 inches of rain on the flood-prone coast that is the heart of U.S. energy production, according to forecasts. Oil producers are already starting to pull personnel off oil rigs, which could throw fuel prices higher until the extreme weather quiets down. Track Harvey's path here .

Perry, Texas' longest-serving governor, tweeted "Stay safe, Texas" ahead of landfall, linking to emergency preparedness resources.

IT'S DEJA VU ALL OVER AGAIN: Speaker Paul Ryan said Wednesday a short-term continuing resolution would likely be necessary to give Congress more time to iron out a longer-term spending package, POLITICO's Louis Nelson reports . "I think that will probably be necessary, yes, because I can't imagine the Senate will be able to process the appropriations bill as quickly as the House is," he said of a CR. And that comes even as the threat of government

shutdown grew over President Donald Trump's insistence Congress give him money for his border wall, POLITICO's Josh Dawsey reports, potentially opening up significant rifts within the president's own party if he sticks to his hard line.

WALDEN WEIGHS IN ON MALHEUR SITUATION: Asked about the 2016 occupation of the Malheur National Wildlife Refuge in his district, Energy and Commerce Chairman Greg Walden urged peaceful protest and respect for the laws for anyone seeking to protest the federal government. "Those that violate the law should be prosecuted," he said alongside Ryan Wednesday. "However these protests take place, they need not be armed, they need not be violent, they need not be vile."

THERE'S NO PLACE LIKE HOME: With his national monument review wrapping up, Zinke today heads to Missoula, Mont., for an "on-site briefing and [to] assess the situation involving ongoing wildfires in the Pacific Northwest and Northern Rockies." Along with Agriculture Secretary Sonny Perdue, Zinke will "inspect the on-the-ground operations."

GOING OUT GUNS BLAZING! Daniel Kammen resigned his post as State Department science envoy in a fiery letter addressed to Trump Wednesday in which eagle-eyed readers noted the first letter of each paragraph spelled out I-M-P-E-A-C-H. "Particularly troubling is the consistency of your response to Charlottesville with a broader pattern that enables sexism and racism, and disregards the welfare of young Americans, the global community and the planet," the University of California, Berkeley, professor wrote. "Your presence in the White House harms the United States domestically and abroad and threatens life on this planet."

PENCE: MORE VENEZUELAN SANCTIONS COMING: Expect the Trump administration to unveil yet another round of sanctions against Venezuelan government officials, Vice President Mike Pence told a gathering in the largest Venezuelan community in the U.S. "At President Trump's direction, the United States has already issued three rounds of targeted sanctions against Maduro and his inner circle — and there's more to come," Pence told the applauding crowd. "And we'll continue to act until the Maduro regime holds free and fair elections, releases all political prisoners, and ends the repression of the Venezuelan people." As POLITICO's Sergio Bustos reports, the vice president vowed to employ "full measure of U.S. economic and diplomatic power" to restore order in the oil-rich country.

WATCH THIS SPACE: Look for environmental advocates to pressure sympathetic attorneys general nationwide to launch all-out investigations into whether Exxon Mobil misled the public on climate science in light of Wednesday's peer-reviewed Harvard study with that conclusion. "Time for California AG @AGBecerra to join @MassAGO and @AGSchneiderman in a full scale investigation of what #ExxonKnew," Jamie Henn, a spokesman for 350.org, tweeted Wednesday. Back in July, Becerra told advocates that "though we don't announce publicly if we are doing an investigation, I'm very aware of that particular matter."

MAIL CALL! BISHOP SEEKS UNREDACTED BLM MISCONDUCT REPORT: House Natural Resources Chairman Rob Bishop has asked Interior's acting inspector general for an unredacted copy of a report outlining serious misconduct from a BLM law enforcement manager. According to a committee aide, the official allegedly removed moqui marbles from an evidence

room, gave several as gifts and asked an underling to pore through his emails and delete any that portrayed him badly.

MORE UTILITIES OPPOSE SUNIVA PETITION: Add the Electric Reliability Coordinating Council and Duke Energy to the list of entities opposing a bid by Suniva and SolarWorld Americas to have the International Trade Commission recommend duties on imported solar equipment in order to revive domestic manufacturing facilities. "The delivery of reliable, affordable, and increasingly clean energy relies upon international trade policies that increase supply chain stability, not policies that destabilize it," Diane Denton, managing director of federal policy for Duke, wrote.

SUPPORT URGED FOR INTERNATIONAL CLIMATE WORK: As Congress attempts to figure out what to do about the appropriations process, the Business Council for Sustainable Energy sent a letter to Senate leaders urging continued support for the United Nations Framework Convention on Climate Change and the International Panel on Climate Change, as well as the Green Climate Fund. "Preserving the U.S. financial contributions to these international programs and institutions not only protects the opportunity for U.S. governmental leadership but also protects and promotes the business interests of American companies," Lisa Jacobson, the group's president, wrote.

GETTING TO 100 RENEWABLE AROUND THE WORLD: A Stanford- and U.C. Berkeley-led peer-reviewed paper out Wednesday tackles individualized plans for 139 countries — which account for 99 percent of global emissions — to run on 100 percent renewable energy by 2050. It won't be easy though, as the study calls for "rapid technology transition" that will see electricity generated by wind, water and solar power replace fossil fuels. Additionally, hitting the targets will rely on public action around the world to pick "leaders who will implement strong policies, reduce barriers and confront entrenched interests." The journal *Joule* published the paper.

THAT'S A LOT OF PEOPLE! An estimated 17.6 million people live within a mile of an active oil or gas well, according to a peer-reviewed study published Wednesday in Environmental Health Perspectives. Researchers from PSE Healthy Energy; the University of California, Berkeley and Harvey Mudd College found 50 percent of West Virginians and 47 percent of Oklahomans live within a mile of active oil and gas development. The study also estimated the state with the most residents living near active wells as Texas, with some 4.5 million.

REPORT: ENERGY SECTOR SPENT BIG IN 2016: Clean Water Action released a report Wednesday finding the oil and gas industry spent $103 million during the 2016 election cycle, 88 percent of which went to Republican candidates. In addition, the report found the energy sector spent $119 million on lobbying in 2016, supporting 722 registered lobbyists to push their priorities.

RECORDS SOUGHT ON PARIS DECISION: The Center for Biological Diversity submitted open records requests to EPA, OMB and the State Department seeking all records related to the Trump administration's decision to pull out of the Paris climate accord. Those include any

relevant emails, telephone logs and notes from meetings involving Trump, EPA Administrator Scott Pruitt, Secretary of State Rex Tillerson and other officials.

REGULATORY TASK FORCE RECORDS SOUGHT: After EPA failed to respond to an open records request within statutory limits, the Southern Environmental Law Center filed a federal lawsuit seeking correspondence related to the agency's regulatory reform task force that seeks to identify possible regulations for elimination. "It's already absurd to have an arbitrary directive to strip away commonsense environmental protections, but to refuse to share any information about this process is alarming and simply un-American," Kym Hunter, a staff attorney with the group, said in a statement.

SLEEPING TOO WELL? Your ME host really, really, really hates rats, so this piece in the New Republic warning of the coming "ratpocalypse" due to shorter, warmer winters is quite disconcerting. And, there's a climate link! "I personally feel there is a connection with climate change, just because of logic and the biology of rats' reproductive cycle," Bobby Corrigan, one of the nation's leading rat experts (that's a thing), said.

DOE grid study: Gas drives power shift, but markets need reform Back

By Darius Dixon | 08/23/2017 10:08 PM EDT

The Trump administration's dive into the nation's power system delivered a conclusion Wednesday that the energy world reached long ago: Cheap natural gas is changing the face of the U.S. electric grid.

In an Energy Department report ordered by Secretary Rick Perry, the agency pointed to low power prices and the closure of many coal-fired power plants as mostly due to a surge in supplies of natural gas, which last year topped coal as the nation's biggest source of electricity. But the report also called for "reforms" to power markets that would help bolster the electricity network's resilience by easing the financial pressures on many power providers.

Perry drew a wave of criticism when he ordered the agency to produce the report, saying in his April memo that Obama-era regulations had "destroyed jobs and economic growth" and threaten the grid, and suggested that federal support for renewable power "create[s] acute and chronic problems." Critics warned that Perry appeared to be building a case for federal action to support the coal industry, a priority for President Donald Trump, who promised to revive the suffering industry.

But the new 187-page report paints a far more complex picture of the nation's power grid, and it laid out many of the issues that have been vexing states and federal regulators, particularly in the Northeast and Midwest.

"The biggest contributor to coal and nuclear plant retirements has been the advantaged economics of natural gas-fired generation," DOE's report says. "Low-cost, abundant natural gas and the development of highly-efficient [natural gas combined cycle] plants resulted in a new baseload competitor to the existing coal, nuclear, and hydroelectric plants."

The agency focused on four different factors that were eating away at the economics of coal and nuclear power: cheap gas, low electricity demand growth over the past decade, government regulations and the influx of renewable energy into the grid. But DOE officials said that assigning a percentage of blame to each of those factors was too great a lift — if it was possible at all. Nevertheless, one official said agency number-crunchers were able to identify natural gas as the biggest factor.

Despite highlighting natural gas as the prime factor that most analysts, utilities and regulators had already settled on, one DOE official said the new study was designed to approach the concern around the retirements of around-the-clock baseload power in a new way, and bring new attention to an important but underappreciated issue.

Perry, in a letter accompanying the report, said the power industry "has experienced massive change in recent years, and government has failed to keep pace."

"It is apparent that in today's competitive markets certain regulations and subsidies are having a

large impact on the functioning of markets, and thereby challenging our power generation mix. It is important for policy makers to consider their intended and unintended effects," he added.

The report's recommendations don't call for Congress to change any laws or agencies to alter any specific rules. Rather, it appears designed to nudge regulators like FERC to "expedite" its work with grid operators to figure out policies to bridge — or block — new state energy policies and establish fuel-neutral power markets that fairly pay power producers.

The study also suggests that the Nuclear Regulatory Commission, the EPA and FERC revisit a number of their regulations on the power industry, and boost research and development for grid management and coal power plant efficiency.

The report is not likely to be nearly as popular in the coal industry as Trump's early executive order on climate change and energy, which focused mostly on promoting coal by rolling back regulations at EPA and the Interior Department. Still, the report nodded to the president's call for "energy dominance."

"While DOE is not the main agency tasked in the Order, it should continue to prioritize energy dominance and implementing the Executive Order broadly and quickly," it states.

Paul Bailey, head of the American Coalition for Clean Coal Electricity, commended DOE and Perry in a statement "for studying the challenges that face the electricity grid. One of the biggest challenges is how to sustain the nation's coal fleet so it can continue supporting a reliable and resilient electricity grid."

Solar Energy Industries Association head Abigail Ross Hopper said the group was still reviewing the report. But she noted "it's been proven time and again that a diversified electricity mix is good for the overall system and poses no threat to the reliability of our nation's grid. On the contrary, solar and other renewables provide significant cost savings, relieve pressure on our nation's infrastructure and improve the grid's overall performance."

DOE's call for FERC, EPA and other bodies to help alter the electricity market and aid power plants is at least partly because of the agency's limited power to direct energy policy.

"DOE has no authority," said former FERC Chairman Jon Wellinghoff, a Democrat, ahead of the report's release. "It's FERC that has all the authority ... and DOE does not control FERC. I would say that when I was there, and I'd say it now."

Still, Tony Clark, a Republican former FERC commissioner, said DOE is often used by administrations as a "thought leader in the energy space," given the resources the agency has in its national labs and vast amounts of data.

One DOE official said that most studies of the power system have focused on its reliability. And though a gas-heavy grid is dependable, the official cautioned that those plants are reliable so long as the fuel is there, and the threats to pipelines, physical attacks and resilience deserve a lot of attention.

The study, which Perry had originally sought in June, was also notable for what it doesn't say.

In letters that became public on Tuesday, coal producer Murray Energy and other companies wrote that during private conversations with CEO Robert Murray, Trump had promised to use DOE emergency power to put in place a two-year moratorium that would require Ohio-based FirstEnergy to keep operating its coal-fired plants even if its power-generating subsidiary goes bankrupt. According to the letters, administration attorneys were concerned about the legality of such an action. One letter said Murray was present when Trump repeatedly directed Perry to grant the request to order the plants to stay open.

But DOE denied the request, saying that "the evidence does not warrant the use of this emergency authority."

Environmentalists, renewable energy advocates and some analysts were incensed by Perry's initial April 14 memo as well as some of his public statements about intervening with state energy policies, such as suggesting he planned to have a hand in keeping power plants running.

Perry's memo, energy guru Peter Fox-Penner said, was "looking through a preconceived, political lens broadly at baseload and blaming renewables policy, which is looking at the wrong culprit. The right direction for a solution is market design."

Just days after issuing the memo to his chief of staff, Perry said that keeping nuclear power on the grid served a national security interest and can justify moves by the federal government that override state authority.

"I was a very strong proponent of the 10th Amendment — thank you very much, we know how to run Texas," the former governor said at an energy event in New York City, referring to the amendment that lays out federal authority limits. "Shoe is on the other foot — or the boot is on the other foot — now."

But on Wednesday, DOE officials said they focused on the specific questions they were tasked with in Perry's memo and not his public statements.

Clark said the controversy around Perry's statements had gotten out of hand.

"Everything right now in D.C. seems to get spun out of control a little bit in terms of reaction on both sides," he said. "When it was first announced that there would be a DOE study, you had some folks say every coal plant in Ohio and Pennsylvania was going to be saved. And you had other people setting their hair on fire thinking that this would be the end of the wind and solar. ... To me, that was the D.C. spin machine."

Ryan: 'I don't think anyone's interested in having a shutdown' Back

By Louis Nelson | 08/23/2017 03:09 PM EDT

House Speaker Paul Ryan said Wednesday he did not think Republican lawmakers are interested in shutting down the government over funding for President Donald Trump's long-promised border wall.

Trump told the crowd at a rally Tuesday night in Phoenix, "believe me, if we have to close down our government, we're building that wall," a promise that prompted the crowd to chant "build that wall."

But Ryan (R-Wis.), who spoke to reporters during a visit to Intel Corp. offices in Oregon, said the House has already passed border security legislation that includes money for a wall. He said lawmakers shouldn't have to choose between keeping the government open and making good on the president's border security pledge.

"I don't think a government shutdown is necessary, and I don't think most people want to see a government shutdown, ourselves included. And Congress, in the House, has already done its work on this issue. There are very legitimate problems and concerns on the border that need to be addressed," Ryan said. "I don't think anyone's interested in having a shutdown. I don't think it's in our interests to do so while we work on doing what we actually said we would do, what we've done already in the House and we need to do, which is to control our border. So I don't think you have to choose between the two."

Congress must pass funding legislation by the end of next month in order to avoid a government shutdown, and lawmakers are scheduled to have just 12 working days after their Sept. 5 return before the deadline hits. Ryan said he expects Congress will keep the government open via a short-term continuing resolution, as opposed to a full appropriations bill, because the schedule won't offer sufficient time for the Senate to process the latter.

"The fact is though, given the time of year it is and the rest of the appropriations we have to do, we're going to need more time to complete our appropriations process, particularly in the Senate. So that's something that I think we all recognize and understand, that we're going to have to have some more time to complete our appropriations process," the speaker said.

Asked if that meant a continuing resolution, he replied, "I think that will probably be necessary, yes, because I can't imagine the Senate will be able to process the appropriations bill as quickly as the House is."

Shutdown threat grows as Trump digs in on wall Back

By Josh Dawsey | 08/23/2017 01:30 AM EDT

President Donald Trump's vow Tuesday to close down the government if he doesn't get money for the border wall mirrors private comments he has made to advisers in recent days — and could cause significant rifts within his own party if he follows through.

The fight over the wall is likely to explode in September as the administration wrangles over a new budget, an increase in the debt ceiling, the beginning of a tax reform package and a possible resuscitation of health care legislation.

Trump has told his advisers he will not accept a deal on other issues without money for the wall "and it has to be real money," said one senior White House official.

Trump has told senior White House officials and advisers he would be willing to go to whatever lengths are necessary to get money for the wall, a contentious claim even among his advisers.

He hasn't identified specific amounts of money that he wants, but he seeks "enough to really start building it," said one person who spoke to him last weekend.

"He is animated about the wall," the person said. "He cares about that more than many other things. He knows his base cares and chants about it."

At a campaign rally in Phoenix on Tuesday, the president reiterated to his loyalists that he is committed to his vision for securing the border. "If we have to close down our government," Trump said, "we're building that wall."

Some said Trump's preoccupation is in keeping with what he has said since before the election last year. "It should surprise exactly no one," presidential counselor Kellyanne Conway said. "Why are people surprised when they try to change his mind on something significant and fail?"

Few staff members in the West Wing are as concerned about it, senior administration officials said.

Some in the White House have urged Trump not to focus as much on the wall, try to pass a clean debt-ceiling bill and move to tax reform. "You have barely anyone here saying, 'Wall, wall, we have to get the wall at all costs,'" one White House official said.

It would be impossible to get Democrats on board for such a plan, Capitol Hill aides say, and Republicans will probably need Democratic support to enact a budget or raise the debt ceiling.

Rep. Mark Meadows (R-N.C.), who leads the conservative Freedom Caucus, praised the idea Tuesday — and Speaker Paul Ryan (R-Wis.) has promised to try to get money for the wall. The House passed a bill in July that delivers some wall funding, but it has little chance of becoming law.

Trump, on the campaign trail, said that Mexico would pay for the wall — a promise that has been widely mocked for its improbability.

Two people who have spoken to Trump said he sees not building the wall as a personal embarrassment — and that he has shown more interest in building the wall than in other issues, like the upcoming budget negotiations.

"You don't want a government shutdown," the White House official said. "He is told that. He says, 'I want money for the wall.'"

Subject: Morning Energy: Pruitt's commitment to transparency questioned — N.Y. mulls carbon price options — Manchin-to-DOE trial balloon rises again

By Anthony Adragna | 08/14/2017 05:43 AM EDT

With help from Darius Dixon

A NEW CA-vs.-EPA SHOWDOWN: California Attorney General Xavier Becerra is the latest Democratic official from the Golden State to take on EPA Administrator Scott Pruitt — this time with a public records lawsuit alleging he has failed to promptly hand over documents related to his ethics arrangements. Becerra filed the suit Friday, Pro's Alex Guillén reports. Pruitt, a prolific litigant challenging the Obama-era EPA, has agreed to stay away from lawsuits over the various rules he challenged in court, such as the Clean Power Plan or Waters of the U.S., although he says he is not barred from working to roll back the rules themselves. Becerra asked for documents outlining Pruitt's "compliance with federal ethics regulations and obligations" as well as agency "policies and procedures for determining who (if anyone) can assume the powers of the Administrator if he is recused or disqualified from participating in a matter."

EPA spokeswoman Liz Bowman said agency staff had reached out twice to Becerra's office to say they were working on a response. "It's unfortunate that California is suing the Agency, draining resources that could be better spent protecting human health and the environment — rather than working with EPA's career staff, as they can gather all the information requested," she said in a statement.

A few hours after Becerra filed his suit, the New York Times dropped a big report documenting limits on access to EPA — for both the public, press and even agency staff. Citing interviews with 20 current and former staffers, the Times reported that EPA employees now must leave their cellphones before meeting with Pruitt and must have an escort to see the administrator, who is accompanied by his armed security staff even at agency headquarters. ("None of this is true," Bowman told the Times. "It's all rumors.")

Pruitt's tactics aren't just controversial at agency headquarters. He's frequently met with tightly-screened industry groups and opted for interviews with friendly media figures. It was three such closed events in North Dakota that earned Pruitt a rebuke from Republican Sen. John Hoeven. "I think (meetings) should be open," he said, according to The Bismarck Tribune. "I guess I saw no reason not to have it open," he said.

But Pruitt isn't shifting approaches either. He leaned into a brewing controversy over a major federal climate change report blaming human activity for climate change, promising he and his staff would gauge the "accuracy" of its findings. It's a bizarre promise, Pro's Emily Holden reports, given Pruitt's concern over so-called politicization of science and the fact the report has already undergone "rigorous" peer-review by a 14-person committee at the National Academies with 132 pages of suggestions from the reviewers already incorporated into the final version. "It's a much more extensive process than a usual peer review, which does not typically come out

as a paperback book," said Bob Kopp, a lead report author and climate scientist at Rutgers University.

The administrator also dismissed the discussion over the role of human activity in climate change during a Texas radio show last week as "political" and a "wedge issue." "Why aren't we celebrating what we're achieving with respect to CO2 ... why do we continue to engage in this political football?" he said. Multiple science organizations have sought meetings with Pruitt to discuss why he doesn't acknowledge the scientific consensus that human activity is driving climate change.

WELCOME TO MONDAY AND HAPPY AUGUST EVERYONE! I'm your host Anthony Adragna, and hope everyone had a lovely start to August. Thank you to Pro's Alex Guillén, Darius Dixon, Annie Snider and Esther Whieldon for keeping this warm for me while I was away on my honeymoon! Geronimo Energy's Jenny Monson-Miller was first to correctly identify Marguerite Higgins on Friday as the Pulitzer Prize-winning female journalist buried at Arlington Cemetery. For today, in honor of the amazing performance of "42nd Street" I just saw in London: What play holds the record for the longest initial run in history (at over 26,000 and counting)? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

NEW YORK'S 'MAJOR STEP' TOWARD CARBON PRICE: New York's grid operator released a hotly-anticipated report Friday finding that the state could support its clean energy goals with minimum costs to consumers by incorporating the social cost of carbon emissions into the its electricity prices, POLITICO New York's Marie J. French reports . NYISO CEO Brad Jones and Public Service Commission Chairman John Rhodes said the document's release marked the first step in a collaborative process to further consider what a carbon price would look like and how it could be implemented. Setting a price on carbon would help incentivize greater investments in renewable energy and more efficient combined-cycle fossil fuel-powered generators while pushing out less-efficient technologies, the report argues.

SECOND TIME'S THE CHARM? White House officials are again titillated by the possibility of luring West Virginia Democratic Sen. Joe Manchin to serve as Energy secretary, a role still currently occupied by Rick Perry, Bloomberg reports . There's high interest because Manchin's seat would be filled by newly-minted GOP Gov. Jim Justice, potentially opening the possibility the Republican-led Senate might be able to pass some form of healthcare reform. ME readers likely remember Manchin interviewed for the slot that went to Perry during the transition though there's some thought Perry could jump the vacant Homeland Security job formerly held by White House Chief of Staff John Kelly. A spokesman for Manchin, for what it's worth, said "Senator Manchin has not had any recent conversations with the Administration about the Secretary of Energy position."

PERRY GOES WEST! Far from the Washington rumor mill, Perry is out in Eastern Oregon later today where he'll tour the Army Corps-operated McNary Lock and Dam in Umatilla. That'll be followed Tuesday by visits to the Pacific Northwest National Laboratory and DOE's Hanford Site. Joining Perry at various points of his trip are Senate Energy ranking member Maria Cantwell, Rep. Dan Newhouse and House Energy and Commerce Chairman Greg Walden.

QUE TAL CON LA VENEZUELA? Vice President Mike Pence is visiting Colombia, Argentina, Chile and Panama during a South American swing this week and senior administration officials expect Venezuela to dominate their talks. One official told reporters on Friday to expect discussion of "economic options, diplomatic options — every tool that's available" to amplify pressure on Venezuelan President Nicolás Maduro. One option that's been avoided to date would be placing sanctions on Venezuelan oil imports, something four Republican senators warned last week doing would harm Gulf Coast oil refiners.

All of this comes as Trump himself refused to rule out the U.S. pursuing "a military option" against Venezuela, though Pence downplayed such talk during a press conference Sunday night with Colombian President Juan Manuel Santos. "President Santos and I discussed in some detail additional measure that could be taken to further pressure the regime in Venezuela, economically," Pence said. "We'll continue on this trip and beyond to bring diplomatic pressure to bear." Santos in his remarks stressed any talk of military intervention "shouldn't even be considered."

AND THE BEAT GOES ON: Jeff Holmstead, the former EPA air chief during the George W. Bush administrations whose name briefly popped up as a potential number two at the agency, attended an OMB meeting last week on EPA's proposed Clean Power Plan repeal on behalf of the Electric Reliability Coordinating Council, according records posted by the White House, Pro's Alex Guillén reports in Energy Regulation Watch. Holmstead wasn't available for comment, but his Bracewell colleague Scott Segal said they discussed possible replacements rules, including implementation and enforcement issues, with administration officials who "seemed interested and engaged."

THIS IS... UNUSUAL: The family of West Virginia Republican Gov. Jim Justice has filed a lawsuit against two top Kentucky environmental regulators themselves — not the state of Kentucky for which they work — because they blame the officials for their company's failure to meet reclamation deadlines, the Courier-Journal reports. The lawsuits, filed on behalf of the Kentucky Fuel Corporation, allege the actions of Kentucky Department for Natural Resources Commissioner Allen Luttrell and Deputy Commissioner John D. Small could have cost the company up to $4.5 million in fines.

STEYER THROWS HIS WEIGHT AROUND: Billionaire environmentalist and Democratic mega-donor Tom Steyer said Saturday he and his organization NextGen America would only support pro-choice candidates for office, POLITICO's Gabriel Debenedetti reports. He also pointedly refused to rule out a run for office — whether that be the presidency or a statewide role in California. "Look, I promise: There is nothing that I would not do in order to have the most impact," he said in an interview on the sidelines of the progressive Netroots Nation conference in Atlanta.

MONIZ PLUCKS DOE STAFFER FOR NEW GROUP: Former Energy Secretary Ernest Moniz has hired Jeanette Pablo away from the Energy Department as the general counsel for his nascent Energy Futures Initiatives. Pablo, who will also be a senior associate with EFI, has spent more than 20 years working in the energy world, including a long stretch with the Tennessee

Valley Authority as well as positions with PNM Resources and American Water Co.. Up until last week she was the acting deputy director for energy systems with DOE's Office of Energy Policy and Systems Analysis.

NEW GIG FOR SCHRODER: Russia's largest oil company, Rosneft, has added former German Chancellor Gerhard Schröder as an "independent director" on its board, POLITICO Europe's Emmet Livingstone reports, citing an official government statement. Chancellor Angela Merkel's predecessor already chairs the shareholders' committee of Nord Stream AG, a gas-pipeline consortium set up to transport Russian gas across the Baltic Sea and into Germany.

MAIL CALL! HOUSE ENTERS SUNIVA FRACAS TOO: Hot on the heels of their Senate colleagues, a bipartisan group of 53 congressmen, led by Reps. Mark Sanford, Mike Thompson, Pat Meehan and Matt Cartwright, sent a letter Friday to the International Trade Commission urging it not to grant petitions from Suniva and SolarWorld Americas that would impose solar trade import tariffs. The lawmakers are throwing their weight around ahead of the first public hearing on the petitions Tuesday at which hundreds of solar workers are expected to testify about the impacts the tariffs would have on their jobs.

MOVER, SHAKER: Ciaran Clayton will soon be joining the Nature Conservancy as director of global media relations; she's been working with the Center for American Progress and was previously director for communications with NOAA.

California sues EPA for Pruitt ethics docs Back

By Alex Guillén | 08/11/2017 04:45 PM EDT

California Attorney General Xavier Becerra today sued EPA for documents related to Administrator Scott Pruitt's ethics agreements.

EPA has not yet responded to a request Becerra made in April under the Freedom of Information Act for the documents, according to the suit. The case was filed in U.S. District Court for D.C.

Becerra specifically requested details about Pruitt's "compliance with federal ethics regulations and obligations." Pruitt has recused himself from working on a number of lawsuits related to rules he sued over, including the Clean Power Plan and Waters of the U.S., although Pruitt said he is not barred from working on regulatory rollbacks or replacements of those rules.

Becerra also asked for the agency's "policies and procedures for determining who (if anyone) can assume the powers of the Administrator if he is recused or disqualified from participating in a matter."

WHAT'S NEXT: Becerra asked the court to force EPA to reply to his April public records request. The court will give EPA a chance to respond.

Pruitt: EPA will review 'politicized' climate science report Back

By Emily Holden | 08/11/2017 05:32 PM EDT

Environmental Protection Agency chief Scott Pruitt said his staff will gauge the "accuracy" of a major federal science report that blames human activity for climate change — just days after researchers voiced their fears to The New York Times that the Trump administration would alter or suppress its findings.

"Frankly this report ought to be subjected to peer-reviewed, objective-reviewed methodology and evaluation," Pruitt told a Texas radio show Thursday. "Science should not be politicized. Science is not something that should be just thrown about to try to dictate policy in Washington, D.C."

Pruitt, who has expressed doubts about carbon dioxide's role as a major driver of climate change, also dismissed the discussions in Washington about manmade carbon emissions, calling them "political."

Scientists called his remarks troubling, especially because the report — part of a broader, congressionally mandated National Climate Assessment — has already undergone "rigorous" peer-review by a 14-person committee at the National Academies. The reviewing scientists backed the report's conclusion from researchers at 13 federal agencies that humans are causing climate change by putting more greenhouse gases in the atmosphere, leading to a clear increase in global temperatures.

The report's authors implemented the 132 pages of suggestions from the reviewers, and now the Trump administration has one last opportunity to review the document before publication. Agencies are supposed to sign off by Aug. 18 and send their comments to the authors.

"It's a much more extensive process than a usual peer review, which does not typically come out as a paperback book," said Bob Kopp, a lead report author and climate scientist at Rutgers University.

Kopp said he has "no idea" what to expect after hearing Pruitt's comments. Staffers at EPA had already signed off on an earlier draft.

Eric Davidson, president of the American Geophysical Union, said the report has undergone "a very rigorous peer-review" and is "built on 50-some years of published research, and each of those papers went through its own peer review."

He added that while fears of Pruitt suppressing the climate report might be more imagined than real right now, he didn't rule it out.

"Certainly it's a possibility, and if the administration doesn't understand that it's already peer-reviewed, that really is a sign of concern that he may not understand the process," Davidson said. "If he's continuing to question why CO_2 is a big deal, that's also very concerning, because CO_2 is a big deal. ... To see those quotes continue to come out is definitely disconcerting."

Several climate experts said they welcomed scrutiny of the report, but they also expressed concerns that political biases could color the process.

"The question is will it be reviewed by people who are scientific experts or will it be reviewed by people who have a political agenda?" said Kathy Jacobs, who oversaw the broader National Climate Assessment under the Obama administration and now heads the Center for Climate

Adaptation Science and Solutions at the University of Arizona.

"The implication of [Pruitt's statement] is that it hasn't been linked to the data," she said of the report. "That certainly is not true. This is built on a mountain of evidence."

Even as Pruitt said EPA would review the report for objectivity, he criticized the Times for saying scientists worry that the administration might interfere with its publication.

"The New York Times out there saying they had to release this report because it's going to be suppressed is just simply legendary," he said. "It's just made-up news trying to create a distraction from the real work that's being done in Washington, D.C."

His comments Thursday came the same day that the National Oceanic and Atmospheric Administration issued a separate report confirming that 2016 was the warmest year on record, surpassing the records set in each of the two previous years.

This week's dust-up over the 13-agency climate report is far from the first climate science dispute for Pruitt, who as Oklahoma's attorney general sued to block a series of major EPA regulations. He drew criticism after announcing in June that he wanted to conduct a "red team, blue team" debate of climate science, a move that his detractors said would put fringe views on the same plane as established, peer-reviewed research.

The EPA chief defended his "red team-blue team" strategy in the radio interview, saying that "this debate, this discussion, I think it's good and healthy for the country."

Pruitt told the Texas radio show that his agency would review the 13-agency report "like all other 12 agencies and evaluate the merits and demerits and the methodology and accuracy of the report."

But EPA already plays a role in reviewing that document. The U.S. Global Change Research Program, which coordinates the agencies involved in the review, lists EPA's point person as Andrew Miller, a longtime employee and an associate director of climate research.

"On the one hand, EPA has been a very productive contributor the entire process, including during this administration," Rutgers University's Kopp said. "On the other hand, Administrator Pruitt has said things in the past that contradict sort of mainstream climate science and the findings of the report. But the process has been operating quite well. I'm hopeful that it will continue to operate well."

Katharine Hayhoe, another report author from Texas Tech University, said she strongly agreed with Pruitt that science shouldn't be politicized and the report should be peer-reviewed.

"Thankfully, all of this has *already happened*," she said in a lengthy email responding to Pruitt's comments.

"Science should not be politicized, and I and my colleagues deplore the attempts of politicians to

do so, their attempts to pretend as if a thermometer gives us a different answer if we are Democrat or Republican," she continued. She noted that the report found no alternative explanations for why climate change is happening other than human influence.

Another expert familiar with the process of crafting the report said the standards exceeded the typical scientific process.

Typically, the president's science adviser signs off on the report, but Trump has yet to appoint one. The U.S. Global Change Research Program, which coordinates the report, lists Kimberly Miller at the White House Office of Management and Budget as the president's liaison.

Democrats and other critics contend that Pruitt has criticized climate change policies because he wants to run for the U.S. Senate from Oklahoma, where his stance might resonate with conservative voters. EPA did not comment on that issue.

David Doniger, director of the Natural Resources Defense Council's climate program, said addressing climate change would affect the fossil fuel industries, and Pruitt has "lined up his personal political fortunes" with the economic interests of oil, gas and coal companies.

Science organizations have asked to meet with Pruitt to discuss why he doesn't acknowledge a link between human action and climate change.

In the radio interview, Pruitt accused the Obama administration of using carbon dioxide as a "wedge issue."

"Why aren't we celebrating what we're achieving with respect to CO_2? ... Why do we continue to engage in this political football?" he said.

Trump says he's not ruling out military option against Venezuela Back

By POLITICO Staff | 08/11/2017 06:38 PM EDT

President Donald Trump today said he would not rule out the U.S. pursuing "a military option" against Venezuela, which has come under increased pressure for its human rights abuses.

Speaking to reporters after meeting with Secretary of State Rex Tillerson and U.S. Ambassador to the U.N. Nikki Haley, Trump said he has "many options" for Venezuela, "including a possible military operation, if necessary."

The Treasury Department late last month targeted Venezuelan President Nicolás Maduro with sanctions, accusing him of widespread abuses of the Venezuelan people.

Treasury announced the sanctions following the election of an assembly to rewrite the South American country's constitution.

"By sanctioning Maduro, the United States makes clear our opposition to the policies of his regime and our support for the people of Venezuela who seek to return their country to a full and prosperous democracy," Treasury Secretary Steven Mnuchin said at the time.

Megadonor Steyer vows to only back candidates that support abortion rights Back

By Gabriel Debenedetti | 08/12/2017 09:38 AM EDT

ATLANTA — Democratic mega-donor Tom Steyer said on Saturday that he and his NextGen America group do not intend to work on behalf of anti-abortion politicians, jumping into the Democratic Party's ongoing debate on the topic.

"We're pro-choice," the hedge fund manager-turned-activist told POLITICO on the sidelines of the progressive Netroots Nation conference here.

Asked if his group would help candidates or sitting lawmakers who don't support abortion rights, he said, "We do not work for a single candidate who is not pro-choice. I think people like to have litmus tests. We are explicitly pro-choice. We work a lot with Planned Parenthood, we work a lot with NARAL. We are absolutely committed to it."

Those comments put Steyer — the Democratic Party's single largest donor in recent cycles thanks largely to the money he's put in the NextGen super PAC — on the side of activists who have been dismayed by comments made recently by some party leaders like Sen. Bernie Sanders and Democratic Congressional Campaign Committee chairman Ben Ray Lujan.

They have suggested at times that the party need not have a litmus test on abortion, spurring considerable controversy about which candidates to fund ahead of 2018's midterm elections.

Now, the word of the party's biggest funder is likely to weigh heavily on the debate.

Steyer also pointedly refused to rule out a run for office — including the presidency or a statewide role in California — in the near future.

"Particularly subsequent to November 8, 2016, the idea of not being fully involved in this seems to me to be — I don't know how I would do that," he said. "The only question is not how to do the biggest thing, but have the most differential impact to what otherwise would happen."

After spending over $165 million on Democrats in the 2014 and 2016 election cycles, he has long been considered a potential self-funding contender for 2018's gubernatorial race in California.

But as other candidates, including Lt. Gov. Gavin Newsom and former Los Angeles mayor Antonio Villaraigosa, have been running large-scale campaigns for months, Steyer has stayed away. He demurred when asked about getting into the race, choosing to heap praise on Gov. Jerry Brown instead when pressed on his feelings about the other candidates.

"The best thing I can say is people do not realize how good Jerry Brown is, full-stop," he said. "If you ask me about anyone else, it's sort of like: Do you know who hit third for the San Francisco Giants after Willie Mays retired? How'd it go for him?"

Asked about the potential for pursuing Sen. Dianne Feinstein's (D-Calif.) seat if she chooses to retire ahead of a 2018 re-election bid, he demurred again.

"I don't think Dianne's going to retire," he said. "Look, I promise: There is nothing that I would not do in order to have the most impact."

And, finally, pushed on the likelihood of his pursuing the White House, he replied: "I keep telling you I'm not ruling anything out."

Subject: POLITICO's Morning Score: Summer retirement watch is on — Hawley forms Senate exploratory committee — End Citizens United endorses Rosen — Hurd gets first major challenger in TX-23

By Daniel Strauss and Scott Bland | 08/03/2017 10:00 AM EDT

With Elena Schneider, Maggie Severns, Kevin Robillard and Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

RETIREMENT WATCH - August and September 2017 will be key months for the 2018 House landscape: Rep. Diane Black's (R-Tenn.) gubernatorial campaign launch on Wednesday means that there are now 18 House members who have announced they will leave their seats open in 2018 - a number that is sure to rise. That's partly because some not-quite-official Senate candidates, like GOP Reps. Todd Rokita and Lou Barletta, have not yet made things official, while GOP Rep. Jim Bridenstine of Oklahoma has said in the past that this would be his last term and is not raising money but hasn't spoken about it recently. But mostly, it's because of the biannual tradition that some members simply come back from recess and decide that they don't want to run again.

- Retirements will shape the battle for the House more than almost any other factor, apart from the president's approval and the general national environment. Republican incumbents showed much more ability to separate from Trump than open-seat candidates in 2016, and while that could fade now that he's president, their experience (and bank accounts) will come in handy with Republicans facing down a potentially forbidding political environment, especially in the 23 GOP districts that Hillary Clinton carried last year. So far, a plurality of the retirements have come from Republicans in safe seats. Democratic retirements by reps running for higher office have actually exposed two true swing seats (MN-01 and NV-03) versus just one for the GOP so far (FL-27). Whether those numbers shift, and by how much, is the big thing students of the House are watching with the end of summer already on the horizon.

MO-VING CLOSER - "Hawley forms exploratory committee for U.S. Senate run against McCaskill," by McClatchy's Lindsay Wise and Bryan Lowry: "Missouri Attorney General Josh Hawley is creating an exploratory committee to run for U.S. Senate against Democrat Claire McCaskill. 'As part of Josh's process to consider becoming a candidate for the United States Senate, this week he is filing paperwork to launch an exploratory committee with the Federal Election Commission,' said Hawley's spokesman, Scott Paradise, in an email...Former U.S. Sen. Jack Danforth, Republican megadonor David Humphreys and other prominent Missouri Republicans published an open letter months ago urging Hawley to jump into the race for U.S. Senate in 2018." **Full story.**

PRIMARY COLORS - "Justice Democrats raised almost $1M. What's next?" by Campaign Pro's Maggie Severns: "The anti-incumbent PAC Justice Democrats raised $923,803 during the first six months of this year ... [and] has endorsed a dozen candidates and started pushing a Medicare-for-all platform in Washington that will be a main focus this year. The group has raised enough money to make a big splash in a few selected primaries, if it decided to, but it has not elected to use the money as a traditional outside-spending or bundling PAC. ... Justice Democrats disclosed paying $429,850 for 'strategic consulting' to Brand New Congress, an affiliated LLC that is also led by Chakrabarti, during the first six months of 2016. Chakrabarti said the funds went to payroll and other expenses for Justice Democrats staff who are employed by both organizations. Brand New Congress is also offering itself as a consulting firm and hub for candidates endorsed by Justice Democrats." **Full story.**

FIRST IN SCORE - End Citizens United endorses Jacky Rosen in Nevada: The campaign finance reform group End Citizens United is the latest group to throw its support to Democratic Rep. Jacky Rosen in the race against GOP Sen. Dean Heller. ECU president Tiffany Muller said in a statement the Nevada Senate race will be "a top priority for ECU this cycle." ECU spent $2 million boosting now-Sen. Catherine Cortez Masto in 2016 and spent $150,000 for Rosen during her congressional race. The group found signs it thinks is promising in polling last cycle in Nevada: key groups of Nevada voters, including independents, were more swayed by messages with a money in politics theme than by other generic messaging.

Days until the 2017 election: 96.

Days until the 2018 election: 460.

Thanks for joining us. You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

HOUSE WATCH - "Rep. Will Hurd gets first major Democratic challenger for 2018," by the Texas Tribune's Patrick Svitek: "Gina Ortiz Jones, a former Air Force intelligence officer, is entering the race Wednesday, wading into a potentially crowded primary field for a shot at Hurd ... Jones said she was inspired to come home to San Antonio and run for Congress after witnessing up close the opening months of Donald Trump's presidency as a director in the Office of the U.S. Trade Representative ... Jones attended Boston University on a ROTC scholarship and served in the Air Force from 2003-2006, deploying to Iraq. After a stint in the private sector, she went to work for the Pentagon's Defense Intelligence Agency in 2008, ultimately becoming a special adviser to the deputy director." **Full story.**

- DIGITAL ADS - NRCC attacks Democrats with digital ads on single-payer, via Campaign Pro's Elena Schneider: The NRCC is out with digital ads targeting House Democrats in eight states on single-payer health care, as they return to their home districts during the August recess. The ad , which starts today, attack Democrats for supporting a single-payer

health care system, "a new plan, brought to you by the same Democrats who gave us Obamacare," the ad's narrator says. It also splices together news footage about Charlie Gard, a British infant with a rare condition who died, as his parents fought to take him to the United States for experimental treatment.

- REFORMA FISCAL - American Action Network launches Spanish-language radio ads on tax reform: The American Action Network's new tax reform push is launching Spanish-language radio spots in the districts of six vulnerable Republican lawmakers: Arizona's Martha McSally, California's Jeff Denham, Steve Knight, and David Valadao; Florida's Carlos Curbelo, and Texas' Will Hurd. "America's tax code is sabotaging our economy," an announcer says in the 60-second ad. "U.S. small businesses face the highest tax rates in the industrialized world - giving competitors in places like China an unfair advantage. So working families get left behind. But things, are about to change." The ad then praises the congressman for working to "make America's tax code simpler, fairer, and pro-growth." The ads will run throughout recess. **Listen to ad here.**

FIRST IN SCORE - PPP survey: Flake, health care repeal unpopular in Arizona, per Democratic poll: Another new survey from the Democratic firm Public Policy Polling shows a Republican senator up for reelection in 2018 in bad shape after months of congressional health care battles. This poll shows Arizona Sen. Jeff Flake with an 18 percent approval rating among voters and 62 percent disapproving of his job performance. In a generic ballot test, 47 percent said they would back a Democrat, versus 31 percent who said they'd back Flake. Another 22 percent said they were undecided. On the Senate health care bill, which died last week, 55 percent said they did not support it, while 31 percent backed it. Meanwhile, Trump's approval rating hovers at 44 percent. (Unlike yesterday's Nevada poll, there isn't much other data to compare this one to, so consider it with that caveat in mind.) "Drive for Our Lives," a coalition of liberal groups that are touring the country to target GOP on health care, released the poll. **Read the full polling results here.**

- "Drive for Our Lives" bus tour is scheduled to stop in Phoenix and Tucson, Ariz., on Aug. 4 and 5, with appearances from former Rep. Gabby Giffords and Mark Kelly.

GUESS WHO'S BACK - Trone enters MD-06: Millionaire wine retailer David Trone jumped into the Democratic primary to replace Rep. John Delaney, who's now running for president. "With your help, I'll pick right up where John leaves off," Trone, who lost a primary for a neighboring district in 2016, said in a campaign announcement released Wednesday. Trone said he would "fight President Trump and Congress's attempts to gut health care," along with promising to reject any contributions from corporations, lobbyists and PACs. Trone spent upwards of $13 million of his own money on his 2016 race, and he's expected to spend heavily again in the expensive district. **Watch the announcement video here.**

- GUESS WHO'S BACK, PART II? - "Sources: Michael Grimm eyes return to Congress," by NY1's Grace Rauh: "Sources told NY1 that Grimm is beginning to let a small number of political leaders on Staten Island know that he intends to run for Congress. Any campaign would be a challenge for someone in Grimm's position; he spent seven months in federal prison for tax fraud, and he was released in May of 2016. ... Grimm on Wednesday afternoon ... insisted he has

not made any decisions yet on his political future. But he did say that there are people who would like to see him run, and he said he plans to return to public office one day. Grimm's entry into the race would mean a Republican primary challenge for incumbent Congressman Dan Donovan." **Full story.**

TECH INVESTMENT - "Progressive Campaign Tech Innovator Makes Nearly $1.5M Initial Investment in First 10 Groundbreaking Companies ... Higher Ground Labs, the leading innovative incubator and accelerator for progressive political and campaign technology, has deployed nearly $1.5 million to 10 groundbreaking companies that will begin supercharging progressive campaign technology...The first round of 10 companies HGL is investing in include: Voter Circle ... Qriously ... GroundGame ... BallotReady ... Mobilize America ... Victory Guide ... Tuesday Strategies ... Hope ... Field Day ... Hustle ... "

STILL NOT RUNNING? - "Zuckerberg hires former Clinton pollster Joel Benenson," by POLITICO's Annie Karni: "Facebook CEO Mark Zuckerberg and his wife, Priscilla Chan, have hired Democratic pollster Joel Benenson, a former top adviser to President Barack Obama and the chief strategist to Hillary Clinton's failed 2016 presidential campaign, as a consultant, according to a person familiar with the hire. Benenson's company, Benenson Strategy Group, will be conducting research for the Chan Zuckerberg Initiative, the couple's philanthropy. The organization - whose mission statement, according to its website, is 'advancing human potential and promoting equality' - is endowed with the couple's Facebook fortune." **Full story.**

- And speaking of possible candidates - our Playbook colleagues Anna Palmer and Jake Sherman interviewed Colorado Gov. John Hickenlooper at a Playbook Exchange event and he didn't rule out a run in 2020, either for president or to challenge Sen. Cory Gardner. More from their interview here.

NO BROTHERLY LOVE - "Pa. Dems file ethics complaint over Barletta TV interview," by the Morning Call's Laura Olson: "The Pennsylvania Democratic Party has filed an ethics complaint against U.S. Rep. Lou Barletta over a television interview this week in which the Republican congressman stood in his district office answering questions about the Senate bid he's expected to announce soon. The complaint, filed with the U.S. House's Office of Congressional Ethics and signed by Democratic Party spokesman Max Steele, alleges that the interview's location violates House rules and potentially federal law ... Barletta's political consultant, John Brabender, responded that the comment came during an interview set up to discuss health care policy. He described the complaint as revealing anxiety among Democrats over someone who has not yet joined the Senate race." **Full story.**

CODA - QUOTE OF THE DAY: "Some of you have asked if this challenge means I'm running for public office" Facebook founder Mark Zuckerberg wrote on his Facebook in May. "I'm not."

Subject: Barrasso presses EPA to quickly finish RFS studies

By Alex Guillén

12/01/2017 11:22 AM EDT

Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) pressed EPA today to quickly finish studies of the Renewable Fuel Standard's environmental impacts.

The 2007 law shaping the RFS required EPA to study and report to Congress on whether the RFS will hurt air quality, which the agency has not done. EPA has also failed to update a review of the RFS' effects on resource conservation. EPA's inspector general dinged EPA last year for failing to complete those studies.

"Over the last several years, the U.S. Senate Committee on Environment and Public Works has heard increasing concerns about the environmental impacts of the RFS," Barrasso wrote in his letter.

The agency plans to finish the resource conservation report by the end of this month, but Barrasso blasted the 2024 target to complete the air quality impact study, calling it "unacceptable."

"EPA cannot ignore the will of Congress and the requirements of the Clean Air Act for 17 years," he wrote. "I ask that you complete this study no later than September 30, 2018."

Subject: WSJ: Coal Makes a Comeback

THE WALL STREET JOURNAL

Coal Makes A Comeback

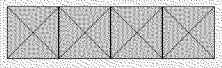
Trump's policies and exports to Europe are helping the industry.
Wall Street Journal
Editorial Board
August 16, 2017
https://www.wsj.com/articles/coal-makes-a-comeback-1502926053

Not long ago liberals hailed the demise of coal as inevitable while the Obama Administration strangled the industry with regulation. But don't look now, Tom Steyer, because coal is showing signs of a revival and breathing economic life into West Virginia and other coal states.

Former Environmental Protection Agency Administrator Gina McCarthy proclaimed in 2015 that coal "is no longer marketable." She planned to be the lead undertaker. The Obama Administration worked tirelessly to fulfill her mission and may have succeeded had Hillary Clinton become President. "We're going to put a lot of coal miners and coal companies out of work," the 2016 Democratic nominee famously promised.

Yet the Trump Presidency seems to have lifted animal spirits and coal. Weekly coal production has increased by 14.5% nationwide over last year with even bigger bumps in West Virginia (19%), Pennsylvania (19.7%) and Wyoming (19.8%). Exports were up 58% during the first quarter from last year. Apparently coal can be marketable if regulators let it be.

***



The Obama Administration first targeted coal consumption with rules on mercury emissions and ash disposal that would have made it next to impossible to build a new coal-burning power plant. Then came the 2015 Clean Power Plan that would have forced the existing fleet of coal plants into early retirement.

Finally, the Obama anti-coal warriors sought to shut down coal's export potential. Thick-seamed coal on federal land in the Powder River Basin overlying Wyoming and Montana is relatively clean-burning and inexpensive to mine. The Obama Interior Department suspended new coal leases on federal land last winter and then reassessed royalty payments—thereby reducing investment and profitability. In December came the *coup de grâce*: Interior's stream rule usurping state authority over permitting.

President Trump has called a cease fire to his predecessor's "war on coal." In February he signed a resolution repealing the stream rule under the Congressional Review Act. The Supreme Court stayed the Clean Power Plan in February 2016, and EPA Administrator Scott Pruitt is dismantling the power rule as well as the ash and mercury rules.

Regulator Wants Electric Grid Planning to Avoid 'Regrets'

By *Rebecca Kern*

The U.S. electric grid is resilient and reliable now, but the Federal Energy Regulatory Commission must prepare for future changes to the electricity mix and competitive energy markets, FERC Chairman Neil Chatterjee said.

Exxon: EPA Should Leverage Existing Chemical Exposure Data

By *Pat Rizzuto*

The EPA should partner with chemical and product makers in securing chemical exposure information to improve decisions, an Exxon Mobil scientist said.

One Way for a Gas Driller to Save Cash? the Water Pipe Business

By *Ryan Collins*

How does a U.S. shale gas explorer save money on all the water it needs to bring into fields and pump into wells? The answer, according to one driller: Build your own water pipelines.

Coal Standoff Hinders Merkel's Push for Next German Government

By *Rainer Buergin, Patrick Donahue* and *Brian Parkin*

A clash over climate change between two of Angela Merkel's potential government partners escalated to the point that the German chancellor had to step in to tone things down.

Brazil Pushes Deep-Water Exploration with Bid Round, Law Change

By *Sabrina Valle*

Brazil started auctioning areas in its most prized oil region Oct. 27 as lawmakers consider completely reversing nationalist oil policies to give a further boost to

exploration.

Trump China Trip to Broker Multibillion-Dollar U.S. Energy Deals

By Jennifer Jacobs and Justin Sink

Representatives from about 40 companies are expected to accompany President Donald Trump on the first presidential trade mission to China Nov. 8-10 and sign deals for billions of dollars in U.S. investments.

Battery Boom Relies on One African Nation Avoiding

Chaos of Past

By Tom Wilson

The cars of the future will depend increasingly upon supplies of an obscure metal from a country in the African tropics where there has never been a peaceful transition of power and child labor is still used in parts of the mining industry.

First Solar Surges Due to Possible Trump Tariffs on Rivals

By Christopher Martin

First Solar Inc. orders surged in the third quarter, a sign that developers are flocking to thin-film solar panels that won't be affected by import tariffs President Donald Trump may impose.

California Taps VW Cheating Penalty to Help Build Emissions Lab

By John Lippert and Ryan Beene

The California Air Resources Board plans to break ground today on a vehicle emissions test lab that will cost $419 million, with a third of the money coming from penalties that Volkswagen AG is paying because of its diesel cheating scandal.

Max Boegl Builds World's Tallest Wind Turbine With Storage Unit

By Brian Parkin

The German construction company Max Boegl Wind AG built what it says is the world's tallest wind turbine by placing a tower on an integrated hydro battery in the depths of the nation's Black Forest.

Oil Industry Seeks to Help Gasoline-Fueled Cars in Climate Fight

By Jessica Shankleman

Big oil is betting it can help the internal combustion engine, the heart of its business for a century, withstand the onslaught from electric cars.

Thursday Night Wrapup

Dynegy Inc. Could Benefit From Illinois Bill to Help Coal Plants

By *Stephen Joyce*

Legislation introduced in Illinois could allow Dynegy Inc. and other coal-fired plant owners to lock in electricity sales for three-year terms and charge higher prices in central and southern Illinois.

Connecticut Latest State to Throw Lifeline to Nuclear

By Jim Polson

Connecticut lawmakers took a step toward propping up the state's sole nuclear

plant, following in the footsteps of New York and Illinois in seeking to avert closures.

Paper Giants Thrive Amid China's Pollution

Crackdown

By *Emma Dai*

China's drive to tackle pollution is proving a boon for the country's top paper and packaging companies, as the closure of smaller factories and new restrictions on waste imports drive up product prices.

Wind Farms of a Certain Age Aim to Extend Lifespans

By *Brian Eckhouse*

Even for wind farms, middle age can be a time for replacement surgery.

Subject: Head of conservative states' air group to take top EPA post

By Emily Holden

12/04/2017 05:07 PM EDT

EPA is hiring Clint Woods, the head of an association that represents conservative state air agencies that have challenged federal pollution and climate regulations, to become deputy assistant administrator of the agency's air office.

Woods is executive director of the Association of Air Pollution Control Agencies. He previously worked for the energy and environment subpanel of the House Science Committee and for the American Legislative Exchange Council, an organization of conservative state legislators and businesses. Before that, he was government affairs manager for the Recreation Vehicle Industry Association.

Woods will work under the agency's air chief, Bill Wehrum, a former Hunton & Williams lawyer who has represented fossil fuel and chemical companies and was acting head of the air office under the Bush administration. Woods says he will also work with Principal Deputy Assistant Administrator Mandy Gunasekara, who took up the role last month, and David Harlow, an EPA air adviser from the same law firm as Wehrum.

Woods did not say what his specific duties would be but noted that his time with state and local agencies through AAPCA will "draw a lot of parallels" with EPA's work in implementing the Clean Air Act through cooperative federalism.

He is currently based in Lexington, Ky., and will assume his new position in mid-December.

AAPCA President Stuart Spencer, the associate director of the Arkansas Department of Environmental Quality, said Woods helped grow membership, increased engagement with EPA and produced reports on the state role in environmental protection.

Chinese Truckers Play Savior to Energy Giants Fearing LNG Glut

Energy giants that invested hundreds of billions of dollars to liquefy natural gas have an

unlikely hero to thank for boosting demand and keeping their market out of a price-killing glut: the Chinese truck driver.

Energy
How Merkel's Green Energy Policy Has Fueled Demand for Coal
By 2030, the eastern German town of Poedelwitz will likely be razed to get at the rich veins of coal beneath its half-timbered houses. The reason: Chancellor Angela Merkel's effort to steer Germany toward greener energy, which has unexpectedly meant booming demand for dirty coal. While Merkel aims to wean the country from nuclear power and boost renewable energy, the shift has been slow—Germany's 140-plus coal-fired plants last year supplied 40 percent of the country's ...

Energy
Nuclear Scientists Head to China to Test Experimental Reactors
China is becoming the testing ground for a new breed of nuclear power stations designed to be safer and cheaper, as scientists from the U.S. and other Western nations find it difficult to raise enough money to build experimental plants at home.

Driving the Day

Good Sunday morning. ON TRUMP'S PLATE: A rogue North Korea, which he cannot convince to stop testing deadly weapons. The dual threat of a government shutdown and debt ceiling default, which needs to be solved by the end of the month. America's fourth-largest city trying to recover from a historic storm, and a Congress that needs to spend billions of dollars to clean it up. A Republican leadership he's been warring with. A stalled agenda. The nation's longest war.

FIRST IN PLAYBOOK -- TRUMP'S WEEK: TUESDAY: The president meets with the Big Six on tax reform. The Big Six are Senate Finance Chairman Orrin Hatch, House Speaker Paul Ryan, Senate Majority Leader Mitch McConnell, House Ways and Means Chairman Kevin Brady, Treasury Secretary Steven Mnuchin and NEC Director Gary Cohn. **WEDNESDAY:** Trump meets with House and Senate leadership, and travels to North Dakota for a tax reform event. **THURSDAY:** Trump hosts Amir Sabah al-Ahmed al-Jaber al-Sabah of Kuwait.

SPOTTED -- VICE PRESIDENT MIKE PENCE and **SECOND LADY KAREN PENCE** at National Community Church on Barracks Row this morning.

PRESIDENT TRUMP also went to church this morning, per the White House pool. He attended St. John's, across from the White House.

BULLETIN -- NORTH KOREA TESTS HYDROGEN BOMB. NYT's CHOE SANG-HUN in Seoul: "North Korea carried out its sixth and most powerful nuclear test in an extraordinary show of defiance against President Trump on Sunday, saying it had detonated a hydrogen bomb that could be mounted on an intercontinental ballistic missile.

"The test, which the North called a 'complete success,' was the first to clearly surpass the destructive power of the bombs dropped on the Japanese cities of Hiroshima and Nagasaki in World War II.

"Mr. Trump threatened last month to bring 'fire and fury' to North Korea if it continued to threaten the United States with nuclear missiles, but the country and its leader, Kim Jong-un, has appeared unmoved, with the test on Sunday preceded by the launch last week of a ballistic missile over Japan into the north Pacific." http://nyti.ms/2x2hncr

PRESIDENT DONALD TRUMP is tweeting this morning warning North Korea about their actions. **@realDonaldTrump** at 7:30 a.m.: "North Korea has conducted a major Nuclear Test. Their words and actions continue to be very hostile and dangerous to the United States....." ... at **7:39 a.m.:** "..North Korea is a rogue nation which has become a great threat and embarrassment to China, which is trying to help but with little success." ... at **7:46 a.m.:** "South Korea is finding, as I have told them, that their talk of appeasement with North Korea will not work, they only understand one thing!"

-- WHITE HOUSE STATEMENT from Sarah Huckabee Sanders at 9:14 a.m., per pooler John Bennett of CQ Roll Call: "The National security team is monitoring this closely. The President and his national security team will have a meeting to discuss further later today. We will provide updates as necessary."

-- **Anna Fifield**, WaPo Tokyo bureau chief **(@annafifield):** "The nuclear device that North Korea tested today was almost eight times the size of the American atomic bomb that destroyed Hiroshima". ... **Jonathan Cheng (@JChengWSJ):** "Full statement from N. Korea on today's nuclear test." http://bit.ly/2wuxcai

MARTHA RADDATZ: speaks with **SEN. TED CRUZ (R-TEXAS)** on **ABC'S "THIS WEEK": RADDATZ** : "We have shows of force. We have sanctions. Nothing seems to work. Do you to think it hurt or helped when President Trump talked about fire and fury? Just a very simple answer. Hurt or help?" **CRUZ:** "The president speaks in ways that I wouldn't speak. But that is his prerogative. I do think it helps for North Korea and China to understand that we have a president who is strong. That is beneficial. I will say we're seeing some signs that China may be more helpful than they have in the past with North Korea. Now, I have very little trust that that will continue, but I think the only way we have a chance of it continuing is if it is coming from American strength and not a policy of weakness or appeasement."

TREASURY SECRETARY STEVEN MNUCHIN on **"FOX NEWS SUNDAY":** "I did speak with the president and it's clear that this behavior is completely unacceptable. We have already started with sanctions against North Korea but I am going to draft a sanctions package to send to the President for his strong consideration that anybody who wants to do trade or business with them would be prevented from doing trade or business with us. We are going to work with our allies, we will work with China but

people need to cut off North Korea economically. This is unacceptable behavior."

DEPT. OF DIPLOMACY -- "Trump preparing withdrawal from South Korea trade deal, a move opposed by top aides," by WaPo's Damian Paletta: "President Trump has instructed advisers to prepare to withdraw the United States from a free-trade agreement with South Korea, several people close to the process said, a move that would stoke economic tensions with the U.S. ally as both countries confront a crisis over North Korea's nuclear weapons program.

"Withdrawing from the trade deal would back up Trump's promises to crack down on what he considers unfair trade competition from other countries, but his top national security and economic advisers are pushing him to abandon the plan, arguing it would hamper U.S. economic growth and strain ties with an important ally. Officials including national security adviser H.R. McMaster, Defense Secretary Jim Mattis and National Economic Council director Gary Cohn oppose withdrawal, said people familiar with the process who spoke on the condition of anonymity to discuss internal White House deliberations.

"Although it is still possible Trump could decide to stay in the agreement to renegotiate its terms, the internal preparations for terminating the deal are far along, and the formal withdrawal process could begin as soon as this week, the people said." http://wapo.st/2wvna98

-- "A quick guide to the South Korea free trade deal," by WaPo's Amanda Erickson: "Experts say that withdrawing completely would lead to big increases on the tariffs levied against products the United States imports from South Korea. That would mean that all kinds of everyday goods, from Samsung electronics to cellphones and automobiles, would get more expensive. South Korea would probably raise tariffs against U.S. products too, including agriculture products." http://wapo.st/2gCZzh3

-- NICHOLAS BURNS, longtime diplomat **(@RNicholasBurns):** "This is no time to lecture South Korea or suspend free trade agreement. Best way to deter North Korea is to stand firmly with Seoul+Tokyo."

THIS COULD BE A PROBLEM -- "China's anger at West to overshadow tougher action on North Korea," by Reuters' Ben Blanchard and Philip Wen in Beijing: "North Korea's latest nuclear test is likely to pile more pressure on China to take tough action against its neighbor, but Beijing already doubts economic sanctions will work and says it is not its sole responsibility to rein in Pyongyang. China has lambasted the West and its allies over recent weeks for promoting the 'China responsibility theory' for North Korea, and been upset by Seoul and Washington's own military drills that Beijing says have done nothing to cool tensions." http://reut.rs/2wymBti

JOHN MCCAIN is attending the Ambrosetti Forum in Lake Como, Italy this week. **MCCAIN ON TRUMP**, via Time Magazine**:** "'I realize that I come to Italy at a time when many are questioning whether America is still committed to remaining engaged in the

world, to upholding our traditional alliances, and standing up for the values we share,' McCain, a Republican and frequent critic of the president, said, according to remarks shared by his staff: 'I also realize -- and there is no point in avoiding a little straight talk here -- that this doubt has much to do with some of the actions and statements of our President.'" http://ti.me/2x2B2Jr

****** **A message from the American Bankers Association:** Nearly 9 in 10 Americans surveyed say it's important to have banks of all sizes. They recognize that the diversity of America's banks is a source of strength for our $18 trillion economy. Learn more: http://politi.co/2gcsGrg ******

THE LATEST ON HARVEY RECOVERY ...

-- "In tale of two cities, parts of Houston survived untouched, while others begin flood cleanup," by L.A. Times' Matt Pearce, Hailey Branson-Potts in Houston and Anna M. Phillips in Los Angeles: "A week after Hurricane Harvey lashed Texas with record rainfall, President Trump returned to the Lone Star State, as storm survivors began to return to their neighborhoods and stark divisions between those who lost everything to the floodwaters and those who escaped relatively unscathed were on display.

"Parts of west Houston were still reeling on Saturday. In residential neighborhoods near the Addicks Reservoir, which overflowed during the storm, residents relied on boats including canoes and kayaks to run errands and commute to work. Some had power; some didn't. Some of the single- and two-story brick homes remained swamped with several feet of fetid water; others were dry." http://lat.ms/2x15bZs

-- "AP EXCLUSIVE: Toxic waste sites flooded in Houston area," by Jason Dearen: "The Associated Press surveyed seven Superfund sites in and around Houston during the flooding. All had been inundated with water, in some cases many feet deep. On Saturday, hours after the AP published its first report, the EPA said it had reviewed aerial imagery confirming that 13 of the 41 Superfund sites in Texas were flooded by Harvey and were 'experiencing possible damage' due to the storm.

"The statement confirmed the AP's reporting that the EPA had not yet been able to physically visit the Houston-area sites, saying the sites had 'not been accessible by response personnel.' EPA staff had checked on two Superfund sites in Corpus Christi on Thursday and found no significant damage. AP journalists used a boat to document the condition of one flooded Houston-area Superfund site, but accessed others with a vehicle or on foot. The EPA did not respond to questions about why its personnel had not yet been able to do so." http://bit.ly/2wy6ewR

SUNDAY BEST -- CHUCK TODD interviews **HOUSTON MAYOR SYLVESTER TURNER** on **NBC'S "MEET THE PRESS": TODD:** "I want to ask you about the President's visit. Helpful?" **TURNER:** "The President's visit on yesterday was very positive. The goal for this week for me, we're going to take it one week at a time, and

that's housing, housing, housing. Checking on people, especially in these communities that don't necessarily get all of the attention. But, you know, where senior citizens exist, people with disabilities, low income communities, we're checking on them. ...

"The other thing this week which is a high priority is debris removal. And every community, every part of this city, was touched by this storm. And so people now are already putting that debris out. And what I said to the president, 'We need to get that debris removed like yesterday, otherwise we'll have a public safety hazard.' And so the city's crews started on Thursday removing the debris. We're working every day. But we need advanced funding. ...

"The president was certainly amenable to that. And in fact, he issued a statement that it would be 90% reimbursable in that category. So housing, housing, housing for this week, debris removal this week. And then saying to our businesses and others, 'Let's get going. We're in the recovery phase. And so let's move forward. Open up the businesses. Provide the necessary employment. But let's get going.'"

-- DANA BASH speaks with **TEXAS GOV. GREG ABBOTT** on **CNN'S "STATE OF THE UNION": BASH:** "You're saying you believe that the federal government will need to give north of $100 billion?" **ABBOTT:** "In the overall equation, the cost of this, if I understand it correctly, to rebuild Katrina was over $120 billion. And when you consider the magnitude of the size of this storm, it's far larger than Katrina, both geographically and population wise. And when you look at the number of homes that have been mowed down and destroyed and damaged this is going to be a huge catastrophe that people need to come to grips with, it's going to take years for us to overcome this challenge

CLICKER -- "A View Inside the Houston Homes Hit by Hurricane Harvey" - photos by Mike Osborne on NewYorker.com -- ***15 pix*** http://bit.ly/2et8RrE ... **@WardDPatrick:** "As he puts on plastic gloves to serve food at NRG Stadium...President Trump turns to press and says: 'My hands are too big!'" http://bit.ly/2wvhNqx

NOTHING TO SEE HERE -- "Justice Department: No evidence Obama wiretapped Trump Tower," by Matt Nussbaum: "There is no evidence to support President Donald Trump's claim that Barack Obama ordered the wiretapping of Trump Tower during the 2016 presidential campaign, the Justice Department said in a new court filing. The DOJ made the statement in a motion for summary judgment filed Friday in response to a Freedom of Information Act lawsuit by the watchdog group American Oversight. 'Both FBI and NSD confirm that they have no records related to wiretaps as described by the March 4, 2017 tweets,' the government said, referring to the Justice Department's National Security Division." http://politi.co/2gtkMGw

SCOOP -- CNN's KEVIN LIPTAK got **BARACK OBAMA's** inauguration letter to Trump, who "has shown the letter to visitors in the Oval Office or his private White House residence," according to CNN. "Congratulations on a remarkable run. Millions have placed their hopes in you, and all of us, regardless of party, should hope for expanded prosperity and security during your tenure. ... This is a unique office, without a clear blueprint for success, so I don't know that any advice from me will be particularly helpful. Still, let me offer a few reflections from the past 8 years.

First, we've both been blessed, in different ways, with great good fortune. Not everyone is so lucky. It's up to us to do everything we can (to) build more ladders of success for every child and family that's willing to work hard.

Second, American leadership in this world really is indispensable . ... Third, we are just temporary occupants of this office. That makes us guardians of those democratic institutions and traditions -- like rule of law, separation of powers, equal protection and civil liberties -- that our forebears fought and bled for. ... And finally, take time, in the rush of events and responsibilities, for friends and family. They'll get you through the inevitable rough patches. Michelle and I wish you and Melania the very best as you embark on this great adventure, and know that we stand ready to help in any ways which we can." http://cnn.it/2ezThOO

SPORTS BLINK -- "Howard pulls biggest point-spread upset in college football history," by ESPN's David Purdum: "By point-spread standards, Howard pulled off perhaps the biggest upset in modern college football history Saturday night. The Bison, an FCS team from the Mid-Eastern Athletic Conference, entered as 45-point road underdogs against UNLV and stunned the Rebels 43-40 in Las Vegas. UNLV paid Howard $600,000 for the appearance. Las Vegas sportsbooks were not offering a money line on the game, but the Bison could be found as 600-1 long shots and even higher at some offshore books." http://es.pn/2eQOAgdn

KNOWING REP. JOE KENNEDY -- "The next Kennedy weighs his next move," by Heather Caygle: "Democrats are in search of new leaders to take on Donald Trump, and Rep. Joe Kennedy could fit the bill. But it's not clear he wants the job. In short order, Kennedy has garnered a loyal grassroots following with a series of viral speeches challenging Trump on everything from health care to hate speech, leading some Democrats to believe he could help fill the party's leadership vacuum.

"It's a shift for someone who, despite his famous last name and wavy red mane, has kept a low profile on the national scene since being elected to the House in 2012. Loath to be seen as a political celebrity, the 36-year-old from the outskirts of Boston has put in the work of a relative back-bencher and focused on delivering for his district. ... Kennedy has already proven he has the ability to harness his star power, after gaining national prominence for blasting GOP efforts to dismantle Obamacare earlier this year.

"But the key question for Democrats, including the more than two dozen interviewed for this story, is what's next for the young lawmaker they say is much more than a notable last name? It's one - to the quiet frustration of several in the party - that Kennedy seems in no hurry to answer." http://politi.co/2iSJEfb

SNEAK PEAK -- More than 300 pastors and church leaders are sending individualized letters today to Trump urging him to not get rid of DACA and work with Congress to pass legislation for Dreamers. The effort, organized by the Evangelical Immigration Table, comes after hundreds of religious leaders signed onto a letter to Trump, Senate Majority Leader Mitch McConnell (R-Ky.) and Speaker Paul Ryan (R-Wis.).

****** **A message from the American Bankers Association:** America's banks play a critical role in generating economic growth while delivering safety and convenience for customers. The two million women and men who work for America's banks safeguard $12.9 trillion in deposits and originate $2.4 trillion in home loans. They provide $331 billion in loans to small businesses and $175 billion in loans to farmers and ranchers. Banks' fraud protection measures stop at least $11 billion in attempted fraud each year. And thousands of banker volunteers deliver financial literacy lessons annually to millions of young Americans to help them become financially successful adults. VALLEY TALK - "In Silicon Valley, Working 9 to 5 Is for Losers," by Dan Lyons in the NYT: "Silicon Valley prides itself on 'thinking different.' So maybe it makes sense that just as a lot of industries have begun paying more attention to work-life balance, Silicon Valley is taking the opposite approach - and branding workaholism as a desirable lifestyle choice. An entire cottage industry has sprung up there, selling an internet-centric prosperity gospel that says that there is no higher calling than to start your own company, and that to succeed you must be willing to give up everything.

"'Hustle' is the word that tech people use to describe this nerd-commando lifestyle. You hear it everywhere. You can buy hustle-themed T-shirts and coffee mugs, with slogans like 'Dream, hustle, profit, repeat' and 'Outgrind, outhustle, outwork everyone.'

You can go to an eight-week 'start-up hustle' boot camp. ... You can also attend Hustle Con, a one-day conference where successful 'hustlers' share their secrets. Tickets cost around $300 - or you can pay $2,000 to be a 'V.I.P. hustler.' This year's conference, in June, drew 2,800 people, including two dozen who ponied up for V.I.P. passes." http://nyti.ms/2vVrgUr

Subject: First Move: Sandy Boosts Carbon-Tax Talk • Murkowski Tackles Cyber • Making Chemical Ban Stick

What you need to know to start your day.

Sandy Boosts Carbon-Tax Talk • Murkowski Tackles Cyber • Making Chemical Ban Stick

By Chuck McCutcheon

It's been five years since Superstorm Sandy slammed into the East Coast, claiming more than 100 lives, ripping up Jersey Shore boardwalk rides, and leaving hundreds of thousands of New York-area residents without power. Some in the region now want the anniversary to provide a push for fighting climate change.

Environmental and community groups, headed by the organization New York Renews, are using Sandy's anniversary to call for "bold and immediate" actions on climate change. The groups are planning a rally and march—more than 125 organizations have signed on—across the Brooklyn Bridge on Saturday.

Waves break in front of a Seaside Heights, N.J., amusement park wrecked by Superstorm Sandy in October 2012.
Photo by Mario Tama/Getty Images

A few lawmakers in New York's Legislature already have introduced bills to impose a carbon tax, among them a measure to establish a $35-per-ton levy on all carbon-based fuel. The New York Independent System Operator and the state Public Service Commission also have been working on a plan to incorporate a carbon price into the wholesale price of electricity. Gerald Silverman will have a story this week.

The head of the Senate's energy committee long has sought to stop cyber attacks on the electricity grid as well as get a broad energy bill into law. She'll work toward both objectives at a hearing today.

Alaska Republican Sen. Lisa Murkowski's committee will listen to testimony from three of the department's national labs—Oak Ridge, Pacific Northwest, and Idaho—as well as cybersecurity technology firms Qubitekk Inc. and New Context Services Inc. They're expected to discuss advanced technologies that could be used to help protect the electric grid and energy infrastructure from cyberattacks. Rebecca Kern is covering.

PFOA, short for perfluorooctanoic acid, became famous in 1950s when DuPont started using the stuff in the process of making non-stick frying pans. It has found its way into everything from 3M's Scotchgard stain repellent to Gore-Tex clothing and stain resistant carpets—but it's also shown up at high levels in drinking water near factories.

Now efforts to ban the chemical through a global treaty may have hit a setback: a scientific panel has delayed issuing a recommendation for another year.

The decision was viewed as good news for chemical companies and manufacturers, especially large electronics companies such as Intel, Micron, and Samsung. But environmentalists say the delay on PFOA is a clear signal that pressure from manufacturing interests may be influencing the panel's thinking. Look for a story from Adam Allington later this morning.

Other Stories We're Covering

- Pharmaceutical, ammunition, circuit board, recreational vehicle, and other companies that aren't normally subject to the EPA's commercial chemical rules may have to comply with a mercury reporting proposal the agency will publish today. Pat Rizzuto is tracking.
- Mine safety commissioners will discuss today whether the CEO of coal behemoth Murray Energy has to read a statement to miners that they have the right to complain about safety conditions. After Bob Murray told workers at five of his mines that they must bring safety issues to managers' attention before they went to the Mine Safety and Health Administration, the agency cited the company for interfering with miners' rights. Lars-Eric Hedberg is following.
- President Donald Trump's picks to staff the EPA and the nation's nuclear regulator sailed through a Senate committee, but face a longer road to getting a confirmation vote from the rest of the chamber's members. Delaware Sen. Tom Carper, the Senate environment panel's top Democrat, called EPA chemical office nominee Michael Dourson "one of the most troubling nominees I have ever considered during my time on this committee." Dean Scott is watching.

Quote of the Day

"I am here because I really feel called to it. My desire each day is to bless the president and the decisions he's making."
—EPA Administrator Scott Pruitt, in an interview with Bloomberg News

Today's Events

- **12:30 p.m. • Natural Gas** • American Gas Association luncheon features U.S. Trade and Development Agency's energy sector worldwide team leader.
- **1:30 p.m. • Energy Star** • EPA offers webinar discussing ways to track and

report facilities' environmental data.
- **All Day • Sustainability** • Sustainable business conference wraps up in Huntington Beach, Calif.

Around the Web

- Europe's chemicals agency proposes to restrict hazardous substances in tattoo ink.
- Florida wildlife officials are looking for a dangerous lizard that's 4 to 5 feet long.
- Iroquois Pipeline Operating Company President Jeffrey Bruner is taking over as chairman of the Interstate Natural Gas Association of America's board.
- EPA starts looking for household hazardous waste in areas of fire-ravaged California.
- Environmental groups urge a Virginia water board to reject certifying two pipeline projects over pollution concerns.

Driving the Day

BIG NBC SCOOP -- "Trump Wanted Dramatic Increase in Nuclear Arsenal in Meeting With Military Leaders," by Courtney Kube, Kristen Welker, Carol Lee and Savannah Guthrie: "President Donald Trump said he wanted what amounted to a nearly tenfold increase in the U.S. nuclear arsenal during a gathering this past summer of the nation's highest ranking national security leaders, according to three officials who were in the room.

"Trump's comments, the officials said, came in response to a briefing slide he was shown that charted the steady reduction of U.S. nuclear weapons since the late 1960s. Trump indicated he wanted a bigger stockpile, not the bottom position on that downward-sloping curve.

"According to the officials present, Trump's advisers, among them the Joint Chiefs of Staff and Secretary of State Rex Tillerson, were surprised. Officials briefly explained the legal and practical impediments to a nuclear buildup and how the current military posture is stronger than it was at the height of the build-up. In interviews, they told NBC News that no such expansion is planned. The July 20 meeting was described as a lengthy and sometimes tense review of worldwide U.S. forces and operations. It was soon after the meeting broke up that officials who remained behind heard Tillerson say that Trump is a 'moron.'" http://nbcnews.to/2yYtoMX

-- ONE OF THESE THINGS IS NOT LIKE THE OTHER: A rare Savannah Guthrie byline.

E TU, TOM BARRACK?-- "'He's better than this,' says Thomas Barrack, Trump's loyal whisperer," by WaPo's Michael Kranish in New York: "Barrack, in interviews with

The Washington Post, said he has been 'shocked' and 'stunned' by some of the president's rhetoric and inflammatory tweets. He disagrees with some of Trump's proposals, including his efforts to ban immigrants from certain Muslim countries and his push for a border wall with Mexico. He wonders why his longtime friend spends so much of his time appealing to the fringes of American politics.

"'He thinks he has to be loyal to his base,' Barrack said. 'I keep on saying, 'But who is your base? You don't have a natural base. Your base now is the world and America, so you have all these constituencies; show them who you really are.' In my opinion, he's better than this.' I tell him all the time: I don't like the rhetoric,' Barrack, who runs a large real estate investment company, said at his Manhattan office." http://wapo.st/2guINhc

-- WHAT TRUMP WANTS TO FOCUS ON: **@realDonaldTrump** at 6:21 a.m.: "Stock Market has increased by 5.2 Trillion dollars since the election on November 8th, a 25% increase. Lowest unemployment in 16 years and.....if Congress gives us the massive tax cuts (and reform) I am asking for, those numbers will grow by leaps and bounds. #MAGA" ... **at 6:31 a.m.:** "It would be really nice if the Fake News Media would report the virtually unprecedented Stock Market growth since the election.Need tax cuts" ... **at 6:36 a.m.:** "The Democrats want MASSIVE tax increases & soft, crime producing borders.The Republicans want the biggest tax cut in history & the WALL!"

-- TO BE SURE: Some Republicans don't want the wall.

Good Wednesday morning. QUICK BULLETIN -- 2017 GENIUS GRANT WINNERS -- The MacArthur Foundation awards $625,000 grants each year to a group of people they think exhibits "exceptional creativity." Here is the list of the 2017 winners http://nyti.ms/2guJB5R

SCOOP -- HOWARD KURTZ is writing a book about the relationship between **PRESIDENT DONALD TRUMP** and the news media. Regnery expects to publish the book early next year.

CONGRESS PONYING UP ... -- BLOOMBERG: "House to Add $36.5 Billion for Hurricane Relief, Puerto Rico Aid," by Kevin Whitelaw: "House lawmakers unveiled a bill Tuesday night that would provide $36.5 billion in emergency funding for hurricane and wildfire relief requested by the Trump administration. With Congress under pressure to provide urgent help to storm victims in Texas, Florida and Puerto Rico, the House measure includes $18.7 billion for the Federal Emergency Management Agency's disaster relief fund, as well as $16 billion to replenish the nation's flood insurance program." https://bloom.bg/2g1fHW8

WILDFIRES RAVAGING NORCAL -- L.A. TIMES: "Toll from Northern California firestorms sharply rise: 2,000 structures destroyed, at least 17 dead," by Paige St. John, Phil Willon, Louis Sahagun, Sonali Kohli, and Nina Agrawal: "The toll from Northern California's ranging wildfires continued to grow Tuesday evening as officials said the fires destroyed up to 2,000 structures and killed at least 17 people. The

devastating losses establish firestorms among the most destructive in California history. The estimated losses of homes, businesses and other buildings jumped from 1,500 to 2,000, and officials fear the death toll will also continue to rise.

"Sonoma County alone has received about 200 reports of missing people since Sunday night, and sheriff's officials have located 45 of those people, said county spokeswoman Maggie Fleming. The majority of the fatalities are from Sonoma County, where huge swaths of the city of Santa Rosa were leveled by the Tubbs fire. Eleven people have died in Sonoma County as of 7 p.m. Tuesday, officials said. Two people have died in Napa County, three in Mendocino County and one in Yuba County, Cal Fire officials said." http://lat.ms/2y6qAAJ

-- "Seen From Above: Entire California Communities Reduced to Ash," by NYT's Josh Haner, Troy Griggs and Anjali Singhvi: http://nyti.ms/2fZ9LNa

WHAT D.C. WILL BE TALKING ABOUT TODAY -- Nationals vs. Cubs, 4 p.m., TBS. If the Nats lose, the season is over. Dusty is going with Tanner Roark over Stephen Strasburg. If you don't know about baseball and someone asks you what you think, tell them you think this is a really ... well ... curious decision. Blame Jake if you get yelled at. (You likely won't.) Today is the kind of day that could shape the D.C. sports psyche for years. The Nationals have become part of the fabric of our city. Cross your fingers.

WHAT TRUMP IS READING -- @NBCNews: "JUST IN: In letter to NFL owners, Roger Goodell says: 'We believe that everyone should stand for the National Anthem.'" http://bit.ly/2yZErpb

OUR ALLIES ...

-- "Wall Street Journal Reporter Sentenced to Prison by Turkish Court," by WSJ's Thomas Grove: "A Turkish court sentenced Wall Street Journal reporter Ayla Albayrak to two years and one month in prison Tuesday, declaring her guilty of engaging in terrorist propaganda in support of a banned Kurdish separatist organization through one of her Journal articles. ... Ms. Albayrak ... is currently in New York ... 'This was an unfounded criminal charge and wildly inappropriate conviction that wrongly singled out a balanced Wall Street Journal report,' said Wall Street Journal Editor in Chief Gerard Baker. 'The sole purpose of the article was to provide objective and independent reporting on events in Turkey, and it succeeded.'" http://on.wsj.com/2yf4GuC

-- "How Israel Caught Russian Hackers Scouring the World for U.S. Secrets," by NYT's Nicole Perlroth and Scott Shane: "It was a case of spies watching spies watching spies: Israeli intelligence officers looked on in real time as Russian government hackers searched computers around the world for the code names of American intelligence programs. What gave the Russian hacking, detected more than two years ago, such global reach was its improvised search tool -- antivirus software made by a Russian company, Kaspersky Lab, that is used by 400 million people worldwide, including by officials at some two dozen American government agencies. The Israeli officials who

had hacked into Kaspersky's own network alerted the United States to the broad Russian intrusion, which has not been previously reported, leading to a decision just last month to order Kaspersky software removed from government computers." http://nyti.ms/2yfWwBQ

JOSH ROGIN in WaPo, **"The Dalai Lama speaks on Trump and 'America first'":** "'Your ancestors really considered the importance of liberty, freedom, democracy, these things,' the Dalai Lama said in response to my question about his current view of the United States. 'The present president, in the very beginning he mentioned 'America first.' That sounded in my ear not very nice.' The Dalai Lama is concerned that the United States, despite being 'the leader of the free world,' was becoming more 'selfish, nationalist,' he said." http://wapo.st/2ygblir

THE LATEST ON IRAN DEAL -- "Democrats brace for Iran deal upheaval," by Elana Schor and Nahal Toosi: "Democrats and other defenders of the Iran nuclear deal have all but given up on President Donald Trump as he prepares to push the pact to the brink. So they've adopted a new strategy, if you can call it that: Appeal to cooler heads in Trump's orbit who want to keep the agreement in place, their boss' rhetoric notwithstanding.

"The aim is to avoid further inflaming tensions with U.S. allies or slowly strangling the deal after Trump declares Tehran out of compliance, which is expected to happen as soon as Thursday. European diplomats, former U.S. officials and like-minded activists are joining in with a ramped-up lobbying effort designed to dissuade the GOP-led Congress from responding to Trump by reimposing sanctions that are likely to destroy the deal." http://politi.co/2hBj1Yk

NEW POLITICO/MORNING CONSULT POLL -- STEVEN SHEPARD -- "Majority backs stricter gun control laws after Vegas shooting": "A new POLITICO/Morning Consult poll shows that a majority of voters support stricter gun control laws in the wake of last week's mass murder of 58 concertgoers in Las Vegas by a single man with nearly two dozen firearms shooting from the window of his 32nd-floor hotel room.

"On most of the proposals to regulate gun ownership -- including background checks, restrictions on where Americans can carry firearms and prohibitions against accessories like the 'bump fire' stocks used by the Las Vegas gunman -- large majorities express support in the poll, conducted last Thursday through Monday.

"But despite those findings, voters still don't think the chances are high that Congress will act to strengthen federal firearm laws, even after the deadliest mass shooting in modern American history. And slightly more voters still say it's more important to protect Americans' right to own guns than it is, in general, to limit gun ownership."

http://politi.co/2guDZbE

MORE QUESTIONS ON ZINKE TRAVEL -- "Zinke's travels: Ski resort and Alaskan steakhouse," by Esther Whieldon and Ben Lefebvre: "Interior Secretary Ryan Zinke has attended at least two additional political fundraisers while traveling for official business, including a weekend ski getaway less than three weeks after he was sworn in where donors paid up to $3,000 to attend, according to sources and documents reviewed by POLITICO.

"Zinke's previously undisclosed attendance at the events adds to scrutiny he is facing over his habit of mixing political activities with official business when traveling outside of Washington, D.C., and to questions over travel expenses incurred by members of President Donald Trump's Cabinet. In addition to the fundraisers, Zinke has held at least a half-dozen other events with big donors or influential conservative organizations while on official trips.

"Zinke, a former Montana congressman who became secretary March 1, started his fundraising appearances even before attending a March 30 Virgin Islands Republican Party fundraiser in St. Croix that POLITICO reported last week, at which donors paid up to $5,000 per couple for a photo with him. The Justice Department's Office of Special Counsel, which is investigating Zinke's use of travel and political activities in office, has been asked by a watchdog group to look into his appearance there." http://politi.co/2xw560K

MURPHY TAKES A PASS ... -- "Democratic Sen. Chris Murphy says he's ruling out a 2020 presidential run" - CBS News: http://cbsn.ws/2wNDUGa

2018 WATCH -- "Senate Democrats worry Russia could jeopardize reelection bids," by Kyle Cheney, Elana Schor, and Cory Bennett: "Democratic senators fighting to hold on to their seats next year are increasingly worried about a troubling reality: Russia appears set to mess with U.S. elections - again. ... Democratic senators such as Heidi Heitkamp of North Dakota, Bob Casey of Pennsylvania and Jon Tester of Montana - who hail from states President Donald Trump won in 2016 - know they're already facing stiff reelection challenges.

"Now they're concerned the Trump administration is dragging its feet on thwarting sophisticated Russian cyber operations that could have significant impact on their races - and could even sway which party wins control of the Senate. The red- and purple-state Democratic seats are top targets for Republicans hoping to expand their two-seat majority in the Senate; Democrats likely would have to hold all of them if they are to have any hope of retaking the chamber. 'If there isn't some effort to take steps against Russian interference, every campaign is going to have to be on guard and working against it,' said Casey, describing himself as 'very concerned.'" http://politi.co/2g0MwT4

DACA UPDATE ...

-- "Meet the Republican who might cut a Dreamers deal," by Seung Min Kim: "As Donald Trump was pressing his hardline immigration platform en route to the GOP nomination last year, Republican Sen. Thom Tillis decided to go in a different direction entirely. Tillis, a reliable Republican on most issues, approached the No. 2 Senate Democrat, Dick Durbin, to discuss the fate of hundreds of thousands of 'Dreamers.' Sooner or later, Tillis thought, they would be at risk - a view that's come to life after Trump announced last month that nearly 700,000 young immigrants would begin losing legal protections early next year unless Capitol Hill intervenes.

"The freshman senator from North Carolina is now making his biggest immigration play yet, unveiling a plan to provide permanent relief to the undocumented immigrants who came here as minors. If a deal can be done to win over the warring parties and a president who has swung back and forth on the issue, it might start with Tillis, who has methodically carved out a profile as a pro-immigration Republican at a time when the GOP has swerved sharply to the right." http://politi.co/2g0oyrf

RUSSIA WATCH -- "Carter Page says he won't testify before Senate Intelligence panel in Russia probe," by Ali Watkins: "Carter Page, a former foreign policy adviser to the Trump campaign, informed the Senate Intelligence Committee on Tuesday that he will not be cooperating with any requests to appear before the panel for its investigation into Russian meddling in the 2016 election and would plead the Fifth, according to a source familiar with the matter. A former naval-officer-turned-energy consultant, Page came under fire last year after reports emerged that he had met with high-level associates of Russian President Vladimir Putin in Moscow in 2016. While Page denied those meetings occurred, the Trump campaign distanced itself from the adviser not long after, with former officials saying that Page and Trump had never met." http://politi.co/2zcViFP

ON PUERTO RICO -- "Trump's Puerto Rico video tells positive story but leaves a lot on cutting-room floor," by WaPo's Jenna Johnson: "The 8-minute-48-second video provides the kind of narrow, positive view of relief efforts in Puerto Rico that the president has been trying to convey amid the humanitarian crisis there -- a montage of stacks of bottled water, helicopters moving concrete slabs and supplies, boats carrying medical items and trucks hauling diesel. There are many more federal workers and military members featured than Puerto Ricans in need of aid, and there is no mention of the fact that 84 percent of the island is still without power and more than one-third of residents do not have access to clean drinking water. The last 81 seconds are devoted to documenting Trump's four-hour visit to the island last week." http://wapo.st/2yfLtJ1 ... ***The video*** http://bit.ly/2zeJmn0

--"Ronan Farrow on Harvey Weinstein Story: 'I Was Threatened With a Lawsuit,'" by Variety's Brian Steinberg: "Ronan Farrow didn't break the first story of shocking allegations about movie mogul Harvey Weinstein, but his New Yorker piece published Tuesday has added a new sordid dimension to the scandal. Farrow discussed his story Tuesday evening on MSNBC's 'The Rachel Maddow Show,' and there's good reason: He started the story under NBC's auspices. Asked why the story ran in the New Yorker rather than on NBC, Farrow told Maddow, 'You would have to ask NBC and NBC executives about the details.'

"'I will say that over many years, many news organizations have circled this story and faced a great deal of pressure in doing so,' he continued. 'There are now reports emerging about the kind of pressure news organizations have faced. That is real. And in the course of this reporting, I was threatened with a lawsuit personally by Mr. Weinstein.' He also challenged NBC's statement that the version of the story they saw wasn't publishable. 'I walked into the door at the New Yorker with an explosively reportable piece that should have been public,' he said. 'Immediately the New Yorker recognized that and it was not accurate to say that it was not reportable. In fact, there were multiple determinations at NBC that it was reportable.'" http://bit.ly/2yaLVsy ... ***Ronan's piece*** http://bit.ly/2yEUf4r

Subject: Morning Energy, presented by the National Biodiesel Board: Tensions elevated as Pruitt meets corn-state senators on biofuels — BLM clears way for controversial Cadiz project — Carper bashes inadequate responses from EPA nominees

By Anthony Adragna | 10/17/2017 05:40 AM EDT

With help from Eric Wolff, Tim Starks and Esther Whieldon

BIOFUEL FIGHT HEATS UP TODAY: Iowa Sen. Chuck Grassley, joined by home-state colleague Joni Ernst, Nebraska's Deb Fischer and possibly others, will meet with EPA Administrator Scott Pruitt today amid growing concern that President Donald Trump is reneging on a campaign promise and undermining the biofuels industry, Pro's Eric Wolff reports . EPA's recent proposal to cut biomass-based biodiesel quotas for 2018 and 2019, as well as recent reports the agency was considering allowing the use of credits from ethanol shipped overseas, has drawn multiple Senate letters in recent weeks, including a bipartisan letter from 38 senators and another with 29 signatures.

The recent moves have proven a huge financial boon for the oil refiners and rattled the market for biofuel credits known as RINs. Pruitt, who had immensely close ties to the oil industry as Oklahoma attorney general, is looking for ways to help them out, according to an administration official and oil industry sources who have spoken with EPA. "The administrator wants to drive down RIN prices," said one oil refining source who recently spoke to multiple EPA career and political officials. "The reason he wants to do that, he's going to screw them on point of obligation. He's willing to [push] any crazy idea that accomplishes that goal in the short term. It doesn't matter what the litigation risk is."

Remember Trump made his support for the Renewable Fuel Standard a rare policy-heavy portion of his campaign in Iowa, and Grassley, in particular, took Pruitt's proposed changes personally. He recently called them a "bait and switch" from what the administrator had told him before his nomination. Separately, four Republican governors — Kim Reynolds (Iowa), Sam Brownback (Kan.), Eric Greitens (Mo.) and Dennis Daugaard (S.D.) — sent a letter to Trump Monday voicing concern over EPA's recent RFS moves. "Cutting the biomass-based diesel volume set a year ago is not only unnecessary, it's highly disruptive, unprecedented and potentially catastrophic," they wrote.

Another refining industry source sums up the administration's dilemma to Eric: "The administration faces a conundrum on this issue. On the one hand guys are really leaning on them and talking about how they made a promise to rural America. On the other hand, the president made a promise to protect manufacturing jobs.... Politically what they're facing is a lot of heat."

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and NEI's Robert Powers was first out of the gate to identify Mark Neumann as the previous holder of Speaker Paul Ryan's House seat. For today: Who defeated a sitting party leader to win the Senate seat they currently hold? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on

Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

BRINGING INDUSTRY TO THE TABLE: In his Monday move to end what he terms EPA's sue and settle practice, Pruitt vowed to seek the consent of the companies the agency regulates before agreeing to any deadlines for environmental action, Pro's Alex Guillén reports. "EPA shall seek to receive the concurrence of any affected states and/or regulated entities before entering into a consent decree or settlement agreement," he said. EPA noted the directive does not outright require industry consent on any agreement, while adding it applied to lawsuits from both environmental and industry groups.

But critics argue his action targets a non-existent problem that will empower the entities Pruitt is supposed to be regulating. "His targeting of legal settlements, especially where EPA has no defense to breaking the law, will just allow violations to persist, along with harms to Americans," NRDC's John Walke said. During the Obama administration, EPA frequently entered into settlements with environmental groups after missing statutory deadlines. But the subsequent regulations still went through the lengthy rulemaking process, and a 2014 GAO study concluded the "effect of settlements in deadline suits on EPA's rulemaking priorities is limited."

BLM CLEARS WAY FOR CONTROVERSIAL CALIFORNIA WATER PROJECT: Regulators cleared the biggest remaining federal obstacle for Cadiz Inc. water pipeline in California's Mojave Desert when ruled the project can move forward without additional BLM approval, Pro's Esther Whieldon reports, citing a letter released Monday. Acting Director Mike Nedd axed an Obama-era 2015 finding that the project could not use an existing railroad right of way and would need to apply for its own. Cadiz in a statement said it will begin working on final engineering designs, contracts and obtaining a conveyance agreement with the Metropolitan Water District of Southern California.

Opponents slammed the move: Sen. Dianne Feinstein, a longtime opponent of the project, said Cadiz's pipeline would draw more water than the aquifer can recharge naturally and expose residents to potentially harmful levels of chemicals. "The Trump administration might be willing to let Cadiz profit by harming our public lands but California shouldn't give up," she said in a statement. "Our state can still require a stronger review of Cadiz's plans. The fight to protect our desert isn't over."

The Bernhardt question: A spokeswoman said Interior Deputy Secretary David Bernhardt "has absolutely no role in anything related to Cadiz." The agency's number two did legal work for Cadiz before joining the agency, and his former firm stands to benefit if it's completed.

CARPER BASHES EPA NOMINEE RESPONSES: Sen. Tom Carper, top Democrat on the Environment and Public Works Committee, released responses to questions from four nominees to senior EPA roles that he told ME were "shocking" in their lack of substance. He was in particular critical of the responses of the agency's chemicals pick, Michael Dourson, who didn't provide specific answers on a host of questions related to the agency's implementation of the Toxic Substances Control Act and air chief, Bill Wehrum, who provided vague answers on topics like the Paris Climate Accord and how he would approach various air regulations. But ME didn't get a sense from Carper or aides that committee Democrats were likely to boycott a

Wednesday vote on the nominations of Dourson and Wehrum, as well the picks of David Ross to head the water office, Matthew Leopold to be general counsel and Jeff Baran's re-nomination to the NRC.

Read the responses to Carper's questions for the record here.

EPA OFFICIAL LANDS IN PUERTO RICO : Newly sworn in EPA Region 2 Administrator Peter Lopez landed in Puerto Rico Monday to meet with local officials "to make sure my team at the EPA continues to help lift these communities up." Army Lt. Gen. Jeffrey Buchanan, leading the administration's response to the disaster, said in a statement it would be "months" before the electric grid could be rebuilt: "FEMA asked the Army Corps of Engineers to take the lead in that, not necessarily with military power guys, but with contracts with local workers," he said. A short-term priority is getting water treatment plants back up and running through generators followed by the longer-term goal of getting other critical infrastructure back on the electric grid.

Sign of the times: NBC News correspondent Gabe Gutierrez tweeted a picture of a drinking water well on a Superfund site with protective fencing ripped off. "People are desperate," Lopez told Gutierrez, adding people are breaking into sealed-off wells.

Trump critical of island again: Once again casting the island's struggles as partially self-inflicted, Trump said the military "shouldn't have to be" distributing food and water on the island, POLITICO's Cristiano Lima reports. Meanwhile, the Senate is likely to take up a House-passed relief package H.R. 2266 (115) once it passes its budget.

ALASKAN PICKED FOR INTERIOR ROLE: Trump late Monday announced his intent to nominate Tara Sweeney, executive vice president of external affairs for Arctic Slope Regional Corporation, as assistant Interior secretary of for Indian Affairs. She chaired the Arctic Economic Council from 2015 to 2017. "Secretary Zinke could not have chosen a better leader to help him fulfill the federal government's trust responsibility," Senate Energy Chairman Lisa Murkowski said in a statement.

** **Presented by the National Biodiesel Board:** More than 64,000 jobs are supported by clean-burning biodiesel. But the EPA is threatening to reduce biodiesel use and weaken the Renewable Fuel Standard (RFS). We must protect those biodiesel jobs with a strong RFS program. Watch the president promise to protect the RFS here: http://bit.ly/2xn5Sgm **

HOLD YOUR HORSES: Senate Majority Leader Mitch McConnell used a lunch with the president Monday to stress that Steve Bannon was going after some staunch supporters of Trump's agenda, such as John Barrasso and Deb Fischer, with his pledge to recruit primary challengers for sitting Republican senators, POLITICO's Matthew Nussbaum and Cristiano Lima report . That point apparently resonated with Trump, who later told reporters: "Some of the people he may be looking at, I'm going to see if we talk him out of that."

UNITED WE STAND? Even as Trump and McConnell projected a united front Monday, White House officials behind-the-scenes are increasingly wondering what's going on in the Senate and afraid the chamber won't be able to pass Republican tax overhaul, POLITICO's Burgess Everett

and Josh Dawsey report. "You ask me if the Republican-controlled Senate is an impediment to the administration's agenda: All I can tell you is so far, the answer's yes," OMB Director Mick Mulvaney, a former member of the House Freedom Caucus, said.

RALLYING AGAINST ANWR LANGUAGE: Six Senate Democrats — Ed Markey, Michael Bennet, Tom Udall, Maria Cantwell, Al Franken and Jeff Merkley — are joining environmental groups at 11:15 a.m. in the Senate swamp to urge the removal of language opening ANWR to drilling from the fiscal 2018 budget resolution.

DOE WATCHDOG: CLOSE, BUT NOT QUITE: The Department of Energy needs to improve control over who can access systems, the security of its web applications and mitigation of vulnerabilities, according to a recently released inspector general report. The IG had pointed out those flaws and others in a prior report. "The weaknesses identified occurred, in part, because department officials had not fully developed and/or implemented policies and procedures related to the issues identified in our report," the IG concluded. "Without improvements to its cybersecurity program in areas such as enhanced controls over vulnerability management and access controls, the department's systems and information may be at a higher-than-necessary risk of compromise, loss, and/or modification." Overall, however, DOE had addressed 13 of the 16 weaknesses the IG previously identified.

TAKE A GLANCE! NUTRIENT CREDIT PROGRAM USE LIMITED: Despite 11 states having 19 nutrient credit trading programs meant to help hit discharge limits, use has been limited, according to a report released by GAO Monday. Programs in Connecticut, Pennsylvania and Virginia saw the bulk of credit trading.

GTM: HIGHER TARIFFS MEAN LESS SOLAR: A 40 cents per watt tariff would cut solar demand in half, GTM Research says in a study out today. The research group found that lower tariffs had less of an impact: For example, adding 10 cents per watt would drive down sales 9 percent. The study also found that utility scale solar would be hardest hit, as utilities are more sensitive to cost than the residential market.

REPORT: LET'S COMMISSION A COASTAL COMMISSION: The Regional Plan Association released a report Monday calling for New York, New Jersey and Connecticut to form a new coastal commission as the region prepares for the impacts of climate change over the next decades.

HOT DOC: The Environmental Defense Fund released a new document called "Pruitt's Playbook" chronicling what it says is Pruitt's assault on EPA's mission.

WINTER IS COMING: The American Gas Association today predicts cooler temperatures this winter will mean a five percent increase, on average, on heating bills as consumers are likely to use three percent more natural gas.

MAIL CALL! MORE CRITICISM OF MONUMENT REVIEW: More than 350 National Park Service employees sent Zinke a letter today saying they are "extremely disappointed" in his review of national monuments designated under the Antiquities Act.

— Separately, more than 350 companies largely from the outdoor recreation retail industry in a Monday letter to Trump urged the president to "embrace the conservation ethic of your predecessors and keep current protections in place for our public lands and waters." The letter also asks Trump not to roll back protections on monuments. The Commerce Department has until Oct. 25 to send the White House a report on marine monuments and Trump is mulling Interior Secretary Ryan Zinke's recommendations to shrink and/or allow mining, commercial fishing and logging in 10 existing monuments.

MOVER, SHAKER: Bryan Rice, an Interior veteran and member of the Cherokee Nation of Oklahoma, started as director of the Bureau of Indian Affairs on Monday. He most recently led the agency's Office of Wildland Fire as the latest stop on a federal career spanning more than 20 years.

Stories from POLITICO Pro

EPA's Pruitt boosts industry role in negotiations with green groups Back

By Alex Guillén | 10/16/2017 03:57 PM EDT

Industry groups will soon get a seat at the table when EPA decides how to respond to some lawsuits from environmental groups.

EPA will ask for the consent of the industries and companies it regulates before agreeing to any deadlines for environmental action sought by "special interest groups," according to a new directive issued by Administrator Scott Pruitt.

EPA will notify states or industries of any petitions or lawsuits that may affect them and will take "any and all appropriate steps to achieve the participation" of industry during negotiations, Pruitt wrote in his directive that is intended to end the agency's so-called sue and settle practice.

"Accordingly, EPA shall seek to receive the concurrence of any affected states and/or regulated entities before entering into a consent decree or settlement agreement," Pruitt continued.

In response to questions from POLITICO, EPA noted the directive does not outright require industry consent on any agreement. And the agency said Pruitt's directive applies to both environmental and industry groups' suits.

But EPA's new directive to seek industry approval first could lead to "back-room deals" between the agency and those it regulates, according to Amit Narang, a regulatory expert at watchdog group Public Citizen.

"There's simply nothing for industry groups to come in and discuss with the EPA related to these lawsuits except how they want the EPA to potentially craft a new regulation that was already unlawfully delayed in a way that's industry-friendly," he said.

"Pruitt's doing nothing more than posturing about a non-existent problem and political fiction," said John Walke of the Natural Resources Defense Council. "His targeting of legal settlements, especially where EPA has no defense to breaking the law, will just allow violations to persist, along with harms to Americans."

Republicans have complained for years that environmental groups would sue EPA and quickly

reach a deal for the agency to take certain actions, bypassing industry input, a practice they termed "sue and settle." They note that it was those type of lawsuits that led EPA to write the Clean Power Plan, for example.

"Sue and settle ... interferes with the rights of the American people to provide their views on proposed regulatory decisions and have the agency thoughtfully consider those views before making a final decision," Pruitt wrote in a memo accompanying his directive.

Democrats and environmentalists argue that the deals Republicans have complained about largely targeted missed statutory deadlines, and that any subsequent regulations were still open to the full rulemaking process. And the Clean Power Plan may have been spurred in part by a settlement agreement, but the final rule was developed with all required public input and was subject to legal challenge.

A 2014 study by the Government Accountability Office concluded that the "effect of settlements in deadline suits on EPA's rulemaking priorities is limited." That study also said that long-standing Justice Department policy prevents EPA from striking a deal in a deadline suit that specifies the substance of any subsequent rule.

Pruitt's directive quickly landed plaudits from conservative groups.

"The EPA is making it clear that the public and the integrity of the rulemaking process are no longer going to be sacrificed for the political objectives of narrow interests," Daren Bakst of The Heritage Foundation said in a statement.

William Yeatman of the Competitive Enterprise Institute called it a "welcome" first step, but added that EPA had routinely missed deadlines for years under the Clean Air Act and other laws, and should seek more resources from Congress to meet those deadlines and avoid environmental groups suing.

The 2014 GAO study also noted that EPA's proposed consent decrees, published in the Federal Register, traditionally took public comment for 30 days before moving forward.

Pruitt acknowledged that in his memo, and while he admitted those comments sometimes led to changes in the final agreements, "numerous stakeholders lack faith in the effectiveness of this comment opportunity" because EPA and environmental groups "have already agreed in principle to the proposed settlement."

It remains unclear how EPA plans to defend itself in court over clearly missed deadlines set by Congress. The agency said only that it "will handle any lawsuits consistent with today's directive."

But the agency's critics say there's simply no viable defense.

"These are the simplest lawsuits for environmental groups to win and for the EPA to lose. There's no point in EPA fighting these lawsuits. The evidence is as simple as looking at the

calendar and saying a congressional deadline has been missed," said Narang. "If EPA was to fight these cases in court, that would be one of the most wasteful uses of taxpayer money."

In recent weeks, Pruitt has racked up several such deadline suits.

For example, Democratic attorneys general and environmental groups are preparing to sue Pruitt for missing a key implementation deadline for the 2015 ozone standard. EPA is also facing down a lawsuit from the state of Maryland for failing to respond to its petition seeking pollution controls on upwind power plants.

Similar consent decrees have been reached in the past with industry groups as well. The agreement setting deadlines for EPA to issue its 2014-16 Renewable Fuel Standard volumes, for example, was reached with oil and refining industry groups.

BLM clears the way for Cadiz California water pipeline Back

By Esther Whieldon | 10/16/2017 06:06 PM EDT

The Bureau of Land Management has ruled the proposed Cadiz Inc. water pipeline in California's Mojave Desert can move forward without agency approval, effectively clearing the biggest remaining federal hurdle for the project.

In a Friday letter, which Cadiz released today, BLM acting Director Mike Nedd reversed a 2015 finding by the Obama administration that the project could not use an existing railroad right of way and would need to apply for its own.

The proposed pipeline would pump groundwater from a desert aquifer across 43 miles of land, much of it federally owned, and the project's opponents have argued it would draw more water than the aquifer can recharge naturally.

The Interior Department in September also reversed a legal interpretation made under the Obama administration and found railroads have broad discretion to lease their rights of way. The Center for Biological Diversity has filed a public records request with Interior to figure out why the agency revoked that legal interpretation.

David Bernhardt, Interior's second-in-command, did legal work for Cadiz before joining the agency. An Interior spokeswoman in an emailed statement said "the Deputy Secretary has absolutely no role in anything related to Cadiz."

WHAT'S NEXT: Cadiz in a statement said it will begin working on final engineering designs, contracts and obtaining a conveyance agreement with the Metropolitan Water District of

Southern California. A Cadiz spokeswoman in an email said the storage component of the project will still require federal permits.

Trump: Military 'shouldn't have to be' distributing food in Puerto Rico Back

By Cristiano Lima | 10/16/2017 03:39 PM EDT

President Donald Trump said military personnel assisting in Hurricane Maria recovery efforts "shouldn't have to be" distributing food in Puerto Rico, again casting the U.S. territory's challenges as partially self-inflicted during a Monday press conference.

The president said that while federal agencies have provided "massive" amounts of food and water to Puerto Rico — where access to resources and power remains severely hampered by last month's storm — they should not also be expected to distribute them. Trump has previously said Puerto Ricans relied too much on federal government resources instead of a "community effort" to rebuild.

"We have massive amounts of water. We have massive amounts of food," Trump said at the White House, where he spoke alongside Senate Majority Leader Mitch McConnell. "But they have to distribute the food."

Trump added: "We now actually have military distributing food — something that, really, they shouldn't have to be doing."

The president has singled out issues with infrastructure and other challenges in Puerto Rico that he said pre-dated the storm as hurdles in the path to recovery. He has also warned that he won't leave federal employees in Puerto Rico indefinitely.

"We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!" he tweeted.

The House of Representatives on Thursday overwhelmingly approved a $36.5 billion relief package for Puerto Rico and other impacted regions. It is headed to the Senate, where it is expected to be approved.

Trump expresses wariness of Bannon's war on GOP establishment Back

By Matthew Nussbaum and Cristiano Lima | 10/16/2017 12:44 PM EDT

President Donald Trump, who in 2016 ran as the nontraditional, nationalist insurgent riding roughshod over the establishment, on Monday expressed skepticism about Steve Bannon's attempt to produce a wave of such candidates in coming Republican primaries.

"Some of the people he may be looking at, I'm going to see if we talk him out of that," Trump said during a Rose Garden news conference when asked about Bannon's pledge to recruit primary challengers to all but one sitting Republican senator in 2018.

While it's unclear whether Trump will follow through, his comments could mark a line in the sand, with Trump appearing to describe a willingness to stand by Republican incumbents against Bannon-backed challengers.

Trump's stance was muddied, however, because roughly two hours earlier he appeared to voice support for Bannon's avowed war on establishment figures, including Senate Majority Leader Mitch McConnell. Trump told reporters that Bannon "is a friend of mine" and is "very committed to getting things passed" when asked about the Breitbart News chief's attacks on McConnell and other GOP leaders who have failed to pass his legislative agenda.

But after a private meeting with McConnell, Trump expressed the skepticism about Bannon's efforts, especially his support for GOP Senate candidates who will challenge McConnell's leadership role.

"Just so you understand, the Republican Party is very, very unified," Trump declared during the Rose Garden news conference, with McConnell by his side.

Trump's pronouncement came after he and McConnell discussed primaries over lunch, according to a person briefed on the exchange. McConnell told Trump that Bannon was targeting senators who were supporters of Trump's agenda, like Sens. Deb Fischer (R-Neb.) and John Barrasso (R-Wyo.). That point resonated with Trump, according to the person briefed, and McConnell went on to explain how past insurgent primary winners had wound up losing in the general election.

Trump's apparent commitment to stand by incumbent Republican senators against his former campaign CEO and White House strategist shows that even a tradition-bucking president may hew to the party line in the interest of moving his agenda forward and maintaining a governing majority.

McConnell, of whom Bannon has been publicly critical since he was ousted from his West Wing role in August, said that despite any differences between himself and Bannon, his goal was simple: "to win elections in November."

The Senate Republican leader said that regardless of who won during the party primaries, what mattered was that they carried their victory into the general election.

"You have to nominate people who can actually win because winners make policy and losers go home," he said. In a swipe at Bannon, he cited controversial Republican candidates from recent elections who, after beating more moderate opponents in primaries, lost to Democrats in what were widely seen as winnable races.

Bannon on Saturday ratcheted up his war against the GOP establishment — and McConnell specifically — as he vowed to challenge any Senate Republican who doesn't publicly condemn attacks on Trump.

"Yeah, Mitch, the donors are not happy. They've all left you. We've cut your oxygen off," Bannon said during a speech to religious conservatives at the Values Voter Summit in Washington.

"There's a time and season for everything and right now it's a season of war against a GOP establishment," Bannon added. "It's no longer acceptable to come and pat you on the head and tell you everything is going to be fine just to get those people in office."

Since leaving the West Wing, Bannon has raised his public profile, holding campaign events and delivering speeches to further his campaign against establishment figures. He's also relying on the powerful forces of the Breitbart News platform and the support of the ultrawealthy Mercer family to further his agenda.

Trump's own frustration with GOP establishment leaders was clear on Monday. He told reporters earlier in the day that he "can understand where Steve Bannon is coming from" given Republican lawmakers' failure so far to pass Obamacare repeal, tax reform and other big ticket items.

While Trump stressed that he had "great relationships with many senators," he gave a grim assessment of the work by GOP lawmakers on Capitol Hill. "They are not getting the job done," Trump told reporters while meeting with his Cabinet. "And I'm not going to blame myself. They are not getting the job done."

The president added that "there are Republicans frankly that should be ashamed of themselves" for their inability to follow through on repealing the Affordable Care Act and passing major tax reform legislation.

But at the Rose Garden news conference, Trump and McConnell, standing side by side, sought to strike a united front.

"We've been friends for a long time. We are probably now — despite what we read — we're probably now, I think, at least as far as I'm concerned, closer than ever before," Trump said, glossing over their public feuding in recent months. "And the relationship is very good. We're fighting for the same thing."

"I wanna underscore what the president said: We have the same agenda," McConnell said.

Trump has also already shown a comfort in breaking with Bannon, joining McConnell to support

Alabama Sen. Luther Strange against a primary challenge from the far-right former judge, Roy Moore.

Moore won by about 9 points, and Bannon introduced him for his victory speech.

Alex Isenstadt contributed to this report.

Trump White House fed up with the Senate Back

By Burgess Everett and Josh Dawsey | 10/16/2017 07:01 PM EDT

President Donald Trump and Mitch McConnell stood side by side at the White House Monday afternoon to declare they're "together totally" and "very united" heading into this fall's tax reform battle.

But behind the scenes, Trump, his administration and even some senators are increasingly worried that taxes will go the way of Obamacare repeal in the Senate: Months of bickering ending in extreme embarrassment.

The debate hasn't even started on the GOP's plan, yet some senators are pushing their own tax proposals, while others are increasingly emboldened to defy the Republican president. It's a dangerous mix considering that McConnell can lose only two votes assuming Democrats band together in opposition.

"We look at the Senate and go: 'What the hell is going on?'" White House budget director Mick Mulvaney said in an interview Friday.

"The House passed health care, the House has already passed its budget, which is the first step of tax reform. The Senate hasn't done any of that. Hell, the Senate can't pass any of our confirmations," Mulvaney fumed in an interview, slapping a table for emphasis. "You ask me if the Republican-controlled Senate is an impediment to the administration's agenda: All I can tell you is so far, the answer's yes."

The revulsion for the Senate's age-old traditions and byzantine procedure boiled over in public repeatedly on Monday. Trump complained in front of TV cameras that the Senate is "not getting the job done" and said he sees where Steve Bannon — his former chief strategist now planning to run primary challengers against incumbent Republican senators — "is coming from."

And House Speaker Paul Ryan (R-Wis.), when asked Monday to name the biggest impediment to tax reform, replied: "You ever heard of the United States Senate before?"

Shortly after, Trump and McConnell held an unusual 40-minute unity news conference intended to sooth a jittery party that's watched Trump attack "Mitch M" for failing on health care reform and McConnell assert that Trump had "excessive expectations" for Congress. Trump suggested he would try to get Bannon to back off on some of McConnell's incumbents, and McConnell sought to keep the tax reform critics at bay after Trump said he wants it done this year.

"We're gonna get this job done and the goal is to get it done by the end of the year," McConnell said after lunching with the president. The meeting had been long-planned, but the impromptu news conference was Trump's idea, two sources familiar with the event said.

McConnell is expected to hold a vote this week on the budget — a precondition for tax reform — and GOP aides expect it to pass. That will relieve some of the pressure on the chamber, which has been receiving flak nonstop from donors, House members and the president since the health care implosion this summer.

Administration officials are hoping that frustration produces enough pressure to force the Senate to pass tax reform. But already, there are signs of trouble.

Sen. Ron Johnson (R-Wis.) is so skeptical that the Senate can enact the GOP's tax framework that he's begun pitching his own tax plans to colleagues. It would shift the burden of corporate taxes onto shareholders and allow individuals to opt out of the existing tax code and into a system without the confusing array of tax preferences and deductions that people can now choose.

It's radically different from what congressional leaders and the president proposed. But Johnson said in an interview that leadership's plan "is going to be very difficult to pass. We've already seen with the outline now, with the principles given, that's going to be a challenge."

"I don't want to be a problem child here, but what I'm offering is a plan B," Johnson added. "If they can't get the votes ... I've got an alternative."

Senate Majority Whip John Cornyn (R-Texas) brushed off any negativity about the Senate's work, insisting that he never thought the party's agenda is "off track." But he said the sniping from Mulvaney and Ryan — and skepticism from some Republican senators about the prospects for tax reform — is not helpful.

"I don't think that sort of thing is very constructive myself," Cornyn said Monday.

The House is sure to labor to pass tax reform, too. Members from high-tax states are already rebelling against plans to gut the deduction for state and local taxes. But two White House officials said the most serious concerns are in the Senate.

"I was really not happy that this Congress couldn't control its own members and get to a winning vote on health care," said Sen. David Perdue (R-Ga.). "This tax code is something we've got to do. We've got to do that this year. It's a test of the Republican majority."

But like with health care, the tax reform process is moving more slowly than many Republicans would like. There's no bill yet, for starters. And White House officials have deliberately left some policy details vague because they're unsure what it will take for various senators to get on board and want to leave their options open, one of these people said.

The White House officials expect a multitude of demands from Sen. Bob Corker (R-Tenn.) regarding the deficit, and from Sen. Rand Paul (R-Ky.) on middle-class tax cuts. Nevada Sen. Dean Heller, perhaps the most endangered Republican senator on the ballot next year, is expected to have his own asks.

Other moderate Republicans senators are expected to hold major sway as well, including Lisa Murkowski of Alaska and Susan Collins of Maine. Another wild card is Sen. John McCain (R-Ariz.), who has voted against past tax cuts and cast the decisive vote against Obamacare repeal.

"We're expecting to have to make some deals here," one official said.

Rattled that many senators are still on the fence, the Koch network encouraged its donors at a recent retreat to call Republican senators and push them to vote for tax reform. Vice President Mike Pence told donors at the Koch summit that they thought they could convince Paul and that Trump planned to travel more to win over wavering senators.

And after working for months on an Obamacare repeal-and-replace bill that went nowhere, senators say they feel more urgency than they ever have on taxes.

"If you just stand there you get run over," said Sen. John Kennedy (R-La.). "I don't want to see what happened to us on health care happen to us on tax reform. Which is basically, we analyze it until we are paralyzed."

If that happens again, Republicans are warning of dire consequences: Losing the House and possibly the Senate, and inviting a new wave of ire at incumbents. In an urgent plea over the weekend, Sen. Lindsey Graham (R-S.C.) even suggested on CBS' "Face the Nation" that if the party can't pass tax reform and repeal Obamacare within the next few months, "it will be the end of Mitch McConnell as we know it."

People close to Trump said the White House isn't there yet.

"We don't get into leadership races down here," Mulvaney said. But maybe, he suggested, the pressure on McConnell and "the Senate's failure to pass health care might actually help us to get tax reform passed. Because I think they know they need to get something done."

Subject: Playbook Power Briefing, presented by BP: Members begin reaching out on next path forward on health care -- RYAN turns attention to taxes -- DAVID BRADLEY sells majority stake in The Atlantic to LAURENE POWELL JOBS

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by BP

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Friday afternoon. SPOTTED: Sen. Susan Collins (R-Maine), receiving a round of applause at the Bangor Airport this morning. **...** Mitch McConnell waiting at DCA for a flight to Louisville this morning. ... Making the rounds in the West Wing on Friday afternoon, GOP strategist J. Hogan Gidley.

WHAT WE'VE HEARD is that there are talks beginning between individual members of the House and Senate on charting a way forward for health care. Rep. Mark Meadows (R-N.C.), the leader of the Freedom Caucus who is close with President Donald Trump, is reaching out quietly to members of the Senate, including Sen. Lindsey Graham (R-S.C.). Graham is also talking to Trump today. There is a belief across the GOP on the Hill, however, that there is not a single product that can get through the House and Senate, so they have their work cut out for them.

SEN. CHUCK SCHUMER (D-N.Y.) and **HOUSE MINORITY LEADER NANCY PELOSI (D-CALIF.)** have both reached out to Ryan since the Senate bill went down. This becomes much more complicated internally for Republicans if they start working with Democrats.

THE SENATE and **HOUSE** are now scheduled to be out of session until Sept. 4.

SPEAKER PAUL RYAN: NEXT UP? TAX REFORM. BUT GET TO WORK IN THE SENATE ON HEALTH CARE! -- "While the House delivered a bill to repeal and replace Obamacare, unfortunately the Senate was unable to reach a consensus. I am disappointed and frustrated, but we should not give up. I encourage the Senate to continue working toward a real solution that keeps our promise. We have so much work still to do, and the House will continue to focus on issues that are important to the American people. At the top of that list is cutting taxes for middle class families and fixing our broken tax code. I'm glad that members will now take time to hear directly from those they represent and make the case for historic tax reform that we intend to pursue in the fall."

REINCE PRIEBUS and **ANTHONY SCARAMUCCI** are on AF1 with Trump to New York. Scaramucci said it was "better not to comment" on his phone call to the New Yorker's Ryan Lizza to pooler Sarah Westwood of the Washington Examiner.

FROM THE PRESIDENT -- @realDonaldTrump at 9:46 a.m.: "If Republicans are going to pass great future legislation in the Senate, they must immediately go to a 51 vote majority, not senseless 60..." ... **at 10 a.m.:** "...Even though parts of healthcare could pass at 51, some really good things need 60. So many great future bills & budgets need 60 votes...."

PRESIDENT TRUMP is holding a rally Aug. 3 in Huntington, W.Va.

IF YOU'RE GOING TO Politicon in California tomorrow, Jake and Anna are moderating the "Trump vs. the Media" panel at 3:30 p.m. local time. The panel will have Bill Kristol, Jason Miller, Jon Lovett and Symone Sanders, so make sure to stop by! Who won't be at Politicon? Anthony Scaramucci -- WaPo's Abby Phillip reports that he pulled out "overnight."

****** **A message from BP: We produced and refined 1.3 million barrels per day of oil and natural gas last year - enough energy to light the entire country.** *Flip through our Economic Impact Report to learn more.* ******

ANOTHER DPRK LAUNCH -- "US detects North Korea missile launch," by Zachary Cohen and Barbara Starr: "The US detected a ballistic missile launch out of North Korea at approximately 10:45 am. EST on Friday, the Pentagon confirmed to CNN. They are assessing the launch and will have more soon. Japanese Prime Minister Shinzo Abe told Japanese broadcaster NHK: 'I have received the first report that North Korea again launched a missile and it possibly landed inside the exclusive economic zone.'" http://cnn.it/2tQ1EMg

ALEX CONANT in POLITICO Magazine, **"Why Trump's White House Won't Stop Leaking:** Sorry, Anthony Scaramucci. Your mole hunt is doomed": "President Trump is completely justified to be outraged about the leaks in his White House. But mole hunts inevitably lead only to more moles, and more leaks. Trump's White House is not leaky because of a few bad apples. The No. 1 reason why it leaks is because his team lacks unity. It's not without irony that many of the leaks are about the very staff infighting that is causing the leaks. ... The leaks are also the result of deep disloyalty, for which the president has only himself to blame. Trump demands blind loyalty from his subordinates. But blind loyalty does not exist in politics, except among sycophants and people without principles-neither of whom make for trustworthy aides." http://politi.co/2vOPjFz

ANALYZING A MOMENT -- "Watch The Shocking Moment John McCain Killed The Republican Health Care Bill," by BuzzFeed News' David Mack http://bzfd.it/2tQ2Qj6

****** **A message from BP: We operate an oil and gas pipeline network across**

America that spans nearly 4,000 miles - farther than New York to San Francisco. *Watch this short video for more on our U.S. footprint.* ******

HIGH ART -- "Donald Trump's Drawing of the New York City Skyline Just Sold for $29,184 at Auction," by ArtNet News' Henri Neuendorf: "According to Los Angeles-based auction house Nate D. Sanders, the work was created by the president for a charity auction promoting worldwide literacy in 2005 and was consigned to the auction house by the winner of the original charity event. The charity auction also included works by fellow Republican John McCain, and former Democrat Senator Joseph Lieberman, as well as actors Charlize Theron and Benicio Del Toro. The sketch is drawn on a large envelope made of a stock type of paper, and according to Michael Kirk of Nate D. Sanders auctioneers, there are only two other known variants of the drawing. The variants 'feature the same skyline with slight variations,' making it an extremely rare example of presidential memorabilia. On Thursday night, there were 11 bids for the drawing, starting at $9,000." http://artnt.cm/2u5nAhW

TO INFINITY AND BEYOND? -- "Will Trump get a man to Mars?," by Negassi Tesfamichael: "President Donald Trump made a bold promise in April: He would send a human to Mars during his first term - 'or, at worst, during my second term.' Vice President Mike Pence doubled down earlier this month. 'Here from this bridge to space, our nation will return to the moon ad we will put American boots on the face of Mars,' Pence said at the Kennedy Space Center. But just about everyone else is saying fat chance. Even Trump's space policy adviser for his campaign and transition says getting a man or woman on the face of Mars by 2024 is virtually impossible." http://politi.co/2tPWFeO

MEDIAWATCH -- TECH CRUNCH: "Laurene Powell Jobs' Emerson Collective is buying a majority stake in The Atlantic": "Emerson Collective, the organization founded by Laurene Powell Jobs, has agreed to purchase a majority stake in The Atlantic. In a memo to the staff of The Atlantic, chairman and owner David Bradley writes that he started looking for a buyer when he realized his sons were not interested in owning a media company. (Axios, which was backed by both the Emerson Collective and Bradley,obtained the memo.)

"Bradley, who is 64, says he will still own 'a large share' of the 160-year-old magazine, though it's 'likely' that he will sell his remaining stake to Emerson in three to five years. He also remains the full owner of the other Atlantic Media properties, including Quartz. Peter Lattman (previously the media editor at The New York Times) will become vice chairman of The Atlantic. Other than that, it sounds like the magazine's leadership will not be changing." http://tcrn.ch/2w6G1UV

-- "How Trump derailed MSNBC's centrist makeover," by Mic's Kelsey Sutton: "[T]he election of Donald Trump has complicated [an news-centric] evolution, raising the profile and popularity of MSNBC's liberal hosts just as [MSNBC and NBC News chairman Andrew] Lack sought to dial back the network's liberal identity. While MSNBC's dayside programming has indeed tottered toward the center of the political spectrum, its prime-

time shows, led by figures like Rachel Maddow and Chris Hayes, drives public perception of the channel as an anti-Trump liberal haven.

"Five company insiders told Mic they believe Lack is caught in between these two MSNBCs. The sources, who spoke to Mic on the condition of anonymity to protect their jobs or their relationships with the company, said Trump's unexpected presidential win has complicated Lack's plans to move to the center. Amid this channel reinvention, many of the high-profile diverse voices and faces have disappeared from the screen, making some both inside and outside the company worry that diversity, for which MSNBC was once celebrated, has been put on the back burner." http://bit.ly/2tPVpbm

-- @mlcalderone: "After three decades at NYT, [Michael R. Gordon] taking buyout. Memo" http://bit.ly/2u5FiBW

TRANSITIONS -- Loni Hagerup and **Matt Bisenius** will both be co-chiefs of staff in Rep. Jim Sensenbrenner's (R-Wis.) office starting in August. Hagerup is currently Sensenbrenner's deputy chief of staff and Bisenius is director of legislative affairs at the National Propane Gas Association. Current Chief of Staff **Bart Forsyth** has accepted a new position with the PhRMA.

SPOTTED last night at the Capitol Hill American Legion attending "A Capitol Benefit" for those injured June 14 at The Congressional Baseball Game practice: Rep. Collin Peterson (D-Minn.) on stage with band the Second Amendments, Rep. Rick Crawford (R-Ark.), on stage with the Wil Gravatt Band, Fred Humphries, Suhail Kahn, Ryan Thompson, Phil Bianchi, Erica Arbetter, Ben Cantrell, Jana Plat, Kelle Strickland and Kenny Hulshof. Proceeds benefited the Capitol Hill Police Memorial Fund.

Subject: Morning Media: New Trump ad attacks the media -- Doc crew filming New York Times reporters -- James Risen joins The Intercept

By Hadas Gold | 08/14/2017 05:41 AM EDT

With Alex Weprin

TALK ABOUT TIMING. THE DAY AFTER THE HORRIFIC EVENTS IN CHARLOTTESVILLE, PRESIDENT DONALD TRUMP'S CAMPAIGN RELEASED A NEW AD. But instead of a message about something like uniting the country, the ad goes after Democratic politicians and the media, claiming the media is "attacking our president," accompanied by a photo splash of CNN and MSNBC anchors. "The president's enemies don't want him to succeed" the ad says over a second iteration of the photo splash.

MEANWHILE, THE PRESIDENT TOOK A WHILE TO COME AROUND TO CONDEMNING NAZIS AND WHITE SUPREMACISTS THIS WEEKEND, with the White House finally updating its original statement on the violence in Charlottesville. Via my colleague Nancy Cook : "The Trump administration on Sunday tried to reframe the president's earlier, vague statement that blamed "many sides" for violence in Charlottesville, Virginia, a day earlier, after his comments sparked outrage from at least a dozen prominent Republican lawmakers. In a statement, the White House sought to clarify that President Donald Trump condemns violence, bigotry and hatred, and it said 'of course that includes white supremacists, KKK, neo-Nazis and all extremist groups.'" But that statement remains only attributed to a White House official. "Press corps specifically asked this if statement this [morning] could be attributed on the record. Spox said no," tweeted Washington Examiner's Gabby Morrongiello who was pool reporter on Sunday.

"The problem with vague condemnations of hatred is they allow hate groups to interpret the condemnations as they see fit," CNN's Jake Tapper tweeted. Case in point: The neo-Nazi website The Daily Stormer praised the president's comments as "good" for not directly attacking them.

-- On Friday Trump told pool reporters he'd be holding a "pretty big press conference" on Monday. But the daily guidance released by the White House late last night makes no mention of a press conference today.

-- Vice President Mike Pence assailed the media for criticizing Trump, saying during a visit to Colombia that it was appropriate to criticize not only the white supremacists behind the "Unite the Right" march but also counter-protesters on the scene. "I will say I take issue with the fact that many in the national media spent more time criticizing the president's words than they did criticizing those that perpetrated the violence to begin with," he said.

-- The latest on the ground from Charlottesville via my colleague Ben Schreckinger.

FIRST IN MORNING MEDIA: A CREW IS FILMING INSIDE THE NEW YORK

TIMES for a documentary about the paper's coverage of the president, two sources told me. They've filmed meetings, reporters on the phone and other material in both Washington and New York. It's not clear who is behind the film and Times spokespeople declined to comment. But it wouldn't be the first time a documentary crew has been given ample access to the Times for a documentary. Remember "Page One", Andrew Rossi's 2011 documentary about the Times (and its media columnist David Carr) in a changing technological era? If you haven't seen, I highly recommend it.

Good morning and welcome to Morning Media! Until Aug. 16 you can reach me at hgold@politico.com / and forever more at @Hadas_Gold. Morning Media is edited by **Alex Weprin** (@alexweprin / alexweprin@gmail.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). Archives. Subscribe.

RUPERT MURDOCH DINED WITH PRESIDENT TRUMP EARLIER THIS MONTH, CNN reports. The two are known to be in touch frequently, often speaking often by phone. A White House dinner isn't that surprising, even though Murdoch's Wall Street Journal is getting tougher on Trump in its editorial content. Murdoch, of course, also leads Fox News, which is arguably Trump's biggest defender in the mainstream media.

YASHAR ALI'S LAWYERS ARE DEMANDING ERIC BOLLING DROP HIS LAWSUIT, writing in a letter to Bolling on Friday that the the suit is "utterly devoid of merit." The letter notes that the Fox News host chose to only target Ali in his $50 million lawsuit, not HuffPost, which Ali's lawyer, Patricia Glaser, claims is "a calculated effort to harass and intimidate Mr. Ali personally." Bolling remains suspended from Fox which says an investigation into his alleged sending of lewd text messages is ongoing.

-- In a statement to HuffPost, Bolling's lawyer said "it is ironic and telling that Ms. Glaser accuses us of a publicity stunt in a letter she has yet to send me and that I learned about from the New York Times ... She is right about one thing, no evidence has been produced about these claims, and that is why we filed suit so that the evidence and truth will come out."

-- Ali's lawyer's letter is not the formal response to the summons with notice that Bolling filed last week, so Ali still needs to formally respond. "If they choose not to withdraw their claim, we will defend Yashar Ali vigorously. We don't believe this claim has any merit," one of Ali's lawyers, Jill Basinger told me.

MATT DRUDGE THINKS STEPHEN BANNON IS A WHITE HOUSE LEAKER according to the Daily Caller. Drudge, who for reasons unknown has long portrayed Bannon in a negative light on his influential site, "has previously suspected Bannon of leaking in an email reviewed by TheDC, and he is known to link to articles that paint reported Bannon foe Jared Kushner in a positive light," the Daily Caller reports. The tidbit was part of a larger, sort of insane story about former Trump advisor Sam Nunberg threatening dire consequences for Drudge if Bannon is fired.

ALASKA DISPATCH NEWS FILES FOR BANKRUPTCY, NAMES NEW PUBLISHER: Alaska's largest newspaper filed for Chapter 11 bankruptcy protection over the weekend and will

soon be sold to siblings Ryan Binkley, Wade Binkley, James Binkley and Kai Binkley Sims, as well as Alaska Media LLC, which owns three rural Alaska newspapers, the Dispatch reports. The Binkley family is "an Alaska family that made its fortune hauling freight and tourists on the Yukon River and its tributaries, and a company that owns rural newspapers in the state."

OMAROSA APPEARANCE AT NABJ CONFERENCE CAUSES UPROAR , via Cristiano Lima: White House aide Omarosa Manigault's panel appearance caused an uproar at the National Association of Black Journalists annual conference in New Orleans on Friday. Manigault, director of communications for the Office of Public Liaison and an assistant to president Donald Trump, repeatedly received jeers and groans from the crowd during her comments, according to social media posts from numerous journalists in attendance. The panel featured appearances from relatives of prominent victims of police violence, but the discussion was frequently derailed as Manigault engaged in several heated exchanges with others onstage. At one point, Manigault was pressed on Trump's July comments that seemed to encourage police violence during arrests. At first Manigault hesitated, according to multiple reporters in attendance, before affirming she felt the comments had been out of line. Read more here.

REVOLVING DOOR:

-- James Risen, the legendary Pulitzer-prize winning national security reporter, is joining The Intercept to cover national security. Risen will also be director of First Look's Press Freedom Defense Fund. He recently took a buyout at The New York Times. [HuffPost]

-- The Washington Post has announced a "rapid response investigative team" that includes Beth Reinhard, who joins from The Wall Street Journal, Jack Gillum, who joined the Post in June from the Associated Press, Andrew Ba Tran, who joined in May from the Connecticut Mirror, and current Posties Shawn Boburg, Emma Brown and Aaron Davis. [Washington Post]

SOUNDBITE: "Nazis are a lot like cats. If they like you, it's probably because you're feeding them." -- [John Oliver]

TIL: The man who created Wonder Woman also contributed to the invention of the polygraph test [National Academy Press].

EXTRAS:

-- Fox News once called leak investigations into journalists "chilling." Now? Not so much, Margaret Sullivan finds. [Washington Post]

-- A man claiming to be Andrea Tantaros' ghostwriter is suing the former Fox News host. [Courthouse News]

-- After firing Jeffrey Lord and losing Kayleigh McEnany, will CNN seek to hire more pro-Trump voices? [THR]

-- "It's not easy being the first and only Fox News host in Silicon Valley." [NY Times]

-- Rolling Stone retracted a story for mischaracterizing comments it originally attributed to Charlamagne Tha God. [Rolling Stone]

-- Former New York City mayor and current media mogul Michael Bloomberg has an op-ed in The Guardian, taking aim at Trump and climate change. [The Guardian]

-- RIP Wayne Woodlief, Boston Herald political columnist, who died this past week at age 82. [Boston Herald]

Subject: POLITICO's Morning Energy: FERC quorum a-coming? — Pruitt reverses course on ozone delay — No place like Gold King in August

By Annie Snider | 08/03/2017 10:00 AM EDT

With help from Eric Wolff, Alex Guillén, Darius Dixon and Esther Whieldon.

FERC QUORUM SO CLOSE YOU CAN ALMOST TASTE IT: Late Wednesday, the White House officially sent the nominations for FERC nominees Rich Glick and Kevin McIntyre to the Senate, raising the prospect that the agency's six-month stretch without a quorum will finally get resolved, Darius Dixon reports.

FERC has been unable to make major decisions on everything from interstate natural gas pipelines to liquefied natural gas export terminals to anti-market manipulation cases since early February. With the paperwork delivered, particularly for Democratic nominee Glick, the industry's Eye of Sauron-like attention is trained entirely on the Senate. GOP nominees Neil Chatterjee and Rob Powelson received approval from the Senate Energy and Natural Resources Committee in June, but their confirmations were stalled by Democrats amid battles over Obamacare and the tradition of molding bipartisan nomination packages for the agency.
The calculation happening now is determining whether Glick's nomination - rather than his actually confirmation - is enough for Democrats to accept Chatterjee and Powelson being confirmed before the Senate skips town for recess. "They're trying to structure a package that gets both sides interested enough to get everybody behind it," Sen. John Thune, the GOP No. 3, told ME. "I know that the FERC absences are on everybody's radar screen." Other senators said they expect a plan for FERC action to materials today.

Nominations across the federal government have been piling up for potential 11th-hour action ahead of the Senate's plans to depart for its abbreviated August break, no later than next week. The White House also officially delivered nominations Wednesday for John Henderson to lead the Air Force's energy, environment and installations program and Ryan Nelson to be Interior Department Solicitor.

In the meantime, Senate Majority Leader Mitch McConnell teed up a noon vote today on Dan Brouillette's nomination to be Deputy Secretary of Energy.

Optimistic Yucca foe: Nevada Sen. Dean Heller, who held up the nomination to protest Brouillette's support for a nuclear waste repository in his home state, lifted that hold after making progress on Yucca Mountain, his office told ME, declining to elaborate.

PRUITT REVERSES COURSE ON OZONE IMPLEMENTATION DELAY: EPA Administrator Scott Pruitt has dropped his plan to delay a key step in implementing the 2015 ozone standard - deciding which areas hit the air quality target. Pruitt had originally said he didn't think EPA had the necessary data to decide on the designations by the Oct. 1 deadline, a move that drew lawsuits from environmental groups and blue states. But a pre-publication

Federal Register notice Pruitt signed Wednesday says that "the information gaps that formed the basis of the extension may not be as expansive as we previously believed."

The notice hints, however, that there may yet be regional delays made on a case-by-case basis. "The Administrator may still determine that an extension of time to complete designations is necessary, but is not making such a determination at this time," it states. Here's Alex Guillén with more.

YOU MADE IT TO THURSDAY! I'm your fill-in host, Annie Snider, and I know it's not surprising, but I am still impressed with y'all's knowledge of nuclear history. Dan Meyer of the Duberstein group was the first across the finish line with yesterday's trivia, correctly answering that the August 2, 1939 letter written by Leo Szilard and signed by Albert Einstein warned President Franklin D. Roosevelt that Germany could develop an atomic bomb and urged the U.S. to begin its own nuclear program - which eventually became the Manhattan project. Dan has today's question: Name the official currently in the line of presidential succession who is ineligible to be president. Send your guesses - and your tips, energy gossip and comments to asnider@politico.com or follow us on Twitter @AnnElizabeth18, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

THE GLASS IS NOW 40 PERCENT FULL: EPA put out an annual report Wednesday touting decreased emissions amid a growing economy over the last quarter-century - old news to those following the issue. But as Mother Jones reporter Rebecca Leber pointed out Wednesday on Twitter, the 40 percent non-attainment rate for ozone EPA Administrator Scott Pruitt has used in the past to attack the Obama administration's environmental record is now an EPA win. "Despite this success, there is more work to be done," Pruitt said in a statement. He vowed to work with states to improve air quality. Environmentalists also noted a changed tune. EPA's report credits the pollution reductions to "implementation of the Clean Air Act and technological advancements." As the NRDC's John Walke pointed out, many innovations came about because of demand created by regulations. "It's not like electric utility sector was clamoring for scrubbers prior to any Clean Air Act rules warranted using them," he wrote.

ANNIVERSARY GETAWAY: Pruitt is scheduled to tour the Gold King Mine with Colorado Gov. John Hickenlooper (D) and Sen. Cory Gardner (R-Colo.) on Friday, just ahead of the 2-year anniversary of the 2015 spill of 3 million gallons of wastewater by an EPA crew, the Denver Post reports. The disaster has become a favorite example for congressional Republicans of EPA ineptitude.

Gina McCarthy, who was EPA administrator at the time of the spill, visited command centers and people affected by the toxic wastewater that eventually reached the Colorado River, but did not visit the actual mine. EPA said at the time that the area was too remote and difficult to access, and that they did not want to interfere with emergency operations underway.

Road-trippin': Already on the road, Pruitt swung through Indiana Wednesday, where he spoke Wednesday with Gov. Eric Holcomb (R) and farm interests about the Waters of the U.S. rule, which EPA is in the midst of withdrawing and rewriting, and also visited Liberty Mine. Next week he'll be back on the topic of the water rule while in North Dakota, the Bismarck Tribune

reports.

INTERIOR NO. 2 CALLS OUT EMPLOYEES WHO "PARROT" SPECIAL INTERESTS: After being sworn in as Deputy Interior Secretary on Tuesday, David Bernhardt sent a missive to department employees calling out "a few people" who he said "parrot comments of special interests rather than carry out their governmental duties." Bernhardt, who was opposed by most Senate Democrats, in part over potential conflict of interests concerns related to his former job as a lobbyist and lawyer for various industries, warned employees in the email obtained by POLITICO that such people "often avoid grounding their views in the actual facts or the law." Esther Whieldon's got the rundown here.

FALSE ALARM? Some climate change information disappeared from the Department of Agriculture's website late last week before reappearing late yesterday, according to a report from the Environmental Data & Governance Initiative. The missing pages from USDA's "Climate Hubs," which provide tools to help farmers and land managers adapt to climate change, "were the result of the site being migrated to a new server," an agency spokeswoman said.

Agriculture Secretary Sony Perdue and the nominee to be his chief scientist, Sam Clovis, have both questioned human-caused climate change. But Perdue has said he's committed to "digging ever deeper" into research about agricultural production in a changing climate.

NOTHIN' TO SEE HERE: Southern Co. CEO Tom Fanning spent Wednesday morning trying to squash speculation that the Vogtle nuclear project is facing a similar fate to the two-reactor project slated for shutdown in South Carolina. On a call with analysts, Fanning argued "there are a host of differences" between the two projects, with project backers on track to decide by the end of this month how to proceed. Here's Darius Dixon with more.

SPECIAL COUNSEL INVESTIGATING OBAMA-ERA WHISTLEBLOWER FIRING: The U.S. Office of Special Counsel has launched a whistleblower investigation into the Obama administration's firing of an Interior Department employee who raised concerns over the agency's plan to approve Shell's Arctic offshore drilling lease, Esther Whieldon reports. The U.S. Merit Systems Protection Board this week granted the counsel's request to require the agency to reinstate Jeffrey Missal as the regional environmental officer with the agency's Bureau of Safety and Environmental Enforcement in Anchorage, Alaska while the office of special counsel investigates.

A MONIZ FOR THE AGES: Former Energy Secretary Ernest Moniz returned to old stomping grounds at the Energy Department Wednesday as a guest of honor for the unveiling of his official portrait to an auditorium of current and former agency employees. NNSA Administrator Frank Klotz presided, and Moniz's successor, Rick Perry, gave speech. Both Moniz and Perry got plenty of laughs out of the attendees, which included ex-Energy Secretary Bill Richardson, former DOE deputies Elizabeth Sherwood-Randall and Dan Poneman, and Obama Health and Human Services chief Sylvia Burwell, who is now president of American University.

Moniz quipped that he was honored so many people gathered for his "official designation as a historical artifact" before engaging in an extended explanation of everything in Chris Saper's

painting, which included "The Future of Natural Gas" report he led while at MIT, a DOE Quadrennial Technology Review, the Obama administration's Quadrennial Energy Review - an effort he pushed for well before he was secretary - and the Iran nuclear agreement he helped negotiate. DOE's Flickr account has dozens of photos.

GREENS, DEM STATES URGE COURT AGAINST HEARING METHANE APPEAL: The coalition of Democratic states and environmental groups that challenged EPA Administrator Scott Pruitt's 90-day stay of the methane rule for new oil and gas wells yesterday urged the D.C. Circuit Court of Appeals not to hear an appeal. The full court on Monday reinstated the rule while it considers requests from industry groups and Republican states for an appeal heard by all 11 judges. The stay's opponents argued yesterday that the case "does not come close to satisfying the demanding standards for granting *en banc* rehearing." EPA has remained silent on the matter so far, but may weigh in by this afternoon's final brief deadline, along with the stay's industry and state supporters. The court could decide whether to hear the appeal as soon as Friday.

EPA PANEL ON PRUITT CO2 REMARK: OPINIONS DON'T VIOLATE INTEGRITY POLICY: After a letter circulated in conservative news outlets Tuesday clearing Pruitt from scientific integrity allegations for his controversial remark that carbon dioxide is not the primary driver of climate change, the agency released a four-page report Wednesday compiled by five senior career staffers. The panel found Pruitt's comment did not violate the agency's scientific integrity policy because it was not a "significant departure from accepted practices of the relevant scientific or scholarly community." However, the report did not discuss how the remark diverged from scientists' consensus, and concluded "expressing an opinion" does not violate the integrity policy.

ZINKE TAKES ANOTHER MONUMENT OFF CHOPPING BLOCK: Interior Secretary Ryan Zinke on Tuesday announced he will recommend Trump leave intact the Upper Missouri River Breaks National Monument in central Montana. "The monument is one of the only free-flowing areas of the Missouri that remains as Lewis and Clark saw it more than 200 years ago," Zinke said in a statement. Zinke has until Aug. 24 to send his recommendations on the remaining monuments on his list.

BIODIESEL'S DC TEAM MOTORS AWAY: The National Biodiesel Board, which is based in Missouri, is losing two of its three Washington staffers. Anne Steckel, the head of the D.C. office, and Sandra Franco, the head of regulatory affairs and general counsel, are both leaving the group, NBB spokesperson Rosemarie Calabro Tully told ME. Chief Operating Officer Doug Whitehead will come to D.C. to run the office. The move comes at an awkward time, as lobbying is ramping up to get a biodiesel producers tax credit into any future tax overhaul bill, the group's members want EPA to increase the biodiesel requirements in the Renewable Fuel Standard, and they're looking to the Commerce Department to slap sanctions on Argentina and Indonesia.

MAINE LEGISLATURE SUSTAINS VETO ON SOLAR BILL: The Maine Legislature on Wednesday did not override Gov. Paul LePage's veto of L.D. 1504, a measure that would have had utility regulators formulate new recommendations on the future of net metering in 2019. The Legislature passed the measure in June with a veto-proof majority but on Tuesday the House fell short of the votes needed to override the veto.

REPORT SAYS STATES ILL-EQUIPPED TO TAKE ON ESA: A report out Tuesday by University of California Irvine School of Law suggests that most states are legally and financially ill-equipped to take over protecting and recovering threatened and endangered species. It notes that state expenditures on conservation of federally listed species make up only about 5 percent of total national spending on ESA, and found that compared with the requirements of the Endangered Species Act, some state laws fall short.

MOVER, SHAKER: Monica Trauzzi, managing editor and anchor of E&E News' video operation, is heading to the Nuclear Energy Institute in September as senior director of external communications.

Joan Card, a Western water expert who served as senior policy advisor in EPA's Region 8 office until January, has joined the natural resources consulting firm Culp & Kelly, LLP.

QUICK HITS

- Pacific Northwest threatened by hottest weather ever recorded. Washington Post.

Subject: BREAKING NEWS: Flynn pleads guilty to lying to the FBI

Former White House national security adviser Michael Flynn pleaded guilty Friday to one felony count of making a false statement to the FBI.

It's the latest step in the investigation by special counsel Robert Mueller into Russian meddling in the 2016 election that is closing in on President Donald Trump's close associates.

Trump's former national security adviser admitted to one count of lying to FBI agents about conversations he had with Russia's then-ambassador to the U.S., Sergey Kislyak, during the presidential transition period in late December 2016.

Subject: Barrasso aims to reschedule nominee vote next week

By Anthony Adragna

10/18/2017 03:56 PM EDT

Environment and Public Works Chairman John Barrasso said today he hopes to reschedule a markup on several EPA, NRC and federal highway nominees for next week.

Asked why today's scheduled vote was shelved, Barrasso told POLITICO "one of the members wanted to get a little additional information from one of the nominees," but he declined to provide further details.

But the chairman was likely referring to Iowa Sen. Joni Ernst, who declined to voice her support on Tuesday for air chief nominee Bill Wehrum.

Ernst's office did not respond to requests for comment. Republicans hold an 11-10 majority over Democrats on the committee so they cannot afford any defections.

The other nominations likely to get votes when the vote gets rescheduled include Michael Dourson for EPA chemicals chief, David Ross as head of the EPA water office, Matthew Leopold for EPA general counsel, Jeff Baran's re-nomination to the NRC and Paul Trombino's selection to be administrator of the FHWA.

WHAT'S NEXT: Barrasso hopes to schedule a vote on the various nominees next week.

Subject: BREAKING NEWS: Trump on whether he'll fire Price: 'We'll see'

President Donald Trump on Wednesday expressed his sharp displeasure with Secretary of Health and Human Services Tom Price over his use of expensive private jets, and said "we'll see" when asked by reporters if he would fire Price.

"I was looking into it and I will look into it. And I will tell you personally, I'm not happy about it," Trump said in a brief exchange with reporters. "I am not happy about it. I'm going to look at it. I am not happy about it, and I let him know it."

POLITICO revealed that Price has flown 26 times on private aircraft since last May at a cost of hundreds of thousands of dollars, a break with the practice of his predecessors who generally took commercial flights.

Leading the News

Trump to Shrink Utah Monuments Holding Artifacts, Minerals

By Jennifer A. Dlouhy and Justin Sink

President Donald Trump said Dec. 4 that he'll shrink two national monuments in Utah that contain stunning red-sandstone vistas, historic relics and energy resources, arguing his predecessor overstepped in protecting the land.

Hardrock Miners Avoid Millions in Cleanup Assurance Costs

By *Sylvia Carignan*

Mining industry and state government representatives have convinced the EPA to back down from a Superfund regulation that would have cost the industry more than $170 million annually and required companies to pay for environmental cleanup.

Volvo, Truck Groups Say EPA Glider Plan Comes At Their Expense

By *Abby Smith*

Exempting some trucks from federal greenhouse gas emissions requirements "makes a mockery of the massive investments" companies such as Volvo have made to clean up their vehicles, industry representatives told the EPA.

Today's News

EPA Taps State Association Head for Air Office Deputy

By *Jennifer Lu*

The EPA has found the deputy assistant administrator for its air office in Clint Woods, who is stepping down as head of a state association of air pollution officials to join the federal agency.

Trump Disbands Group Meant to Prepare Cities for Climate Shocks

By *Christopher Flavelle*

The Trump administration has terminated a cross-agency group created to help local officials protect their residents against extreme weather and natural disasters.

Scalia Opinion Looms Over EPA Rethink of Waters Rule

By *Amena H. Saiyid*

An attorney cautioned the Trump administration Dec. 4 against rewriting the rule clarifying the reach of the Clean Water Act by relying solely on the late Justice Antonin Scalia's narrow reading of the law.

Dakota Access Judge Tightens Oversight Citing Keystone Rupture

By Andrew Harris

Citing the Keystone pipeline rupture in South Dakota last month, the federal judge overseeing a lawsuit over the Dakota Access pipeline ordered its builders, opponents and the Army Corps of Engineers to give him a spill-response plan by April 1.

Planes, Trains and Automobiles—America's New

Pollution King

By Tom Randall

For the first time in 40 years, power plants are no longer the biggest source of U.S. greenhouse gas pollution. That dubious distinction now belongs to the transport sector: cars, trucks, planes, trains and boats.

What We Know About How Tax Bill Affects Energy, Renewables

By Jonathan Levin, Andrew Pollack and Drew Armstrong

The tax bill passed by Republicans in the U.S. Senate over the weekend may boost profits for industries from banking to retail to fossil fuels. It also could put the squeeze on hospitals and renewable energy firms.

Tax Reform Losers from Biofuels to Coal to Get Second Chance

By *Ari Natter*

Energy lobbyists, who failed to get a range of expired breaks for biofuels to coal-fired power plants into the $1.5 trillion tax overhaul bill making its way through Congress, may get a second chance before the end of the year.

A $12 Billion Clean-Energy Tool That U.S. Tax Reform Could Kill

By Brian Eckhouse

The tax-reform proposal the U.S. Senate passed over the weekend would hobble—and potentially cripple—the supply of tax-equity investment, an esoteric but critical source of clean-energy finance.

Tax Reform Could Stifle JPMorgan's Support for Renewable Energy

By *Joe Ryan* and *Brian Eckhouse*

Clean-energy developers are learning the hard way that every line of the U.S. tax code is connected.

Texas Governor Asks EPA to Cut Biofuel Quotas, Citing Hardship

By Mario Parker and Jennifer A. Dlouhy

Texas Gov. Greg Abbott (R) asked EPA Administrator Scott Pruitt to lower conventional renewable-fuel quotas to no more than 9.7 percent of total gasoline consumption, saying that costs for biofuel credits "are creating a severe economic hardship for refiners," among other parties.

Ozone Delays Draw Lawsuit From Environmental Groups

By *Jennifer Lu*

Environmental groups made good on their promise to sue the EPA over delays in determining the areas in the U.S. where air quality does not meet federal ozone

standards.

China Is Said to Plan Extending Electric Vehicle Tax Rebate

By *Tian Ying*, *Heng Xie* and *Yan Zhang*

China is planning to extend a tax rebate on the purchase of new-energy vehicles after the incentive helped the country become the world's biggest market for clean fuel automobiles, according to people with direct knowledge of the matter.

Austria Doubles Down on Hydro in Bid to Green Its

Power Supply

By Jonathan Tirone

Austria's biggest utility expects to squeeze more profit from hydropower and upgrade its distribution grid as Europe shifts toward getting more of its electricity from numerous types of sources.

Brazil May Pour Nearly $3 Billion More Into Waterway Project

By *Michael Kepp*

Privatizing Brazil's state power company could pump another 9 billion reais ($2.34 billion) into the country's effort to revitalize the basin of its second largest waterway over the next three decades.

Tropical Countries Push Green Supply Chains for Forestry

By *Lucien O. Chauvin*

Countries that export tropical timber are pushing toward more sustainable forestry practices in response to demands from countries, such as China, for greener supply chains.

Friday Night Wrapup

Trump Agrees to Meet with Senators Warring Over Biofuel Policy

By *Jennifer A. Dlouhy* and *Ari Natter*

President Donald Trump has agreed to meet with key senators and Cabinet-level officials to discuss U.S. biofuel policy, according to four people familiar with the plan.

Exxon Claim of Bogus Schneiderman Probe Questioned by Judge

By Erik Larson

A federal judge questioned Exxon Mobil Corp.'s claim that a securities-fraud probe by New York's Attorney General is flawed because its focus shifted from a suspected climate-change cover-up to whether investors were misled.

Duffy Wants Flood Program Extension Separate From Spending Bill

By *Brandon Ross*

The chairman of the House Financial Services Committee's insurance panel wants extensions of the National Flood Insurance Program to be separate from a government spending bill, a Republican aide told Bloomberg Government.

Southern Strikes a Deal on Costs of Failed 'Clean Coal' Plant

By *Mark Chediak*

Southern Co. has reached an agreement with Mississippi regulators that would have customers paying less for a failed, $7.5 billion "clean coal" project.

Subject: Playbook Power Briefing, presented by Koch Industries: PAUL RYAN says bump stocks will be looked at -- White House to demand hardline immigration changes for DACA fix -- TRUMP could make IRAN DEAL announcement next week -- HOUSE passes BUDGET

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Koch Industries

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. PROGRAMMING NOTE: Power Briefing will not publish on Monday, but still expect Playbook in your inbox in the morning.

PAUL RYAN told MSNBC host Hugh Hewitt that **BUMP STOCKS** need to be looked at: "Yeah, look, I didn't even know what they were until this week, and I'm an avid sportsman. So I think we're quickly coming up to speed with what this is. Fully automatic weapons have been banned for a long time. Apparently this allows you to take a semi-automatic, turn it into a fully automatic, so clearly that's something that we need to look into." http://nbcnews.to/2xk0GK8

-- "NRA bans bump stocks at its own firing range," by Lorraine Woellert: "Many firing ranges, including the one at National Rifle Association headquarters, ban the use of bump fire systems like that used by Las Vegas shooter Stephen Paddock, according to firearms experts. Bump stocks increase the speed at which bullets are fired and cause the entire weapon to move back and forth in the shooter's grip. As a result, they decrease accuracy and are less safe, the experts say." http://politi.co/2gdTODF

TRUMP INC. -- "Three Trump Cabinet members attended mining lobbyist meeting at Trump International Hotel," by WaPo's Dino Grandoni and Juliet Eilperin: "The National Mining Association drew the high-ranking officials to the fall board of directors meeting it held at Trump International Hotel, just blocks from the White House, on Tuesday and Wednesday. Interior Secretary Ryan Zinke was initially scheduled to attend, but according to the department's deputy communications director, Russell Newell, he 'is traveling and so was unavailable for the meeting.' Interior Deputy Secretary David Bernhardt attended Wednesday in his place.

"On Tuesday morning, Commerce Secretary Wilbur Ross headlined a general session. In the afternoon, Labor Secretary Alexander Acosta spoke with NMA members during a lunch sponsored by Jennmar Corp. and Royal Gold, a mining-equipment maker and precious metals company, respectively. And on Wednesday morning, Energy Secretary Rick Perry spoke at a breakfast sponsored by Komatsu Mining Corp., a

mining division of a Japanese conglomerate, posting about his speech on Twitter." http://wapo.st/2fTF9kb

WHAT'S NEXT FOR DACA -- "White House plans to demand immigration cuts in exchange for DACA fix," by Josh Dawsey, Andrew Restuccia and Matt Nussbaum: "The White House is finalizing a plan to demand hardline immigration reforms in exchange for supporting a fix on the DACA program, according to three people familiar with the talks - an approach that risks alienating Democrats and even many Republicans, potentially tanking any deal. The White House proposal is being crafted by Stephen Miller, the administration's top immigration adviser, and includes cutting legal immigration by half over the next decade, an idea that's already been panned by lawmakers in both parties.

"The principles would likely be a political non-starter for Democrats, infuriating Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi, who have negotiated with President Donald Trump on immigration and left a White House meeting last month indicating a solution was near. They could also divide Republicans, many of whom oppose cutting legal immigration.

"Miller was upset after Trump's dinner with Schumer and Pelosi and has been working since to bring the president back to the tougher stance he took during his campaign." http://politi.co/2fTRiW7

-- "Flake tries to strike DACA compromise," by Burgess Everett: "[Sen Jeff Flake's (R-Ariz.) bill would give children who have been in the United States continuously since 2012, or those protected by the Deferred Action for Childhood Arrivals, conditional resident status for 10 years if they meet certain education or employment conditions. Eventually those people would be eligible for a green card, and ultimately, citizenship. Trump is set to rescind the DACA program in March and is urging Congress to act; he's met with both conservatives and Democrats in efforts to strike a deal.

"In return, Flake's bill would deliver $1.6 billion for border security, build more border access roads and beef up interior enforcement in the United States, which may rankle Democrats. Flake aims to target gang and cartel members for deportation, which is currently not allowed." http://politi.co/2yKjQoR

-- WE'VE had private conversations with Democrats on the House side, who have said they will oppose a bill that beefs up interior enforcement.

****** **A message from Koch Industries:** Koch has been the Environmental Protection Agency's (EPA) first- or second-ranked company for pollution prevention initiatives since 2012. What's more, since 2012, we have implemented more than 1,000 pollution prevention activities across the United States. See how at ChallengeAccepted.com.
******

HURRICANE RELIEF UPDATE -- "RSC chief stakes opposition to hurricane relief

without offsets," by Sarah Ferris: "The Republican Study Committee's chairman is threatening to oppose the next round of hurricane relief funding if Congress doesn't cut spending to cover the costs. 'We're going to come out strong for those to be offset,' Rep. Mark Walker (R-N.C.) told POLITICO late Wednesday. 'Just because Republicans are in charge doesn't mean deficits and debts no longer matter.'

"Walker said he has for weeks told fellow lawmakers, including those in leadership, to demand offsets. Now he is going public with his position as Congress considers the White House's new $29 billion disaster aid request." http://politi.co/2yKFAkv

YOUR MOVE, SENATE -- "House passes budget in first step toward tax reform," by Jen Scholtes: "The House passed a budget Thursday that paves the way for tax reform, slashes spending over 10 years and calls for lawmakers to find at least $203 billion in extra savings from mandatory programs. After months of intra-party wrangling, GOP leaders succeeded in advancing the fiscal 2018 resolution, H. Con. Res. 71 (115), on a 219-206 vote." http://politi.co/2geqNaT

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:44 a.m. : "So wonderful to be in Las Vegas yesterday and meet with people, from police to doctors to the victims themselves, who I will never forget!" ... **at 6:59 a.m.:** "Why Isn't the Senate Intel Committee looking into the Fake News Networks in OUR country to see why so much of our news is just made up-FAKE!" ... **at 7:09 a.m.:** "Stock Market hits an ALL-TIME high! Unemployment lowest in 16 years! Business and manufacturing enthusiasm at highest level in decades!" ... **at 7:50 a.m.:** "Rex Tillerson never threatened to resign. This is Fake News put out by @NBCNews. Low news and reporting standards. No verification from me."

ABOUT THOSE VISITOR LOGS -- "Secret Service: No visitor logs for Mar-a-Lago," by Josh Gerstein: "There are no visitor logs or other system of tracking those who visited President Donald Trump at his winter retreat known as Mar-a-Lago, a Secret Service official confirmed Wednesday. Responding to a Freedom of Information Act lawsuit, Special Agent Kim Campbell said that her agency had a smattering of records regarding some foreign dignitaries and law enforcement officers who met Trump earlier this year during his stays at the Palm Beach resort he owns.

"However, Campbell acknowledged the lack of a comprehensive or even a routine process for tracking such visitors, such as the one used for the White House." http://politi.co/2yJzErY

AT JUSTICE -- "Jeff Sessions Just Reversed A Policy That Protects Transgender Workers From Discrimination," by BuzzFeed's Dominic Holden: "U.S. Attorney General Jeff Sessions has reversed a federal government policy that said transgender workers were protected from discrimination under a 1964 civil rights law, according to a memo dated Wednesday to US attorneys across the country and heads of federal agencies.

"Sessions' memo, obtained by BuzzFeed News, says, 'Title VII's prohibition on sex discrimination encompasses discrimination between men and women but does not encompass discrimination based on gender identity per se, including transgender status.' It adds that the government will take this position in pending and future matters, which could have far-reaching implications across the federal government and may result in the Justice Department fighting against transgender workers in court." http://bzfd.it/2yLdiGs

MARK YOUR CALENDARS -- "Nuke deal hangs in balance as Trump plans Iran policy speech," by the AP's Bradley Klapper and Matthew Lee: "President Donald Trump could announce his secret decision on the future of the Iran nuclear deal next week. U.S. officials familiar with the president's planning said Wednesday he is preparing to deliver an Iran policy speech in which he is expected to declare the landmark 2015 agreement contrary to America's national security interests.

"The speech has been tentatively scheduled for Oct. 12 at an as yet undetermined venue in Washington, according to two officials who weren't authorized to publicly discuss the planning for the event and demanded anonymity. They cautioned that plans could still change, and the White House declined to comment on the timing or substance of Trump's pending announcement." http://bit.ly/2xk1OgQ

REPORTER'S NOTEBOOK -- "Trump Feels His Trip To Puerto Rico Went Great. But What Happens Next Will Define Him," by BuzzFeed's Adrian Carrasquillo: "I was the press pool reporter for the trip, responsible for sending reports to hundreds of reporters around the country. And I am, as far as I know, the only White House press corps reporter of Puerto Rican descent. The trip meant a lot to me. I wanted to capture as faithfully as I could what was happening during the visit, but also what the president's actions and words meant for the island and its struggling residents going forward." http://bzfd.it/2yKimL4

IN THE STATES -- "Blackburn enters Tennessee Senate race, as Haslam passes," by Kevin Robillard http://politi.co/2gdkRik

ACROSS THE POND -- "Theresa May's speech nightmare unites her warring party," by POLITICO Europe's Tom McTague, Annabelle Dickson and Charlie Cooper: "It was excruciating, embarrassing, hard to watch. British Prime Minister Theresa May stood, alone, in front of the nation, coughing and spluttering, her voice giving way as she gave the closing address at her party's annual conference on Wednesday.

"It was meant to be a chance for the U.K. prime minister to resurrect her leadership after a downbeat conference beset by stories of Cabinet splits. Instead, the speech exemplified a wounded prime minister willed on by a party with no appetite for a leadership contest and no credible alternative. The Tory leader, who last year bathed in the warm affection of a party with its eyes fixed on delivering Brexit, clung on as the disasters kept coming. ... As journalists covered their eyes in embarrassment, the party faithful did all they could to get her through it." http://politi.co/2yL4cJZ

MEDIAWATCH -- "NBC Is Opening a News Bureau in San Juan," by TVNewser's Chris Ariens: "The network will rent a house where news crews will be based covering the story of the recovery after Hurricane Maria. NBC will have a full time presence for now, then periodically as the story warrants." http://bit.ly/2fURuo6

-- Maegan Vazquez is joining CNN's breaking news team. She was previously a White House reporter at IJR.

-- Michael Hudson has been named the AP's global investigations editor. He was previously at International Consortium of Investigative Journalists.

BLOOMBERG

EPA's Pruitt Denies He's an Ally of Polluters, Vows to Get Tough

Jennifer A Dlouhy and Jennifer Jacobs
Bloomberg
October 25, 2017
https://www.bloomberg.com/news/articles/2017-10-25/epa-s-pruitt-denies-he-s-an-ally-of-polluters-vows-to-get-tough

Scott Pruitt, the head of the Environmental Protection Agency, vowed that he will get tough on corporate polluters, dismissing critics who cast him as too cozy with industry.

"They don't know me," Pruitt said, during an interview with Bloomberg News in his Washington office. "I've led a grand jury. We are going to do enforcement, to go after bad actors and go after polluters."

Pruitt, the former Oklahoma attorney general, is leading the efforts to roll back Obama-era environmental regulations, including the first limits on carbon dioxide emissions from power plants and an overhaul of clean-water rules. Despite moving to rescind those measures, those that remain in place will be fully enforced, he said.

"I know what it means to prosecute people," he said. "And we've got some of those folks across the country -- those people that are intentionally taking steps to pollute our water, to pollute our air."

While coal miners, manufacturers and oil companies have praised Pruitt's efforts to halt or rescind regulations, environmental advocates say he's the leading example of a Trump administration appointee who has an agenda that conflicts with the very nature of the agency he leads.

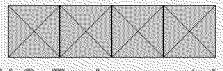
Under former President Barack Obama, the EPA played a pivotal role in the government's fight against climate change, proposing sweeping rules to limit on methane leaks from oil wells and carbon-dioxide emissions from coal plants. Pruitt, who sued the EPA more than a dozen time to challenge those and other regulations, by contrast, is pursuing what he calls a "back to basics" agenda that he says will prioritize action on traditional pollutants.

...

Pruitt highlighted the EPA's decision earlier this month to approve a plan for removing toxins from the San Jacinto Waste Pits, a Superfund site near Houston that began leaking cancer-causing dioxin after flooding from Hurricane Harvey.

That included ordering two companies -- International Paper Co. and a subsidiary of Waste Management Inc. -- to pay an estimated $115 million toward excavating more than 212,000 cubic

yards of contaminated waste from the site. Both companies have objected to the cleanup plan.



"And they are already barking down there," Pruitt said, referencing those companies' complaints. Pruitt said he was told some people would be "surprised" he would seek to hold Fortune 500 companies accountable.

Another example: In June, the Trump administration filed a lawsuit alleging that a Colorado-based oil company repeatedly violated clean air rules by allowing volatile organic compounds to escape from of storage-tank batteries. According to the complaint filed in that civil case, the EPA alleged that PDC Energy Inc. failed to adequately design, operate and maintain control systems on those tanks., resulting in those leaks. That case is ongoing.

"I am here because I really feel called to it," Pruitt said. "My desire each day is to bless the president and the decisions he's making."

Subject: GAO to review Pruitt appearance in beef group's anti-WOTUS video

By Alex Guillén

11/03/2017 06:22 PM EDT

The Government Accountability Office will investigate EPA Administrator Scott Pruitt's appearance in an industry group's video calling for public comments in favor of repealing the Waters of the U.S. rule, according to a letter released today by House Democrats.

Rep. Peter DeFazio (D-Ore.) asked GAO to investigate whether Pruitt's actions violated laws "on the use of appropriated funds for lobbying and publicity or propaganda purposes and the Antideficiency Act," according to the letter, dated. Oct. 31.

The video was posted on Aug. 16 by the National Cattlemen's Beef Association, a major critic of the Obama-era WOTUS regulation. It includes an interview in which Pruitt discusses his criticisms of the rule, along with text urging viewers to submit pre-written comments via the NCBA's website.

The video quickly drew criticisms from environmental groups. EPA at the time said Pruitt sought "engagement with all stakeholders, especially those who felt their voices were ignored by the previous Administration."

GAO previously dinged the Obama-era EPA in 2015 when it concluded the agency's use of a "Thunderclap" social media campaign promoting the WOTUS rule amounted to "covert propaganda."

WHAT'S NEXT: GAO's letter does not specify how long the inquiry will take.

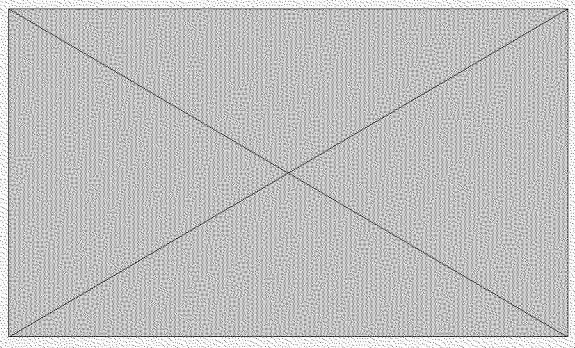
Research consistently finds that Americans exhibit a disturbing level of antipathy toward those on the economic margins.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



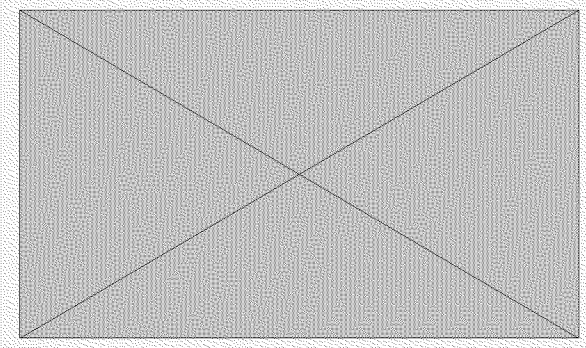
Twenty20

America can't fix poverty until it stops hating poor people

Arthur C. Brooks and john a. powell | CityLab

Research consistently finds that Americans exhibit a disturbing level of antipathy toward those on the economic margins. For growing percentages of middle- and upper-class people, interactions with the poor and working class are rare. We need to address the forces that are pulling us apart along social and economic lines. And we need, both personally and structurally, to change

the way we see those who are struggling.

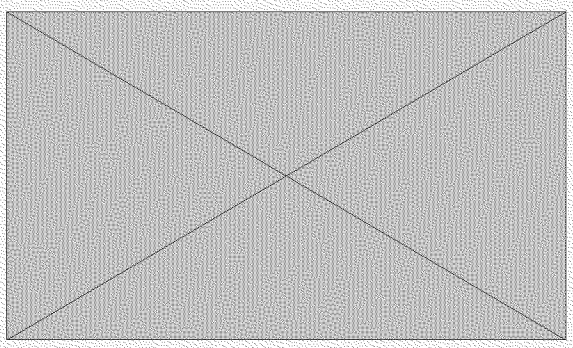


Twenty20

Do kindergartners learn from playacting discrimination?

Frederick M. Hess and Grant Addison | National Review

In a Chicago school this past April, one kindergartner fretted that he wouldn't be able to get to his spare underpants if he had an accident. Why? Staff at the prestigious Catherine Cook School had opted to deny 5- and 6-year-olds access to their cubbies to school them on discrimination. If one student did this to another, we'd call it bullying. What do we call it when educators do it?



Reuters

The Washington Post gets retirement wrong

Andrew G. Biggs | National Review Online

Experts disagree on how well prepared Americans are for retirement, and any researcher would admit that a legitimate debate rages on. That's what makes The Washington Post's lengthy exposition of "The New Reality of Old Age in America" so disheartening. It has everything that poor journalism exhibits: reliance on anecdotes, misleading and sometimes outright incorrect data, and one-sided citation of experts.

The link between GDP and corporate taxes

Matt Jensen, Aparna Mathur, and Cody Kallen | AEIdeas

Given that corporate tax reform feels more likely now than ever before in recent memory, AEI researchers are sharing an approach that anyone can use to generate reasonable estimates of how economy-wide investment and GDP would respond to corporate tax changes. This approach is quite useful when considering alternative paths for corporate income tax reform.

Subject: Morning Media: Press threats at home and abroad --Trump's taking questions -- BuzzFeed 'revolt' -- Governor Scarborough? -- New York Magazine turns 50

By Michael Calderone | 10/17/2017 05:38 AM EDT

PRESIDENT DONALD TRUMP'S ATTACKS on The New York Times, CNN and NBC grab headlines, but the effect of his rhetoric may be most felt by reporters on the ground in American cities and contentious spots like Standing Rock, as well as in countries where press freedom is a constitutional guarantee.

- "The most dangerous place to be a journalist in America is at a protest," Peter Sterne and Jonathan Peters write in the Columbia Journalism Review, noting that most of the 20 arrests and 21 physical attacks on the press so far this year have occurred at demonstrations. They also tie such mistreatment to an anti-press climate fueled by Trump, writing that "with his near-daily denouncements of the press, the president has helped normalize abuses against journalists by ordinary people."

- As I wrote Thursday, Trump's recent suggestion that someone "look into" news organizations over their coverage was at odds with the U.S. State Department's condemnation of Turkey that same day for convicting a Wall Street Journal reporter. Such comments carry "a worldwide price," writes The Washington Post's Margaret Sullivan. Joel Simon, executive director of the Committee to Protect Journalists, agreed, telling Sullivan that "when the president consistently speaks that way, there's a loss of U.S. influence and credibility on matters of press freedom."

Good morning and welcome to Morning Media. Drop a line at mcalderone@politico.com and follow @mlcalderone. Archives. Subscribe.

SPEAKING OF PRESS FREEDOM, FCC Chairman Ajit Pai has to make a choice in responding to Trump's suggesting last week that NBC lose its "license" following critical coverage: free press or the president. POLITICO'S Margaret Harding McGill reports that "Pai could confront public questions about the issue as soon as Tuesday at a telecom law event in Washington, forcing him to choose between his longstanding defense of freedom of speech and the man who made him chairman."

TRUMP'S IMPROMPTU PRESS EVENTS, like the one Monday afternoon in the Rose Garden, can play to his strengths and the media's weaknesses. POLITICO'S Jason Schwartz writes how it "had not been listed on the president's official schedule and, with scant time to set up chairs, reporters bunched in on the White House lawn. As Trump pointed out to call on different reporters, many took to shouting out their questions over each other." Still, some White House reporters are happy to get the opportunity.

- "The President is taking questions much more frequently in recent weeks and that is a good thing," ABC's Jonathan Karl said. "There is no substitute for a formal press conference, but regardless of format, it is important to have the opportunity to ask the president questions and

that is happening much more often." Karl also said that he has "probably had more opportunities to ask questions of President Trump over the past two weeks than I had of President Obama during the last two years of his presidency."

MORE ON TRUMP'S ROSE GARDEN PERFORMANCE, from POLITICO'S Josh Dawsey: "It was the latest instance of Trump bypassing his own communications staff to speak directly to the press, and the public, after weeks of blistering criticism and as White House aides struggle with the increasing possibility that they may end the year without accomplishing any of their grand legislative goals."

BREITBART CHAIRMAN STEVE BANNON will attend an event today in Scottsdale, Arizona in support of Kelli Ward, who is challenging incumbent Republican Sen. (and Trump critic) Jeff Flake for the party's nomination. Laura Ingraham, the conservative radio host whose new 10 p.m. Fox News show will premiere later this month, is headlining the event.

TRUMP HAS BYPASSED CONSERVATIVE TALK RADIO: CNN's Oliver Darcy writes on the president's "mysterious absence" from a presumably well-suited medium, and notes how the drought may end. "Last week, as this story was being prepared for publication, CNN asked the White House if the president planned on appearing on talk radio," Darcy writes. "On Monday, a White House official told CNN the president has carved time out of his schedule to participate in a talk radio event at the White House on Tuesday."

WEINSTEIN EFFECT, CONT'D: The Times' Jim Rutenberg, Rachel Adams and Melena Ryzik write on the floodgates opening in Hollywood: "Facebook, Instagram and Twitter were flooded with messages from women who used the hashtag #MeToo to acknowledge that they had dealt with sexual harassment or assault. A tweet posted by the actress Alyssa Milano inspired the online campaign. ... Twitter promoted the #MeToo campaign on Moments, its platform of highlighted stories, and the hashtag went on to be used more than 500,000 times in its first 24 hours by people from all lines of work."

NATE SILVER QUESTIONS WEINSTEIN-CLINTON FRAMING: "It's amazing to me that both the right-wing and the mainstream media have tried so hard to make the Weinstein scandal about Hillary Clinton when the real scandal is so much worse and implies that the establishment which helped to enable it is deeply corrupt," he tweets. "If you're really 'anti-establishment,' you should be *outraged* by Weinstein in ways that have nothing much to do with Clinton or Democrats."

MANAGING A MEDIA-OBSESSED PRESIDENT: White House aides try to manage Trump with "frequent praise" in public and showing him positive news coverage, as The Washington Post's Ashley Parker and Greg Jaffe report. In addition, they write, "some aides and outside advisers hoping to push their allies and friends for top postings, such as ambassadorships, made sure their candidates appeared speaking favorably about Trump in conservative news outlets - and that those news clippings ended up on the president's desk."

WASHINGTON POST AND "60 MINUTES" GET RESULTS: "President Trump declined on Monday to express confidence in Rep. Tom Marino (R-Pa.), his drug czar nominee, in the

wake of the Washington Post/"60 Minutes" investigation that found the lawmaker helped steer legislation that made it harder for the government to take some enforcement actions against giant drug companies."

BUZZFEED STAFFERS 'REVOLT' OVER ROGER STONE PIECE: Splinter's David Uberti writes: "Several BuzzFeed staffers openly criticized their site's decision Friday to publish an op-ed arguing that GOP political operative Roger Stone and President Donald Trump share 'a long history as an ally of the LGBT community,' renewing questions on the acceptable range of voices in public debate and how opinion journalists balance provocation and facts in the Trump era."

GOVERNOR SCARBOROUGH? MSNBC host and now-political independent Joe Scarborough prompted speculation Friday that he'd consider running for governor of Connecticut, where he lives, after tweeting an an emoji in response to a suggestion that he enter the race. But Scarborough tamped down the chatter Monday after being added to a local poll. "No thank you," he tweeted with another emoji. Scarborough, a former Florida congressman, has flirted before with running for office. An MSNBC spokesman did not immediately respond to a request for comment.

TRAGEDY: Maltese journalist Daphne Caruana Galizia, who has reported deeply on government corruption and the Panama Papers disclosures, was killed in a car bombing Monday.

NEW YORK MAGAZINE TURNS 50: The new issue, with cover illustrations by Alex Katz, kicks off a year-long celebration for the magazine that includes next month's publication of "Highbrow, Lowbrow, Brilliant, Despicable: 50 Years of New York Magazine."

REVOLVING DOOR:

Kinsey Wilson, who was recently the New York Times' executive vice president for product and technology and remains a senior adviser to president and CEO Mark Thompson, has been named Shorenstein Center visiting fellow for fall 2017 and spring 2018. Shorenstein director Nicco Mele said Wilson's "role in an advisory capacity, as we work on various projects related to the sustainability of news, will be immensely valuable."

Matthew Ingram, a highly regarded writer on media and technology, and most recently at Fortune, is joining the Columbia Journalism Review as chief digital writer.

David Byler, most recently with Real Clear Politics, is joining The Weekly Standard as staff writer and chief elections analyst.

And **Cristiano Lima**, who has contributed to this newsletter, is now a POLITICO breaking news reporter.

EXTRAS:

- The Times' Michael Grynbaum talks to Breitbart White House reporter Charlie Spiering.

- Ex-Obama staffer-turned podcaster Tommy Vietor feuds with Fox News' John Roberts.

- Longreads is looking to raise $25,000 to help support writers, photographers and illustrators.

- NBC fires "Today" editor over leaked Lawrence O'Donnell clip.

- North Korean hackers targeted British broadcaster Channel 4 over a planned "series about a British nuclear scientist kidnapped in Pyongyang."

- Frank Bruni, Maggie Haberman and other NYTers sing Stephen Sondheim's "Broadway Baby."

KICKER:

"I think it's embarrassing to report on a president like this. It's kind of humiliating in a way to the entire institution - and that institution, the presidency, includes the White House press corps. And so instead of facing full-frontal that fact, I think journalists try to make it seem a little bit more normal than it really is," - *NYU professor and press critic Jay Rosen on MSNBC's "The Beat with Ari Melber."*

Waters of the US Rule and Clean Water Act fail to provide cost-effective improvements in water quality

November 2017

Nathan P. Hendricks

Key points

- **The Clean Water Rule — commonly referred to as the Waters of the US (WOTUS) rule — defines the jurisdiction of the Clean Water Act over all waters that have a "significant nexus" with navigable waters.**
- **The WOTUS rule creates regulatory uncertainty since much of the jurisdiction is left to case-by-case determination and is burdensome given the large fines imposed by the Clean Water Act.**
- **The WOTUS rule would have little impact on water quality because nonpoint emissions are largely exempt.**
- **Markets for water quality provide an opportunity for cost-effective improvements in water quality, but property rights for emissions must be clearly defined.**

Subject: EPA deputy nominee Wheeler represented ethanol group

By Alex Guillén

10/18/2017 03:47 PM EDT

Andrew Wheeler, the nominee for EPA deputy administrator, worked for the ethanol group Growth Energy this year, according to his financial disclosure documents.

Wheeler, an attorney at Faegre Baker Daniels, was previously known to lobby for coal producer Murray Energy, among several other companies, as revealed in lobbying disclosures. But his financial disclosure shows Wheeler provided "strategic advice and counseling" rather than lobbying services to Growth Energy.

Growth Energy hired FBD for lobbying earlier this year, according to records, but Wheeler was never named on those disclosures.

"We hired Faegre Baker Daniels for lobbying and consultant help on renewable fuels issues. Andrew Wheeler has not lobbied on our behalf but has provided consultant services," Growth Energy spokeswoman Jenni Roberson said in an email. Wheeler did not return a request for comment today.

Growth Energy was one of the groups that successfully sued EPA over its 2014-2016 Renewable Fuel Standard volumes. It has also opposed EPA Administrator Scott Pruitt's recent move to potentially weaken biodiesel requirements, a proposal that has angered several key corn state Republican senators and threatened to hold up several other EPA nominees.

The financial disclosure shows Wheeler also provided advice and counsel, but not lobbying work, to International Paper, Archer Daniels Midland and General Mills. Previously reported lobbying clients included Xcel Energy, Bear Head LNG and Energy Fuels Resources.

WHAT'S NEXT: Wheeler was nominated earlier this month and has yet to have a nomination hearing in the Senate.

Subject: U.S. Court stays EPA truck trailer rule

By Eric Wolff

10/27/2017 02:48 PM EDT

The D.C. Circuit Court of Appeals today stayed an EPA rule that would have required truck trailers to be more aerodynamic.

"The EPA Final Rule on review is hereby stayed insofar as it purports to regulate trailers," the court wrote. "Petitioner has satisfied the stringent requirements for a stay pending court review."

The grant of a stay signals that the petitioners could win on the merits.

The Truck Trailer Manufacturers Association challenged the rule soon after it was finalized last year. The case has been held in abeyance at EPA's request, but the rule was set to go into effect on Jan. 1.

The lawsuit was a narrow challenge to EPA's requirement that the trailers used to haul cargo meet new regulations designed to make them lighter and more aerodynamic to reduce their fuel use and emissions.

Power Plant Rule Rewrite to Focus on Two Waste Streams: EPA

Posted August 15, 2017, 12:41 P.M. ET

By Amena H. Saiyid

The EPA will rewrite toxic wastewater limits from air pollution controls and bottom ash at power plants, affecting more than a thousand plants nationwide.

The change involves limits for wastewater associated with using scrubbers to reduce sulfur dioxide emissions and transporting bottom ash that contain arsenic, selenium, nitrates, mercury, zinc and other pollutants, the Environmental Protection Agency told the U.S. Court of Appeals for the Fifth Circuit in a motion filed Aug. 14.

The Fifth Circuit, which is reviewing challenges to a 2015 rule, had stayed the case pending EPA's decision on what part of the rule it would reconsider.

Power plants are responsible for 30 percent of all industrial discharges of toxic pollutants into the surface waters, according to an EPA factsheet. The 2015 rule would require all owners and operators of power plants to invest significant capital into building and designing pollution controls and associated infrastructure for each plant to comply with the rule. The EPA estimated these costs at $480 million, but engineers say the costs would be much higher.

The 2015 effluent limits for steam generating electricity plants (RIN:2040-AF14) required the power plant industry to install best available technology that is economically achievable to control six sources of wastewater.

The Utility Water Act Group, the Southwestern Electric Power Co., a subsidiary of American Electric Power, and Union Electric Co., an Ameren Corp. subsidiary, petitioned the EPA March 24 and the Small Business Administration Office of Advocacy petitioned the agency April 5, all asking for reconsideration of the rule's impact on jobs. The groups also asked the EPA to postpone compliance dates related to the six waste streams. The rule would have taken effect Jan. 1, 2018.

The EPA sought comment on the postponement, but hasn't yet decided whether it will postpone all the dates, or just those associated with the two waste streams for which it has decided to rewrite regulations.

Exxon Mobil's $2.6M Fine for Ruptured Pipeline Tossed

Posted August 15, 2017, 04:09 P.M. ET

By Andrew M. Ballard

Exxon Mobil will get a break on a $2.6 million fine levied against it for a 2013 pipeline spill in Arkansas.

The U.S. Court of Appeals for the Fifth Circuit ordered the Pipeline and Hazardous Materials Safety Administration to reconsider the fine in an Aug. 14 ruling because the company properly complied with certain safety regulations at issue (ExxonMobil Pipeline Co. v. DOT, 5th Cir. App., No. 16-60448, 8/14/17).

Exxon Mobil's Pegasus Pipeline ruptured near Mayflower, Ark., spilling several thousand barrels of crude oil about 22 miles north of the state's capital, Little Rock.

Seam Defect

A PHMSA investigation into the accident identified the cause as a manufacturing defect in the seam of the pipe maintained by Exxon Mobil Pipeline Co., and the agency assessed the $2.6 million fine in October 2015, based on nine alleged regulatory violations. The citations arose from risk factor and pipeline integrity assessments.

Exxon Mobil challenged six of the violations cited by regulators, and the Fifth Circuit found five of those decisions to be "arbitrary and capricious," because it said the company reasonably complied with applicable guidance.

The appeals court did affirm the agency's decision regarding one of the challenged violations, which requires pipeline operators to develop and follow a written integrity management program. But the court said the $783,300 elevated penalty for that cited violation also needed to be lowered as there was no indication the company's failure to use a proper assessment tool was a cause of the spill.

Requirements Followed

"According to the unambiguous text of the pipeline integrity regulations, pipeline operators are required to 'consider' various risk factors when they prioritize pipelines for assessment," according to Judge Jennifer Walker Elrod. "This is a process-based requirement that does not mandate a particular outcome, but rather prescribes a careful, informed decision-making process that pipeline operators must undergo in good faith," Elrod said in her Aug. 14 opinion.

As Exxon Mobil complied with that requirement when it determined the Pegasus Pipeline was not susceptible to seam failure by applying the appropriate methodology, the bulk of the violations were incorrectly cited and the fine required revision, Elrod wrote.

Suann Guthrie, a spokesperson for Exxon Mobil, told Bloomberg BNA Aug. 15 that company officials were "still reviewing the decision" and declined to comment further.

Agency representatives didn't immediately respond to requests for comment.

Liability Relief Central to Superfund Site Reuse, Investors Say

Posted August 15, 2017, 7:00 A.M. ET

By Sylvia Carignan

Liability concerns may scare off investors interested in renovating Superfund sites, which could hobble the EPA's new effort to woo third parties to clean up the properties.

Enticing companies to redevelop properties with contaminated groundwater or soil would likely require the Environmental Protection Agency to protect landowners from long-term cleanup liabilities, building on similar provisions commonly used for less-contaminated brownfields, people involved with the Superfund program told Bloomberg BNA.

The EPA's Superfund task force recommendations, released in July, emphasize leveraging private investment to clean up Superfund sites for reuse, much as the agency's Brownfields Program provides grants to developers to redevelop sites. The task force has focused on changes it can make to the Superfund program that don't require legislation.

Private investment in brownfields sites can be a catalyst for redevelopment, Dan French, chief executive officer of Brownfield Listings, which runs an online bulletin board for brownfields sites open for redevelopment and developers looking for sites, told Bloomberg BNA. But the Superfund program doesn't yet work that way.

"Can Superfund be opened up and made more flexible? Yeah, it's time for a refresh," French said. A lack of new sources of capital may be "the bigger problem undercutting the program's potential."

Though questions linger about liability and funding, the possibility of modeling Superfund after brownfields intrigues some investors.

Third Party Funding

Superfund sites would have to be more appealing investments to get third parties interested in the initial purchase, Mathy Stanislaus—former assistant administrator at the EPA's Office of Land and Emergency Management, which handles Superfund—told Bloomberg BNA.

"The reason that [Superfund] is a government program is because it's fundamentally a health risk and an ecological risk" program, Stanislaus said. Investors were more willing to clean up brownfields, which were spun off from the Superfund program in 2002, once they were shielded from the liability.

Brownfields sites can be contaminated, but are generally not as toxic as Superfund sites. Brownfield properties are sites where redevelopment or reuse "may be complicated by the presence of a hazardous substance, pollutant, or contaminant," according to the Small Business Liability Relief and Brownfields Revitalization Act (SBLRBRA).

Albert "Kel" Kelly, EPA Administrator Scott Pruitt's special adviser on Superfundtold Bloomberg BNA the agency wants to make the Superfund program more like the Brownfields Program by drawing on

Superfund money to leverage more private funding.

"Making Superfund more like the Brownfields [Program] is the dream of many redevelopment pros," French said.

But Stanislaus said the task force's desire to blend the Superfund and Brownfields programs shows a "fundamental misunderstanding" of why they're separate.

"You're not fundamentally going to promote third-party investment in these properties—these are large liabilities," Stanislaus said. "You will get the private sector to invest in a real estate transaction when the market conditions are right and the liability concerns are appropriately managed."

Sarah Sieloff, executive director of the Center for Creative Land Recycling, said some firms may be primed to take that role. "EPA sees the role of a third party as a potential business opportunity for firms that already invest in highly contaminated land, and have some expertise managing the requirements," she told Bloomberg BNA.

That may encourage a market for Superfund sites to grow out of the existing real estate field, attracting firms that had not previously been interested in contaminated lands.

"Whether or not they invest in Superfund sites," she said, "these firms would be some of the most likely to possess the capacity to act in the role EPA anticipates."

Banking on Land Banks

The city of Cleveland's Industrial-Commercial Land Bank takes on site assessments and other pre-redevelopment tasks to prepare properties for reuse.

The land bank has addressed brownfields as well as closed Superfund sites that needed more remedial work.

According to David Ebersole, the city's interim director for economic development, the land bank helps fund further cleanup efforts at closed Superfund sites so that the properties can be put back into productive use.

Ebersole told Bloomberg BNA that the land bank has not yet had to decide whether to start working with any active Superfund sites.

But if the opportunity arises, Ebersole said, the EPA and responsible parties would have to provide certain assurances on potential liability and cleanup funding before the land bank would consider taking on an active Superfund site.

Arthur Bogen, president of the Connecticut Brownfield Land Bank, said the bank approaches sites as transactions. "We help the project by organizing it, identifying regulatory compliance and liability relief, and locking down the redevelopment plan and developer," he told Bloomberg BNA.

Bogen said the bank has not considered Superfund sites, and that the sites are much more expensive to clean up.

"There are some Superfund sites we are aware of in Connecticut, but the cost of the cleanup exceeds the funding we could envision," he told Bloomberg BNA.

Legal Protections

Eric Williams, president of Legacy Land Stewardship, primarily takes on mining properties and former industrial properties where potentially responsible parties can pay for cleanup.

His public benefit corporation is working on properties such as the former Cotter Corp. uranium mill, a Superfund site outside Canon City, Colo. "We get involved in properties that oftentimes don't have strong real estate value," he told Bloomberg BNA.

Legacy Land Stewardship completes the closure of the site on the responsible party's behalf. But, he said, that may not be the end of it.

"In most cases, properties are never fully cleaned up, and so there's long-term care that's still required for those properties," he said.

The EPA's task force notes in its recommendations that "even the most comprehensive arrangement" does not protect a responsible party from being sued by EPA in the future for new contamination discovered at its Superfund site.

"Five years from now, if [EPA representatives] are unhappy with the cleanup, or are critical of it, they may come back to you as the original owner and say, 'You need to fix this,'" said Ron Tenpas, partner at Morgan, Lewis & Bockius and counsel for the Superfund Settlements Project, which represents companies active on waste issues.

On the Hook

The EPA's task force recommendations suggest site-specific agreements that would allow third parties to assume legal liability and remediation responsibilities at a site. The agency must now decide how to implement the recommendations by the end of fiscal year 2018.

Those third parties are separate from contractors that are hired to perform cleanup work at a site, such as engineering company Bechtel's construction of a radioactive waste treatment plant at the Department of Energy's Hanford Superfund site in Washington state.

For example, Stanislaus said, a third party might be interested in taking on a Superfund site with soil and groundwater contamination.

"If a third party just wants to pay for soil cleanup, not groundwater, that may be a legitimate transaction, but at some point, someone needs to be on the hook for the long-term obligations of the groundwater cleanup," Stanislaus told Bloomberg BNA.

An agreement that exists in the brownfields world could be adapted for Superfund sites, Tenpas said.

The "bona fide prospective purchaser" (BFPP) provision in the 2002 brownfields act protects landowners from liability for cleanup costs if they meet certain conditions, including:

- reviewing records and inspecting the site for the presence or possibility of contamination;

- demonstrating that the purchaser is not affiliated with any liable party;

• complying with land use restrictions; and

• cooperating with information requests.

"Some third parties still remain concerned about potential liability and the availability of the BFPP protection at contaminated properties," the EPA's task force recommendations state.

To protect third parties from future liabilities, Tenpas said the EPA would need to provide long-term assurances when the third party buys the contaminated site, not just EPA guidance that covers the subject.

"You need a mechanism at the time of the sale," Tenpas said.

Trump Said to Be Signing Order to Speed Up Public-Works Permits

Posted August 15, 2017, 11:02 A.M. ET

By Mark Niquette

President Donald Trump plans to sign an executive order August 15 designed to streamline the approval process for building roads, bridges and other infrastructure by establishing "one federal decision" for major projects and setting a two-year goal for permitting.

The order will create accountability and discipline for the permitting process and will not require a change in law, said a person familiar with the matter. The process can sometimes involve approvals by multiple agencies and duplicative reviews, officials have said.

Trump is expected to participate in an infrastructure discussion during his visit to Trump Tower in New York City with his team including Transportation Secretary Elaine Chao and Gary Cohn, director of the National Economic Council, the White House said.

Because the federal government owns less than 10 percent of U.S. infrastructure, the Trump administration has focused on efforts to accelerate environmental reviews and permitting for projects that can take years and create unpredictability for investors.

"This is the most boring thing we do but absolutely the most impactful thing," DJ Gribbin, special assistant to the president for infrastructure policy, said during a June 23 appearance at the U.S. Conference of Mayors in Florida.

The Trump administration has said it plans to release a legislative package by this fall to meet the president's pledge to invest $1 trillion to upgrade U.S. infrastructure. The White House signaled it wants to allocate $200 billion in federal dollars over 10 years to pay for large-scale and rural projects and to induce states, localities and the private sector to spend $800 billion.

Previous Order

Trump approved an earlier executive order just four days after taking office to expedite environmental reviews and approvals for high-priority infrastructure projects, and White House officials in March convened a working group of federal agencies to identify policies, regulations and statutes that hinder project approvals.

The president also announced on June 9 during the White House's "infrastructure week" that he was creating a council that already exists, the Federal Permitting Improvement Steering Council. It was authorized by Congress in 2015 and implemented by President Barack Obama. The council is not meeting its potential, the White House said at the time.

The Business Roundtable sent Cohn a letter on April 7 reiterating that "existing law already provides a mechanism for comprehensive reform" of the permitting process for major projects. Critics say that while existing procedures can be streamlined, most delays are caused by the need for state and local approvals and other factors including available funding.

A fact sheet the administration released with its budget on May 23 calls for designating a single federal entity to shepherd each project through the review and permitting process instead of navigating multiple agencies, as well as shifting infrastructure permitting to state and local officials where appropriate.

That's particularly important for private-sector investors, who have capital available but lack enough projects and certainty about deals, Chao has said.

Democrats have urged the administration to focus on the streamlining provisions that have already been approved but not yet fully implemented and said the problem is really a lack of direct federal spending for projects.

Profitable Pickup Trucks, SUVs May Get Break in Trump Review

Posted August 15, 2017, 9:48 A.M. ET

By Ryan Beene and John Lippert

A move under consideration by the Trump administration could ease tough fuel-efficiency standards set to take effect in 2021 on pickups, SUVs and other light trucks, the bulwark of U.S. auto industry sales and profits.

For the 2021 model year, light trucks must average roughly 33 miles per gallon to comply with the current standards, a gain of more than 6 percent from model year 2020, according to estimates from the National Highway Traffic Safety Administration. That's triple the pace of any annual gain for trucks starting in model year 2017, the first year of the current standards, which were finalized in 2012.

President Donald Trump hasn't proposed any changes to the standards yet. But in recent weeks, both NHTSA and the U.S. Environmental Protection Agency signaled a new willingness to alter the rules earlier than originally planned. The EPA formally asked for public comment on whether its 2021 standards are appropriate and NHTSA said it may review the year in an upcoming rulemaking.

"The domestic Big Three are the big winners, and Fiat Chrysler is arguably the most advantaged" if Trump freezes the standards, said Gopal Duleep, president of H-D Systems, a Washington, D.C.-based research company.

General Motors Co., Ford Motor Co. and Fiat Chrysler Automobiles NV derive more than three-

quarters of their U.S. sales from light trucks. Even Toyota Motor Corp., which has car and truck sales more closely balanced, would catch a break. For the 2016 model year, Toyota forecasts that its light truck fleet may fall nearly 9 percent below the government's fuel economy target, according to figures released by NHTSA.

Any short-term regulatory relief could handcuff automakers if it allows them to fall behind in a global race to cut emissions with electric motors that either supplement or replace gasoline engines, said Duleep. But in the short run, automakers are likely to welcome any easing of the regulations, he said.

Automakers have been preparing for the rules since they were announced in 2011, and analysts say they're unlikely to make significant changes even if Trump moved to weaken the rules. Instead, carmakers would see a huge increase in efficiency credits they could use to help them meet stiffer targets in later years, said Dave Cooke, senior vehicles analyst with the Union of Concerned Scientists, an environmental group.

"If their plans are in place and they receive additional credits, it just makes the later years' standards that much easier to meet," Cooke said.

Fiat Chrysler Chief Executive Officer Sergio Marchionne may be bringing out new Ram Pickup and Jeep SUV models, but he's not ignoring electrification. He told investors in July that after 2022, half of his Maserati models will be battery powered.

According to the agreement the Obama administration reached with automakers and announced in 2011, much of the efficiency increase—particularly for trucks—was to come after 2020 to give automakers time to comply. The delay was seen as a crucial factor in the decision by most automakers to endorse the plan. Ford's F-Series pickup trucks alone account for the majority of the company's North American profits.

NHTSA also has said it will study freezing the standards after model year 2020 as a baseline scenario in an environmental review of pending fuel economy requirements for 2022-2025. The deliberations come as part of a so-called mid-term review included in the Obama administration's plan to boost fuel economy to a fleet average of more than 50 miles per gallon by 2025.

A freeze or cut after 2020 would make good on Trump's pledge to the chief executives of Detroit's automakers to slash environmental regulations that he made during his first days in office. It would come as GM is cutting shifts at its passenger-car assembly plants to avoid excessive inventories, Ford is reviving dormant truck nameplates like the Bronco and the Ranger and as Fiat Chrysler has already killed its slow-selling Chrysler 200 sedan.

But for now, automakers say they're simply welcoming Trump's reopening of the review after Obama sought to end parts of it during his last days in office, and are not backing a specific set of revisions.

"Global Automakers has only asked that the mid-term review be conducted in a transparent and deliberate process, based on the facts," said Lauren Boland, communications manager for the trade group, which includes Toyota and Honda Motor Co.

The trade group has not asked to put the already-final 2021 rules under review. Nor has the Alliance of Automobile Manufacturers, which represents GM, Ford, Fiat Chrysler and others, according to spokeswoman Gloria Bergquist.

"Let the facts come in and let the evidence dictate a decision next spring that optimizes our nation's environmental and economic objectives, consistent with affordability," she said in an email.

The EPA plans to determine whether the tailpipe standards for 2021 need to change by next April. That ruling could carry another risk for automakers: driving a wedge between California and Washington regulators, who've been coordinating their rules since 2011 to allow the companies to sell the same vehicles in all 50 states.

The state of California has already said it has no plans to change its 2025 emissions targets, which are followed by several other states that combined account for around 30 percent of U.S. auto sales.

"It was very difficult to get a national standard in the first place," said Stephanie Brinley, senior automotive analyst at IHS Markit. "It's best for the country to have a common standard."

Authorization for Freeport LNG Export Facility Upheld by Court

Posted August 15, 2017, 11:19 A.M. ET

By Rebecca Kern

A federal appeals court upheld the Energy Department's authorization of a Freeport LNG Development L.P., liquefied natural gas export facility in Texas, rejecting the Sierra Club's assertion that the department didn't go far enough to assess the indirect environmental impacts of the project.

The U.S. Court of Appeals for the District of Columbia Circuit held that "the department offered a reasoned explanation as to why it believed the indirect effects pertaining to increased gas production were not reasonably foreseeable."

The Sierra Club claimed in its lawsuit that the Energy Department didn't assess the indirect effects of LNG exports, including the impacts of a likely increase in natural gas production and usage that will result from the export authorization. However, the D.C. Circuit said the department was not required to "foresee the unforeseeable."

"We cannot say that the department failed to fulfill its obligations under [the National Environmental Policy Act] by declining to make specific projections about environmental impacts stemming from specific levels of export-induced gas production," D.C. Circuit Judge Robert Wilkins wrote in an Aug. 15 opinion.

Last year, the D.C. Circuit denied a Sierra Club lawsuit over the Federal Energy Regulatory Commission's approval of the Freeport LNG terminal, saying the indirect environmental impacts of LNG exports would be better addressed by the Energy Department. It was one of four Sierra Club LNG petitions against FERC that the D.C. Circuit denied.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

The export facility, located on Quintana Island about 70 miles south of Houston, is expected to be

completed in 2019 and will produce and export 15 metric tons per annum (MTPA) of LNG, according to the company's website.

Nuclear Power's Woes Imperil U.S. National Security, Moniz Says

Posted August 15, 2017, 7:49 A.M. ET

By Ari Natter

The decline of the U.S. nuclear-power industry puts America's security at risk, according to a report being released Aug. 15 by former Energy Secretary Ernest Moniz that calls for greater federal investment.

The report from the Energy Futures Initiative and obtained by Bloomberg News says a commercial atomic power sector is necessary to keep uranium-processing technology away from terrorists and other bad actors as well as support nuclear-powered Navy vessels.

The report by Moniz, a nuclear scientist who served as energy secretary under President Barack Obama, calls for expanded government loan guarantees, tax incentives and research on nuclear technology. The report doesn't mention President Donald Trump, who is proposing cutting nuclear research funding and killing the loan guarantee program.

Nuclear power makes up about 20 percent of U.S. electricity generation, but the industry has been struggling. Five nuclear plants, with a combined capacity of 5 gigawatts, have closed early since 2013, and an additional six plants are scheduled to shutter early over the next nine years. Of the two new nuclear plants under construction in the U.S., one was halted by Scana Corp. last month and backers of the other, Southern Co.'s Vogtle plant in Georgia, are seeking additional aid from the federal government.

Westinghouse Electric Co., the nuclear technology pioneer that is part of Toshiba Corp., went bankrupt in March, after it hit delays with its AP1000 reactors at each of those plants. After it declared bankruptcy, Westinghouse—whose technology is used in more than half the world's nuclear power plants—said it shifted its focus from building reactors to helping dismantle them.

Trump pledged to help the industry and Energy Secretary Rick Perry is conducting a study of the electric grid aimed at helping so-called baseload power plants, which includes coal and nuclear. But Trump's budget also proposed deep cuts to the Energy Department, including shuttering the loan guarantee program Moniz says should be expanded and cutting research spending.

Moniz, who served as Energy Secretary from 2013 to January 2017, also serves as CEO of the Nuclear Threat Initiative, a nonprofit organization that works for nuclear disarmament, securing nuclear materials, and nonproliferation.

The U.S. needs companies and engineers that can both build and run nuclear enterprises, Moniz, a nuclear physicist himself, said in the report. The U.S. Navy's reactors require supplies and qualified engineers, and American nuclear scientists fill vital national security roles, it said.

Companies, such as BWX Technologies Inc. of Lynchburg, Virginia manufacture nuclear components for both the commercial nuclear industry and naval reactors. If the commercial business collapses, that may mean one less company able to process highly enriched uranium, according to the report.

Shrinking Enterprise

"A shrinking commercial enterprise will have long term spillover effects on the Navy supply chain, including by lessened enthusiasm among American citizens to pursue nuclear technology careers," according to the report.

In addition to extending a tax credit for new nuclear power and the Energy Department's loan guarantee program, the report says the federal government could also direct the Federal Energy Regulatory Commission to "place a greater emphasis on the national security importance of nuclear power and its associated supply chain."

Coal and nuclear power "need to be properly compensated to recognize the value they provide to the system" and "should be recognized as an essential part of the fuel mix," FERC Chairman Neil Chatterjee said Aug. 14

Southern Wins Early Review of Nuclear Reactor Cost Overruns

Posted August 15, 2017, 02:05 P.M. ET

By Mark Chediak and Margaret Newkirk

U.S. utility owner Southern Co. may have a better idea of how much of an estimated $25 billion nuclear power project it will be allowed to charge Georgia customers before a reactor is even online.

Georgia utility regulators voted 4 to 1 on Tuesday to review a new cost estimate for two delayed reactors under construction in the next few months. The move could offer Southern, which supported the measure, clarity sooner on how much of the billions it's investing in the project are recoverable through customer rates. The state Public Service Commission and Southern had previously agreed to assess expenses once a reactor was finished.

"This would send a message to the company, company's partners, Wall Street and ratepayers that the commission continues to be supportive of this project," Georgia Public Service Commission Chairman Stan Wise said at the meeting.

Although the measure included an amendment that would allow the commission to rescind Tuesday's vote or any others if Southern decides to abandon the project, it signals support among regulators for the project to continue, according to analysts at Guggenheim Securities LLC. Georgia regulators would need to sign off in order for it to go forward given the cost increases and delays.

"While Chairman Wise's motion could be viewed as punitive to the extent it leaves the door open for the commission to re-visit prior approvals, we view it as a push toward proceeding with construction," Shahriar Pourreza, a New York-based analyst for Guggenheim Securities, said in a note.

Costs Spiral

Earlier this month, Southern released new estimates indicating that the costs of the Vogtle reactors may total more than $25 billion, almost double original estimates. In March, the project's lead

contractor, Westinghouse Electric Co., filed for bankruptcy, and the first reactor may not be finished until 2022.

The reactors, already years behind schedule, are the only ones actively under construction in the U.S. They've come to represent the last and best hope for a nuclear renaissance that has failed to materialize in the U.S. following Japan's Fukushima accident. Scana Corp. pulled the plug in July on a similar plant in South Carolina after the costs of that project jumped to more than $20 billion.

Southern is slated to decide by the end of this month whether it even wants to move forward with the Vogtle plant. The company's chief executive officer, Tom Fanning, stressed in an Aug. 2 interview that dropping the work altogether would leave the company with "nothing to show" for its investment.

Backers of the troubled nuclear project have meanwhile asked the Trump administration to help get it finished, people familiar with the talks said earlier this month. That could include increasing or speeding up disbursements of $8.3 billion in federal loan guarantees to the companies behind the plant, the people said, asking not to be identified because the negotiations are ongoing.

Georgia Power, the Southern unit building the reactors, said it's required by law to seek approval of new cost and schedule forecasts. "We expect to file our comprehensive schedule, cost-to-complete and cancellation assessments by the end of August and make a recommendation to the Georgia PSC based on that assessment," Jacob Hawkins, a company spokesman, said in an emailed statement on Tuesday.

How Elon Musk and Cheap Oil Doomed Push for Another Car Fuel

Posted August 15, 2017, 01:31 P.M. ET

By Patrick Martin

The idea was nothing short of revolutionary: convert the nation's millions of trucks, buses and other commercial vehicles to run on natural gas instead of gasoline and diesel.

Back in 2008, the proposal by energy magnate T. Boone Pickens had some appeal. U.S. oil production was plunging, and the world's biggest fuel-consuming country was becoming ever more dependent on foreign crude. Oil jumped to a record near $150 a barrel, while natural gas was comparatively cheap. Pickens co-founded Clean Energy Fuels Corp. to profit from the switch. The maker of natural gas filling stations was once valued at about $1.8 billion.

But there was a different kind of revolution. New drilling techniques led to a boom in oil supplies from the U.S., and electric cars took off. Tesla Inc., which had yet to deliver its first electric car a decade ago, now has 455,000 reservations for its Model 3—almost 20 times the number of natural-gas vehicles on U.S. roads as of 2015. Shares of Clean Energy Fuels are down 90 percent from a 2012 peak, and the company concedes that natural gas may only be a niche market as a transportation fuel.

"I'm not sure America is set up" for widespread use of passenger natural gas vehicles given all the infrastructure needed to get supplies to customers, Andrew Littlefair, Clean Energy Fuels' chief executive officer, said by phone. "There are a lot of reasons it would make sense to look at that again, but I don't know that I'm ready to say that's going to happen."

Pickens, who made his first fortune as an oil wildcatter five decades ago, had high hopes for natural gas because he believed crude supplies were peaking. In op-eds, media interviews and meetings with politicians including then-President Barack Obama, Pickens said the nation's heavy-duty trucks and fleet vehicles should run on natural gas. The U.S. could reduce its reliance on oil imports and use more wind and solar power, he said.

Pickens, 89, wasn't able to comment, according to Jay Rosser, a spokesman for BP Capital LLC, the energy hedge fund Pickens founded.

Shale Boom

By 2011, U.S. oil output began to surge with the shale boom. Three years later, prices for crude, diesel and gasoline were tumbling. While natural gas has become a staple for domestic power plants, supplanting coal, the prospect for cheaper alternatives made it less attractive as a vehicle fuel.

In April, the most recent month for data from the Department of Energy, liquefied natural gas sold for $2.52 per diesel-gallon-equivalent, compared with $2.55 for diesel. That's hardly a bargain, considering Pavel Molchanov, an analyst at Raymond James Financial Inc., estimates that trucks that run on LNG cost about $30,000 to $50,000 more than a comparable diesel rig.

Even though natural gas has remained cheap—trading at $2.948 per million British thermal units at 8 a.m. in New York on Aug. 15—using it to fuel vehicles is "not something that has taken off," said Salim Morsy, an analyst at Bloomberg New Energy Finance in New York. "Gasoline and diesel are undoubtedly the cheapest in total cost of ownership, but as technology improves and batteries get cheaper," the number of electric cars will at least double.

The number of plug-in autos in the U.S. almost tripled between 2008 and 2015, government data show. Tesla, the company founded by billionaire Elon Musk, has introduced three models since 2012, and other manufacturers are jumping into the market. Volvo AB has said all its new cars from 2019 will be hybrid or all-electric, and BMW AG is developing a self-driving electric to replace the 7-Series as the company's flagship in 2021.

Natural gas vehicles have seen their share of the auto market shrink. Chesapeake Energy Corp., one of biggest U.S. gas producers, eliminated the team working on natural-gas vehicles in 2013. Honda Motor Co. discontinued a natural-gas-fueled model of its popular Civic sedan in 2015.

Last year, with oil locked in a prolonged price slump, Pickens sold about 4 million shares of Newport Beach, California-based Clean Energy Fuels, which operates more than 500 natural gas filling stations across the country. While the company has declined in value, Tesla traded at a record high in June.

Still, Littlefair sees opportunities for growth, especially in the fleets of vehicles owned by municipal governments trying to reduce tail-pipe emissions and operating costs. Dallas Area Rapid Transit, which uses 537 buses and 123 shuttles that run on natural gas, this month extended its operation and maintenance contract with Clean Energy Fuels. California cities including Los Angeles and Fresno also have contracts with the company.

Clean Energy Fuels is also seeking a way to expand its reach by using natural gas extracted from landfills and farms to supply filling stations.

Few Stations

While companies including AT&T Inc. and Ryder System Inc. use natural gas in trucks that make short trips and return to the same depot each day, limited infrastructure has prevented wider use. There are 1,828 natural-gas filling stations in the U.S., compared with almost seventy times as many conventional gas stations and around 38 times as many non-residential plug-in stations and charging outlets for electric vehicles, government and industry data show.

It can cost $1.8 million to build a filling station that supplies compressed natural gas, according to the National Renewable Energy Laboratory. Electric vehicles, in contrast, can be plugged into a home outlet.

"The infrastructure would be costly" for widespread use of natural gas vehicles, said Lee Klaskow, a senior analyst for transportation and logistics at Bloomberg Intelligence. "You would have to have some huge cost savings."

Big Oil Follows Silicon Valley into Backing Green Energy Firms

Posted August 15, 2017, 8:20 A.M. ET

By Anna Hirtenstein

Major oil companies are joining Silicon Valley in backing energy-technology start-ups, a signal that that those with the deepest pockets in the industry are casting around for a new strategy.

From Royal Dutch Shell Plc to Total SA and Exxon Mobil Corp., the biggest investor-owned oil companies are dribbling money into ventures probing the edge of energy technologies. The investments go beyond wind and solar power into projects that improve electricity grids and brew new fuels from renewable resources.

While the money involved is small—a fraction of the $7.5 billion that venture capital and private equity injected into the clean energy industry last year—the funds support work that may evolve into major income streams in the decades ahead as governments work to limit fossil-fuel pollution and global warming.

"In the energy industry, small companies have quite a lot of disruptive power," Geert van de Wouw, managing director of Shell Technology Ventures, said in an interview. "We always have to look over our shoulder to make sure that we stay ahead of the game."

Following is a list of the projects the biggest oil companies are supporting:

Shell Technology Ventures

The unit of Royal Dutch Shell Plc splits its spending between oil and gas technology and clean energy equally. The green share may increase to about 60 percent in the years ahead, according to van de Wouw, declining to detail his annual budget. The fund's total size is "hundreds of millions of dollars," he said. It has put money into:

• Kite Power Systems, a maker of a kite that flies on wind currents to generate renewable electricity;

• Glasspoint Solar Inc, a company that has developed a way to make steam for enhanced oil recovery with solar energy; and

• Sense, a start-up that creates devices that monitor home power consumption.

Total Energy Ventures International SAS

The unit of the French oil major Total SA has invested $160 million to date with almost three quarters flowing into North America, according to the fund's CEO Francois Badoual. It only takes minority stakes. It has invested in:

• AutoGrid, a California-based company that designs smart-grid software;

• United Wind, a company that leases wind turbines to retail customers and small businesses; and

• Off Grid Electric, a Tanzania-based installer of rooftop solar panels that works in low energy-access areas in Sub-Saharan Africa.

"We try to detect and invest in innovation," Badoual said. "The shift can accelerate at a pace which is difficult to really foresee, but you have to be ready and to adapt."

BP Ventures Inc.

BP Plc's VC fund has invested $325 million to date. It tends to skew more towards chemicals or fuels, rather than renewable electricity. It has funneled money into:

• Tricoya Technologies, a maker of a technology that changes the chemical structure of wood chips to make a building material that's more durable and energy efficient;

• Fulcrum, a producer of bio-jet fuel made from municipal waste, which raised $30 million from BP; and

• Solidia, a company that is working on reducing the carbon footprint of concrete.

"BP Venture's goal is to be both an investor and an end-user of the technologies in which we invest," said Jonathan Tudor, managing director of the fund. "That requires a longer-term commitment because we look beyond a quick financial return. We take an active role in the evolution of these companies and want to see their new technologies commercialized and deployed into BP's existing businesses."

Exxon Mobil Corp.

Exxon has a different approach to frontier technology. It prefers to conduct research internally and with partners rather than buy minority stakes in start-ups. It's studying biofuels, carbon capture and storage, energy-efficiency processes and energy-saving materials, according to spokesman William Holbrook, and is working with:

• Synthetic Genomics Inc., which studies how to make biofuels from algae; and

• FuelCell Energy Inc., which is developing carbonate fuel cells to capture CO2 emissions from natural gas plants while also producing electricity.

"We conduct R&D through in-house efforts, via partnerships with other industries and by funding academic and other nongovernmental research projects," Holbrook said by email. "These studies

help inform the company on emerging technologies, define our potential contribution to the science, and assess the future applicability of the technologies to our businesses."

Chevron Corp.

Chevron has been investing in start-ups since 1999 and divides its portfolio between oil and gas, advanced materials, communications infrastructure and information technologies and emerging and alternative energy. On the latter, it has invested in the following:

• Acumentrics, a fuel cell company that can make its products from ceramics;

• Ensyn, a maker of fuels and chemicals from residue from forests and agriculture; and

• Inventys, a developer of carbon capture technology that traps CO2 from industrial gas streams.

The fund "serves as a window and an on-ramp" for emerging technologies, said Chevron spokesman Kent Robertson by email. The technologies are "well aligned with projected energy needs."

Statoil Energy Ventures

The unit of Norway's state oil company, Statoil ASA, has invested $20 million since February 2016. It only funds renewable start-ups, listing among its investment themes wind, solar, storage, transportation, energy efficiency and smart grids. To date, it has put money into:

• ChargePoint Inc., an electric-vehicle charging point operator based in California;

• Oxford Photovoltaics Ltd., a solar technology company that is developing panels with perovskite. The substance could make traditional photovoltaics as much as 30 percent more efficient; and

• Convergent, a large-scale energy storage developer working on projects with lead acid, lithium-ion and flywheel batteries in the U.S. and Canada.

"In the transition into clean energy, it's not clear who would be the winners and losers," said Bala Nagarajan, investment director at Statoil Energy Ventures. "So for us, the investment is a means to understand which business models and which technologies are likely to be more successful. These investments help us position ourselves in the right part of the value chain."

Of course the oil companies have always dabbled in other forms of energy, backing solar after the 1973 oil crisis. Exxon backed nuclear power in the 1980s. Shell vowed to push into renewables ahead of the landmark Kyoto Protocol on climate change in 1997.

Those efforts fizzled when dips in the oil price sharpened the industry's focus on costs. More recently, Shell has taken big stakes in offshore wind projects, BP revived its wind business and Total pressed into solar through an investment in SunPower Corp.

Big Oil's push into venture capital adds to the sense that technology is moving rapidly in the energy industry, leaving a question mark over what will dominate supply for the first time in almost a century.

"A lot of these companies are still figuring out how to get involved on a larger scale," said Rick Wheatley, head of leadership and innovation at Xynteo Ltd., a consultant that advises Shell, Statoil and Eni SpA on sustainability and long-term planning. "They invest in start-ups to learn and to

demonstrate intent. For the cost of a drilling campaign, they can invest in dozens of start-ups."

Brazil's Solar Expected to Grow With State's New Regulation

Posted August 15, 2017, 03:56 P.M. ET

By Michael Kepp

A new solar energy regulation in Brazil's Sao Paulo state is expected to encourage more small and large-scale solar systems to be built and help those under construction come online more quickly.

"The now-clear rules for licensing solar [photovoltatic] systems in Sao Paulo state will lower project risks and boost solar PV investments there," Alexandre Franceschi, project development manager of the Cobra Group, a solar developer building a large-scale system in the state, told Bloomberg BNA.

The regulation is significant because Sao Paulo accounts for over 30 percent of Brazil's gross domestic product and is among the most solar-powered states in a country that's trying to boost usage of the renewable source.

The Sao Paulo State Environmental Secretariat (SMA)'s previously issued solar system licenses on a project-by-project basis without clear or standardized guidelines to inform developers about the need or specific type of license. Under the Environmental Secretariat's new regulation, issued Aug. 4, small-scale solar systems—those with installed capacity of fewer than 5 megawatts—need only be licensed if their installation requires cutting vegetation or if they are to be located in government-protected areas.

Sao Paulo has the second-largest number of such systems in terms of installed capacity among Brazil's 26 states.

Those systems are small rooftop and ground-mounted systems that homeowners and small businesses install to supply their own electricity. The systems sometimes use net metering—a billing mechanism that credits solar energy system owners for the excess electricity they add to the grid.

Developers of medium-to-large–scale solar systems, those ranging in capacity from 5 megawatts to 90 megawatts, must submit a simplified environmental study to get a license under the new regulation. Developers of ultra-large-scale systems—ground-mounted systems with a capacity of over 90 megawatts— must submit a preliminary environmental study (RAP), which has far fewer requirements than an environmental impact assessment for projects with a potentially substantial environmental footprint.

Developers of solar PV systems that need licenses still must first get a preliminary permit and then comply with SMA-imposed conditions to get installation and operating licenses that are required to come online.

The new regulation "is a positive initiative that other states should adopt," Rodrigo Sauaia, CEO of the Brazilian Photovoltaic Solar Energy Association (Absolar), told Bloomberg BNA Aug. 14.

Cobra Group's solar system, currently under construction, will have an installed capacity of 120 megawatts. The company also has a license to build a second 150-megawatt solar system there.

"Now that SMA analysts have standardized licensing rules to follow, they will be able to more quickly decide if a solar PV project is feasible and should be licensed, and under what conditions," Franceschi told Bloomberg BNA. "And this will speed up the completion of solar PV projects being planned or now underway."

Brazil's latest 10-year energy expansion plan said large-scale (non-rooftop) solar power, which accounted for just .01 percent (21 megawatts) of the electricity mix in 2016, would account for 4.5 percent (9,660 megawatts) by 2026.

Driving the Day

Good Tuesday morning. SIREN: INSIDE THE DEBT-CEILING DRAMA ... THE NATION'S BORROWING LIMIT needs to be lifted in the next month or so, and House and Senate Republicans and the Trump administration have **NO IDEA AND NO PLAN** how it's going to get done, according to sources in each corner of the fight. **ELEMENTS IN THE WHITE HOUSE** have signaled to Hill leaders they believe Congress will pass a clean increase -- lifting the debt cap without other provisions. This will not fly with some conservative members, who want some sort of policy concessions. **HOUSE** and **SENATE REPUBLICANS** tell us they have not decided on a strategy as of yet. The prevailing theory among GOP aides continues to be that the Senate will pass a clean debt ceiling increase and jam the House with it. That seems risky, and aides are worried.

-- MITCH MCCONNELL, yesterday in Kentucky: "There is zero chance -- no chance -- we will not raise the debt ceiling."

-- FROM A GOP HILL AIDE: "Leadership has no plan for debt ceiling. Zero specifics on tax reform. We are six weeks away for funding the government and no one has any idea what will happen. Leadership has nothing they've articulated."

THE BOSTON GLOBE'S VICKY MCGRANE -- "Businesses fret over Congress' ability to avoid debt default" http://bit.ly/2vUBW8X

NANCY COOK on tax reform: "There is broad consensus, according to five sources familiar with the behind-the-scenes talks, on some of the best ways to pay for cutting both the individual and corporate tax rates. The options include capping the mortgage

interest deduction for homeowners; scrapping people's ability to deduct state and local taxes; and eliminating businesses' ability to deduct interest, while also phasing in so-called full expensing for small businesses that allows them to immediately deduct investments like new equipment or facilities." http://politi.co/2imiAoC

ABOUT LAST NIGHT ... PRESIDENT TRUMP'S WAR ....

-- NYT's MARK LANDLER and **MAGGIE HABERMAN: "Angry Trump Grilled His Generals About Troop Increase, Then Gave In":** "President Trump's skepticism about America's involvement in Afghanistan was no secret to his staff. But his top national security officials were still taken aback at a meeting in the Situation Room on July 19, when an angry Mr. Trump began ripping apart their latest proposal to send thousands of additional American troops to the country. 'We're losing,' the president declared, according to a person who was in the room. The plan, he complained, was vague and open-ended, with no definition of victory. 'What does success look like?' he asked.

"The day before that meeting, Mr. Trump had invited four soldiers who had served in Afghanistan to the White House for lunch. His exchanges with these enlisted men, an official said, left him sober about the prospects for turning around a war that has dragged on for nearly 16 years. He showed up the next day determined to ask hard questions." http://nyti.ms/2x8hUGr ... ***Video of Trump's speech*** http://bit.ly/2imLhS9

-- ELIANA JOHNSON: "How Trump swallowed a bitter Afghanistan pill,": "The plan - which will maintain an unspecified U.S. troop presence without withdrawal timetables and intensify pressure on Pakistan to crack down on terrorist safe havens - was the product of a months-long strategy review in which the president's national security team talked him out of ending the costly 16-year war. 'It wasn't a debate,' said a senior White House aide. 'It was an attempt to convince the president.' ... If there was a worldview behind the remarks, it was what Trump called a 'principled realism' devoted to rooting out terrorists without building up the countries that host them - a balance between the president's isolationist tendencies and the neoconservative ideology that animated the last Republican administration. 'We are not nation-building again,' Trump said. 'We are killing terrorists.'" http://politi.co/2wsSVRg

-- WAPO'S PHIL RUCKER and **BOB COSTA:** "Trump's private deliberations -- detailed in interviews with more than a dozen senior administration officials and outside allies -- revealed a president un-attached to any particular foreign-policy doctrine, but willing to be persuaded as long as he could be seen as a strong and decisive leader. 'This has been many months in the making,' said Kellyanne Conway, counselor to the president. 'The hallmark of leadership is a deliberative process, not an impulsive reaction, and that is precisely the protocol he followed here.'

"Part of that listening included hearing out the military about sharing the burden in the region and getting Pakistan more involved in managing the war. 'When Secretary [Jim] Mattis said this would be a South Asia strategy, that tells you a lot,' said John Bolton, a former U.S. ambassador to the United Nations, referring to recent remarks by the

defense secretary. 'The big issue wasn't land-war tactics. The big issue is Pakistan.' He called Trump's Monday speech the 'defining moment of the Trump policy seven months into the administration.'" http://wapo.st/2wz7HVS

-- POLITICAL REALITY, via WaPo's Thomas Gibbons-Neff and Anne Gearan: "Trump's decision is a middle path that does not hew to either of the main foreign policy themes he articulated as a candidate: to stay out of expensive overseas quagmires, and to decisively win any conflict worth entering." http://wapo.st/2v1XbGZ

BREITBART HEADLINES: "Trump Reverses Course, Will Send More Troops to Afghanistan" ... **"Defends Flip-Flop in Somber Speech"** ... **"...TRUMP'S 'AMERICA FIRST' BASE UNHAPPY WITH FLIP-FLOP AFGHANISTAN SPEECH..."** ... **"...HIS MCMASTER'S VOICE: IS TRUMP'S AFGHANISTAN POLICY THAT DIFFERENT FROM OBAMA'S?"** http://bit.ly/1FMhXpk

-- SUSAN GLASSER: "America Is Out of Ideas in Afghanistan": "President Trump proved one thing beyond the shadow of a doubt in his Afghanistan strategy speech Monday night: After nearly 16 years of fighting America's longest war, there are no new ideas. He called his plan 'dramatically different.' It wasn't. The only thing that seemed a striking change from his two presidential predecessors' approach to the war launched after the attacks of September 11, 2001, was Trump's escalatory rhetoric. He repeatedly vowed to 'win' a conflict that his Defense Secretary James Mattis told Congress recently 'we are not winning' and sharply criticized Afghanistan's neighbor Pakistan, a troublesome ally Trump excoriated for offering 'safe haven' to terrorists." http://politi.co/2g0WUxg

-- WHAT KABUL IS THINKING -- AP: "Afghanistan's government is applauding President Donald Trump's speech for focusing on needs and conditions instead of timelines. Afghan Ambassador to the U.S. Hamdullah Mohib calls it a '10 out of 10.' He tells The Associated Press by telephone from Kabul that Afghans heard 'exactly what we needed to.' Mohib says critiques of the speech for failing to disclose troop numbers are misguided. He says the focus on numbers detracts from the 'real focus' on conditions and support needed for Afghanistan to succeed and achieve peace.

"The ambassador is also praising Trump for 'breaking the silence' about Pakistan's sheltering of what he calls terrorists. Trump emphasized the need for Pakistan to stop harboring the Taliban. Mohib says Afghanistan has made progress and is committed to pursuing reforms to show it merits continuing help from the U.S." http://bit.ly/2wzxWvf

WHAT TRUMP IS WAKING UP TO -- N.Y. POST: "THE TRUMP DOCTRINE: We stay in A'Stan, but 'no nation building'" http://nyp.st/2algwpl ... **N.Y. DAILY NEWS:** "MAKE WAR SURGE AGAIN: Trump touts new plan for Afghanistan but won't give strategy" http://nydn.us/2vUhEMX ... **ANOTHER DAILY NEWS COVER:** "NOT TOO BRIGHT!: Trump ignores fake news warning, stares at eclipse" ... **N.Y. TIMES:** "IN SPEECH, TRUMP SETS U.S. STRATEGY FOR AFGHAN WAR ... Generals' Warnings Overrode Initial Skepticism ... Expanding Role in a Conflict He Once Called Futile"

http://nyti.ms/2wzQOKT ...

... **WAPO:** "Troop increase planned in Afghan war ... Behind the decision: Debate, infighting and stalemate, and finally a bow to the generals ... NEW STRATEGY AFTER INTERNAL REVIEW: Trump previously called conflict a waste of time" ... **WSJ:** "Trump Vows New Afghan Tack: President will boost pressure on Pakistan, avoid telegraphing U.S. military strategy".

-- ONE THOUGHT: Trump says he will not detail publicly how many more troops he's sending to Afghanistan. We'll see if that flies with lawmakers when Defense Secretary Jim Mattis heads to Capitol Hill to testify this fall.

****** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2ie5v0A ******

FOR YOUR RADAR -- "Navy to Pause Operations, Review Collisions, With 10 Missing: Defense Secretary Jim Mattis responds as storm impedes search for sailors from USS John S. McCain," by WSJ's Nancy Youssef in Washington and Jake Maxwell Watts in Singapore: "The U.S. Navy announced a pause in its global operations and patrols and has begun a broad investigation after the destroyer USS John S. McCain on Monday collided with a merchant vessel, leaving 10 sailors missing, the second such incident in just over two months.

"The response by the U.S. military signals the Navy believes it needs to examine whether there may be institutional problems behind the deadly collisions, and that it may need to retrain some of its personnel in seamanship. Navy Adm. John Richardson, the chief of naval operations, announced 'an operational pause be taken in all of our fleets around the world' -- a move that officials said was rare." http://on.wsj.com/2g1ZEdN

TRUMP'S TUESDAY -- TRUMP is going out west. He'll head to Yuma, Arizona, at noon. He'll go on a tour of "U.S. Customs and Border Protection equipment" and meet with Marines. He'll then head to Phoenix for a campaign rally.

-- WE HEAR the White House was working the Hill to drum up support for Trump's trip to the border. The House Freedom Caucus is taking the lead in that effort.

VP MIKE PENCE is accompanying Trump to the rally in Phoenix. **JUST A NOTE:** Pence and Jeff Flake served together in the House and know each other well. If Trump attacks Flake, it will be interesting to see Pence's reaction.

NEXT UP... "GOP on eggshells as Trump storms into Phoenix," by Alex Isenstadt in Phoenix: "President Donald Trump faces a decision on Tuesday evening with profound implications for his already strained relationship with the GOP: Whether to attack a vulnerable Republican senator on his home turf. While White House officials won't say exactly what's on Trump's agenda when he holds a campaign-style rally here, there is a

widespread expectation that he will go after GOP Sen. Jeff Flake, a loud critic of the president who recently published an anti-Trump manifesto, 'Conscience of a Conservative.'

"Senate Majority Leader Mitch McConnell, Majority Whip John Cornyn, and [NRSC] Chairman Cory Gardner all declared that Flake had their full support. On Tuesday morning, Senate Leadership Fund, a super PAC closely aligned with McConnell, will amp the pressure. The group is set to release a blistering digital ad campaign that targets former Kelli Ward, a conservative former state senator and Flake primary opponent who Trump praised in a tweet last week.

"The ad paints Ward as an extreme figure with 'crazy ideas' who engages in 'embarrassing behavior.' People close to the group describe the offensive as part of a broader effort to show that any Trump-led push to undermine Flake, or any GOP incumbent for that matter, won't go uncontested." http://politi.co/2vkusZf ... ***The ad*** http://bit.ly/2wzsVmq

-- @KFILE: ".@kelliwardaz's new ad ties Jeff Flake to Obama, but it looks like a photo from bill signing for judge killed in the Giffords attack." http://bit.ly/2imtLO4

-- SEN. JEFF FLAKE (R-ARIZ.) to Kurtis Lee of the L.A. Times: "What did he think about Trump calling him toxic on Twitter, reporters asked Flake on Monday after speaking to a gathering of local business leaders? 'I don't worry about it at all,' Flake said at an events center here in the suburbs east of Phoenix. Is Trump right in offering aid and comfort to his primary challenger, former state Sen. Kelli Ward? 'That's not my realm. That's somebody else's. I just - I'm running my own campaign. It's going well. And what the president does, that's his prerogative,' Flake said." http://lat.ms/2vUpgis

-- "Arpaio keeping his calendar clear for possible Trump pardon," by Ted Hesson: "Former Maricopa County Sheriff Joe Arpaio said Monday that he doesn't know whether President Donald Trump will grant him a pardon this week -- but he's keeping his calendar open. When asked whether he would be available when Trump visits Phoenix on Tuesday, the 85-year-old former Arizona lawman told POLITICO that 'of course' he would be. ... The former sheriff was convicted in late July of criminal contempt in a racial profiling case and faces a maximum of six months in jail. He is scheduled to be sentenced Oct. 5." http://politi.co/2x7Z0j7

BEHIND THE SCENES -- "Trump aides plot big immigration deal - that breaks a campaign promise," by McClatchy's Anita Kumar: "Donald Trump's top aides are pushing him to protect young people brought into the country illegally as children -- and then use the issue as a bargaining chip for a larger immigration deal -- despite the president's campaign vow to deport so-called Dreamers. The White House officials want Trump to strike an ambitious deal with Congress that offers Dreamers protection in exchange for legislation that pays for a border wall and more detention facilities, curbs legal immigration and implements E-verify, an online system that allows businesses to check immigration status, according to a half-dozen people familiar with situation, most

involved with the negotiations.

"The group includes former and current White House chiefs of staff, Reince Priebus and John Kelly, the president's daughter, Ivanka Trump, and her husband, Jared Kushner, who both serve as presidential advisers, they said. Others who have not been as vocal publicly about their stance but are thought to agree include Vice President Mike Pence, who as a congressman worked on a failed immigration deal that called for citizenship, National Security Adviser H.R. McMaster and Gary Cohn, a Democrat who serves as director of the National Economic Council. ...

"On the other side, a smaller group - including Attorney General Jeff Sessions and his former aides, Stephen Miller, who serves as Trump's senior policy adviser, and Rick Dearborn, White House deputy chief of staff - opposes citizenship, according to sources familiar with the discussions. ... Miller was ordered not to brief the president on the issue in recent months, according to two of the people." http://bit.ly/2vaiYIy

RYAN FACES LOCAL PEPPERING -- FIRST TOWN HALL SINCE 2015 -- "Ryan faces heat back home in Wisconsin," by Rachael Bade in Racine, Wisconsin: "Paul Ryan was one of most popular Republicans in the country last fall, routing his Democratic challenger and beating back a Donald Trump-inspired primary challenger who trolled him at every turn. Yet there he was, taking flak from discontent constituents at a town hall in Racine on Monday night. ...

"In this small southeast Wisconsin town on Lake Michigan, the speaker fares no better than any other congressional Republican facing unhappy crowds. And in some ways his powerful position in Washington makes it worse because he controls the 240-strong House Republican majority. While the CNN-hosted Ryan town hall was carefully choreographed, packed with about 300 well-behaved attendees, interviews with constituents who have voted for Ryan showed many were disquieted by the GOP's failure to deliver on key campaign promises. ...

"To be sure, Ryan is still extremely popular with Republicans here in the First District. All but one Republican interviewed for this story said he or she would vote for Ryan again, and many praised him as 'honest,' 'tenacious' and 'hard-working.' Some, like Franksville-native Bill Jaeck, even parroted Ryan's talking points about House-passed bills stalled in the Senate -- an echo worthy of Ryan's Washington press conference.

"But there's a sinking feeling among some Ryan supporters that the man they've known and voted in for years is not the superman they'd hoped. 'Being speaker of the House has become a setback. ... It's basically ruined his career for a while, because he's forced to do many unpopular things,' said Marlene Lamberton of Caledonia, a longtime supporter." http://politi.co/2in2zyq

INTERESTING BITES FROM RYAN... ON NEW AFGHANISTAN STRATEGY: "I'm pleased with the decision. I'm actually pleased with the way he went about making this

decision. ... So I also think what I heard tonight for the first time -- this is what I wasn't briefed on -- is I think I heard a new Trump strategy, or a doctrine, so to speak. Principled realism I think is how he described it."

-- ON TRUMP'S HANDLING OF THE CHARLOTTESVILLE SITUATION: "[I] think it was in New York on an infrastructure press conference, in answer to a question, I think he made comments that were much more morally ambiguous, much more confusing. And I do think he could have done better. I think he needed to do better. I actually think what he did two days ago in commending the peaceful protests against the hate in Boston was a good start. And I think just what I heard, I don't know, 25 minutes ago, was exactly what a president needs to say and what we needed to hear. So I do believe that he messed up in his comments on Tuesday, when it -- it -- it sounded like a moral equivocation, or at the very least moral ambiguity, when we need extreme moral clarity."

-- ON CENSURING TRUMP: "I will not support that. I think that would be -- that would be so counterproductive. If we descend this issue into some partisan hack-fest, into some bickering against each other, and demean it down to some political food fight, what good does that do to unify this country?"

PER BEN WHITE'S MORNING MONEY - "MNUCHIN'S WIFE HITS TURBULENCE - Lot of buzz on Twitter last night over an Instagram post and reply from Louise Linton, the actress who recently wed Treasury Secretary Steven Mnuchin. The initial post showed Linton and Mnuchin getting off an official plane from a trip to Kentucky. And Linton hashtagged just about everything including her high end ensemble featuring #tomford sunglasses, #roulandmouret pants and #hermesscarf. A commenter on the post said: 'Glad we could pay for your little getaway. #deplorable.' That apparently set Linton off. In a long response she said, among other things: 'Have you given more to the economy than me or my husband. ... I'm pretty sure we paid more taxes toward our day 'trip' than you did. ... Thanks for your passive aggressive nasty comment.' ... Linton's Insta account is now private. Needless to say, saying 'my husband and I are richer than you' is probably not a great move." ***The deleted Instapic*** http://bit.ly/2wiD1IK

THE JUICE ...

-- SPOTTED AT THE SINCLAIR BROADCAST GROUP OFFICES: Laura Ingraham yesterday meeting with David Smith, the company's executive chairman.

-- AMERICAN ACTION NETWORK is doubling down on tax reform. The group is running ads in 34 congressional districts as part of a $1 million radio campaign running through the end of the month. Six of the districts will be up with a Spanish version. ***The ad*** http://bit.ly/2v1U6GX

MEDIAWATCH - "Ross Levinsohn named new publisher and CEO of Los Angeles Times as top editors ousted," by LA Times' Meg James: "In a dramatic shakeup at the Los Angeles Times, the Chicago-based parent company has installed new leadership and plans to invest more resources in the news organization to move it more

quickly into the digital age. Ross Levinsohn, 54, a veteran media executive who worked at Fox and served as interim chief of Yahoo, was named publisher and chief executive of the 135-year-old news organization. ...

"Jim Kirk, 52, a veteran Chicago news executive, who was publisher and editor of the Chicago Sun-Times until last week, was named interim editor of the storied newspaper. The two men replace Davan Maharaj, who has served as both editor and publisher since March 2016. Maharaj was terminated Monday morning, along with a handful of other senior editors, including Managing Editor Marc Duvoisin, Deputy Managing Editor for Digital Megan Garvey and Assistant Managing Editor of Investigations Matt Doig." http://lat.ms/2x8gSKU

JUST POSTED - TRUMP. INC - "Here's How the Trump Brothers Are Running the Family Business: Usually with other people's money, sometimes with dubious partners. Inside the empire, under new management," by Bloomberg Businessweek's Peter Robison and Michael Smith: "Donald Jr., 39, and Eric, 33, ... [have] repeatedly pursued licensing arrangements in which they attach the family name to projects, generating cash without bearing much risk. They have a seemingly ad hoc, opportunistic style that's sometimes led to partnerships with questionable characters, including people barred for securities violations or sued for fraud. And they've walked away, leaving employees, customers, or business partners with the fallout." https://bloom.bg/2in30cn

FIRST PERSON - "How I Became Fake News: I witnessed a terrorist attack in Charlottesville. Then the conspiracy theories began," by Brennan Gilmore in POLITICO Magazine: "On Saturday morning I witnessed James Fields smash his car into a crowd of demonstrators, killing Heather Heyer and wounding 19 others. Although I immediately shared the footage with police on the scene, it took me a half hour to decide to post it publicly. ... Desperate to lay blame on anyone besides the alt-right, [conspiracy theorists] seized on these facts to suggest a counter-narrative to the attack, claiming there was no way that someone with my background just happened to be right there to take the video. ...

"They wrote that I was a CIA operative, funded by (choose your own adventure) George Soros, Hillary Clinton, Barack Obama, the IMF/World Bank, and/or a global Jewish mafia to orchestrate the Charlottesville attack in order to turn the general public against the alt-right. I had staged the attack and then worked with MSNBC and other outlets controlled by the left to spread propaganda. They claimed my ultimate goal was to start a race war that would undermine and then overthrow Donald Trump on behalf of the 'Deep State.' (I'm generalizing here as the theories are widely variant, logically inconsistent and I'm only aware of the small percentage I could be bothered to read.)" http://politi.co/2v1zgHP

THE BENCH -- "Dems' first wave of recruits 'outsiders' in 2017 version of Tea Party," by Heidi Przybyla in Murphysboro, Illinois: "Much like the Republican men and women who swept into Washington in the 2010 Tea Party wave, the majority of Democratic candidates are new to state-level or national politics. Unlike the Tea Party, many of these Democrats have a long record of public service. They are former public prosecutors, doctors, CIA operatives and veterans, and they are concentrated in 'heartland' states like Kansas, Iowa, Indiana and Minnesota." https://usat.ly/2vZRU06

2020 WATCH ... HAVE AT IT! -- "This House Democrat Lost A Leadership Race To Nancy Pelosi. Now He May Run For President," by BuzzFeed's Alexis Levinson in Manchester, New Hampshire: "It's still more than three years until the next presidential election, and yet here was Ray Buckley -- the chairman of the New Hampshire Democratic Party for the last decade -- riding shotgun last Wednesday from Boston to Hopkinton, New Hampshire, with Rep. Tim Ryan, the 44-year old Democrat from Youngstown, Ohio. ... last week's New Hampshire visit was not just a reunion of old friends. In June, Ryan campaigned for a Democratic candidate in South Carolina. Next month, he'll make his second trip of the year to Iowa." http://bzfd.it/2vjYT1W

-- "Dems prep for Trump primary challengers in 2020," by Gabe Debenedetti: "The [DNC] is conducting full-scale opposition research on multiple Republicans it believes could challenge President Donald Trump for reelection - or are likely to run if he does not. The effort, which began in late spring, covers Vice President Mike Pence, Ohio Gov. John Kasich, United Nations Ambassador Nikki Haley and Nebraska Sen. Ben Sasse, among others." http://politi.co/2wzoE2i

****** **A message from Chevron**: This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. JON MEACHAM in the **NYT, "Why Lee Should Go, and Washington Should Stay":** "'I wonder,' Mr. Trump said, 'is it George Washington next week, and is it Thomas Jefferson the week after? You know, you really have to ask yourself, where does it stop?' "To me, the answer to Mr. Trump's question begins with a straightforward test: Was the person to whom a monument is erected on public property devoted to the American experiment in liberty and self-government? Washington and Jefferson and Andrew Jackson were. Each owned slaves; each was largely a creature of his time and place on matters of race. Yet each also believed in the transcendent significance of the nation, and each was committed to the journey toward 'a more perfect Union.

"By definition, the Confederate hierarchy fails that test. Those who took up arms against the Union were explicitly attempting to stop the American odyssey. While we should judge each individual on the totality of their lives (defenders of [Robert E.] Lee, for instance, point to his attempts to be a figure of reconciliation after the war), the forces of hate and of exclusion long ago made Confederate imagery their own. Monuments in public places of veneration to those who believed it their duty to fight the Union have no place in the Union of the 21st century - a view with which Lee himself might have agreed. 'I think it wiser,' he wrote in 1866, 'not to keep open the sores of war.'" http://nyti.ms/2v9rtnh ... ***Meacham's latest for Time, "American Hate, a History"*** http://ti.me/2g1af8Z

TEVI TROY in POLITICO Magazine, "Why the White House Needs Another Bannon: Every GOP president needs an intellectual wrangler. Trump can't succeed without one": "For the past four decades, Republicans have viewed themselves as the party of ideas -- and a crucial part of that self-perception has been having a person inside the White House to serve as a conduit to conservative thinkers. ... Steve Bannon wasn't a traditional liaison to that world, but there's no question he served this function for the Trump administration ... One major difference between Bannon and his predecessors, though, is that he did not appear to be able to get his boss interested in his reading. [Daniel Patrick] Moynihan often recommended books to Nixon, and [Karl] Rove even had a reading contest with Bush." http://politi.co/2x8h8cK

ISAAC DOVERE talks with **REV. AL SHARPTON** and **REP. JERRY NADLER (D-N.Y.)** in the latest "Off Message" podcast. "We're in a poisonous atmosphere that is being increased by the president of the United States. It's like turning on the gas in a room," Sharpton told Dovere. "Any match could lead to an explosion, and we're getting that kind of atmosphere from this president." Nadler, who wrote the censure resolution, told Dovere he thinks Trump should quit, and warned Republicans now not to count on House Democrats for the votes to pass a continuing resolution or raise the debt ceiling, unless both are clean-even if that leads to a shutdown or economic meltdown: "We can't

give in to that kind of blackmail."

As for the Jewish aides who defend Trump, including his daughter and son-in-law Jared Kushner: "I don't care what Jared Kushner said about the fact that Donald Trump loves, loves him and Ivanka and other people," Nadler said. "He was willing to traffic in anti-Semitism. He was willing to use anti-Semitic imagery. And then, when caught up in it, refused to repudiate it, and denied that it was what it clearly was." http://politi.co/2v1T6CM

FUTURE OF NEWS -- "CNN Launches a Daily News Show for Snapchat," by WSJ's Alexandra Bruell: "CNN is launching a daily news show for Snapchat called 'The Update,' the latest reflection of how media companies are stepping up their interest in the mobile messaging platform. The show will include a news roundup that airs at 6 p.m., with updates from CNN's anchors and reporters around the world, said Turner, the network's parent company, in a statement. There will also be breaking news segments. If news breaks after the show, CNN might update the running list of news featured on its show and change the cover photo to reflect the update." http://on.wsj.com/2wjcgUz

Playbookers

SPOTTED: Sean Spicer in his Navy uniform at the Pentagon Monday for reserve duty.

TRANSITIONS - Julie Morse starts next Monday as a producer at "CBS This Morning". She has her last day as a producer for MSNBC Friday.

WEEKEND WEDDINGS -- OBAMA ALUMNI -- Melissa Nitti, public affairs manager at Google, and **Mark Beatty,** partner at 270 Strategies, got married on Sunday. Pool report: The couple "said their vows ... in Hood River, [Oregon] against the majestic backdrop of Mt. Hood -- the same mountain that welcomed Melissa's great, great grandparents when they made their journey along the Oregon Trail. The bride and groom met on the 2012 Obama for America campaign where Melissa was a member of the media team and Mark served as deputy battleground states director. The happy couple was feted by friends and family -- including proud parents Rick and Jan Nitti and Duane and Elaine Beatty -- who came from around the country to join the celebration." ***Pic*** http://politi.co/2v27BXn

SPOTTED: Jeremy Bird (who served as the wedding officiant), best man Stephen Brokaw, Mitch Stewart, Isaac Baker, Kristina Peterson, Betsy Hoover, Lauren Kidwell, Meg Ansara, Lynda Tran, Sara El-Amine, Jeff Gabriel, Greg Schultz, and Chris Wyant, Kelly Norton, Anne Sokolov, Kate Sokolov, and Stephanie Gent, Jessica Santillo, Keith Maley, Niraj Chokshi, Jamie Hill and Stephanie Gunter.

WELCOME TO THE WORLD -- Erik Elam, LD for Sen. Dan Sullivan (R-Alaska), and **Amy Elam,** events principal at HIS/Markit, on Sunday welcomed their son Everett

Brooks Elam into the world. He's 6 lbs, 9 oz. ***Pic*** http://politi.co/2vl64a4

BIRTHDAY OF THE DAY: National Review editor **Rich Lowry** is 49. He tells us he's "been reading almost exclusively about nationalism lately for a potential book project." **How he got his start in journalism:** "I wrote for an alternative conservative publication at UVa called the Virginia Advocate. I still have boxes of old issues that are fun, if wince-inducing, to look back at. I always tell people that I was sophomoric as a first-year -- I was precocious that way.

"My first real journalism job was as a research assistant with Charles Krauthammer. This was back before he was a TV star. Probably the most notable thing I did working for him was inadvertently insert a typo into his Washington Post column at the last minute. I mentioned this at a tribute dinner to Charles a couple of years ago, and merciful and gracious man that he is, he officially forgave me." **Read his Playbook Plus Q&A:** http://politi.co/2vkL2bL

BIRTHDAYS: Luke Russert is ageless ... Obama WH alum Jess Allen, a JD candidate at NYU Law, is 28 (hat tip: Rachel Racusen) ... Paul Singer is 73 ... Steve Kroft is 72 ... Morton Dean is 81 ... Jennifer Loven, managing director at Glover Park Group and an AP alum ... Steve Brill, celebrating with a road trip up the coast of Maine (h/t wife Cynthia) ... Tom Edsall is 76 ... HPS alum Sabrina Siddiqui ... Jen Nedeau, head of marketing and comms at Bully Pulpit Interactive ... Robin Wright of the U.S. Institute of Peace and the Wilson International Center ... MSNBC's Steve Kornacki is 38 ... Sen. Cory Gardner (R-Colo.) is 43 ... Rep. Trey Gowdy (R-SC) is 53 ... former Rep. Thad McCotter (R-Mich.) ... Chris Smith ... Grazia Salvemini ... Ryan Patmintra ... AP's Nebi Qena is 4-0 ... Ken Farnaso, digital comms at the House Small Business Cmte. and an NRCC alum (h/t Alex Stroman) ... Carolyn Harrold, new AtlanticLIVE director of business development and former SXSW head of programming, celebrating her first birthday in DC since making the move from Austin (h/t Patrick Garrigan) ...

... Bill Miller, SVP at the Business Roundtable ... Bill Cortese ... Jim Strader ... Abby Denburg ... Sward Tondoneh ... Bill Turenne Jr. ... Elizabeth Lubben ... Eleanor Strom of Google ... Natalie Apsell ... Sinclair's AnnaMaria Di Pietro ... Selena Strandberg ... Katie Gordon ... Morgan Canup ... Matthew Barnes ... Claire Stein-Ross ... Pema Levy of Mother Jones ... Gigi Sukin, digital editor at Colorado Biz magazine (h/t Gordon Bronson) ... Chad Connelly, RNC's director of faith engagement ... Tori Amos is 54 (h/t Tracy Sefl) ... Nick Mildebrath ... Alex Pellegrino ... Adrian Slater ... Katie Bloodgood ... Nick Greene ... Jordan Goldes ... Rob Borden ... Charlotte Day-Reiss ... former Rep. Bud Cramer (D-Ala.) is 7-0 ... Megan Paulsen ... Chris Pumphrey ... Essence Motley ... Alyssa Palisi ... Mac Flores ... Brystol English ... Julia Rothwax ... Pat Eltman ... Chris Lapetina ... Hailey Arends ... Phoebe Link (h/ts Teresa Vilmain)

****** **A message from Chevron**: This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video:

Air Pollution

Philip Morris Joins Growing Group of Carbon-Pricing Corporations

Philip Morris International Inc., the maker of Marlboro cigarettes, now uses an internal cost of carbon emissions in its business decisions, joining a group of almost 1,400 companies that agreed to consider how greenhouse gas emissions will affect their industries, according to a statement Oct. 12 from environment group CDP.

Climate Policy

Merkel Signals Deeper Green Ambitions as Pollution Overshoots

Chancellor Angela Merkel's government signaled it will step up its green programs after acknowledging Germany's emissions are on track to overshoot a target a little more than two years away.

Coal Mining

China's Top Coal Region to Cut Pollution by 40 Percent

China's second-largest coal producing region is planning to cut pollution by two fifths over the autumn and winter seasons, Xinhua News Agency reported.

Coal Mining

Coal's Comeback Is Running Out of Steam After a Year of Growth

For all the talk of coal's comeback under President Donald Trump, the actual rebound in U.S. production started months before November's election—and it may be fizzling out.

EPA

EPA Veteran to Head Agency's Midwest Region

An EPA veteran with support from both sides of the political aisle will oversee the agency's work in the Midwest.

Energy

Australia to Fund Companies to Scale Back Energy Use This Summer

Australia will pay 10 large industrial energy users and small businesses to reduce energy use at times of extreme peak demand under a pilot program that has received A$35.7 million

($27.9 million) in government grants.

Energy
China Mulls Storage Salve for $4 Billion Renewables Headache
China is considering a prescription for nearly $4 billion worth of wasted electricity production looming over its push into clean energy.

Energy
Danish Company Dong Turns Trash into Energy
The U.K. might soon be powering its lights with energy that comes from the trash. A Danish energy company is working on new machines that sort household trash from recycling, while rapidly breaking down organic materials like food to create power from biogas produced by the process.

Energy
Feds Must Support Nuclear Power for National Security, Perry Says
The commercial nuclear power industry needs a federal boost for national security reasons to prevent the U.S. from falling behind global competitors such as Russia and China, Energy Secretary Rick Perry told lawmakers.

Energy
Russia-backed Pipeline May Need to Comply With EU Energy Law
The European Commission plans to propose in November an update of its natural-gas security regulation that would make new pipelines—including the controversial Nord Stream 2 link from Russia to Germany—subject to the European Union energy law.

Energy
U.K. Eyes Cap on 'Rip-Off' Power, Gas Prices
The U.K. government published its plans to cap domestic power and gas prices to protect millions of households from what it calls "rip-off" charges at the hands of the biggest utilities.

Oil & Gas
Dakota Access Boosts Drillers but Won't Be a Bakken Game-Changer
Once hailed as the spur for a North American "energy renaissance," the $3.8 billion Dakota Access pipeline has limited driller costs in its first four months in operation.

Oil & Gas
House Republicans Push Bills to Promote Oil and Gas
Republicans in the House are lining up more oil and gas legislation, including a bill on offshore drilling, and a rewrite of the law on national monuments, all with solid opposition from Democrats.

Oil & Gas
Local Drilling Rules Draw Industry Lawsuit in Colorado
A Colorado city's new drilling rules impede the state's interest in uniformly regulating oil and gas operations and should be tossed out, oil industry groups argue in a lawsuit.

Renewable Energy
Aussie Green Energy Bank Warns Funds at Risk If Targets Scrapped
Australia's government-owned green bank said investments in renewable energy generation will drop if the nation doesn't extend into the next decade clean energy targets and the financial incentives to meet them.

Renewable Energy

Brazil Experiments With Floating Solar Panels Above Dams

Floating solar panels on the reservoirs above two state-owned dams will showcase technology that could eventually help Brazil diversify its energy sector as the country grapples with severe droughts.

Subject: BREAKING NEWS: Supreme Court lets Trump fully impose latest travel ban

The Supreme Court has given President Donald Trump the go-ahead to implement the newest version of his travel ban policy in its entirety.

Lower court rulings had exempted from the travel restrictions foreigners with "bona fide" family or business or educational ties to the United States, but the justices issued a stay Monday that allows Trump to carry out the new policy even on those with U.S. connections, at least for now.

The third iteration of Trump's travel ban sought to limit to varying degrees issuance of visas for travel to the U.S. by citizens of eight countries, six of which are majority Muslim.

Two liberal justices, Ruth Bader Ginsburg and Sonia Sotomayor, indicated they would have denied the Trump administration request to fully implement the policy, which Trump issued by proclamation in September.

Driving the Day

Good Saturday morning. PRESIDENT DONALD TRUMP announced more than three dozen White House appointments late Friday night. He tapped Oklahoma Rep. Jim Bridenstine to run NASA and Pennsylvania Rep. Tom Marino to become the next drug czar. Marino previously turned down the position citing a family illness.

THESE NOMINATIONS will spark special elections in Oklahoma and Pennsylvania. Both seats are solidly conservative. But special elections are tricky. You never quite know what you're going to get.

BRIDENSTINE'S APPOINTMENT won't be without controversy. Florida Playbooker Marc Caputo scooped that both Republican Sen. Marco Rubio and Democratic Sen. Bill Nelson of Florida voiced early opposition to his pick.

CAPUTO: "Republican Marco Rubio and Democrat Bill Nelson wouldn't say if they'd buck the president and vote against Bridenstine, who was nominated Friday. But they suggested the GOP congressman's political past would needlessly spark a partisan fight in the Senate that could ultimately damage NASA. Bridenstine also trashed Rubio during last year's GOP presidential primary, although Rubio said he doesn't hold that against the congressman.

"The bipartisan pushback against Trump's nominee for NASA administrator underscores the importance of the agency to Florida, home of the Kennedy Space Center in Cape Canaveral. Nelson, as a member of Congress in 1986 flew on a Space Shuttle Columbia mission; he also has a home on what's known as the state's Space Coast. 'The head of NASA ought to be a space professional, not a politician,' Nelson said in a brief written statement to POLITICO." http://politi.co/2vzkGYf

RICHARD GRENELL , former spokesman for the U.S. mission to the United Nations under President George W. Bush, was also nominated to be the next ambassador of Germany. ***Full list of last night's appointments*** http://politi.co/2wvr9R7

SCHOCK UPDATE -- "Prosecutors deny probing Schock's sexuality," by Josh Gerstein: "Prosecutors are denying claims that they improperly investigated former Rep. Aaron Schock's sexuality as they probed allegations that he used his office and campaign funds for personal purposes. In a late-night court filing Friday, prosecutors rejected Schock's lawyers arguments that such inquiries into the former lawmaker's personal life were part of a pattern of prosecutorial misconduct so outrageous that the criminal case against the Illinois Republican should be thrown out.

"The prosecution team denied investigating Schock's sexuality, but said it did need to establish the nature of his relationship with a Panamanian diplomat because his travels with her appeared related to campaign expenses the government believed may have been unrelated to his campaign. 'We fully agree with Defendant Schock that his sexuality is completely irrelevant in this criminal matter,' prosecutors Timothy Bass and Eugene Miller wrote in the filing in federal court in Urbana. 'It was not of interest to the government, and the government did not inquire about it.'" http://politi.co/2vAj68A

--AN INTERESTING NUGGET FROM THE LEGAL WRANGLING - From a recent government filing: "[I]n late 2013 ... Schock accused a former staffer of inappropriately accessing his friend's (Karla Gonzalez's) social media account and falsely advised the former staffer that the FBI and Capitol Police were investigating the matter. As a result of Defendant Schock's accusation and false representation of a law enforcement investigation, the former staffer retained legal counsel and incurred legal fees of more than $10,000, which were paid by the former staffer's father. Defendant Schock later acknowledged, after being confronted by the former staffer's father, that his statement of a law enforcement investigation was false, stating in an email to the staffer's father that 'I apologized and offered to take care of things,' and he agreed to reimburse the staffer's father for $7,500 of the legal fees."

INSIDE THE WHITE HOUSE -- NYT A1, "Forceful Chief of Staff Grates on Trump, and the Feeling Is Mutual," by Glenn Thrush and Maggie Haberman: "President Trump was in an especially ornery mood after staff members gently suggested he refrain from injecting politics into day-to-day issues of governing after last month's raucous rally in Arizona, and he responded by lashing out at the most senior aide in his presence. It happened to be his new chief of staff, John F. Kelly. Mr. Kelly ... reacted calmly, but he later told other White House staff members that he had never been spoken to like that during 35 years of serving his country. In the future, he said, he would not abide such treatment ...

"The question now is how long Mr. Kelly will stay, with estimates ranging from a month to a year at the most. ... The president, for his part, has marveled at the installation of management controls that would have been considered routine in any

other White House. 'I now have time to think,' a surprised Mr. Trump has told one of his senior aides repeatedly over the last few weeks. Mr. Kelly cannot stop Mr. Trump from binge-watching Fox News, which aides describe as the president's primary source of information gathering. But Mr. Trump does not have a web browser on his phone, and does not use a laptop, so he was dependent on aides like Stephen K. Bannon, his former chief strategist, to hand-deliver printouts of articles from conservative media outlets.

"Now Mr. Kelly has thinned out his package of printouts so much that Mr. Trump plaintively asked a friend recently where The Daily Caller and Breitbart were. ... While Mr. Trump still reaches out to allies outside the administration ... more often than not it has been through the White House switchboard and not on his personal phone. And Mr. Kelly has usually listened in on the calls, according to two people with direct knowledge." http://nyti.ms/2wsmVeO

-- "John Kelly Pushing Out Omarosa for 'Triggering' Trump," by The Daily Beast's Lachlan Markay and Asawin Suebsaeng: "Newly minted White House chief of staff John Kelly has sought to put a dent in the influence of one of President Donald Trump's most famous advisers: Omarosa Manigault. The former Apprentice co-star-who currently serves as the communications director for the Office of Public Liaison-has seen her direct access to the president limited since Kelly took the top White House job in late July ... In particular, Kelly has taken steps to prevent her and other senior staffers from getting unvetted news articles on the president's Resolute desk-a key method for influencing the president's thinking, and one that Manigualt used to rile up Trump about internal White House drama." http://thebea.st/2vzZfWU

REUTERS'S JIM OLIPHANT: TRUMP'S EMPATHY TEST -- "For a man who prefers to project a glowering brusqueness, Donald Trump's trip to Houston on Saturday provides him with the opportunity to show a warmer, more empathetic side - and perhaps connect with some Americans critical of his presidency. Trump's predecessor, Barack Obama, became known as the 'comforter-in-chief' for his role in consoling victims of mass shootings and terror attacks. But the flooding caused by Hurricane Harvey marks the first large-scale national tragedy under Trump's watch." http://reut.rs/2xF4GBr

"The White House said Trump will first travel to Houston to meet with flood survivors and volunteers who assisted in relief efforts and then will move on to Lake Charles, Louisiana, another area hammered by the storm. Trump first visited the region on Tuesday, but stayed clear of the disaster zone, saying he did not want to hamper rescue efforts. Instead, he met with cabinet members, state and local leaders, and first responders. He was criticized, however, for not meeting with victims of the worst storm to hit Texas in 50 years, and for largely focusing on the logistics of the government response rather than the suffering of residents." http://reut.rs/2xF4GBr

TRUMP'S SATURDAY -- THE PRESIDENT is traveling to Ellington Field, Texas, where he will visit with people impacted by the hurricane. He then will head to a Harvey relief center and meet with members of the Texas congressional delegation. He then goes to

Chennault International in Lake Charles, Louisiana, where he meets with "members of the county emergency operations center, National Guard and Cajun Navy."

FOR YOUR RADAR -- REUTERS: "Russia's Putin won't attend U.N. General Assembly" http://reut.rs/2x0zSOs

****** **A message from the American Bankers Association:** It's no secret that banks help create jobs and economic growth by lending to America's employers. But America's banks themselves employ thousands of women and men. Can you guess how many? Is it 200,000, 1 million or 2 million? Find out: http://politi.co/2wc3FR6 ******

THE LATEST ON HARVEY RELIEF -- "White House rejiggers Harvey request as dollars dwindle," by Jen Scholtes, Sarah Ferris, and Rachael Bade: "The federal government is burning through cash even faster than the White House estimated in responding to Hurricane Harvey, prompting the Trump administration to revamp its emergency funding request. The White House sent a formal plea to lawmakers Friday evening seeking $7.85 billion as a down payment in aid for areas ravaged by the superstorm -- nearly $2 billion more than the administration estimated earlier in the day.

"The total includes $7.4 billion for [FEMA's] disaster relief account and $450 million to support the Small Business Administration's disaster loan program for small businesses and homeowners. The White House warned that further delays in raising the debt limit could jeopardize recovery efforts, after previously cautioning that action would be needed by month's end to avoid a downgraded credit rating and, ultimately, default.

"'Indeed, if the debt ceiling is not raised, it may not be possible to outlay the requested supplemental appropriations or funds for other critical Government operations,' White House budget director Mick Mulvaney wrote in the request. The House is expected to pass its first installment of hurricane aid next week, but congressional leaders are still talking with the Trump administration about process and timing in the Senate." http://politi.co/2vSutUl ... ***Mulvaney's letter*** http://politi.co/2vzB2Aa

-- TOP REPUBLICAN LEADERS have been telling us that the easiest way to get this through is to lift the debt ceiling at the same time.

-- "Harvey is likely to be the second-most costly natural disaster in U.S. history," by L.A. Times' Don Lee: "Between the shutdown of oil refineries and chemical plants, impaired roads and ports, and widespread damage to homes, businesses and cars, the economic toll from Hurricane Harvey is now being estimated as the second-costliest natural disaster in U.S. history, trailing only the devastation caused by Hurricane Katrina in 2005. Some economic researchers, including the national forecasting firm Moody's Analytics, are putting the price tag of Harvey at $81 billion to $108 billion or more, most of that in damage to homes and commercial property." http://lat.ms/2wp9JqW

--"Storm deaths: Death toll from Harvey tops 50," by Houston Chronicle's Cindy

George, Margaret Kadifa, and Lindsay Ellis: "More than 50 people - including a veteran Houston police officer - have died or are feared dead in the Houston area and beyond in flooding or circumstances connected to Tropical Storm Harvey, according to local officials. ... Local officials expect the grim discoveries of additional bodies once the floodwaters retreat and the streams, rivers and bayous go back into their banks." http://bit.ly/2vTjPx0

THIS COULD BE A PROBLEM -- "Trump's 'Dreamers' decision could roil shutdown, debt talks," by Rachael Bade and Heather Caygle: "Congressional Republicans are worried that a decision from President Donald Trump to rescind protections for so-called Dreamers could undercut fall negotiations with Democrats to keep the government open and avoid a federal default. The White House said Friday that Trump would announce Tuesday whether he would nix President Barack Obama's executive action granting legal status to those who immigrated to the U.S. as children, known as 'Dreamers.' Republicans have long panned the so-called Deferred Action for Children Arrivals, or DACA, as an unconstitutional overreach.

"But now is not the time to blow up the program, GOP leadership sources in Congress caution. Doing so, they worry, could antagonize Democrats in a month where the GOP desperately needs their help to raise the debt ceiling and keep the government open. Senior Republicans have also spoken privately of a potential bipartisan accord later in the year that would codify DACA legislatively, in return for a down payment on Trump's border wall with Mexico. While many agree it's unlikely and perhaps wishful thinking, they worry Trump ending the program would make such a deal impossible.

"In an interview with WCLO in his hometown of Janesville, Wis., Friday, Speaker Paul Ryan cautioned Trump against killing the program. The Wisconsin Republican said Obama did 'not have the authority to do what he did,' but also argued that Congress - not Trump - has to 'fix' the matter. '[T]here are people who are in limbo,' Ryan said. 'These are kids who know no other country, who were brought here by their parents and don't know another home. And so I really do believe there that there needs to be a legislative solution.'" http://politi.co/2iPGGIA

BREITBART: "WHITE HOUSE SIGNALS CAVE: NOT PUSHING CONGRESS FOR BORDER WALL FUNDING, WON'T SHUT DOWN GOVERNMENT," by Adam Shaw: http://bit.ly/2esDzRD

DEATH OF OBAMACARE REPEAL? -- "Moment of truth arrives for Obamacare repeal," by Rachana Pradhan and John Bresnahan: "In a potential death knell for efforts to repeal Obamacare -- at least this year -- the Senate parliamentarian has ruled that Republicans face a Sept. 30 deadline to kill or overhaul the law with only 50 votes, Democrats on the Senate Budget Committee said Friday. Congress is facing fights in September over boosting the federal debt limit, government funding, defense programs and the FAA, among other issues. Adding another Obamacare repeal battle to that schedule could prove too much for Senate Majority Leader Mitch McConnell (R-Ky.), who has all but said he's moving on from health care. In search of a badly needed

legislative victory, McConnell and other Senate Republicans have shifted their focus instead to tax reform." http://politi.co/2ws2O0c

MIKE SCHMIDT and **MAGGIE HABERMAN -- "Mueller Has Early Draft of Trump Letter Giving Reasons for Firing Comey":** "The special counsel, Robert S. Mueller III, has obtained a letter drafted by President Trump and a top political aide that offered an unvarnished view of Mr. Trump's thinking in the days before the president fired the F.B.I. director, James B. Comey. The circumstances and reasons for the firing are believed to be a significant element of Mr. Mueller's investigation, which includes whether Mr. Trump obstructed justice by firing Mr. Comey. The letter, drafted in May, was met with opposition from Donald F. McGahn II, the White House counsel, who believed that its angry, meandering tone was problematic ... Among Mr. McGahn's concerns were references to private conversations the president had with Mr. Comey, including times when the F.B.I. director told Mr. Trump he was not under investigation in the F.B.I.'s continuing Russia inquiry.

"Mr. McGahn successfully blocked the president from sending the letter -- which Mr. Trump had composed with Stephen Miller, one of the president's top political advisers -- to Mr. Comey. But a copy was given to the deputy attorney general, Rod J. Rosenstein, who then drafted his own letter. Mr. Rosenstein's letter was ultimately used as the Trump administration's public rationale for Mr. Comey's firing, which was that Mr. Comey had mishandled the investigation into Hillary Clinton's private email server. ... [In May] Mr. McGahn met ... with Mr. Trump and told him that if he fired Mr. Comey, the Russia investigation would not go away. Mr. Trump told him ... that he understood that firing the F.B.I. director might extend the Russia investigation, but that he wanted to do it anyway." http://nyti.ms/2grUtR4

CYBER WAR -- NYT A1, "Russian Election Hacking Efforts, Wider Than Previously Known, Draw Little Scrutiny," by Nicole Perlroth, Michael Wines and Matt Rosenberg: "The assaults on the vast back-end election apparatus - voter-registration operations, state and local election databases, e-poll books and other equipment - have received far less attention than other aspects of the Russian interference ... Yet the hacking of electoral systems was more extensive than previously disclosed, The New York Times found. ... [H]ackers breached at least [three] providers of critical election services well ahead of the 2016 voting." http://nyti.ms/2vT84qh

WEST WING DEPARTURE LOUNGE -- "Longtime Trump aide Keith Schiller tells people he intends to leave White House," by CNN's Dana Bash, Noah Gray and Jeremy Diamond: "Schiller has told associates within the last two weeks that he plans to leave the White House at the end of September or in early October ... Schiller has told people his primary reason for leaving was financial ... Schiller earns a $165,000 annual salary at the White House -- a downgrade from his annual earnings before he followed Trump to the White House. ... White House press secretary Sarah Huckabee Sanders said the story was 'not true' and declined to comment further. Schiller ... earned $294,000 ... last year." http://cnn.it/2vA8s1N

--@JenniferJJacobs: "Longtime Trump aide Keith Schiller to exit post as Oval operations dir end of Sept, I'm told. Lined up job in private sector that pays more."

Jeremy Diamond

THE JUICE ...

-- CONDI RICE headlined a fundraiser for Ed Gillespie last night at Dan and Sonya Runde's McLean, Virginia, home. ***The invite*** http://bit.ly/2vzCvXr

--COREY LEWANDOWSKI is heading to London later this month to be the keynote speaker for a small off-the-record dinner organized by a macro research firm. The Sept. 13 dinner will likely be attended by portfolio managers and traders from asset managers and hedge funds, according to a source familiar with the dinner. When asked which firm was organizing the dinner and if they were paying for his time, Lewandowski texted "No" and didn't respond to further questions.

Playbook Reads

PHOTO DU JOUR: Director of the National Economic Council Gary Cohn, left, walks away from reporters after doing television interviews at the White House on Sept. 1. | | Alex Brandon/AP Photo

WASHINGTON INC. -- "How Washington lobbyists fought flood insurance reform," by Zach Warmbrodt and Theo Meyer: "The catastrophic weather in Texas has thrown the spotlight on the federal government's troubled flood insurance program, which is nearly $25 billion in debt after huge payouts following Katrina, Sandy and other devastating hurricanes. But as Houston starts the long process of recovering, lobbyists in Washington have already maneuvered to slow lawmakers efforts' to overhaul the National Flood Insurance Program and protect their industries' profits.

"The powerful home builders' lobby helped kill a proposal that would have phased out coverage for new construction in high-risk areas. The National Association of Realtors blocked an attempt to rein in discounted insurance rates that homeowners can get when their flood risk increases. And the American Bankers Association has warned of a 'regional foreclosure crisis' if Congress axes coverage for homes with excessive claims.

"Lawmakers who want to reel in the program are finding that they must appease the influential industry groups whose support they need to move forward. 'We want to have a vibrant construction industry,' said Rep. Dennis Ross (R-Fla.), who's pushing for a greater private-sector presence in the flood insurance market. 'We want to have a

vibrant real estate industry. That's all great. But we're incentivizing building in high-risk areas, which is a moral hazard.'" http://politi.co/2exujzw

HMM -- "Fire Spotted at Russian Diplomatic Building in D.C.," by Jana Winter in Foreign Policy: "The Trade Representative of the Russian Federation, located on Connecticut Ave. in northwest Washington, is one of several diplomatic buildings being shuttered as part of a tit-for-tat with Moscow. The building serves as both an office and a residence for Russian diplomatic staff. Smoke and flames in the back were clearly visible starting late-afternoon Friday, and staff could be seen dumping what appeared to be paper into the fire." http://atfp.co/2esijLX

GOOD NEWS FOR RAHM - "CPD: August shootings down 45 percent from last year," by Chicago Sun Times' Mitchell Armentrout: "Shootings declined by 45.4 percent in August and murders were down by 47.4 percent compared to the same month last year, according to Chicago Police statistics. This August saw more than 300 people wounded in shootings, along with at least 52 deaths ruled homicides, according to data kept by the Chicago Sun-Times. Police still touted it as the sixth straight month to see a decline in shootings over the previous year, the city's longest such stretch in four years." http://bit.ly/2ew1rYd

THE ROKITA PILE ON CONTINUES -- "Former aides to GOP lawmaker describe toxic work environment," by AP's Brian Slodysko in Indianapolis: "Staffers in tears. Pay cuts for small mistakes. Aides who walked out of the office - and never came back. Working for four-term Republican Rep. Todd Rokita of Indiana is an exacting job with long hours, made more difficult by a boss known for micromanaging and yelling at his staff, according to 10 former aides who spoke to The Associated Press. ... [E]ven in Congress ... Rokita's behavior is outside the norm, according to the former aides, most of whom have worked for other elected officials. ...

"During the 2010 campaign, a worker was booted from a staff meeting and instructed to clean Rokita's vehicle, which included scrubbing the carpets, according to two people with direct knowledge of the incident. The reason? A volunteer driver had body odor the night before, they say. Rokita's campaign said the congressman did not recall the incident. ... Some say he turned angry over small details, like the kind of letterhead used on office or campaign documents. ...

"A Jasper County teacher asked Rokita to leave his high school civics class in November 2016 after a talk that was supposed to be about the Constitution got off on the wrong foot, according to two students. Rokita had asked the class if they were taught about 'American Exceptionalism.' But when a number of students seemed puzzled by the concept, he had a testy exchange with their teacher, Paul Norwine, whom he criticized for not including it in the curriculum, the students said. Tensions eased and the talk proceeded, but the class was dumbfounded. ... Rokita's campaign did not dispute the students' account." http://bit.ly/2grWHQy

--FLASHBACK -- John Bresnahan and Rachael Bade, Aug. 18: "The agonizing, 8-

page memo on how to chauffeur a congressman: Pity the poor aide charged with driving Rep. Todd Rokita around his district": http://politi.co/2vTylF3

WHAT JAKE IS READING -- "Romney, Clinton and others counsel a panicked political reporter on fatherhood," by WaPo's Ben Terris: "From the various politicians and D.C. denizens I spoke with, it's clear that today, the smartphone is the greatest impediment to being a good parent (Maggie Haberman, a star Trump chronicler for the New York Times and mother of three, said she once filed an entire story on her BlackBerry from her son's kindergarten graduation ceremony). Sen. Jeff Flake (R-Ariz.) has gone to some extreme measures to combat this problem. In 2013, Flake took two of his sons on a trip to a deserted island, where they would survive by spearing fish and scavenging for coconuts. 'It was worth the risk just to have time without cellphones, without electronics,' Flake, 54, said. 'Just to have five or six days with their dad.' But what about being a good dad for the other 360 days of the year?

"Flake says the best advice he ever got about that came shortly after he first arrived to Congress, and it came from his Arizona congressional colleague, now-former senator Jon Kyl (R). 'He told me to involve my kids as much as I can in this job,' Flake said. 'They were either going to resent this life or revel in it.' This past summer, one of Flake's sons served as a page in the Senate. 'It's great,' Flake said. 'Not only did I get to see him more, but he had to call me sir!'" ***With cameos by Jason Kander and Tim Kaine*** http://wapo.st/2wqmaCY

MEDIAWATCH -- "After Mass Layoffs, Can Glenn Beck Still Save 'The Blaze'? " by The Daily Beast's Lloyd Grove: "By the time Beck himself spoke to his dwindling army of underlings as one of his personal bodyguards from Gavin de Becker's celebrity protection service stood watch, nearly 60 of their coworkers had been abruptly fired-a body count that amounted to almost 30 percent of the workforce, according to estimates compiled by shell-shocked survivors. ... Among the departed, according to sources, were camera operators, producers, a receptionist, a beloved longtime makeup artist, and a well-regarded graphic artist who didn't learn about his sacking until a coworker reached him Thursday night on his cell phone in Houston, where he'd trekked to help relatives cope with the floods of Hurricane Harvey." http://thebea.st/2eqyHwv

--"Jeff Bezos Wants To Give More Money To Charity. He Should Pay His Workers First," by WaPo reporter Fredrick Kunkle in HuffPost: "One of the wealthiest men in the world is thinking of ways to give back. But he's still taking from the very people who helped him build his fortune. ... Many people worked hard for Bezos to help make him so rich, and he has a record of treating them poorly. ... Two years ago, however, Bezos slashed retirement benefits [for Post employees]. For reasons that remain unclear, he froze a pension plan that was awash in so much money that neither he nor the company would possibly have faced additional liabilities." http://bit.ly/2vRp7c9

Coal Firms Seek High Court Review Of Suit Over Air Law 'Jobs' Evaluations

Coal firms are asking the Supreme Court to reinstate a district court's mandate for EPA to evaluate the employment effects of Obama-era Clean Air Act policies on the energy sector and other industries, saying an appellate ruling that overturned the lower court's decision creates a "blind spot" in judicial review of agency duties.

CBD Cites Pending EPA Ozone Designations To Halt Oil, Gas Lease Sale

In an early sign of the effects of EPA's pending ozone designations, environmentalists are protesting a massive planned Bureau of Land Management (BLM) oil and gas lease sale slated for Utah in December, alleging in part that the bureau failed to analyze the emissions impact of the leasing on EPA's expected nonattainment designation for the area.

Democrats Vow To Block EPA Toxics Office Nominee Despite Senate Rules

Sens. Tom Udall (D-NM) and Richard Blumenthal (D-CT) are joining environmentalists' efforts to block confirmation of Michael Dourson, President Donald Trump's nominee to head EPA's toxics office, an effort that faces a high bar given current Senate rules, though they are sidestepping questions of what commitments they may seek from the nominee.

Fighting CERCLA Preemption, Citizens Defend PFAS Medical Monitoring Suit

Residents near two military bases in Pennsylvania that are contaminated with perfluoroalkyl substances (PFAS) are urging a federal appellate court to overturn a lower court ruling that dismissed their suit seeking medical monitoring for exposure to the chemicals under state law, arguing the lower court erred in finding the Superfund law barred the claims.

EPA Urged To Add Community Representative To TSCA Advisory Panel

An academic group is urging EPA to carefully follow requirements in the revised Toxic Substances Control Act (TSCA), as well as federal advisory committee law, to

include a representative from a local community adversely impacted by chemical pollution on a new TSCA advisory panel that EPA is forming.

House, Senate Lawmakers Probe Air Quality Impacts Of Increased Wildfires

House and Senate lawmakers are probing the air quality and greenhouse gas impacts of increased catastrophic wildfires, while states affected by one of the worst recent wildfire seasons will test the scope of EPA's "exceptional events" policy that provides Clean Air Act exemptions for air pollution associated with natural disasters.

EPA Touts Four 'Key' Policy Reform Efforts To Boost Trump's Energy Order

EPA is touting four "key" policy reforms it will pursue to implement President Donald Trump's sweeping executive order on reducing energy sector regulatory burdens, including a new initiative to study rules' impacts on employment as well as previously announced "task forces" on reworking Clean Air Act permits and ambient air standards.

Carper Offers Praise For Wheeler, Aiding Bid For Trump EPA's Deputy Pick

Sen. Tom Carper (D-DE), the top Democrat on the Senate environment committee, has some praise for Andrew Wheeler, President Donald Trump's nominee to be deputy EPA administrator, welcoming his apparent willingness to respond to Democrats' inquiries and comparing him favorably to former GOP Administrators Bill Reilly and William Ruckelshaus, though he stopped short of pledging his support.

San Joaquin Air Chief, NAAQS Reform Advocate, Said To Lead EPA Region 9

Seyed Sadredin, chief of California's San Joaquin Valley air district, may soon be appointed as the new administrator of EPA's Region 9, two sources say, a step that would provide the Trump EPA with a key spokesman on its efforts to help areas attain federal air quality standards though such efforts are likely to be controversial with Democrats and environmentalists, who see them as a rollback.

Responding To Trump, EPA IDs Steps To Ease Energy Industry Burdens

EPA has identified four steps it will take to ease energy industry burdens in response to President Donald Trump's executive order that aims to bolster energy independence, a key plank in the administration's deregulatory program.

Bodine Reply May Aid Trump EPA Nomination But Dourson's Fate Unclear

Susan Bodine's reply to senators about her ongoing advisory work at EPA appear to have satisfied Democrats and could help ensure her confirmation as the agency's top enforcement official, but the fate of controversial toxics office nominee Michael

Dourson, who cleared the environment committee, is unclear as Democrats are vowing to block his confirmation.

Whitehouse Vows Tough Tactics In Face Of Trump EPA 'Shutdown' On Deals

Sen. Sheldon Whitehouse (D-RI) says the Trump EPA has sent a “shutdown signal” against compromising on any environmental policy matters and is pledging that Democrats and other critics will continue to pursue aggressive tactics -- including oversight, litigation, inspector general inquiries, whistleblowers and leaks -- to block the administration's deregulatory agenda.

EPA Radiation Guide Unlikely To Change Cleanup Policy Though Concerns Remain

Language in recently released EPA guidance that endorses higher levels of radiation exposure far beyond what the agency has typically held as acceptable is unlikely to prompt changes to cleanup levels at nuclear waste sites due to the costly, in-depth and controversial rulemakings that would be required, although one observer says it could prompt responsible parties to push for a change in cleanup decisions at specific sites.

Conservatives Maintain Attack On GHG Risk, Despite Pruitt's CPP Stance

A conservative group that has urged EPA to reconsider its landmark greenhouse gas endangerment finding is downplaying recent remarks by EPA Administrator Scott Pruitt appearing to rule out review of the issue as the agency considers replacing the Clean Power Plan (CPP), arguing the remarks do not preclude EPA action on the issue.

Subject: Morning Energy, presented by ExxonMobil: Reading the tea leaves on Clean Power Plan repeal — More political activity from Zinke revealed — Antiquities Act revamp gets its day in committee

By Anthony Adragna | 10/11/2017 05:40 AM EDT

With help from Alex Guillén and Emily Holden

LONG CARBON RULE BATTLE LIES AHEAD: President Donald Trump's administration sought to frame Tuesday's move to rescind the Obama-era Clean Power Plan as fulfilling a campaign process, but it really just kicked off what's likely to be an arduous and lengthy legal and regulatory process that may ultimately result in a replacement rule with very modest reductions in the emissions that fuel climate change. "This is the beginning of the process to carry out the president's promise to make sure that we do our job at the agency within the bounds of the law and don't declare war on certain sections of our economy," EPA Administrator Scott Pruitt said on "Fox News," his only public appearance Tuesday to discuss his proposed rule.

Many state officials, environmental advocates, businesses and reporters were left wondering why they hadn't received any sort of briefing or additional background before or after the proposal's release — especially since senior agency officials had a closed phone call Tuesday morning with conservative organizations where they took questions from groups like the Heartland Institute and State Policy Network, as Pro's Emily Holden reports. Clint Woods, the director of the Association of Air Pollution Control Agencies, which represents mostly conservative state air agencies, said his members got a heads up on timing but would be "looking forward to more engagement prior to major announcements in the future."

Joe Goffman, EPA general counsel when the Clean Power Plan was proposed and finalized, said the agency typically had background conversations with all of those groups when rolling out a major proposal. "We thought that it was an elementary part of our obligation to present information to state governments, to the affected industry, often very broadly defined, and to environmental advocacy groups," Goffman said. A phone call between the administrator and reporters, and a briefing on the Hill for lawmakers was also customary, he said. Pruitt has accused Obama's EPA of not conducting enough outreach or listening enough to states, which Goffman said is "demonstrably false." The agency did not respond to questions about its outreach on the rollback.

ICYMI: Here's links to EPA's fact sheet, proposal and regulatory impact analysis.

Five things: Pro's Alex Guillén and Eric Wolff take a look at five of the biggest policy changes the Trump administration has made to try to prop up the prospects of fossil fuels. 1) Killing the crown jewel of Obama's climate change legacy by axing the Clean Power Plan, 2) A push to shore up coal's place in the nation's electricity marketplace, 3) The likelihood of trade barriers on imported solar products, 4) Tapping the brakes on tightened mileage standards that Obama had imposed for cars sold from 2022 to 2025 and 5) Actions designed to make federal lands more amenable to fossil fuel development.

Push to shutter coal plants gets another jolt: Former New York Mayor Michael Bloomberg is at the Sierra Club's HQ this morning at 11:45 a.m. where he'll announce "an increased commitment" to shutter the U.S. coal fleet even amid the repeal of the Clean Power Plan. That comes as the Union of Concerned Scientists released an analysis finding 21 percent of the nation's coal fleet uneconomic and an additional 18 percent already slated for retirement or conversion to natural gas.

Quotable: California Senate leader (and potential Sen. Dianne Feinstein primary challenger) Kevin de Lèon not mincing words on the withdrawal: "Washington's utter failure to confront the existential threat of climate change will go down among the most shameful chapters in US history," he tweeted.

Here's where we are: EPA started the process to roll back the signature Obama-era effort to combat climate change even as the U.S. is reeling from back to back to back to back hits from hurricanes and ferocious wildfires slam California. Assuming a disaster aid package eventually clears Congress as expected, lawmakers will have spent more than $50 billion responding to the natural disasters already, and House Majority Leader Kevin McCarthy said last week "I do not believe this will be the last of the supplementals." Three weeks after Hurricane Maria slammed into Puerto Rico, 84 percent of the island still lacks electricity and 36 percent of residents still don't have potable water, according to official figures.

TIMELY TELEVISION VIEWING: "Frontline" titles its episode tonight "War on the EPA," as the PBS show focuses on Pruitt's rise from an anti-EPA crusader as Oklahoma attorney general to running the agency. Trailer for the episode here.

WE'RE ROLLING RIGHT THROUGH THE MIDDLE OF THE WEEK! I'm your host Anthony Adragna, and Independent Petroleum Association of America's Neal Kirby was first to identify Sen. Bill Cassidy as our most recent physician elected to the Senate. For today: Who is the only senator to win a reelection race in their 90s? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

SKI RESORTS, ALASKAN STEAKHOUSE, OH MY! Interior Secretary Ryan Zinke attended at least two additional political fundraisers during trips he took for official Interior business, Pro's Esther Whieldon and Ben Lefebvre scoop . Federal law permits Cabinet officials to participate in partisan political activities on their own time and without using any federal resources, but FEC records don't list any reimbursement payments to Interior for the events. "Both law and common sense tell us that taxpayer resources are supposed to be used when you're doing the taxpayers' business [but] are not supposed to be used to help candidates get elected," said Brendan Fischer of the nonprofit watchdog organization Campaign Legal Center.

The two events were:

— A mid-March fundraiser at a ski resort in Big Sky, Mont., organized by committees affiliated with Republican Sen. Steve Daines. Donors were asked to contribute $3,000 if they were

attending on behalf of a political action committee or $1,500 for an individual. Also in attendance: Sen. John Hoeven and Senate Energy Chairman Lisa Murkowski. He didn't charge for lodging or his per diem for part of the trip.

— A May 31 fundraiser for Alaskan Rep. Don Young where a Young campaign spokesman, Matt Shuckerow, said the secretary made "only very brief remarks." He said the campaign "took concerted efforts to follow" strict guidance from Interior's ethics personnel.

Interior's response: Spokeswoman Heather Swift said ethics officials signed off on all trips and they all complied with the law. "The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," she said.

NOT PLEASED: Amid weeks of reporting on non-commercial travel and other troubling behavior from Cabinet officials, the acting head of the Office of Governmental Ethics issued a memo warning he is "deeply concerned" by recent actions. Among the suggestions is "modeling a 'Should I do it?' mentality versus a 'Can I do it?' mentality" in their actions. "It is essential to the success of our republic that citizens can trust that your decisions and the decisions made by your agency are motivated by the public good and not by personal interests," David Apol wrote.

THE WOTUS WITH THE MOSTEST: The Supreme Court today will take up a wonky but important question central to federal water law: Should challenges to the Obama administration's Waters of the U.S. rule go through a district court first or straight to an appellate venue? Of course, the Trump administration is working to repeal WOTUS in the coming months and says it will issue a rewritten version early next year. But this venue question is all but guaranteed to apply again, meaning SCOTUS guidance could prove useful.

What you need to know: The Clean Water Act says that most CWA regulations and actions should be challenged first at the district level, but it lists seven exceptions that would go straight to a circuit court. Two are in play here: one regarding rules affecting effluent limitation guidelines, and one for any action approving or denying discharge permits. The Trump administration argues both exceptions apply, and the suits should go to a circuit court first. Various challengers, led by the National Association of Manufacturers, want it to go through district courts first.

History brief: After the rule was released, lawsuits were filed in both district and circuit courts throughout the country. After some district-level proceedings that led to a stay of WOTUS in 13 states only, the circuit-level cases were consolidated into one mega-case before the 6th Circuit, which then issued a nationwide injunction. The 6th Circuit then issued a complicated 1-1-1 ruling that concluded that it should indeed hear the challenge first. One judge said both exceptions apply, one said only one exception applies and the third said neither applies and the challenges should first go through district courts.

Why it matters: This isn't entirely an esoteric spat. Supporters of district-first litigation argue the Clean Water Act gives more time to challenge regulations that go to lower courts first. It also

means challengers can pick the district court where they want to sue, whereas circuit-first challenges would be randomly consolidated. Meanwhile, those who want circuit-first review argue that it provides more certainty and helps avoid patchwork problems — such as the 13-state WOTUS freeze.

EPICALLY BUSY DAY AT HOUSE NATURAL RESOURCES: The panel is slated to convene two separate hearings Wednesday to examine controversial measures on offshore drilling and the Antiquities Act:

— At 2 p.m, the Energy and Mineral Resources Subcommittee considers a draft of the Accessing Strategic Resources Offshore Act, which would expand offshore revenue sharing program to additional states; prevent future presidents from withdrawing sections of the outer continental shelf from drilling or designating marine sanctuaries; and repeal certain Obama-era rules on Arctic drilling, among other things. Witnesses include former Senate Energy Chairwoman Mary Landrieu.

— The full committee then gathers at 4 p.m. to mark up Chairman Rob Bishop's long-awaited effort to overhaul the Antiquities Act. The bill, H.R. 3990 (115), would require a federal environmental review process to designate any monument more than 640 acres in size, require the sign off from local officials on new large monuments and prohibit marine national monuments "with no archeological or historic sites in need of protection." Committee members will also consider a resolution requiring Zinke to disclose more information about his review of existing national monument designations.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

A NEW DISASTER EMERGES — CALIFORNIA WILDFIRES: Trump declared a major disaster in California Tuesday as wildfires have forced the evacuations of tens of thousands, cost at least 17 lives to date and caused billions in damage. "We are with you, our prayers are with you, and we will be with you every day until we put the fires out and stand with these families to rebuild these communities," Vice President Mike Pence said alongside McCarthy and Rep. Jeff Denham after a briefing Tuesday. Separately, California Sen. Kamala Harris and Feinstein asked Trump in a letter to take all steps to release federal aid "as soon as possible."

Ryan heading to Puerto Rico Friday: According to multiple reports, Speaker Paul Ryan heads to Puerto Rico Friday along with Cathy McMorris Rodgers, the fourth-highest House Republican; Appropriations Chairman Rodney Frelinghuysen; top Appropriations Democrat Nita Lowey and Puerto Rico Resident Commissioner Jenniffer González. That comes as the Financial Oversight and Management Board for Puerto Rico hired Williams & Jensen to lobby the federal government on disaster relief and recovery efforts (h/t POLITICO Influence). The White House late Tuesday asked for an additional $4.9 billion in emergency hurricane aid to help Puerto Rico as part of a disaster funding package the House is still expected to consider this week, Pro Budget and Appropriation's Sarah Ferris reports.

ON THE HOUSE FLOOR: Lawmakers today are slated to consider a bill of interest to ME fans. The Power And Security Systems Act S. 190 (115) would extend energy efficiency standards exemptions for external power devices and is slated to be considered under suspension of the rules, requiring two-thirds support for passage.

PROTESTING PERRY'S PUSH AT FERC: The Nuclear Information and Resource Service and allied organizations are greeting FERC employees today at 8:45 a.m. to protest Perry's push for new rules that "properly value" the coal and nuclear sectors. That comes as National Rural Electric Cooperative Association CEO Jim Matheson sent Perry a letter thanking him for "jumpstarting a conversation" about the nation's electric markets.

DRINKING WATER UTILITIES ENTER FARM BILL FRAY: The American Water Works Association wants Congress to include provisions and funding to better protect drinking water sources from agricultural runoff, Pro Ag's Jenny Hopkinson reports. The group is also pushing for "robust overall funding" for the conservation title — keeping it at $6 billion, if not adding to the current allotment.

FROM THE DEPARTMENT OF WHERE ARE THEY NOW: With his red sweater, coal plant worker Ken Bone rose to national attention as an undecided voter during last year's presidential race but he's since become quite critical of the Trump administration, CNN reports. "Almost anybody who is currently a Democrat in the Senate, I think I would probably vote for over Trump," he said.

DEPARTMENT OF AWKWARD TIMING: Perry gave an interview to the American Gas Association's magazine that prominently features a picture of the secretary with disgraced Rep. Tim Murphy. Read his interview here.

MOVER, SHAKER: Keith Maley has started as director of PR at the Trust for Public Land. He previously was director of regional media in the Obama White House (h/t Playbook).

Liam Donovan has joined Bracewell's Policy Resolution Group as a lobbyist specializing in tax, infrastructure, energy and other issues. He comes from the Associated Builders and Contractors where he was as senior director of legislative and political affairs.

Amy Graham is starting next week as communications director for Sen. Todd Young. She most recently worked as senior communications adviser and deputy associate administrator at the EPA (h/t Playbook).

Trump administration takes ax to climate rule Back

By Emily Holden | 10/10/2017 02:16 PM EDT

The Trump administration officially moved to kill the Obama-era climate change rule for power plants Tuesday, fulfilling a campaign pledge but setting off what is expected to be a bitter legal battle between the EPA and several states, health and environmental groups.

EPA Administrator Scott Pruitt signed an agency proposal to repeal the Clean Power Plan, which would have sped the nation's shift away from coal-burning power plants and toward renewable power and natural gas, which emits less planet-warming carbon dioxide. Less than a third of U.S. emissions come from the power sector, and the rule aimed to shrink them to about 15 percent below 2015 levels by 2030.

Pruitt, the former Oklahoma attorney general who sued Obama's EPA over the rule, claims that it would have cost $33 billion and is illegal because it pushed for a transition away from coal rather than directly limiting emissions from coal plants. EPA released a photo of Pruitt signing the document but did not hold a public event.

EPA is exploring writing a replacement that would let states set their own standards to require coal plants to run more efficiently, or burn less coal while producing the same amount of power. That would likely achieve few emissions reductions.

"The Obama administration pushed the bounds of their authority so far with the CPP that the Supreme Court issued a historic stay of the rule, preventing its devastating effects to be imposed on the American people while the rule is being challenged in court," Pruitt said in a press release. "We are committed to righting the wrongs of the Obama administration by cleaning the regulatory slate. Any replacement rule will be done carefully, properly, and with humility, by listening to all those affected by the rule."

The Trump administration has hailed the withdrawal as a victory for coal, but market experts say the outlook for the fuel is still dim.

"Withdrawing the Clean Power Plan won't clear the deck for new coal generation. The economics of natural gas and renewables are more favorable, now and in our future scenarios," Bloomberg New Energy Finance Policy Editor Steph Munro said.

During President Barack Obama's two terms, the fracking boom turned the U.S. into a natural gas super power, cutting the cost of the fuel by 75 percent and leading to a boom in natural gas-power generation, which tripled between 2009 and 2016, according to the U.S. Energy Information Administration.

Wind power also surged under Obama, tripling in capacity, while solar power grew from virtually zero to become the leading source of new power generation in 2016.

Jim Matheson, CEO of the National Rural Electric Cooperative Association, said the withdrawal will give cooperatives, which are owned by customers rather than investors, flexibility to decide when to take coal plants offline. Those co-ops got 62 percent of their power from coal in 2016,

compared to 71 percent just two years before, he said.

Still, Matheson wants EPA to write a replacement rule to provide business certainty to the utilities, although he acknowledged that process could take years.

"To the extent we can have a level of clarity over time about what the playing field looks like, that matters," he said. Many electricity companies believe that if Pruitt's EPA can write a replacement rule, it will be more difficult for a future administration to challenge than if he takes no action at all. Critics have contended that Pruitt plans to slow-walk the process.

Conservative groups praised the repeal, with lobbying group Americans for Prosperity saying it would prevent "dramatically higher" energy costs.

Health advocates say Trump's EPA is vastly overstating the costs of the rule while ignoring the impacts of climate change and other pollutants that come from coal plants, especially by declining to count the benefits of reducing those emissions in an analysis of the Clean Power Plan.

When EPA finalized the Clean Power Plan, the agency estimated that by 2030 it would annually prevent 3,600 premature deaths, 90,000 childhood asthma attacks and 1,700 heart attacks.

"These are not insignificant benefits, health effects," said Paul Billings, senior vice president of advocacy at the American Lung Association. "I don't necessarily agree with the dollar amount they place on the cost of a human life, but it does create a basis for doing comparisons across rules ... to translate those health effects into dollars costs."

More than half of states sued to stop the Clean Power Plan, and the Supreme Court in early 2016 stayed its implementation while a lower court considered the challenge.

EPA has been asking the court to withhold its decision about whether the rule was legal until the agency has had a chance to withdraw it and explore an alternative.

Tim Profeta, director of Duke University's Nicholas Institute for Environmental Policy Solutions, said EPA is nixing the rule now to keep the court from issuing a decision.

"The court should decide the case that it has before it in order to clear up any dispute over the extent of EPA's authority to regulate greenhouse gas emissions from power plants," Profeta said.

Since Trump's election, 14 green-leaning states have banded together as part of the Climate Alliance and said they will aim to curb emissions even without the federal government.

"We will push ahead and work with states that share our belief in science and the imperative to combat global warming," California Gov. Jerry Brown said.

Washington Gov. Jay Inslee added that "Washington state is already feeling the harmful and costly effects of climate change — in more devastating wildfire seasons, strained water

resources, increasingly acidic coastal waters, and more. And we are taking action to respond."

Inslee argued that "the United States Supreme Court has ruled on three separate occasions that the EPA has a responsibility, under the Clean Air Act and other federal laws, to protect American communities from harmful carbon pollution."

The Supreme Court in 2007 ruled that EPA would have authority to regulate carbon if the agency found it to be a danger to public health. EPA subsequently decided that carbon is a pollutant. For Pruitt to avoid climate regulations outright, he would have to fight that finding, which many legal experts say is a losing battle.

EPA lays out options for replacement to Clean Power Plan Back

By Emily Holden | 10/10/2017 02:06 PM EDT

EPA is considering allowing states to set their own efficiency standards for coal-fired power plants to replace the Obama administration climate regulation that would have imposed stricter pollution limits across the electricity sector, senior agency officials said during a conference call with conservative groups Tuesday.

EPA Administrator Scott Pruitt has long argued that the Obama-era Clean Power Plan, which he proposed to withdraw Tuesday, was agency overreach because it set state carbon goals that would have forced a shift away from coal and toward natural gas and renewable power, rather than requiring changes solely at individual coal plants.

A proposal issued Tuesday raised the possibility of a coal plant-focused replacement, but the comments on the phone call give a clearer indication of what EPA is considering as a replacement.

EPA is proposing to return to its "traditional view of scope and authority" under the law, one administration official said on the call, "which means we are going out to the facility and setting source-by-source specific standards.

"EPA has authority to set up a process. It is then the states that take that process and based on their source-by-source analysis and respective localized environmental characteristics set standards that are actually feasible and achievable," the official said on the call that POLITICO monitored.

That would "ensure that states can still make the decision to keep a diverse fuel supply,"

according to the official.

EPA plans to issue an advance notice of proposed rulemaking in a few weeks to take comment on crafting the replacement to the Clean Power Plan, officials said. EPA will also hold a public hearing and take comments for 60 days after the proposal signed Tuesday is published in the Federal Register, according to officials on Tuesday's call.

Another administration official described the Clean Power Plan as a "novel and expansive view of agency authority" that would have cost consumers $33 billion and forced companies to shut down coal plants.

"Repealing the Clean Power Plan is another step advancing the president's America First strategy and is an example of President [Donald] Trump keeping his promises to the American people," the official said, hewing to talking points acquired by POLITICO on Oct. 7.

The officials on the conference call with more than a dozen participants heard from climate science opponents who urged the administration to convince Americans that, contrary to mainstream research, carbon dioxide does not cause global warming. And they called on EPA to fight the legal finding that requires it to write a replacement rule and regulate emissions.

"Eventually we really need to move to get rid of the endangerment ruling of the Supreme Court," said Jay Lehr, science director for the Heartland Institute, which argues that human activity does not affect the climate. "I think in order to do this in everything EPA does and the president does, we need to begin laying the groundwork for the American public to understand that carbon dioxide is not a contaminant. It is in fact why we live on this planet, it is a breath of life, it has no endangering aspects."

One official suggested Lehr file that idea as a comment in response to the agency's upcoming notice about replacing the Clean Power Plan.

"That will be especially beneficial for us to consider as we move forward," the official said.

Another questioner from Heartland, research fellow Sterling Burnett, suggested the Obama rule might have cost even more than the $33 billion that Pruitt's EPA is contending, although that figure has been criticized as too high by former EPA officials and think tanks.

Burnett also urged EPA not to allow states like California to set higher climate standards than the federal government. The administration officials encouraged him to submit that idea to the agency in the comment-gathering period.

The official also noted that EPA's cost estimates were "interim" figures that might be adjusted.

A third administration official added that "if any stakeholders out there feel that the figures presented in this proposal do not adequately reflect costs for one reason or another, that would be a very good thing I think to submit in comment because that may shape the analysis that's attached with any final action we may take on this proposed repeal."

5 big things Trump is doing to reverse Obama's climate policies Back

By Alex Guillén and Eric Wolff | 10/10/2017 08:34 PM EDT

The Trump administration is gutting President Barack Obama's climate legacy with a series of moves designed to favor the fossil fuel industry while punishing solar and wind energy producers — and Tuesday's proposal to repeal an Environmental Protection Agency rule on power plants is just the most visible.

President Donald Trump's agencies have also taken steps toward buttressing coal's historically dominant role in the electricity markets, protecting it from rising competition from cleaner sources like natural gas and wind. The administration has opened the door to rolling back the stricter fuel-efficiency standards for cars and trucks that are due to take effect in 2022. And Trump's Interior Department is loosening Obama's limits on fossil fuel production on federal lands, while potentially clamping down on leases for wind and solar projects.

Also waiting in the wings is an upcoming trade decision that would allow Trump to sharply increase the cost of solar installations in the U.S. — eroding sun-powered electricity's ability to compete just as it weans itself off federal subsidies.

Trump's supporters say the steps are needed to protect jobs and American energy dominance. But clean-energy advocates say the actions imperil the planet's future.

"In the midst of flood and fire, our federal government is resolutely deciding to cover its eyes," said climate activist Bill McKibben, referring to the intense hurricanes and Western wildfires that have ravaged the U.S. "History will judge few things more harshly."

Here are five of the biggest U.S. energy policy shifts taking place under Trump:

1) Killing the power plant rule

The Clean Power Plan that the EPA is moving to revoke was the crown jewel of Obama's climate change legacy — representing the first time the U.S. had gone after the climate-warming pollution that's belched out of coal-fired power plants' smokestacks. EPA Administrator Scott Pruitt — a former Oklahoma attorney general who had sued to block the regulation — signed the paperwork Tuesday to begin the long process of withdrawing the rule, fulfilling a Trump campaign promise.

The power plant rule sought to capitalize on the U.S. electric industry's shift away from coal and

toward natural gas and renewables. The Obama EPA had estimated the rule would cut the power sector's carbon dioxide emissions 32 percent below 2005 levels by 2030. (The U.S. is already more than halfway to that goal even without the rule.)

"This is a policy that the world wants and that makes sense because of market forces and a policy the world needs because, hello, we're seeing climate change effects on people every day," said Janet McCabe, Obama's former EPA air chief.

EPA's new repeal proposal echoes the coal industry's arguments — and Pruitt's previous legal filings — in contending that the Obama administration overstepped its authority.

Pruitt's agency is considering a potential replacement rule, but one that would yield much smaller emissions cuts. If that effort succeeds, a future Democratic administration could find itself barred from imposing significant regulations on greenhouse gases from other major polluting industries.

2) Securing coal's place in the markets

Energy Secretary Rick Perry issued a surprise directive last month aimed at altering the nation's electricity markets by giving an economic advantage to power plants that keep large fuel supplies on site — a move clearly aimed at helping the coal industry ward off increasingly stiff competition. (It would also benefit nuclear power, another economically struggling sector.)

Coal is the nation's most abundant power-plant fuel, but a combination of environmental regulations, huge surges in natural gas and wind-energy production and slumping demand for electricity have prompted power companies to shutter many coal-burning plants in the past decade. As recently as 2007, coal fueled more than half the electric power sector's net electricity generation — but as of this summer, that had fallen to less than a third.

Green-energy supporters say simple economics are spelling coal's demise — but Perry has argued that the trend puts the "resiliency" of the nation's power grid at risk, endangering national and economic security. His plan, if enacted by the independent Federal Energy Regulatory Commission, would insulate coal and nuclear power plants from the low power prices that have put dozens of older plants into retirement.

DOE's proposal, according to one Montana utility regulator, would be "the largest change to electricity regulation in decades."

Critics say the rule could heap billions of dollars in additional energy costs on homes and businesses without a guarantee that they wouldn't lose power when the next hurricane rips out their power lines or a polar vortex freezes the pile of coal at a power plant.

But that decision will ultimately fall to the five commissioners of FERC, an agency made up largely of technocrats that has long sought to safeguard the energy markets. The markets aren't perfect, but Perry's rule is "a draconian way of fixing it," said Pat Wood, a former FERC chief who was appointed by President George W. Bush.

3) Launching a solar trade war?

A vote by a federal trade panel last month will allow Trump to impose tariffs or a quota on imported solar panels that make up the vast majority of the fast-growing U.S. renewables market — if he chooses to.

The decision by the U.S. International Trade Commission agreed with bankrupt solar manufacturers Suniva and SolarWorld that the low-cost imports had harmed U.S.-based producers. Now, people following the case expect that Trump will slap trade barriers on the imported solar equipment, which is largely produced by Chinese-based companies at factories across Asia.

Those barriers would help the small number of U.S.-based solar manufacturers that remain in existence but could send costs skyrocketing and hurt the much larger solar installation industry. It would also threaten to end the U.S. solar boom, which saw the technology become the country's biggest source of new power generation last year for the first time ever.

With the help of federal subsidies, which will be fully phased out by 2020, the solar industry has slashed costs far faster than predicted and grown more rapidly than expected. But the production of cells and panels has shifted to countries like Malaysia, Vietnam and South Korea.

The ITC will send its recommendations for trade remedies to Trump by Nov. 13 — though the White House can ultimately implement any barrier it chooses. That has solar installers and project developers in a panic, and many are stockpiling panels ahead of possible tariffs. The Solar Energy Industries Association is predicting up to 88,000 job losses, or nearly a third of the U.S. sector. And if domestic manufacturing ramps over the next year, 2018 is likely to see supply shortfalls and price spikes as production fails to catch even reduced demand.

4) Hitting the brakes on fuel economy

Trump announced in March that EPA would reconsider the tightened mileage standards that Obama had imposed for cars sold from 2022 to 2025, a move the former president's agencies had said would lift the average to about 50 miles per gallon. Trump's agency is expected to roll back the requirements.

In a review hastened to completion just before Obama left office, then-EPA chief Gina McCarthy affirmed that the aggressive mileage standard was feasible.

Trump's decision to review the target came amid pressure from U.S. automakers to cut back the standards, but it could backfire. The Clean Air Act includes an exception for California to set its own mileage standards, and if EPA changes the requirements, it won't affect California or the 11 other states that follow the Golden State's lead. For automakers, it opens up the nightmare scenario of producing cars for two different U.S. standards.

5) Opening federal lands to fossil fuels

Trump's Interior Department is seeking to boost oil, gas and coal production by taking a hatchet to Obama-era regulations that govern fossil fuel production on public land. One of the biggest moves so far would reverse Obama's tightened restrictions on leaks of planet-warming methane from drilling wells, pipelines and other infrastructure.

Interior also said it would postpone and rewrite a controversial Obama administration rule that requires drillers to publicly disclose the chemicals they used to frack wells on federal land, among other things.

Interior also has scuttled a review that probably would likely have increased the royalties that coal companies must pay to mine on federal land. And in August, Interior Secretary Ryan Zinke recommended that Trump shrink the size of several national monuments in Utah, Oregon and Nevada, a move that would potentially open them up for drilling or mining. Zinke is aiming to lift restrictions on grazing, mining, fishing and timber harvesting at those and a handful of other monuments.

Besides fighting against previous rules, Interior is trying to take steps it says will increase oil production off the Alaskan coasts and in the long-protected Arctic National Wildlife Refuge.

Zinke's travels: Ski resort and Alaskan steakhouse Back

By Esther Whieldon and Ben Lefebvre | 10/10/2017 07:32 PM EDT

Interior Secretary Ryan Zinke has attended at least two additional political fundraisers while traveling for official business, including a weekend ski getaway less than three weeks after he was sworn in that donors paid up to $3,000 to attend, according to sources and documents reviewed by POLITICO.

Zinke's previously undisclosed attendance at the events adds to scrutiny he is facing over his habit of mixing political activities with official business when traveling outside of Washington, D.C., and to questions over travel expenses incurred by members of President Donald Trump's Cabinet. In addition to the fundraisers, Zinke has held at least a half-dozen other events with big donors or influential conservative organizations while on official trips.

Zinke, a former Montana congressman who became secretary March 1, started his fundraising

appearances even before attending a March 30 Virgin Islands Republican Party fundraiser in St. Croix that POLITICO reported last week, at which donors paid up to $5,000 per couple for a photo with him. The Justice Department's Office of Special Counsel, which is investigating Zinke's use of travel and political activities in office, has been asked by a watchdog group to look into his appearance there.

In the first of the newly disclosed appearances, Zinke attended a mid-March fundraiser at a ski resort in Big Sky, Montana, organized by committees affiliated with Republican Sen. Steve Daines, according to two attendees who saw him there. And in May, Zinke briefly stopped by a fundraiser for GOP Rep. Don Young at a steakhouse in Anchorage, Alaska, a spokesman for Young's campaign told POLITICO.

All three fundraisers occurred on trips that Zinke took for official Interior Department business. The Hatch Act and other federal laws allow Cabinet secretaries to participate in partisan political activities only if they do so on their own time and do not use any governmental resources. Federal Election Commission records for the campaign committees do not list any reimbursement payments to Interior for the events.

"Both law and common sense tell us that taxpayer resources are supposed to be used when you're doing the taxpayers' business [but] are not supposed to be used to help candidates get elected," said Brendan Fischer of the nonprofit watchdog organization Campaign Legal Center.

An Interior Department spokeswoman did not respond to specific questions about Zinke's attendance at the events nor whether the campaigns reimbursed Interior for any of his travel expenses, but she said ethics officials sign off on the secretary's trips and all of them comply with the law.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," Interior spokeswoman Heather Swift said in a statement.

Other guests attending the Montana fundraiser included Sens. John Hoeven (R-N.D.) and Lisa Murkowski (R-Alaska), according to an invitation to the March 17-19 event posted by a local political blog earlier that month. Donors were asked to contribute $3,000 if they were attending on behalf of a political action committee or $1,500 for an individual. Another invitation for events that weekend obtained by POLITICO sought donations as low as $500 to attend two dinners for Daines.

Hoeven hosted his own reception Friday night before the Daines dinner and a lunch Saturday, according to a campaign invitation obtained by POLITICO, which also informed guests that they could purchase "discounted ski lift tickets" at the resort.

Zinke was not named on the invitations, but his official schedule lists him as attending a "welcoming reception" for Daines on Friday night, spending "personal time with Senator Murkowski" at Big Sky Resort on Saturday and attending a "reception & dinner" for Daines that

evening.

Two sources who attended the Daines fundraiser recalled seeing Zinke there. One of the sources, a lobbyist, said Zinke attended the Friday night social and the breakfast buffet the next day. The lobbyist said that when Daines introduced Zinke, the Montana senator mentioned that Zinke was the state's first Cabinet secretary.

The Hatch Act bars Zinke from taking part in political events while acting in his official role as Interior secretary, which includes being identified by his title in invitations. But Richard Painter, a University of Minnesota professor and former White House chief ethics lawyer under President George W. Bush, said Daines referring to Zinke's Cabinet position doesn't appear to violate the law.

Zinke "should take reasonable steps to make sure people aren't using his official title" and not use the title himself at political events, Painter said. "But I don't know that he has an obligation to jump in and tell the senator he can't do that."

The secretary spent most of the day that Friday touring Yellowstone National Park, which the Interior Department manages through the National Park Service. He did not have any other official events listed on his schedule for Saturday and flew back to Washington, D.C., on Sunday.

A report posted by Interior on Zinke's March travel expenses shows that he claimed 75 percent of his per diem that Friday and did not claim any lodging or reimbursements over that weekend, which he took as personal days off. He did fly home on official taxpayer-funded travel, however.

The Young fundraiser occurred May 31, when Zinke was in Anchorage for a speech to the Alaska Oil and Gas Association's annual conference, where he signed a secretarial order for an updated assessment of how much oil exists in part of the Arctic National Wildlife Refuge. The invitation to the reception, a copy of which was obtained by political blog Must Read Alaska and shared with POLITICO, does not list Zinke as a special guest, nor does it say how much donors had to contribute to attend.

FEC records for the Alaskans for Don Young campaign committee show it received $9,800 in campaign contributions from individuals and political action committees on that day.

Young's campaign spokesman, Matt Shuckerow, said in an email that Zinke made "only very brief remarks" at the event, and that the campaign did not confirm his attendance in advance and did not require guests to pay to attend. "Not only did the campaign seek out the guidance of the Interior Department's ethics personnel prior to the event, it took concerted efforts to follow their strict guidance," Shuckerow said. He did not say whether the campaign reimbursed the Interior Department for any costs associated with Zinke's trip.

Zinke's calendar for that day includes a brief stop at Sullivan's Steakhouse in Anchorage, the same venue listed on the invitation, for a "Rep. Don Young Reception." Later that night, Zinke went to dinner with representatives of sportsmen's groups, according to his schedule.

The Anchorage stop came in the middle of a weeklong trip that included the use of a military plane to fly from Washington, D.C., to Norway, Greenland and then Alaska. Interior paid for Zinke and three Interior staff members to take the flight. Zinke's wife, Lola, also accompanied him on the trip but reimbursed the government for the cost of her seat, Interior has said.

In both of the newly disclosed appearances, Zinke did not pose for photos with high-dollar donors, as had been the case with the Virgin Islands Republican Party fundraiser. POLITICO's report on Zinke's appearance in that photo line led Walter Shaub, a former director of the U.S. Office of Government Ethics who is now with the Campaign Legal Center, to ask the Office of Special Counsel to open a Hatch Act investigation. The OSC typically opens investigations in response to complaints it receives, but a spokesman declined to comment on the status of Shaub's request.

Still, some watchdogs question whether Zinke is focused enough on his day job given how much attention he has paid to politics.

"There's always the risk that a high-level government official spending more time involved in political events may not be attending to their official duties," said Nick Schwellenbach, director of investigations at Project On Government Oversight.

White House seeks $4.9B to shore up Puerto Rico finances Back

By Sarah Ferris | 10/10/2017 07:11 PM EDT

The Trump administration today sought an additional $4.9 billion in emergency hurricane aid to stave off what Puerto Rico's governor recently warned could become a fiscal catastrophe.

The OMB sent a formal request to House leadership this afternoon, revising its most recent recovery package request to nearly $35 billion.

The extra $4.9 billion would "address the immediate liquidity issue that Puerto Rico is having," OMB spokesman John Czwartacki told POLITICO. It would allow the island government to make its payroll and fund pensions amid its worst natural disaster in decades.

The White House's request exceeds the $4 billion request from Puerto Rico Gov. Ricardo Rosselló last week, though it would be delivered in the form of a loan, rather than a grant.

In his letter to the White House, Rosselló warned that Puerto Rico's government needed an immediate cash infusion.

"In addition to the immediate humanitarian crisis, Puerto Rico is on the brink of a massive liquidity crisis that will intensify in the immediate future," the governor wrote to the White House.

The loan funds would likely be added to the storm recovery package that the House is expected to approve this week.

The House Appropriations Committee has received and is reviewing the request, a GOP aide confirmed.

Drinking water utilities push for farm bill water protections Back

By Jenny Hopkinson | 10/10/2017 07:17 PM EDT

The American Water Works Association — a group representing drinking water utilities — is urging lawmakers to include in the next farm bill provisions and funding to better protect drinking water sources from agricultural runoff.

Tracy Mehan, AWWA's executive director of government affairs, said the group is getting more involved in the farm bill process than in years past in light of high-profile instances of utilities' source water being contaminated by nitrate and other agriculture-related pollutants — including the Des Moines Water Works' unsuccessful challenge of upstream counties over farm runoff and the algal bloom that shut down Toledo's water supply in 2014.

AWWA is asking lawmakers to include "robust overall funding" for the conservation title — keeping it at $6 billion, if not adding to the current allotment. The group also wants farm bill conservation programs to prioritize protection of drinking water, increase benefits to farmers for practices that safeguard source water, and ensure at least 10 percent of conservation funds are devoted to water-quality efforts.

"We need to sensitize USDA and the relevant committees to the importance of public health" and the issues that arise from farm runoff and chemicals that make their way into bodies of water, Mehan said. For example, nitrogen, a key ingredient in fertilizer, can cause developmental problems and pose cancer risks if present at high levels in drinking water. A report earlier this year from the Environmental Working Group found the contaminant to be present in the drinking water of 218 million Americans.

While conservation programs already address water-quality issues, Mehan said AWWA's focus is to get more resources and reporting aimed at potable water sources. "We assume that a lot of the money that they are spending already is probably useful and could be legitimately categorized as [being spent on] source water protection; we would just like to be more specific

and track it," Mehan said of his group's requests.

Subject: ADMINISTRATOR PRUITT VISITS GOLD KING MINE ON ANNIVERSARY OF SPILL

Contact Information: press@epa.gov

ADMINISTRATOR PRUITT VISITS GOLD KING MINE ON ANNIVERSARY OF SPILL

"A New Review is Paramount for Those Who Suffered Losses" – Administrator Pruitt

Silverton, Colo (August 4, 2017) — On the eve of the two-year anniversary of Gold King Mine spill, Administrator Scott Pruitt visited the site outside Silverton, Colorado to discuss his commitment to those affected by the release of 3 million gallons of contaminated mine water into the Cement Creek and Animas River.

"EPA should be held to the same standard as those we regulate," **said EPA Administrator Pruitt.** "The previous Administration failed those who counted on them to protect the environment."

Despite the release of 3 million gallons of contaminated water tainted with arsenic, lead and other heavy metals, which turned the Animas River mustard-yellow, and moved along the San Juan River through Colorado, New Mexico, Utah and American Indian land to Lake Powell in Utah, the EPA Administrator at the time, Gina McCarthy, nor President Obama nor Vice President Biden, ever visited the site of the spill itself.

Fulfilling his promise during his confirmation hearing to the people of Colorado to visit the site, Administrator Pruitt, along with U.S. Senators Cory Gardner and Michael Bennett and Colorado Governor John Hickenlooper toured Gold King Mine, met with EPA staff on site and discussed a path forward.

"When I was appointed EPA Administrator by President Trump, I committed to review the Gold King Mine decision made by the previous Administration. A new review is paramount to ensure that those who have, in fact, suffered losses have a fair opportunity to have their claims heard," **said Administrator Pruitt**.

Following the tour, EPA political appointees are participating in a town hall in Durango, Colo. with local residents to hear directly from those living around the mine about how they have been affected by the spill.

"We want to listen and learn directly from the community," **said Ken Wagner, senior advisor to the administrator for regional and state affairs.** "The local community is ground zero in environmental disasters, and we want to hear their concerns and do our best to coordinate and provide assistance."

Additional Background:

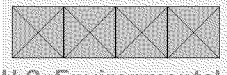
In January 2017, the previous EPA administration denied 79 administrative claims filed by farmers,

ranchers, homeowners, businesses, employees, state and local governments, as well as other individuals seeking damages in connection with the Gold King Mine incident.

On March 16, 2017, EPA provided over $90,000 in additional reimbursements to five entities in Colorado and Utah for costs incurred responding to the August, 5, 2015 release. These payments represent requests received by EPA prior to December 16, 2016, that had adequate documentation. They were evaluated following enactment of the Water Infrastructure Improvements for the Nation (WIIN) Act on December 16, 2016.

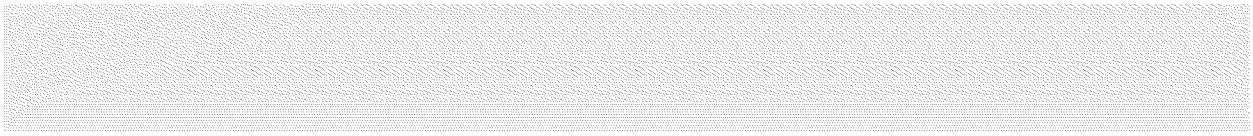
On July 5, 2017, EPA Administrator Scott Pruitt announced his decision to reconsider claims for Gold King Mine damages previously denied by the past Administration. As part of this process, EPA is continuing to review pending claims.

Following the Administrator's instruction, EPA sent letters to approximately 77 claimants whose claims related to the 2015 Gold King Mine release were previously denied. Each letter informs claimants that EPA has reexamined applicable law and facts and will reconsider all of the claims. In some cases, the letter also requests claimants submit any additional documentation in support of their claims.



According to the Federal Tort Claims Act, individuals, businesses, or governmental entities that have a claim for money damages resulting from personal injury or property loss or damage must file their administrative claims within two years of the date the claim accrued.

Some claimants have already filed legal challenges to the Agency's denial of their claims. Those actions will continue to follow the judicial process. In February, the State of Utah filed an administrative claim seeking $1.9 billion. On August 2, 2017 Utah sued the mine owners and EPA contractors for cleanup compensation and unspecified damages. The State of New Mexico and the Navajo Nation, whose administrative claims were denied, have filed motions seeking to add their tort claims to the preexisting Gold King Mine litigation in the District of New Mexico.



The Gold King Mine release occurred on August 5, 2015. EPA has spent more than $29 million responding and addressed many of the issues arising out of the Gold King Mine incident including reimbursing response costs by state, local and tribal governments, providing continued water treatment and monitoring, listing the Bonita Peak Mining District on the National Priorities List of Superfund sites, and conducting research to improve our understanding of how contaminants move through complex river systems. There are an estimated 500,000 abandoned mine sites across the United States.

There are currently 144 total claims pending, including the ones undergoing reconsideration, that require EPA action. EPA has six months (until the end of December) to act on claims under reconsideration.

Subject: POLITICO's Morning Energy: Another ANWR wrinkle in tax revamp battle — Murray bashes oil giants as fossil fuel 'enemies' — Pruitt promises new WOTUS rule by mid-2018

By Anthony Adragna | 12/01/2017 10:00 AM EDT

With help from Alex Guillén and Eric Wolff

ANOTHER TAX BILL WARNING OVER ANWR? Even as Senate Republicans scrambled Thursday evening to rewrite their tax package H.R. 1 (115), a small bloc of House Republicans objected to including ANWR drilling in the package - adding a new potential complication for the bill's passage once the chambers head to conference. A dozen House Republicans, six of whom voted for their chamber's bill previously, sent a letter to their party's leaders raising "concerns with any proposal that would implement an oil and gas leasing program" in ANWR though they stopped short of threatening to pull their support for the bill if it was not removed, Pro's Nick Juliano reports.

GOP Reps. Dave Reichert, Brian Fitzpatrick, Carlos Curbelo, Ryan Costello, Pat Meehan and Mark Sanford all backed the tax package on the floor, but are now expressing unease with the ANWR provision, along with six colleagues who opposed the initial bill over issues such as the state and local tax deduction. Remember Speaker Paul Ryan can only afford 10 additional defections from the original November vote tally for the final package to pass, meaning the small bloc holds some juice in the negotiations.

Other former Republican leaders oppose: A group of seven former Republican officials, including the first EPA Administrator William Ruckelshaus and former Interior Deputy Secretary Lynn Scarlett, sent their own letter to congressional leaders warning there's "simply no need to reverse protections" for ANWR and that fiscal projections for revenue are "highly speculative." They added that tacking the provision into the package would "complicate passage of important and vitally needed tax reform."

ICYMI, Senate Republicans tweaked drilling language in their bill to propose selling more oil from the Strategic Petroleum Reserve. What's interesting is the lack of criticism from Republicans who previously been outspoken against such efforts. (EPW Chairman John Barrasso said in 2012 tapping the SPR is "for emergencies - not political disasters.") Sen. Bill Cassidy summed up the party's thinking to ME: "I'm okay with that, because obviously the Strategic Petroleum Reserve is about energy security, and if ANWR is developed that is far more important to energy security than two days of SPR."

WELCOME TO DECEMBER! I'm your host Anthony Adragna, and the State Energy & Environmental Impact Center's Chris Moyer correctly identified Michelle Lujan Grisham as the niece of former Interior Secretary Manuel Lujan now running for office. For today: Which senator once ran the public schools of his state's largest city? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

MURRAY LABELS OIL GIANTS 'ENEMIES' OF FOSSIL FUELS: Three of the major oil and gas corporations are "enemies" of fossil fuels because of their past advocacy for climate action, including a carbon tax, coal executive Robert Murray said Thursday at a conference hosted by the Heritage Foundation and the Texas Public Policy Foundation. Prompted by comments from TPPF's Brooke Rollins calling their carbon tax advocacy "so disingenuous," Murray declared BP, Shell and Exxon Mobil "our enemies," citing politics and shareholders. "They're not doing our grandchildren justice, those three companies. The other oil and gas companies, they realize that once our enemies get rid of coal, they're next," Murray said. "But those three companies are all about politics and shareholders and I don't buy those products." Oil and gas executive Bud Brigham agreed: "It's cronyism that they chose to have a seat at the table with the government and collusion with special interests a la Elon Musk, etc. It's very disappointing."

Murray math: The coal magnate dropped some eyebrow-raising stats during his appearance, including that he has met with EPA Administrator Scott Pruitt a whopping seven times so far this year. Murray also said he has received 71 death threats, "some serious," although he did not specify over what period those were received.

MORE THAN A LITTLE SHAVE: During his swing to Utah next Monday, President Donald Trump is expected to cut the 1.353-million-acre Bears Ears National Monument down to about 201,400 acres and break it into two new monuments called Indian Creek National Monument and Shash Jaa National Monument, Pro's Esther Whieldon reports, citing proclamations . He'll also divide the existing Grand Staircase-Escalante monument into three parts - Grand Staircase National Monument, Kaiparowits National Monument and the Escalante Canyons National Monument. The action is certain to set off a fierce legal battle almost immediately.

House Natural Resources Chairman Rob Bishop welcomed the move and pledged to attend the ceremony. "The president has stood against prior abuses of executive power and his administration has demonstrated a commitment to work in concert with local communities to protect unique public antiquities and objects the right way," he said in a statement. But Sen. Tom Udall, joined by Native American and environmental groups, will discuss what they're calling an "illegal abuse of power" during an 11 a.m. telephone press conference today.

ZINKE HEADS TO LOUISIANA: This Saturday Interior Secretary Ryan Zinke heads to Louisiana for events on coastal restoration and the state's plan for addressing it along with Sen. John Neely Kennedy, Cassidy and Rep. Garret Graves. They'll participate in events in Baton Rouge, Thibodaux, and Ama, La.

But faces ads in Washington: The Western Values Project is out with a six-figure ad this morning on Fox News and up digitally in Utah urging Trump to reject Zinke's recommendations on national monuments. "One Cabinet member in Washington has become one embarrassment after another for President Trump," it starts. The final line: "Don't let this wannabe cowboy

embarrass you once again."

LAST CALL! Today's your last chance to weigh in Interior's vows to redo sage grouse conservation plans. Advocates, including the Audubon Society and the National Wildlife Federation, say they've submitted at least 163,000 already in support of the existing plans. And a group of fish, wildlife and natural resources professionals urged Interior to ensure any changes made to sage grouse management plans are backed up by appropriate science.

PRUITT PROMISES FINAL WOTUS BY MID-2018: Pruitt is due to make remarks to farmers and biofuels groups today in Nevada, Iowa, today fresh off his agency's biofuels decision on Thursday and a swing through Kentucky. During a speech to the Kentucky Farm Bureau Thursday, Pruitt promised a final replacement to the Waters of the U.S. regulation by mid-2018 that he said would focus on "navigability," according to video posted by WHAS. He also met with Kentucky Gov. Matt Bevin.

On his relationship with Trump: "It is a blessing to serve him and my desire each and every day is to bless him as he makes decisions."

GREENS DEMAND DOURSON DOCS: American Oversight and the Environmental Working Group are beginning a joint investigation this morning into EPA chemicals office nominee Michael Dourson's early work at the agency prior to his Senate confirmation. They're sending out six FOIA requests seeking copies of his communication with senior political staff; ethics and recusal documentation; calendar and telephone logs; records of political appointees discussions about Dourson; contacts with outside groups like Koch Industries and DuPont; and interactions with anyone helping Dourson on his confirmation. "Michael Dourson has been at the EPA for more than a month, and if he's been using his position to help his old clients in the chemical industry, the public needs to know before the Senate votes on his confirmation," Austin Evers, executive director of American Oversight, said. Reminder: Dourson appears to be short the votes needed for Senate confirmation.

FROM FARM TO CAR: EPA issued its rule Thursday making official the Renewable Fuel Standard requirements for 2018 and 2019. Cellulosic ethanol volumes were revised up by 50 million gallons from the agency's July proposal because, EPA said in the rule, the agency received updated data that suggested greater production capacity. Still, 2018's cellulosic volume requirement of 288 million gallons is lower than this year's 311 million gallons.

Biodiesel doesn't lose: Biodiesel producers wished for a larger target, but EPA also abandoned its October threat to make deep cuts. EPA had said that it was concerned about import tariffs, feedstock problems, and the expiration of a biodiesel tax credit crimping supply, and so it wanted to make big reductions. The agency is still concerned about those forces, but, it said, "We find it unnecessary to resolve whether to adopt such interpretations at this point in time because under any approach we would find exercise of these waiver authorities not appropriate based on the record before us."

QUICK SENATE ACTION ON BROWNFIELDS EYED: The House passed legislation H.R. 3017 (115) reauthorizing EPA's Brownfields program Thursday afternoon and Sen. Jim Inhofe

said he thought it could pass by unanimous consent in the Senate in the near future. "There's no one opposed to it that I know of," he told reporters. The bill cleared the House by an overwhelming 409-8 tally with eight Republicans voting no.

CRITICISM OF PUERTO RICO CONTRACTS: Two former Obama administration officials are out with an op-ed this morning in POLITICO urging the Trump administration to stop its practice of awarding massive reconstruction contracts in Puerto Rico to single companies, such as Whitefish Energy. And that comes as the top Homeland Security Democrat Claire McCaskill sent a letter to FEMA asking questions about why it awarded $30 million in contracts to a newly-formed Florida company that was unable in the end to complete the work on the hurricane-ravaged island.

WEST VIRGINIA'S SENATORS ON BLANKENSHIP BID: Even as convicted coal baron Don Blankenship released his first ad in his Senate bid, his possible opponent Sen. Joe Manchin didn't seem perturbed by his entry "I'd just say, 'jump in, the water's fine," he told ME. Republican Sen. Shelley Moore Capito told ME she expected a lively primary campaign and added: "I was surprised and I said, 'It's a free country.'"

MAIL CALL! DO YOU REMEMBER? Top House Energy and Commerce Democrat Frank Pallone sent a letter to Chairman Greg Walden demanding oversight hearings and investigations into the use of private planes by Trump Cabinet officials. "It is critical that we ensure there are effective Agency controls that exist to prevent the risk of fraud, waste, and abuse related to leadership and staff travel," he wrote. Both Perry and Pruitt used non-commercial aircraft, and their agencies fall under the committee's jurisdiction.

INHOFE ON ENDANGERMENT FINDING: NOW OR NEVER: Though it hasn't come up in his conversations with Pruitt, Inhofe wants his fellow Oklahoman to make a push to overturn the endangerment finding now. "If there's a chance of getting it done, I don't see a downside," he told reporters. "I would recommend he do that."

Inhofe spoke with Pruitt on Tuesday and said he was upbeat. "He's warding off the harassment, the opposition, the death threats and these things," Inhofe said. "He's just real happy in his job."

LOOKING FOR WEEKEND PLANS? Hundreds of faith leaders, environmental activists, native tribes, business owners and others gather on Saturday to encircle the Virginia State Capitol on Saturday in protest of the Atlantic Coast and Mountain Valley pipelines. More information here.

TAKE A GLANCE! Resources for the Future released a study Thursday examining multiple potential alternative versions of Perry's proposed grid resiliency rule and their corresponding impacts to human health, the environment, consumers' cost of electricity and power plant owners' profits. Read it here.

COOL NEW TOOL: ProPublica released an application documenting the military's 40,000 hazardous waste sites across the country. Check it out here.

Subject: Trump, Pruitt call Iowa governor to ease tensions on biofuels

By Eric Wolff

10/18/2017 03:40 PM EDT

Iowa Gov. Kim Reynolds says both President Donald Trump and EPA Administrator Scott Pruitt called this morning to reassure her that they supported the federal biofuels program.

Reynolds told a press conference in Iowa the call with Trump was "very productive," and that the president and Pruitt both "affirmed to me their continued commitment to the Renewable Fuel Standard."

Midwestern politicians have been leading the charge against Pruitt's proposal to lower 2018 and 2019 biodiesel volumes in a rule set to be finalized in November, and against potential EPA plans to create a credit for exported biofuels.

"I felt very good about the conversation," Reynolds said.

Reynolds declined to offer additional details, but she said she would be in Washington next week to keep lobbying.

"We're going to continue to push for the answers we're looking for," she said. "It's not done till it's done. You don't stop until you get the final numbers, and then you start working on the next one, and it starts the next day."

Pruitt and his top staff met with Midwestern senators in Iowa Sen. Chuck Grassley's office Tuesday. Sen. Deb Fischer (R-Neb.) emerged from that meeting saying she would back EPA air office nominee Bill Wehrum, who is up for consideration in the Environment and Public Works committee, though Sen. Joni Ernst (R-Iowa) said she was withholding here support for now.

BREAKING -- @HallieJackson: "NEW: is it possible @POTUS might fire Tom Price, I ask? 'We'll see,' he says. Says he's not happy with his HHS Secretary."

WAR REPORT -- "Rocket Attack Hits Kabul Airport Hours After Mattis Arrives," by NBC's Ahmed Mengli, Mushtaq Yusufzai and Alexander Smith: "The Taliban claimed it fired at least six rockets at Afghanistan's main airport Wednesday in an attack intended to target Defense Secretary James Mattis. No one was injured and Mattis had left the airport in the capital Kabul hours beforehand, according to Afghan President Ashraf Ghani.

"**The defense secretary was in the country** for an unannounced visit alongside NATO Secretary General Jens Stoltenberg. It was his first trip to Afghanistan since President Donald Trump announced a new strategy for America's longest war. Although the trip was not publicized, two Taliban commanders told NBC News on condition of anonymity that their 'insiders' in the Afghan security establishment and at Kabul airport had tipped them off in advance." http://nbcnews.to/2wUIR5h

Good Wednesday afternoon. SCOOP - MIKE HAIDET is now White House director of scheduling, sources familiar with the move told Daniel and Tara Palmeri. He was most recently the director of the Trump White House travel office. Haidet was also director of operations on Sen. Rob Portman (R-Ohio)'s re-elect last year, is a Rubio 2016 alum and also served as press secretary for Sen. Portman. **TORY MAGUIRE** was the previous head of scheduling and left the White House last Friday. **REBECCA WASSERSTEIN,** formerly the deputy director of the travel office, has taken over as head of that office. Haidet and Wasserstein did not respond to requests for comment.

THE TAX PLAN LANDS -- "Trump, GOP tax plan omits details on who pays," by Brian Faler and Rachael Bade: "President Donald Trump is heading to Indiana Wednesday to sell a tax-reform plan that glosses over one key question: Who loses? The long-awaited proposal released Wednesday morning by the so-called Big Six is heavy on the GOP's tax cut desires and light when it comes to explaining whose taxes

will have to go up to help control costs.

"After months of meeting behind closed doors, the Trump administration and the Republican leadership in both chambers announced they want to slash the corporate rate to 20 percent from the current 35 percent, while reducing taxes on unincorporated businesses to 25 percent. They're proposing nearly doubling the standard deduction, expanding a tax credit for having children and creating a special low rate on multinational companies' overseas earnings. The cost of all that would run in the trillions, and Republican leaders don't plan to simply cut taxes and leave it at that. They want to at least partially defray the cost with offsetting tax increases. But their plans for doing that, for the most part, are still a secret." http://politi.co/2yIuJZc ... ***The tax plan framework*** http://politi.co/2yGDtil

GET SMART FAST -- "Everything you need to know about the Big 6 tax plan," by Brian Faler: "For individuals: The big surprise here is that Republicans are backing away from plans to slash taxes on the rich. They are floating the idea of some sort of surtax on the well-to-do, though details are scant. That's a major shift from what Republicans campaigned on in last year's elections, when they proposed steep tax cuts for the wealthy. But they are trying to head off the inevitable attacks from Democrats, and maybe even win some of their support. ...

"For businesses: As expected, the plan calls for cutting the corporate rate to 20 percent, from the current 35 percent. Small businesses would pay 25 percent. Companies would be allowed to immediately write off investment expenses, though only for five years." ***Plus the early losers, unanswered questions and other surprises*** http://politi.co/2wVxfOv

-- MUST READ from **RICH RUBIN: "GOP Tax Plan: What We Know and What We Don't"** http://on.wsj.com/2yHjcJD

DRUDGE HEADLINE as of midday: "MORE BETRAYAL REPUBLICAN PLAN TO RAISE TAXES!" ***With photo of Trump and Ryan.***

-- @FreedomCaucus: "The Freedom Caucus has taken an official position in support of the GOP framework for #TaxReform. Statement coming..."

-- POLITICO PRO has everything you need to know on tax reform in one handy guide. ***Download here*** http://politi.co/2yIt8CG

MORE POLITICO/MORNING CONSULT POLLING -- "Poll: Voters say Price's charter flights are inappropriate," by Rachana Pradhan: "Nearly two-thirds of registered voters disapprove of HHS Secretary Tom Price's decision to charter private jets to conduct official business, a new POLITICO/Morning Consult poll shows. Sixty-four percent of voters said it was inappropriate for Price to take private aircraft, which costs tens of thousands of dollars more than commercial flights. Sixteen percent said the trips were appropriate." http://politi.co/2xAEwQL

ANOTHER HEALTH CARE PUSH -- "Alexander, Murray to meet for bipartisan health talks," by Burgess Everett: "GOP Sen. Lamar Alexander will meet with Democratic Sen. Patty Murray on Wednesday to try to salvage their bipartisan health care efforts, Alexander said in an interview. House and Senate Republican leaders rejected the effort last week, preferring instead to try another partisan attempt at Obamacare repeal. Alexander said that now that that's collapsed, he's going to try again with Murray to stabilize insurance markets.

"Still, Alexander said he needs broader buy-in than just a deal between him and Murray, the two leaders of the Senate's health committee. 'We're going to see if it's possible to find some bipartisan consensus that can get a result,' Alexander said. 'I'm talking to her, I'm talking to Republicans and I'm talking to some Democrats.'" http://politi.co/2yGCGhn

****** **A message from Morgan Stanley** : Amid a confluence of regulatory, market and technological factors, the production and sales of battery-powered electric vehicles may finally shift into high gear. A Morgan Stanley report projects that as many as a billion electric vehicles will be on the road worldwide by 2050. Read more. ******

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:56 a.m.: "Spoke to Roy Moore of Alabama last night for the first time. Sounds like a really great guy who ran a fantastic race. He will help to #MAGA!" ... **at 7:09 a.m.:** "Spoke to Jerry Jones of the Dallas Cowboys yesterday. Jerry is a winner who knows how to get things done. Players will stand for Country!" ... **at 7:32 a.m.:** "With one Yes vote in hospital & very positive signs from Alaska and two others (McCain is out), we have the HCare Vote, but not for Friday!" ... **at 7:36 a.m.:** "We will have the votes for Healthcare but not for the reconciliation deadline of Friday, after which we need 60. Get rid of Filibuster Rule!" ... **at 9:36 a.m.:** "Facebook was always anti-Trump.The Networks were always anti-Trump hence,Fake News, @nytimes(apologized) & @WaPo were anti-Trump. Collusion?" ... **at 9:41 a.m.:** "..But the people were Pro-Trump! Virtually no President has accomplished what we have accomplished in the first 9 months-and economy roaring"

-- @jimcramer: "So The President, according to @anthonynoto from Twitter will not be tweeting 280 characters in the test."

GETTING INTO POTUS' GOOD GRACES -- "Roy Moore: Trump didn't support me because he didn't know me," by Louis Nelson: "President Donald Trump supported Sen. Luther Strange in Tuesday's Alabama special election because 'I don't think the president knew me,' victorious former judge Roy Moore said Wednesday morning, pledging support for the president's agenda and predicting Trump would support his candidacy. ... 'Well I don't think the president knew me and I think that when he gets to know me that he'll understand that I do support a very conservative agenda for this country,' Moore said Wednesday morning on Fox News's 'Fox & Friends.' 'And I think that he will back me. And I've received call from him and that's what he said he would do.'" http://politi.co/2yGYycz

-- "Who is Doug Jones, and can he defeat Roy Moore in conservative Alabama?," by WaPo's David Weigel: "Democrats who have not seriously contested an Alabama Senate race since 1996 think they have a credible candidate in Doug Jones, a former U.S. attorney who successfully prosecuted members of the Ku Klux Klan who bombed a black church in Birmingham in 1963, killing four girls. And several progressive groups believe they have clearer shot at winning the general election in December than they would have if Sen. Luther Strange, the establishment candidate who lost resoundingly to Moore on Tuesday, had won. Clearer, but not necessarily easy. ...

"Jones, in an interview conducted before Moore secured his win, said he had a unique opportunity to break Democrats out of their rut. He would offer 'political checks and balances' on the Trump administration, reach out to independents and provide a sober contrast with firebrand Moore." http://wapo.st/2yGRcFI

POLITICO GETS RESULTS -- The House Oversight Committee announced it is "examining the extent to which non-career officials at federal departments and agencies either use government-owned aircraft for personal travel or private non-commercial aircraft for official travel" in a letter to White House Chief of Staff John Kelly. Chair Trey Gowdy (R-S.C.) and ranking member Rep. Elijah Cummings (D-Md.) requested documents on private travel by Oct. 10. ***The letter*** http://bit.ly/2yGZoWL

KUSHNER INC. -- "Jared Kushner Real Estate Company Sued for Predatory Overcharging Practice," by The Daily Beast's Betsy Woodruff: "One of Jared Kushner's real estate companies has been sued. A class action lawsuit filed in Maryland State Court this morning alleges that Westminster Management, a company owned by President Donald Trump's son-in-law and top adviser, charged its tenants improper fees, and then used their failure to pay those fees as a basis to threaten them with eviction." http://thebea.st/2yHc6ob

#18 IN 2018? -- "Corker: 'Possible' that Peyton Manning runs for Senate," by Burgess Everett: "It's 'possible' but not necessarily likely that former NFL quarterback Peyton Manning will run for the open Tennessee Senate seat, retiring Sen. Bob Corker said Wednesday. The outgoing GOP senator said he spoke with Manning on Wednesday morning, one day after Corker said he won't run for a third term. Corker said that Manning is enjoying private life and time with his family but would be a formidable force if he runs for the seat. 'If he were to run nobody in their right mind would consider running against him,' Corker said, though he warned: 'I would not be putting in the headlines today that he's going to be running for the Senate.'" http://politi.co/2wUrdgR

CULTURE WARS -- "Red pilled: My bizarre week using the alt-right's vision of the internet," by WIRED's Emma Grey Ellis http://bit.ly/2wVBwkT

SPORTS BLINK -- "Head coach Rick Pitino and athletic director Tom Jurich out at Louisville," from ESPN: "Louisville men's basketball coach Rick Pitino is out, a source

tells ESPN's Michael Eaves. Athletic director Tom Jurich is also out at Louisville, a source tells ESPN's Jeff Goodman, after the program was linked to a federal investigation into fraud and corruption in recruiting. Jurich and Pitino met Wednesday morning with Louisville interim president Greg Postel. After the meetings, Postel informed reporters that the school would hold a news conference at 1 p.m. and noted that Pitino and Jurich would not attend." http://es.pn/2yHebRj

MEDIAWATCH -- JILL JACKSON is moving to Seattle, where she will rejoin KUOW Public Radio as its news director. She was an intern for the station in 2003. She has been at CBS News since 2007, most recently as a senior producer in the D.C. bureau. Jackson is well known to Hill reporters -- she was the network's Capitol Hill producer for several years.

HAPPENING TOMORROW -- Supreme Court Justice Neil Gorsuch is giving a speech at the Trump International Hotel at a luncheon hosted by The Fund for American Studies.

OUT AND ABOUT -- Members of Congress, lobbyists and staff gathered for the 19th annual Hoops for Youth Charity Basketball Game at the Smith Center last night. Capitol Police officers Crystal Griner and David Bailey, the two officers who helped stop the shooting earlier this year that wounded Rep. Steve Scalise (R-La.), were honored during the event with University of Kentucky men's basketball head coach John Calipari on hand. Calipari announced a $20,000 donation to the Capitol Police Officers Fund, and Rep. Cedric Richmond (D-La.) announced the CBC would also donate $20,000. The first lobbyists team beat the staff team 56-36, and the second lobbyists team beat the members of Congress 49-42. ***Coach Calipari with the officers and participants*** http://bit.ly/2wVeISi

****** **A message from Morgan Stanley** : For years, many industry watchers have predicted the demise of traditional gas-guzzlers and the rise of electric cars. Yet, despite the advent of hybrid vehicles, better and cheaper batteries, and the entry of high-performance luxury electric competitors, the former continues to dominate roads globally. Now, however, the automobile's long-promised electric future may be in sight, according to a new report that projects that as many as a billion battery electric vehicles will be on the road worldwide by 2050, reaching parity with vehicles powered by the internal combustion engine. Why have electric cars never been successful before and why is it different this time? Read more from Morgan Stanley. ******

Subject: Morning Media: Addressing the nation--Will Breitbart challenge the White House?--Shakeup at the L.A. Times

By Alex Weprin | 08/22/2017 06:30 AM EDT

ADDRESSING THE NATION: President Trump took to the stage last night at Fort Myer, Virginia to discuss his strategy for Afghanistan with the American people. The president read from a TelePrompTer for approximately 30 minutes, in a speech that was light on details, and generally free of the rhetoric he is known for in his speeches (save for some rhetorical pressure on Pakistan).

-For President Trump, however, the show around the address may be just as important, if not more important, than the address itself. As The New York Times' Maggie Haberman tweeted last night: "POTUS is often occupied by the staging and showier aspects of the presidency, particularly his first prime time address. If people don't tune in/the ratings are not strong for his first prime time address, it will compound a sense of frustration he already has."

-It is undeniable that President Trump has a fascination with TV ratings and viewership metrics. 10 years ago, after he hosted a press conference for WWE Wrestlemania at Trump Tower, I interviewed Trump for an unremarkable story relating to "The Apprentice" and the WWE. While the story wasn't memorable, the interview stuck with me for a number of reasons, not the least of which was that Trump rattled off ratings for "The Apprentice" and its timeslot competition off the top of his head (along with some familiar "the greatest, highest-rated" hyperbole). Another time, a colleague of mine interviewed Trump for a story, and afterward received an email from his office loaded with attachments, all of them Nielsen ratings meant to back up Trump's ratings boasts from the call.

-So, how many people will tune in? When President Obama addressed the nation in primetime on Afghanistan in December 2009 averaged 40.8 million viewers, according to Nielsen. Related, my story from earlier this year: "Trump vs. Obama: By the TV Numbers"

-This morning: Keep an eye out for Vice President Mike Pence making the media rounds to talk Afghanistan. So far, he is booked on NBC and Fox News.

-Tonight: Trump follows up his scripted address to the nation with a campaign rally in Arizona. As with previous rallies, expect him to play to the crowd...

Good morning and welcome to Morning Media! Am I the only one who found the eclipse to be a communal experience? At least here in New York City, tourists and office workers were all standing slack-jawed on the sidewalk, happily sharing eclipse glasses and homemade pinhole boxes. I want to make Morning Media better and more useful to you, so please send me tips, ideas and feedback! I'm on Twitter **@alexweprin** and on email at **alexweprin@gmail.com**. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

WILL BREITBART CHALLENGE THE WHITE HOUSE? HuffPost's Michael Calderone tackles the question of where Breitbart under Steve Bannon goes from here, and whether ti will stay with its populist mission, even if it finds itself at odds with the White House. "The reflexive boosting of Trump on shows like 'Fox & Friends,' however, may differ from the pro-Trump stance of Breitbart, provided the site lives up its promise of challenging the president when he strays from the nationalist base on issues like immigration, trade and foreign policy," he wrote.

-We may have seen a taste of what Breitbart has in store last night, with edit staff at the site comparing Trump's Afghanistan speech to Obama's speeches on U.S. plans for the country.

-"Trump reverses course, will send more troops to Afghanistan... Defends flip-flop in somber speech... 'Unlimited War'" blared the Breitbart headline last night.

-More from POLITICO's Henry C. Jackson.

-In other Breitbart news, former CNN commentator and noted trump supporter Jeffrey Lord is in talks to join the site, per The Daily Beast : "Two sources familiar with the situation tell The Daily Beast that, post-firing, Breitbart reached out to Lord regarding writing for the site, for a contributorship or a potentially steadier job. Last week, Lord emailed The Daily Beast that he was indeed actively exploring post-CNN media options, stating that he had 'three possibilities already! LOL!' and was 'taking a week off and then back to figuring out the future.' Lord did not respond to follow-up questions regarding the specifics of said options."

CHOOSE YOUR TRUMP ECLIPSE TAKE: From today's New York Daily News cover, featuring a photo of President Trump staring at the solar eclipse without protective glasses: "Not too bright! Trump ignores fake news warning, stared at eclipse." Or, from last night's "Tucker Carlson tonight": "Even the president saw it, but in a move that is not a complete surprise, he looked directly at the sun without any glasses, perhaps the most impressive thing a president has ever done."

CNN CAN SNAP TOO: Not to be outdone by NBC News and its daily "Tune In" program, CNN announced last night a new news show for Snapchat, dubbed "The Update." The show will run at 6 p.m., as well as publish segments on breaking news. Each episode will feature five or more segments from CNN correspondents around the globe. "The Update" will also now serve as the home for CNN's content on the social app. "Since launching content on Snapchat, we have believed in the importance of giving our community access to accurate and authoritative news coverage, and CNN has played an important part in that from the beginning," said Sean Mills, Senior Director of Content Programming for Snapchat, in a statement announcing the deal. "It's more critical than ever that Snapchatters have access to the best journalism in the world, right when news breaks, and we're excited to watch CNN deliver that to them through The Update."

SHAKEUP AT THE L.A. TIMES: Tronc surprised the media world on Monday by completely shaking up its leadership at The Los Angeles Times, the largest newspaper on the west coast, and one of the largest in the country. Davan Maharaj, who had been editor and publisher of the paper, was out. So was managing editor Marc Duvoisin, deputy managing editor for digital

Megan Garvey and assistant managing editor of investigations Matt Doig. In their place, a new publisher: Ross Levinsohn, a former Fox executive and the interim CEO of Yahoo before Marissa Mayer took over. Jim Kirk, who had been editor and publisher of the Chicago Sun-Times, was named editor of the L.A. Times. They will bring in their own leadership team.

-"We don't do it lightly, but he's got to build a team with a digital-first mindset to maintain the integrity of the great journalism that we do here," Tronc CEO Justin Dearborn told Poynter.

-As with everything Tronc-related, you need to read Ken Doctor's take, in The Street.

In other revolving door news:

-The Wall Street Journal named Jay Sapsford deputy D.C. bureau chief. Sapsford had been working for the U.S. Chamber of Commerce as president of the U.S.-Japan Business Council. He is married to Yuka Hayashi, who covers financial regulation for the Journal.

-Wired has hired Erin Griffith as a senior writer; Griffith joins from Fortune, where she covered startups, venture capital and technology. She also wrote the great Term Sheet newsletter.

-Wall Street Journal columnist Peggy Noonan has joined NBC News and MSNBC as a political contributor. She made her debut on "Meet the Press" Sunday.

SOUNDBITE: "We raise our kids well in this community, honestly, I tell my kids to turn off the TV and get off the internet, I think that is probably the most important thing you can do these days."-- House Speaker Paul Ryan, drawing applause while speaking at a CNN town hall last night following Trump's address. "I'm not sure how to take that 'turn off the TV' applause." -- CNN anchor Jake Tapper.

TODAY IN CORRECTIONS:

-Breitbart apologized to German soccer star Lukas Podolski after a photo caption suggested he was a migrant being smuggled to Europe on a jetski. "Breitbart London wishes to apologise to Mr. Podolski... There is no evidence Mr. Podolski is either a migrant gang member, nor being human trafficked. We wish Mr. Podolski well in his recently announced international retirement."

EXTRAS:

-Here's one to keep an eye on: the Gawker bankruptcy case took on important new meaning, after a New York judge issued a ruling in favor of Chuck Johnson that could make it easier for individuals to siue media companies. [THR]

-Related: "Univision Says Lawsuit Over Deadspin Story Intended to Scare Journalists" [WSJ]

-"How I Became Fake News: I witnessed a terrorist attack in Charlottesville. Then the conspiracy theories began." [POLITICO Magazine]

-Buried in this interview with NBC ad sales chief Linda Yaccarino: Megyn Kelly's 9 a.m. hour is being sold as part of "Today," though advertisers that want exposure specifically during her hour can ask for it. [AdWeek]

-Here's a strange story: a prolific Youtuber and meme creator, who was a regular on pro-Trump message boards, disappeared from social media, only to return last week. He went almost totally unnoticed... until being retweeted by the president. [The Daily Beast]

-The SEC is reportedly investigating Spotify's unusual plan to skip an IPO and start selling directly on the New York Stock Exchange. [Bloomberg]

-CNN sister channel HLN debuted its new primetime lineup last night, led by Carol Costello and S.E. Cupp. In this interviews, Costello and Cupp discuss the merits of objectivity and fairness. [THR]

-New York Magazine's The Cut got a major redesign. [The Cut]

Leading the News

Appropriations

$36.5 Billion Disaster Aid Package Heads to Senate After House Passage

A $36.5 billion disaster aid package is headed to the Senate, after the House passed what lawmakers call an installment payment to deal with the nation's emergencies.

Chemicals

New York Poised to Require Ingredient Disclosure for Cleaners

New York could become one of the first states to force manufacturers to disclose a broad range of chemical ingredients included in household cleaning products and identified as unsafe by state, national, and international scientific authorities.

EPA

EPA Veteran to Head Agency's Midwest Region

An EPA veteran with support from both sides of the political aisle will oversee the agency's work in the Midwest.

Energy

Feds Must Support Nuclear Power for National Security, Perry Says

The commercial nuclear power industry needs a federal boost for national security reasons to prevent the U.S. from falling behind global competitors such as Russia and China, Energy Secretary Rick Perry told lawmakers.

Renewable Energy

Brazil Experiments With Floating Solar Panels Above Dams

Floating solar panels on the reservoirs above two state-owned dams will showcase technology that could eventually help Brazil diversify its energy sector as the country grapples with severe droughts.

News

Air Pollution

Philip Morris Joins Growing Group of Carbon-Pricing Corporations

Philip Morris International Inc., the maker of Marlboro cigarettes, now uses an internal cost of carbon emissions in its business decisions, joining a group of almost 1,400 companies that agreed to consider how greenhouse gas emissions will affect their industries, according to a statement Oct. 12 from environment group CDP.

Asbestos

Asbestos Tile Maker Wins Dismissal of Installer's Claims

Conwed Corp. won dismissal of a Kansas man's asbestos exposure claims in federal district court in Minnesota (McGill v. Conwed Corp., 2017 BL 362766, D. Minn., No. 17-01047, 10/10/17).

Climate Policy

Merkel Signals Deeper Green Ambitions as Pollution Overshoots

Chancellor Angela Merkel's government signaled it will step up its green programs after acknowledging Germany's emissions are on track to overshoot a target a little more than two years away.

Coal Mining

China's Top Coal Region to Cut Pollution by 40 Percent

China's second-largest coal producing region is planning to cut pollution by two fifths over the autumn and winter seasons, Xinhua News Agency reported.

Coal Mining

Coal's Comeback Is Running Out of Steam After a Year of Growth

For all the talk of coal's comeback under President Donald Trump, the actual rebound in U.S. production started months before November's election—and it may be fizzling out.

Energy

Australia to Fund Companies to Scale Back Energy Use This Summer

Australia will pay 10 large industrial energy users and small businesses to reduce energy use at times of extreme peak demand under a pilot program that has received A$35.7 million ($27.9 million) in government grants.

Energy

China Mulls Storage Salve for $4 Billion Renewables Headache

China is considering a prescription for nearly $4 billion worth of wasted electricity production looming over its push into clean energy.

Energy

Danish Company Dong Turns Trash into Energy

The U.K. might soon be powering its lights with energy that comes from the trash. A Danish energy company is working on new machines that sort household trash from recycling, while rapidly breaking down organic materials like food to create power from biogas produced by the process.

Energy

Russia-backed Pipeline May Need to Comply With EU Energy Law

The European Commission plans to propose in November an update of its natural-gas security regulation that would make new pipelines—including the controversial Nord Stream 2 link from Russia to Germany—subject to the European Union energy law.

Energy

U.K. Eyes Cap on 'Rip-Off' Power, Gas Prices

The U.K. government published its plans to cap domestic power and gas prices to protect millions of households from what it calls "rip-off" charges at the hands of the biggest utilities.

Oil & Gas

Dakota Access Boosts Drillers but Won't Be a Bakken Game-Changer

Once hailed as the spur for a North American "energy renaissance," the $3.8 billion Dakota Access pipeline has limited driller costs in its first four months in operation.

Oil & Gas

House Republicans Push Bills to Promote Oil and Gas

Republicans in the House are lining up more oil and gas legislation, including a bill on offshore drilling, and a rewrite of the law on national monuments, all with solid opposition from Democrats.

Oil & Gas

Local Drilling Rules Draw Industry Lawsuit in Colorado

A Colorado city's new drilling rules impede the state's interest in uniformly regulating oil and gas operations and should be tossed out, oil industry groups argue in a lawsuit.

Renewable Energy

Aussie Green Energy Bank Warns Funds at Risk If Targets Scrapped

Australia's government-owned green bank said investments in renewable energy generation will drop if the nation doesn't extend into the next decade clean energy targets and the financial incentives to meet them.

Toxic Substances

Cleanup Plan for Toxic Texas Site Less Protective, Companies Say

International Paper and McGinnes Industrial Maintenance Corp. are objecting to EPA Administrator Scott Pruitt's plan for the first of nine Superfund 'mega-sites' he's targeted for cleanup.

Toxic Substances

House Panel Sees Fatal Flaws in EPA's Chemical Toxicity Reviews

The EPA should reconsider Obama-era decisions on chemical toxicity and keep "low-quality science" out of new toxicity assessments, according to Republicans on the House Science Committee.

Regulatory Update

AIR
Engine Emission Defect and Recall Reports
AIR

Notice of the EPA announces the submission of a revised information collection request to the OMB regarding engine emission defect information reports (DIRs) and voluntary emission recall reports (VERRs). The collection addresses requirements for manufacturers of heavy-duty highway and nonroad engines to submit DIRs (Form 5900-301) if emission-related defects that may cause the engines' emissions to exceed Clean Air Act standards are found on engines of the same model year. The collection also addresses requirements for manufacturers to submit VERRs (Form 5900-300) to initiate a voluntary recall and voluntary emissions recall quarterly progress reports (Form 5900-302). The revisions address the reduction in estimated respondent burden hours due to a correction on previous estimates and a significant reduction in the estimated number of respondents. Comments are due Sept. 28, 2017. Contact: Nydia Reyes-Morales; EPA; 202-343-9264; reyes-morales.nydia@epa.gov. Citations: 40 CFR 85 through 1068 (nonconsecutive)

Regulatory Update

AIR
Fuel and Fuel Additives/Gasoline Volatility
AIR

Notice of the EPA announces the submission of a continuing information collection request to the OMB regarding volatility standards for fuel and fuel additives. The collection addresses requirements for gasoline producers or importers to provide on product transfer documents legible and conspicuous statements that the gasoline contains ethanol and the percentage concentration of ethanol. The collection also addresses requirements for producers or importers seeking testing exemptions from volatility standards for research purposes to submit certain information to the EPA. Comments are due Sept. 28, 2017. Contact: James Caldwell; EPA, Office of Transportation and Air Quality; 202-343-9303; caldwell.jim@epa.gov. Citations: 40 CFR 80.27(d) and (e)

Regulatory Update

AIR
Louisiana SIP/VOCs and Stage II Vapor Recovery
AIR

Final rule of the EPA approves revisions to the Louisiana SIP regarding control of volatile organic compounds and the Stage II vapor recovery program. The revisions exempt from Stage II vapor recovery requirements facilities used exclusively for the initial fueling and/or refueling of vehicles equipped with onboard refueling vapor recovery. The revisions also provide an exemption from the submerged fill pipe provisions for a limited number of tanks at a specific facility. In addition, the revisions address notifications to the Louisiana Department of Environmental Quality and due dates for reporting regarding VOC loading, marine vapor recovery, and specified incinerators. The rule is effective Sept. 28, 2017. Contact: Wendy Jacques; EPA Region 6; 214-665-7395; jacques.wendy@epa.gov. Citations: 40 CFR 52.970

Regulatory Update

AIR
NESHAP for Wool Fiberglass Manufacturing
AIR

Proposed rule of the EPA would revise the NESHAP for the wool fiberglass manufacturing source category. The rule would readopt existing emission limits for formaldehyde, establish emission limits for methanol, and establish a work practice standard for phenol emissions from bonded rotary spin (RS) lines at wool fiberglass manufacturing facilities. The rule also would require cooling emissions to be included in incinerator operating limits from RS and flame attenuation (FA) lines. In addition, the rule would establish three subcategories of FA lines based on recent information indicating that there are technical or design differences that distinguish sources that utilize FA lines. Finally, the rule would set work practice standards for phenol from a newly

proposed FA line subcategory. If requested by Sept. 5, 2017, a hearing will be held Sept. 13, 2017, in Washington, D.C. Comments are due Oct. 13, 2017. Contact: Brian Storey; EPA, Office of Air Quality Planning and Standards; 919-541-1103; storey.brian@epa.gov. Citations: 40 CFR 63, Subpart NNN

Regulatory Update

AIR
New York SIP/Cross-State Air Pollution Rule
AIR

Proposed rule of the EPA would approve portions of a revision to the New York SIP regarding Cross-State Air Pollution Rule (CSAPR) federal trading programs. The revisions replace default allowance allocations of the federal trading programs for annual nitrogen oxide (NOx) and sulfur dioxide emissions for the state's large electric generating units for the control periods in 2017 and beyond with state-determined allocations. The revisions leave the corresponding CSAPR federal implementation plans and all other provisions of the trading programs in place. No action is being taken on the proposed revision addressing NOx ozone season emissions. Comments are due Sept. 28, 2017. Subject: House passes budget in first step toward tax reform

By Jennifer Scholtes

10/05/2017 11:56 AM EDT
Updated 10/05/2017 12:40 PM EDT

The House passed a budget today that paves the way for tax reform, slashes spending over 10 years and calls for lawmakers to find at least $203 billion in extra savings from mandatory programs.

After months of intra-party wrangling, GOP leaders succeeded in advancing the fiscal 2018 resolution, H. Con. Res. 71 (115), on a 219-206 vote.

The deal is far from done, however, since the Senate has yet to bring its own plan to a floor vote, and budget writers must ultimately reconcile the differing packages during conference negotiations.

Because Senate Republicans have a smaller majority than their House counterparts, House Republicans are already bracing for a final product that's far different than the plan they have now sent to the Senate.

Before passage this week, House Budget Chairman Diane Black (R-Tenn.) touted her proposal's most fiscally conservative tenets, noting that the budget resolution would instruct congressional committees to cut billions of dollars from mandatory programs that pay for food stamps, housing aid and student loans.

"Can we not acknowledge that there are some programs that perhaps have fraud, waste and abuse we can take care of? ..." Black said on the floor. "That's what this budget does. It says, 'Open up your minds, think differently, let's not do things the same old way and keep putting the same old programs out there that maybe aren't working.'"

But Democrats contend that those budget instructions would take from the poor while the plan's reconciliation language enables Republicans to pursue tax cuts for the nation's wealthiest individuals.

Subject: Morning Media: Steve Bannon Stumps In Alabama -- O'Reilly Visiting Fox -- Snapchat Political Premiere -- Evening News Battle -- WSJ Nabs Two

By Michael Calderone | 09/26/2017 05:49 AM EDT

STEVE BANNON AT HOME IN ALABAMA: The Breitbart chief better known for his work behind the scenes took to the stage Monday night in support of Judge Roy Moore, the conservative media favorite in today's Senate runoff election.

-- For weeks, Breitbart has blasted Moore's Republican challenger, Senator Luther Strange. And Bannon personally told Alabama voters Monday that they could not only stick it to the Republican establishment by picking Moore, but also the "fake news industry."

-- Alabama "gets to show the entire world - not just the nation - you get to show the BBC, the NHK in Japan, CCTV in China, The Guardian newspaper from England, the Times of London, all of them, New York Times, The Washington Post, the entire fake news industry," Bannon said. "You get to show them that this populist, nationalist, conservative movement is on the rise and Judge Roy Moore represents your values."

-- Breitbart has walked a fine line in framing its support for Moore as a rebuke of Majority Leader Mitch McConnell and the establishment, but not as an attack on President Trump, who also backed Strange.

-- Bannon later told Fox News host Sean Hannity, in his first cable interview since leaving the White House, that there needs to be a review to determine how Trump "got the wrong information" that led to his endorsement of Strange. In other words: Trump was misled into picking someone who doesn't best reflect the populist, nationalist that helped elect him and shouldn't be blamed for it.

-- "We're not here to defy President Trump," Bannon said. "We're here to praise and honor him."

Good morning and welcome to Morning Media. I survived writing a media and politics newsletter only to realize I had to do it again. And here it is! Thanks for all the feedback and keep it coming at (mcalderone@politico.com) or @mlcalderone. Morning Media is edited by Alex Weprin (@alexweprin), with contributions from Jason Schwartz (@JasonSchwartz) Archives. Subscribe.

BILL O'REILLY RETURNS TO FOX NEWS: Well, for an interview at least. The former king of cable news will appear as a guest on "Hannity" tonight as part of his book tour. The show also has several more big bookings for the first week in its new 9 p.m. timeslot. House Speaker Paul Ryan will appear Wednesday, with Rush Limbaugh on Thursday.

SNAPCHAT'S PETER HAMBY says it's a misconception that young people only care about

student loans and Bernie Sanders. "They care about war. They care about taxes. They care about health care, DACA. Things matter," Hamby told me. "And more to the point, if you combine millennials and Gen Z, that's the largest group in this country."

-- Hamby says his Snapchat political show, "Good Luck America," which kicks off its third season today, is reaching that highly sought demographic, with 75% of its viewers 25 and under. An average 6 million viewers is tuning in for each episode. And though you can get a feel for the show online, it's really designed for Snapchat: full-screen vertical video, quick pacing, on-screen text, and distills weighty issues in 3 to 5 minutes.

-- **In the latest episode, Hamby visits his hometown of** Richmond to see how the city is tackling the debate over Confederate monuments. He talks to political leaders, like Virginia Governor Terry McAuliffe and Richmond Mayor Levar Stoney, along with members of the community holding differing views. A former CNN political reporter, Hamby said it's freeing not to have to be tethered to the political news cycle. He can continue tackling stories, like Southern city grappling with its past, even as the national media moves on from Charlottesville.

-- **"Most of the people are disconnected from the Washington noise machine** that you and I live in every day." Hamby says of his viewers. But, he said, "they genuinely care about politics and policy and are looking for credible, authoritative content they can trust."

-- **Senator Kamala Harris, New York City Mayor Bill de Blasio**, and Deputy Attorney General Rod Rosenstein will be among Hamby's guests this season.

DAVID MUIR MILESTONE: The "World News Tonight" anchor scored ABC's first season win in total viewers in 21 years, a period stretching back to the Peter Jennings era. Muir, who landed President Trump's first interview after inauguration, as well as sitdowns with Pope Francis, former President Barack Obama and Hillary Clinton, averaged more than 8 million viewers each night. ABC News is expected to announce the win today.

-- **But NBC News got ahead** of its network competitor on Monday and trumpeted several wins of its own, including "NBC Nightly News" anchor Lester Holt taking the top spot in the key 25-54 year old demographic for the 2016-2017 season. Holt also had a big year, which included moderating the first presidential debate. In fact, if you open your New York Times today (as well as a handful of other outlets) you will see a full-page ad trumpeting the news organization's ratings.

NEWSROOMS GRAPPLE WITH 'RACIST': CJR's Peter Vernon suggests outlets are being too timid in not labeling the president's words and actions as "racist." NPR's Michael Oreskes, however, defends his outlet's framing of events.

-- "We treat 'racist' as we would other conclusory labels. We use action words, instead," Oreskes told CJR. "As we have said many times, it's not our job to tell people what to think. It's our job to give them the information they need to make informed decisions."

SARAH PALIN WANTS SUIT AGAINST THE NEW YORK TIMES REOPENED: It

seems like a longshot given that a judge last month dismissed the defamation suit, which stemmed from a June editorial. Here's Palin's motion for reconsideration. (h/t POLITICO's Josh Gerstein)

THE NFL PROTESTS HAVE BEEN VERY GOOD FOR BREITBART: Editor-in-chief Alex Marlow explained to POLITICO's Jason Schwartz why the protest story, which transcends sports, race, politics and culture, is such a big draw. "A lot of people know Andrew Breitbart for his quote, politics is downstream from culture, so the cultural issues that fold in the politics tend to be utterly explosive in terms of the interest level from our readers," Marlow said.

REVOLVING DOOR:

J.J. Gould has been named editor of The New Republic. He previously edited The Atlantic's site. Eric Bates, who joined in April 2016, becomes editor-at-large.

Fox News has signed Gianno Caldwell as a political analyst covering political, financial, and cultural issues.

The Wall Street Journal has nabbed Michael Gordon, who recently took a buyout from the New York Times after three decades with the paper. He'll join the paper's national security team in mid-November and plans to both report and write a column.

The Journal also hired Julie Bykowicz, who'll begin covering money and politics in the Washington bureau. She was previously covered similar issues for The Associated Press and Bloomberg News.

ONE MORE TO COME? I've heard Pulitzer Prize-winning journalist Eric Lichtblau has recently had talks with The Journal, though it's still unclear whether he'll land at the paper. Lichtblau, a veteran of the New York Times and Los Angeles Times, joined CNN in April. He left the network in June along with two other high-profile two journalists following a retracted article.

T-O-N-I-G-H-T: Journalists battle members of Congress at the National Press Club's annual spelling bee. ESPN's Clinton Yates and The Washington Post's Kelsey Snell are hosting the 7 p.m. event and POLITICO's own Seung Min Kim (and one-time writer of this very newsletter, CNN's Hadas Gold) are among the journalists competing. The Congressional side includes Rep. Don Beyer (VA), Rep. Suzanne Bonamici (OR), and Rep. Ted Deutch (FL).

SOUND BITES:

-- "2017: As Puerto Rico was rotting in the heat without power, air conditioning or telecommunications, the president tweeted about football." [Matt Pearce]

-- "The president fell for an adversary's fake missile launch and it's like the sixth-biggest story of the day." [Daniel Dale]

-- "Megyn Kelly did not talk about the NFL/anthem controversy today...if she was still hosting her Fox News show what would she have said?" [Yashar Ali]

MEGYN KELLY DEBUT PANNED: I wrote yesterday how the former Fox News star is trying to rebrand as a cheerful, non-political morning show host. It didn't work for several critics, according to POLITICO's Jason Schwartz.

-- **The Washington Post's Hank Stuever** was particularly cutting: "The debut was like watching a network try to assemble its own Bride of Frankenstein**,** using parts of Ellen DeGeneres, Kelly Ripa and whatever else it can find.... She interviewed people nervously and so awkwardly that they were cowed into giving monosyllabic answers. She also never missed an opportunity to talk about herself."

STEVE BANNON SOUGHT FACEBOOK MOLE: BuzzFeed's Joseph Bernstein scoops on Bannon wanting dirt on the social media giant's hiring policy. "The secret attempt to find bias in Facebook's hiring process reflects longstanding conservative fears that Facebook and the other tech giants are run by liberals who suppress right-wing views both internally and on their dominant platforms," he writes.

MORE FACEBOOK 2016 REVELATIONS: The Washington Post reports that Russians bought ads on the social network to "exploit divisions over Black Lives Matters and Muslims."

REMEMBERING BEN BRADLEE: HBO announced the Dec. 4 debut of a new documentary on legendary Washington Post editor Ben Bradlee. "The Newspaperman" will include "previously unseen home movies, photographs, archival footage and interviews with a who's who of American journalism," including Bob Woodward, Carl Bernstein, Sally Quinn, David Maraniss, David Remnick, Jim Lehrer, Tina Brown and Tom Brokaw.

EXTRAS:

-- C-SPAN was denied the opportunity to televise appeals court arguments to be heard today on LGBT rights, POLITICO's Josh Gerstein reports.

-- Business Insider goes behind the scenes of Fox & Friends, aka "the most powerful TV show in America."

-- Glenn Thrush's abrupt exit from our feeds prompts the question, "Can a White House correspondent do his job without Twitter?

-- The Sunday shows barely mentioned the humanitarian crisis in Puerto Rico.

-- Former Politico NY leaders discuss Old Town Media, their new venture to help publishers develop ideas and grow.

-- Joe Biden gets in the news curation game.

KICKER:

"For the first six months, you were learning how strange this all is...My then-colleague Ashley Parker, we did a briefing for the D.C. bureau just after the election, to tell them what to prepare for and people thought I was kidding. '[Trump] will point to this table and say it's a sofa,' just sort of along those lines," New York Times reporter Maggie Haberman recalling to Recode's Kara Swisher how she explained the president-elect to colleagues.

Driving the Day

Good Wednesday morning. WAR BETWEEN THE WHITE HOUSE AND THE HILL ... ANDREW RESTUCCIA and **MATT NUSSBAUM's** incredible scoop (http://politi.co/2g9ovd1) that VP Mike Pence's chief of staff Nick Ayers called for a "purge" of Republican lawmakers who oppose President Trump, urged donors to withhold cash from Republican lawmakers and openly mused about being in the minority on Capitol Hill has reignited a long-simmering war between the White House and Capitol Hill. The Trump White House and Republicans on the Hill have tried repeatedly to get on the same page. One Ayers quote that's particularly painful for the 292 Republican lawmakers on Capitol Hill is when Pence's top aide seemingly encouraged donors to stop donating to everyone besides the RNC if they didn't get something done before the end of 2017. This is no small thing, according to top Republicans that we spoke to on both sides of the Capitol.

TEXT FROM A TOP REPUBLICAN ABOUT AYERS: "Fair to say both sides of the capitol are perturbed. ... Not because we see an actual threat, but because who the f**k are you?"

-- WHITE HOUSE INSIDERS TELL US that Trump's circle was not at all bothered by the Ayers remarks.

-- ON THE CUTTING ROOM FLOOR: This didn't make it into Andrew and Matt's piece, but Ayers said infrastructure and tax reform might be "a combined effort." We checked in with all of our sources involved in this issue on whether this was true. They all said there was no effort afoot at all to pair the issues.

NBC NEWS SCOOP -- CAROL LEE, KRISTEN WELKER, STEPHANIE RUHLE and

DAFNA LINZER: "Secretary of State Rex Tillerson was on the verge of resigning this past summer amid mounting policy disputes and clashes with the White House, according to multiple senior administration officials who were aware of the situation at the time.

"The tensions came to a head around the time President Donald Trump delivered a politicized speech in late July to the Boy Scouts of America, an organization Tillerson once led, the officials said.

"Just days earlier, Tillerson had openly disparaged the president, referring to him as a 'moron,' after a July 20 meeting at the Pentagon with members of Trump's national security team and Cabinet officials, according to three officials familiar with the incident. While it's unclear if he was aware of the incident, Vice President Mike Pence counseled Tillerson, who is fourth in line to the presidency, on ways to ease tensions with Trump, and other top administration officials urged him to remain in the job at least until the end of the year, officials said." http://nbcnews.to/2xh2lQu

GET READY FOR THIS: "More GOP senators willing to tell Trump to take a hike: An increasing number of Republicans have nothing to lose in crossing the president and Mitch McConnell -- a warning sign for tax reform," by Burgess Everett and Seung Min Kim: http://politi.co/2yH0ZuV

BIG SCOOP -- ELIANA JOHNSON: "Trump prepares to decertify Iran deal - and then save it": "Donald Trump's national security team has unanimously recommended that he decertify the Iran nuclear deal - but that he stop short of pushing Congress to reimpose sanctions on Tehran that could unravel the agreement. Trump's team plans to work with Congress and European allies to apply new pressure on the Iranian regime, according to a strategy developed in an Iran policy review led by National Security Adviser H.R. McMaster. But the strategy assumes the nuclear deal will remain intact for now.

"The deliberations ahead of an October 15 deadline to certify Iran's compliance with the deal, a centerpiece of President Barack Obama's foreign policy agenda, were described by a half-dozen sources inside and outside the administration who have participated in the internal debate.

"As a candidate, Trump described the agreement as 'catastrophic' and 'the worst deal ever.' But the strategy represents a nuanced approach to one of the most important foreign policy decisions of his early presidency. The goal is to allow the president to demonstrate contempt for the agreement and broadcast a new level of toughness toward the Iranian regime-without triggering the international chaos several of his advisers warn would follow from a total withdrawal from the 2015 deal." http://politi.co/2xPozsu

THE LATEST IN LAS VEGAS ...

BREAKING AT 12:32 A.M. -- L.A. TIMES: "Girlfriend of Las Vegas gunman, a 'person of interest' in mass shooting, has landed in Los Angeles," by Joel Rubin and Richard Winton: "Marilou Danley, the girlfriend of the gunman who shot and killed 59 people at a country music concert in Las Vegas, returned Tuesday night to the United States from the Philippines, according to multiple law enforcement sources. Danley was met by federal agents at Los Angeles International Airport, said the officials, who were not authorized to discuss the case publicly. Danley was not placed under arrest and it was not known when, or if, she would agree to be interviewed about Stephen Paddock, who killed himself in the Las Vegas hotel room from which he launched his deadly shooting spree."

-- NYT, A1: "Meticulous Planning by Las Vegas Gunman Before He Opened Fire": "Before he mowed down concertgoers from a perch high in a hotel tower, Stephen C. Paddock created a ring of surveillance around him, with video cameras in his suite and in the hallway, law enforcement officials said on Tuesday. But investigators were still at a loss to offer a motive for the massacre. ... Police officials said that Mr. Paddock, 64, had set up two cameras in the hallway, including one on a service cart, and a third camera over the suite door peephole." http://nyti.ms/2fPcs7N

-- LEAKED PHOTOS from inside Paddock's hotel room. http://dailym.ai/2hM9Gkk

-- "Frantic switchboard calls, geometry of fire, led police to killer on Mandalay Bay's 32nd floor," by WaPo's Scott Wilson and Lynh Bui: "The journey to the room at the end of the 32nd floor began at the switchboards of the Mandalay Bay Resort and Casino, a tropical fantasy in the Nevada desert. As the noises began, scores of confused guests pressed zero on their room phones almost all at once. The first callers asked about what sounded like a sustained burst of fireworks. Others wondered: Was it something else? The hotel operators realized that for callers on some floors, the popping was louder than for guests phoning in from others." http://wapo.st/2kmdNVf

-- "Las Vegas Shooter Stephen Paddock Gambled With at Least $160K in Recent Weeks," by NBC News' Tom Winter, Pete Williams and Andrew Blankstein: "There were 16 Currency Transaction Reports, or CTRs, filed for Paddock in recent weeks. The Treasury Department and the IRS mandate that casinos file the reports for 'each transaction in currency involving cash-in and cash-out of more than $10,000 in a gaming day.' ... A source familiar with the investigation told NBC News that Paddock was a frequent player 'with the highest status' at Caesars Entertainment properties in Las Vegas." http://nbcnews.to/2yH71LL

-- "Las Vegas Strip shooter prescribed anti-anxiety drug in June," by the Las Vegas Review-Journal's Paul Harasim: "Stephen Paddock, who killed at least 58 people and wounded hundreds more in Las Vegas on Sunday with high-powered rifles, was prescribed an anti-anxiety drug in June that can lead to aggressive behavior, the Las Vegas Review-Journal has learned. ...

"Records from the Nevada Prescription Monitoring Program obtained Tuesday

show Paddock was prescribed 50 10-milligram diazepam tablets by Henderson physician Dr. Steven Winkler on June 21. A woman who answered the phone at Winkler's office would not make him available to answer questions and would neither confirm nor deny that Paddock was ever a patient. Paddock purchased the drug -- its brand name is Valium -- without insurance at a Walgreens store in Reno on the same day it was prescribed. He was supposed to take one pill a day." http://bit.ly/2wxqE8E

-- "As the wounded kept coming, hospitals dealt with injuries rarely seen in the U.S.," by WaPo's Tim Craig, Felicia Mello and Lena Sun: "So many patients poured into the city's hospitals that pediatric surgeons were operating on adults and obstetricians were attending to trauma patients. Many of the most critically wounded patients arrived at the 541-bed University Medical Center of Southern Nevada, the state's only Level One trauma center. Over about four hours, it received 104 patients. More than 80 percent were gunshot victims. Douglas R. Fraser, the hospital's chief of trauma surgery, struggled with other doctors there to deal with bullet wounds in torsos and limbs that had shredded human flesh into 'unusual patterns,' caused 'extreme fractures' and bounced through bodies with horrific force." http://wapo.st/2xRTgL2

****** **A message from Koch Industries:** As an employer of over 70,000 people across all 50 states, Koch companies innovate new ways to make everyday products better while using fewer natural resources. Our diverse businesses help improve basic necessities like food, clothing, shelter, transportation and more. See how we are focused on the future at **ChallengeAccepted.com**. ******

THE POLITICS OF GUN CONTROL -- "Dems lower their outrage on guns after massacre," by Heather Caygle and Elana Schor: "The last record-setting shooting spree on U.S. soil - at a nightclub in Orlando, Florida, last year - prompted Democrats to occupy the House floor for a full day in protest of the GOP's refusal to take up new gun control laws. This time, the minority party is employing tamer tactics, tamping down talks of another sit-in and demanding primarily that Republicans drop a gun silencer bill they've been pushing.

"The difference in approach speaks to the tricky, shifting politics of guns for Democrats. It's easy for them to lambaste Republicans for failing to take action after mass shootings. But elevating the issue heading into a midterm election next year - something Democrats said this week they have no plans to do - could repel the very voters they need to woo to regain control of Congress. Not to mention make their vulnerable red-state Democrats prime for Republican attacks.

"There's also a growing sense of futility in the debate. Gun control was a lost cause even under divided government, let alone when Republicans control both chambers of Congress and the White House." http://politi.co/2hNc8Hg

-- @StevenTDennis: "Asked about bump stocks, Senator John Kennedy [R-La.] said this: 'I do not think that the United States Congress can legislate away evil.'"

SCOOP -- JOSH DAWSEY and **RACHAEL BADE: "Ryan asked White House to reconsider ousting Price":** "Speaker Paul Ryan last week urged the White House to reconsider ousting Health and Human Services Secretary Tom Price, his longtime friend who had come under fire for often using taxpayer-funded private jets for travel, according to two people with knowledge of the call. John Kelly, the White House chief of staff, called the Wisconsin Republican minutes before the departure was announced Friday afternoon. It was a heads-up call ... Ryan urged Kelly to reconsider and touted the Georgia Republican's experience in Congress and work in the administration ... Price has long had the speaker's ear on policy matters and was part of Ryan's old 'Jedi Council,' a group of fiscally conservative rabble-rousers who used to powwow when Republicans were in the minority." http://politi.co/2ynO4lf

UP NEXT -- "White House to seek $29B disaster aid package," by AP's Andy Taylor: "The Trump administration is finalizing a $29 billion disaster aid package that combines $16 billion to shore up the government-backed flood insurance program with almost $13 billion in new relief for hurricane victims. The huge request is expected to be officially sent to Congress on Wednesday, but its outlines were characterized by officials who demanded anonymity because the $29 billion measure is not yet public.

"The request would address two pressing needs. The first is to pump money into the flood insurance program, which is rapidly running out of cash to pay an influx of claims from victims of hurricanes Harvey, Irma, and Maria. At the same time, the Federal Emergency Management Agency continues to spend money for disaster relief operations at a high rate and requires more money." http://bit.ly/2xg1fjr

-- TRUMP: FORGIVE PUERTO RICO'S DEBT: "In an interview with Fox News, Mr. Trump said his administration would help Puerto Rico 'wipe out' the debt to help it recover from the extensive damage left by Hurricane Maria two weeks ago. He did not offer specifics. 'We're going to do something. We're going to get it back on its feet,' the president said. 'We have to look at their whole debt structure,' he told Geraldo Rivera, a Fox News correspondent, on 'Hannity.' 'You know, they owe a lot of money to your friends on Wall Street, and we're going to have to wipe that out. You can say goodbye to that. I don't know if it's Goldman Sachs, but whoever it is, you can wave goodbye to that.' ...

"Reached late on Tuesday, investors who hold Puerto Rico's debt and their advisers said they were taken aback and unwilling to comment. One said it was not clear how seriously they should take the remarks, citing promises like Mr. Trump's so-far-unsuccessful pledge to end the Affordable Care Act, the health care plan passed under President Barack Obama." http://nyti.ms/2xTE9AS

GOOD NEWS FOR TRUMP: NEW POLITICO/MORNING CONSULT POLL -- "Poll: 48 percent approve of Trump's tax proposal," by Steven Shepard: "Voters are receptive to President Donald Trump's proposed tax overhaul, with nearly half of those who have heard about the plan supporting it, according to a new POLITICO/Morning Consult poll. But as Congress begins to draft tax legislation, the poll also shows that some elements

of the outline released by the Trump administration last week are more popular than others. And voters are skeptical they will benefit from any changes to the tax code. ...

"The most popular elements of the initial proposal are doubling the standing deduction from $12,000 to $24,000 (62 percent of voters say that should be in the eventual tax bill), reducing the maximum small-business tax rate from 39.6 percent to 25 percent (61 percent), creating a $500 tax credit for all dependents (61 percent) and increasing the child tax credit (60 percent).

"Among the least popular elements of the proposal: reducing the corporate tax rate from 35 percent to 20 percent (39 percent of voters say that should be in the bill) and no longer taxing overseas profits of U.S. companies." http://politi.co/2fJ6xNK

SOAK THE RICH ... -- "Conservatives defy GOP orthodoxy on cutting top tax rate," by Rachael Bade and Aaron Lorenzo: "House conservatives -- desperate for a win on tax reform -- are open to nixing some newly proposed tax cuts on the wealthy, challenging the GOP's tax-cuts-for-all orthodoxy. Multiple House Freedom Caucus members said they'd support maintaining the 39.6 percent tax rate on upper-income earners instead of reducing it to 35 percent under the current GOP plan. President Donald Trump, concerned about Democratic accusations that his tax proposal would be seen as a boon to the wealthy, urged Hill Republicans to consider keeping the current top rate as is to preempt those attacks.

"The Freedom Caucus is typically the first to cry foul on any legislation they deem too accommodating to Democrats. And maintaining the top rate runs counter to Republicans' long-held desires to lower rates on all Americans, no matter their wealth. Conservatives don't seem to mind, however -- so long as it ensures passage of the party's main legislative priority." http://politi.co/2kivhl8

-- WSJ'S RICH RUBIN in a video with a straw hat on, standing next to cows: **"Talking Taxes: The Sacred Cows of the Tax Code:** GOP plan aims to eliminate some major breaks, but that could prove difficult": "The dilemma -- which Republicans are colliding with right now -- is that many of the biggest tax breaks, especially for individuals, are popular and hard to dislodge. Among the most entrenched are the benefits for employer-sponsored health insurance, state and local taxes, home mortgage interest and charitable donations.

"Those big tax breaks are where the money is. In 2018, households will save about $110 billion by deducting state and local tax payments and about $59 billion by deducting charitable donations, according to the Joint Committee on Taxation. The GOP would need to curtail breaks like those to get rates down as far as they want. Employer-sponsored health insurance, likely to be left alone, will lower federal revenue by about $236 billion in 2018, according to the Tax Policy Center." ***With video*** http://on.wsj.com/2fPAP5a

TRUMP'S WEDNESDAY -- Trump and the First Lady will leave this morning for Las

Vegas. The two will visit patients, doctors and "civilian heroes and first responders." They will then return to Washington.

THE JUICE ...

-- SPOTTED: FORMER PRESIDENT BARACK OBAMA and **MICHELLE OBAMA** celebrating their 25th wedding anniversary last night on Fiola's rooftop at 601 Pennsylvania Ave, N.W. ***Instapic by Fiola executive chef Ed Scarpone*** http://bit.ly/2xg7Kr5 ... ***2-min. Facebook video of President Obama's anniversary message*** http://bit.ly/2xPS5hF

-- FORMER SPEAKER JOHN BOEHNER was spotted heading into Russell Tuesday afternoon by himself, in a blazer and slacks sans tie, walking past security. The surprised Capitol Police greeted him as Mr. Speaker, to which he responded, "Just coming in for a haircut. Nothing more."

NOT THE ONION - "IRS awards multimillion-dollar fraud-prevention contract to Equifax," by Steven Overly and Nancy Scola: "The IRS will pay Equifax $7.25 million to verify taxpayer identities and help prevent fraud under a no-bid contract issued last week, even as lawmakers lash the embattled company about a massive security breach that exposed personal information of as many as 145.5 million Americans. A contract award for Equifax's data services was posted to the Federal Business Opportunities database Sept. 30 - the final day of the fiscal year. The credit agency will 'verify taxpayer identity' and 'assist in ongoing identity verification and validations' at the IRS, according to the award." http://politi.co/2yn6F0O

DRIP DRIP -- "Russian-linked Facebook ads targeted Michigan and Wisconsin," by CNN's Manu Raju, Dylan Byers and Dana Bash: "A number of Russian-linked Facebook ads specifically targeted Michigan and Wisconsin, two states crucial to Donald Trump's victory last November, according to four sources with direct knowledge of the situation. Some of the Russian ads appeared highly sophisticated in their targeting of key demographic groups in areas of the states that turned out to be pivotal ... The ads employed a series of divisive messages aimed at breaking through the clutter of campaign ads online, including promoting anti-Muslim messages ... [A] large number of ads appeared in areas of the country that were not heavily contested in the elections, [but] some clearly were geared at swaying public opinion in the most heavily contested battlegrounds." http://cnn.it/2yHaB8J

-- "Rep. Tim Murphy, popular with pro-life movement, urged abortion in affair, texts suggest," by Pittsburgh Post-Gazette's Paula Reed Wards: "A text message sent in January to U.S. Rep. Tim Murphy by a woman with whom he had an extra-marital relationship took him to task for an anti-abortion statement posted on Facebook from his office's public account. 'And you have zero issue posting your pro-life stance all over the place when you had no issue asking me to abort our unborn child just last week when we thought that was one of the options,' Shannon Edwards, a forensic psychologist in Pittsburgh with whom the congressman admitted last month to having a relationship, wrote to Mr. Murphy on Jan. 25, in the midst of an unfounded pregnancy scare. A text from Mr. Murphy's cell phone number that same day in response says, 'I get what you say about my March for life messages. I've never written them. Staff does them. I read them and winced. I told staff don't write any more. I will.'" http://bit.ly/2xf6p3S

LEGAL, BUT STRANGE -- "Steve King employs family as year-round campaign staff, an unusual approach in Congress," by Des Moines Register's Jason Noble: "U.S. Rep. Steve King employs his son and daughter-in-law as full-time campaign staffers, and has paid them more than $805,000 since 2004, records show. Although typically legal, an arrangement paying close family members year-round for congressional campaign work for more than a decade is unusual in several respects, experts said. While holding various campaign manager and chairman titles, King's son, Jeff King, has received a steady paycheck dating to at least 2004, the earliest year for which electronic records are available from the Federal Election Commission." http://dmreg.co/2xfvLys

LATEST IN THE AARON SCHOCK CASE -- "Judge complains prosecution 'misled' him in Aaron Schock case," by Josh Gerstein: "The federal judge overseeing the criminal case against former Rep. Aaron Schock leveled an unusual public complaint Tuesday that he was misled by a prosecutor on the case. Judge Colin Bruce, of the U.S. District Court for the Central District of Illinois, also ordered the prosecution to conduct a review of all its court filings in the matter for potential inaccuracies." http://politi.co/2hLpNyE

****** **A message from Koch Industries:** According to the World Health Organization, 633 million people lack access to safe water worldwide. At Koch, we are addressing this global crisis with innovative membrane filtration technologies to help turn surface and wastewater back into clean drinking water. It's already making a difference in places such as São Paulo, Brazil, one of the world's largest cities. This is one of the many challenges that our more than 70,000 employees across America are working on each day. From water and agriculture, to renewable fuels, energy efficiency and other advancements that help people improve their lives, our team members are encouraged to think like entrepreneurs and challenge the status quo. Here, everyone is encouraged to speak up with ideas to create greater long-term value for society, our customers and businesses, while also reducing waste so more natural resources are available to meet future needs. Go behind the scenes at ChallengeAccepted.com. ******

HMM -- "One Of Trump's Judicial Picks Received A Rare 'Not Qualified' Rating From Top Legal Group," by BuzzFeed's Zoe Tillman: "Charles Goodwin, who serves as a federal magistrate judge in Oklahoma City, is the first of Trump's judicial nominees to receive a 'not qualified' rating from the ABA's Standing Committee on the Federal Judiciary, which vets all federal court nominees. It's also the first time that a lower court nominee has received that rating since 2006. The ABA committee evaluates judicial nominees on their integrity, professional competence, and judicial temperament." http://bzfd.it/2yVL4K5

-- "Sebelius believed Menendez wanted her to 'take some action,'" by Matt Friedman in Newark: "Former Health and Human Services Secretary Kathleen Sebelius testified Tuesday that two things stuck out to her about an August 2012 meeting she had with U.S. Sen. Robert Menendez and then-Senate Majority Leader Harry Reid. One was that she couldn't recall Reid ever arranging a meeting with her and a member of Congress. The other was that she had never been called on to discuss an issue she said lower ranking staff members would normally handle.

"'I think it's the only time I was asked to discuss a practice involving a billing issue before [the Centers for] Medicare and Medicaid Services. That is not something I was personally involved in on a basis like this,' Sebelius said under questioning at Menendez's federal corruption trial. The issue, as Sebelius understood it via briefings from her own staff, was Florida eye doctor Salomon Melgen's overbilling of Medicare by nearly $9 million -- money Melgen, now Menendez's co-defendant, was fighting to not have to pay back." http://politi.co/2wwtEBX

BREAKING ... BLOOMBERG: "Amazon Faces ???250 Million Bill for Unpaid Taxes, EU Says": "The EU ordered Amazon to pay ???250 million in back taxes to Luxembourg, saying the company had received illegal state aid." https://bloom.bg/2hM4BZe

OY - "Yahoo Triples Estimate of Breached Accounts to 3 Billion," by WSJ's Robert McMillan and Ryan Knutson: "A massive data breach at Yahoo AABA 1.95% in 2013 was far more extensive than previously disclosed, affecting all of its 3 billion user accounts, new parent company Verizon Communications Inc. said on Tuesday. The figure ... is three times the 1 billion accounts Yahoo said were affected when it first disclosed the breach in December 2016. The new disclosure, four months after Verizon completed its acquisition of Yahoo, shows that executives are still coming to grips with the extent of the security problem in what was already the largest hacking incident in history by number of user accounts." http://on.wsj.com/2xT7NGg

ON TO MOSCOW -- "New Ambassador to Russia Jon Huntsman Cuts Price on McLean Mansion," by Realtor.com's Lisa Gordon: "The red brick estate, which came on the market last year at $4.2 million, recently had its price reduced to $3.6 million ... The seven-bedroom, five-bath home sits on a half-acre lot down the street from the CIA headquarters, the biggest tourist attraction in McLean. Built in 1985, the 8,852-square-foot home features a mahogany-paneled library, huge master suite, backyard pool, and

outdoor kitchen. Huntsman, a former Utah governor and a 2012 Republican presidential hopeful, bought the property for $3.1 million in 2014 from U.S. Sen Fred Thompson, who was a GOP presidential contender in 2008." ***With 3 pix of the house*** http://bit.ly/2yH5SEe

MEDIAWATCH -- "The press, branded the 'enemy' by Trump, increasingly trusted by the public: Reuters/Ipsos poll," by Reuters' Chris Kahn: "The poll of more than 14,300 people found that the percentage of adults who said they had a 'great deal' or 'some' confidence in the press rose to 48 percent in September from 39 percent last November. Earlier this year, Trump branded the entire industry as the 'enemy of the American people.' The percentage of those who said they had 'hardly any' confidence in the press dropped to 45 percent from 51 percent over the same period. Confidence in Trump's administration moved in the opposite direction." http://reut.rs/2xXf2i7

-- "'Megyn Kelly Today' Ratings Not All Sunshine for NBC's New Morning Host," by NYT's John Koblin: "Megyn Kelly, the new host of the 9 a.m. hour of NBC's 'Today' show, is off to a soft start in the ratings. In her first week as a cheerful morning personality, Ms. Kelly, a former Fox News anchor, drew an average of 2.5 million viewers, according to Nielsen, with 765,000 of them in the 25-to-54-year-old demographic prized by advertisers and network executives.

"The total audience for 'Megyn Kelly Today,' Ms. Kelly's portion of the show, was roughly in line with what 'Today' was reaching in the same hour before making the change, when it was hosted by Al Roker, Dylan Dreyer and Sheinelle Jones. In the coveted age bracket, the show's audience for Ms. Kelly was 5 percent smaller than it was the previous week." http://nyti.ms/2xgmpxw

--Per Michael Calderone's Morning Media: KELSEY SNELL, most recently with The Washington Post, is returning to NPR as a Congressional reporter. She once worked as an intern and production assistant on the weekend edition of "All Things Considered."

****** **A message from Koch Industries:** The Global Harvest Initiative estimates that the world's population will grow to 9 billion by the year 2050. Until then, the challenge is to find better ways to grow twice as much food on roughly the same amount of land that is used for farming today. At Koch, our scientists explore new natural ways to boost crop performance by harnessing tiny soil microbes that stimulate plant improvements and yield. This is one of the many challenges that our more than 70,000 employees across America work on each day. From agriculture and renewable fuels to energy efficiency and other advancements that help people improve their lives, our team members are encouraged to think like entrepreneurs and challenge the status quo. Here, everyone is encouraged to speak up with ideas to improve efficiency, reduce waste, and create greater long-term value for society, our customers and businesses. Go behind the scenes at ChallengeAccepted.com. ******

Driving the Day

POSTCARD FROM GERMANY -- POLITICO Brussels Playbooker Ryan Heath is on stage with John Boehner at American Chamber of Commerce Transatlantic Business Conference in Frankfurt. Boehner told the German audience that Donald Trump is the "least ideological person to ever hold the office," and described the White House as "survival of the fittest." His advice to foreign companies and governments: "engagement works."

Happy Thursday. PRESIDENT TRUMP says the JFK files -- long kept private -- will be unsealed today.

The tax reform debate has been humming along behind closed doors. It's about to go public. Here are some things to keep in mind. **PLAYBOOK'S FOUR TRUTHS ABOUT TAX REFORM:**

-- THIS TAX PLAN WILL LIVE AND DIE 1 MILLION TIMES. We've seen it before: legislation gets declared dead as a doornail, and then is revived, brought back to life and passes with much fanfare. Expect ups and downs here. Right now, the issue at hand is the state and local tax deduction. Lawmakers from high-tax states say they don't want to scrap it, and if they don't get assurances, some have threatened that they'll take down the budget. Remember that this process will be like a rollercoaster. Take it with a grain of salt when some random lawmaker opines on the prospects of the bill, or the process. Until Paul Ryan or Mitch McConnell pull the plug, this thing is alive and kicking. ***Brian Faler** on **"Six things that could derail the GOP's tax plans":*** http://politi.co/2y6H0tq

-- IGNORE THE TIMEFRAME. There really is no deadline to get tax reform done. The

end-of-the-year proclamations are silly, according to most of the people we talk to. This could -- and many think it should -- take time. It's tough (just ask the WSJ's Rich Rubin). It's complicated. Congress is rewriting the entire tax code -- and that affects everyone in the United States. Plenty of lawmakers tell us it SHOULD take something like six months.

-- A 60-40 PROPOSITION, AT BEST, NOT A DONE DEAL. At the end of the day, all the senior aides and lawmakers we speak to say that this remains, at best, a 60-40 proposition. Yeah, Republicans feel pretty good about where things are. But that's mostly out of fear of losing their majorities. Many things can stop this process dead in its tracks.

-- THIS IS UNLIKELY TO BE HUGELY BIPARTISAN. Some Republicans want you to believe that Democrats are knocking on their doors to vote for whatever they produce. It's not true. They might pick up one or two in the Senate. But this is a Grand Ole' Party production.

HOUSE REPUBLICANS will go to the floor today to try to pass Senate's budget, despite unease from some conservatives about the deficit and debt projections, and misgivings from blue state Republicans about scrapping the coveted state and local tax deduction. GOP leaders canceled a 9 p.m. meeting last night to discuss the state-and-local tax issue -- a sign they feel pretty good. **THE BUDGET** is the first step to tax reform.

-- THE DETAILS, from Rich Rubin, Anne Tergesen and Siobhan Hughes in the WSJ: "One option is replacing the [state and local tax] deduction with a tax credit worth between 8% and 20% of a household's property tax payments, with caps for married couples that start somewhere between income of $250,000 and $400,000, said Rep. Tom Reed (R-N.Y.). Instead of generating $1.3 trillion over a decade to offset lower tax rates, as repeal of the state and local deduction would do, he said the idea would yield between $600 billion and $1 trillion. Some versions of the credit concept also include mortgage interest." http://on.wsj.com/2yM1M16

KNOWING KEVIN BRADY -- RACHAEL BADE: "GOP's beloved taxman about to be 'the most hated guy in Washington'": "House Ways and Means Committee Chairman Kevin Brady has spent the better part of a year crafting a Republican tax reform bill. But on the cusp of the plan's long-awaited unveiling, the House GOP's point man on taxes has had to retool the proposal at least twice in 48 hours. ... And the bill hasn't even been made public yet." http://bit.ly/2yTdJSr

-- PELOSI, BEHIND THE SCENES -- Heather Caygle and Aaron Lorenzo: "House Minority Leader Nancy Pelosi (D-Calif.) is convinced another GOP crash-and-burn would likely hand Democrats the House next year, so there's no political upside to playing ball. 'You will be in the majority' if Republicans continue to stumble, Pelosi said during a closed-door caucus meeting on Tuesday, according to sources in the room." http://politi.co/2gK1Szd

TRUMP'S ADMINISTRATION -- "Mnuchin struggles to earn trust on the Hill," by Nancy Cook: "Treasury Secretary Steven Mnuchin is the de facto frontman for the administration's proposed overhaul of the U.S. tax system because of his extreme loyalty to President Donald Trump and the scores of tax policy experts and economists at his command.

"But Mnuchin, a former investment banker and movie financier with no prior experience in Washington, hasn't been able to overcome Republicans' suspicion about his Wall Street background and limited conservative credentials. That may complicate White House efforts to influence debate as the details of a tax bill are written." http://politi.co/2haCvDZ

-- "Tillerson's power play," by Nahal Toosi: "A leaked State Department document is alarming diplomats and others who say it shows the accumulation of power among a small and unaccountable group of senior aides to Secretary of State Rex Tillerson. The chart, obtained by POLITICO, illustrates the growing influence of the State Department's Policy Planning Staff, which traditionally has served as an in-house think tank but which Tillerson heavily relies upon for day-to-day decision making.

"Critics already complain that the office -- led by Brian Hook, a powerful Tillerson aide not subject to Senate confirmation - accepts too little input from career diplomats, and the chart, which lays out a method to craft foreign policy, shows no explicit role for them. The chart appears to show a top-down approach in which ideas emanate from the secretary's inner circle rather than bubbling up from diverse sources, including Foreign Service officers in the field. More than half a dozen current and former U.S. officials who have seen the document said it reveals an unusual level of control and oversight by the Policy Planning Staff." http://politi.co/2xo0MfC

THE RETIREES ... SEUNG MIN KIM: "Flake won't be 'vindictive' toward Trump agenda: The retiring GOP senator says he won't automatically vote against GOP priorities - but he plans to rev up oversight of the administration": "Sen. Jeff Flake was never shy about his distaste for Donald Trump's politics. But one day after his dramatic retirement speech skewering the president, he told POLITICO that he's not 'vindictive' -- suggesting he won't simply be a knee-jerk vote against Trump's agenda. 'I don't know that it's that different. I'm going to work on issues that I'm for,' the Arizona Republican said of his legislative approach going forward. 'I'm not out [to be] vindictive.'" http://politi.co/2gFQFMq

-- "Corker vows to get answers on Trump's Russia sanctions delay," by Elana Schor: "The chief GOP architect of a Russia sanctions package that Congress overwhelmingly approved earlier this year vowed Wednesday to find out why the Trump administration has delayed using its new powers to punish Moscow. Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.) - an author of the massive sanctions bill that President Donald Trump signed in August - told reporters that 'I'm going to get on the phone with someone' within 24 hours to get details on why the

administration missed the law's Oct. 1 deadline to hit certain Russian entities with new penalties." http://politi.co/2z7D23Y

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2y4Q3vf ******

TRUMP FOR YELLEN? From Fox Business Network's Lou Dobbs' interview with Trump -- **TRUMP:** "Tell me who your preference is." **DOBBS:** "I think I -- may I constrain myself?" **TRUMP:** "Yes." **DOBBS:** "Because an ad hoc advisor to the president" **TRUMP:** "No, but I'd love to hear it. You could even cut it out if you want. You don't have to -- I would love to hear you. I only want that from people I respect." **DOBBS:** "I personally believe that Janet Yellen might be worth keeping."

TRUMP: "I tell you what, she was in my office three days ago. She was very impressive. I liked her a lot. I mean, it's somebody that I am thinking about. I would certainly think about it. In one way, I have to say ... In one way, I have to say you'd like to make your own mark. ... You like to make your own mark, which is maybe one of the things she's got a little bit against her. But I think she's terrific. We had a great talk. And we're obviously doing very well together, you look at the markets."

HMM ... -- "Trump associate Cohen sold four NY buildings for cash to mysterious buyers," by Peter Stone and Greg Gordon in McClatchy: "Donald Trump's long time business lawyer Michael Cohen may be best known for his aggressive campaign television defenses of the real estate mogul, his role in an abortive effort to build a Trump Tower in Moscow and allegations that he attended a meeting last summer with Russians in Europe. But while serving as a top executive at the Trump Organization for a decade, Cohen himself was a sometime New York real estate wheeler dealer whose companies appear to have netted as much as $20 million in profit by flipping properties to mysterious buyers." http://bit.ly/2gFKmZA

CNN's OLIVER DARCY -- "Five women accuse journalist and 'Game Change' co-author Mark Halperin of sexual harassment": "Veteran journalist Mark Halperin sexually harassed women while he was in a powerful position at ABC News, according to five women who shared their previously undisclosed accounts with CNN and others who did not experience the alleged harassment personally, but were aware of it. 'During this period, I did pursue relationships with women that I worked with, including some junior to me,' Halperin said in a statement to CNN Wednesday night. 'I now understand from these accounts that my behavior was inappropriate and caused others pain. For that, I am deeply sorry and I apologize. Under the circumstances, I'm going to take a step back from my day-to-day work while I properly deal with this situation.'
...
"[W]omen who spoke to CNN say he ... had a dark side not made public until now. The stories of harassment shared with CNN range in nature from propositioning employees for sex to kissing and grabbing one's breasts against her will. Three of the women who spoke to CNN described Halperin as, without consent, pressing an erection

against their bodies while he was clothed. Halperin denies grabbing a woman's breasts and pressing his genitals against the three women." http://cnnmon.ie/2gCjgm2

MCCONNELL IN CHARGE -- JOHN BRESNAHAN: "McConnell, Cornyn firmly in charge despite flak from right": "Despite a near constant barrage of attacks from Sean Hannity, Steve Bannon and the Breitbart wing of the GOP, Senate Majority Leader Mitch McConnell and other top Senate Republicans remain firmly in charge. There is no threat of a leadership challenge to McConnell or any of the other highest-ranking Republicans, and their support inside the GOP Conference remains rock solid.

"Yet there is also no question that Senate Republicans are feeling the heat from the unhappy GOP base, especially the strongest pro-Trump elements of the party. In response, many Republicans are tying themselves ever closer to President Donald Trump. So while the media, Democrats and even some of their own colleagues - those who are not seeking reelection especially - hammer on Trump's alleged ethical lapses, poor poll numbers, and legislative failures, wrapping yourself in Trump's mantle is the smartest way to survive for party leaders on Capitol Hill." http://politi.co/2y5rhem

GOP CIVIL WAR -- "McConnell allies declare open warfare on Bannon," by WaPo's Dave Weigel, Michael Scherer and Bob Costa: "Allies of Senate Majority Leader Mitch McConnell declared open warfare on Wednesday against Stephen K. Bannon, the former White House chief strategist and leader of an insurrection aimed at defeating mainstream Republican candidates in next year's midterm elections. ... [T]he McConnell-allied Senate Leadership Fund (SLF) will highlight Bannon's hard-line populism and attempt to link him to white nationalism to discredit him and the candidates he will support. It will also boost candidates with traditional GOP profiles and excoriate those tied to Bannon, with plans to spend millions and launch a heavy social media presence in some states." http://wapo.st/2i5svLE

-- NYT'S JONATHAN MARTIN and **JEREMY PETERS: "As G.O.P. Bends Toward Trump, Critics Either Give In or Give Up"** http://nyti.ms/2iAJlpK

-- @davidmackau: "Q: Should you be more civil? Trump: Press makes me more uncivil than I am... I went to an Ivy League college. I'm a very intelligent person". http://bit.ly/2yTWMr7

TRUMP'S THURSDAY -- Trump will discuss the opioid crisis. He will also meet with EPA Administrator Scott Pruitt.

-- FOR YOUR RADAR: "Vice President Pence to visit Israel and Egypt in December," by AP's Ken Thomas and Jill Colvin: "The vice president's trip is expected to take him to Israel during Hanukkah, where he'll discuss the prospects for a Middle East peace agreement in separate meetings with Israeli Prime Minister Benjamin Netanyahu and Palestinian President Mahmoud Abbas. Pence is also expected to address U.S. policy toward Iran and highlight Israel's space program -- a favorite issue." http://bit.ly/2zQYAyP

ABOUT THAT OPIOID ANNOUNCEMENT ... -- "Senior health officials in the dark about Trump's opioid declaration," by Sarah Karlin-Smith and Brianna Ehley: "Top federal health officials responding to the opioid epidemic still don't know what President Donald Trump will say when he makes a highly anticipated announcement about the crisis Thursday afternoon. 'We don't have information about what the announcement will be, and so I can't comment on it. I honestly don't know,' Assistant HHS Secretary for Mental Health and Substance Use Elinore McCance-Katz told POLITICO on Wednesday while appearing at a House Energy and Commerce Committee hearing on the federal response to the epidemic.

"She said the Substance Abuse and Mental Health Services Administration, which is responsible for federal treatment programs, has not been collaborating with the White House in the run-up to the the announcement, which is expected to include a formal declaration that the epidemic is a federal emergency. CDC Principal Deputy Director Anne Schuchat was similarly out of the loop. A spokesperson for the DEA said she had no information but added that the agency will be involved 'to an extent.'" http://politi.co/2gFa5kE

-- "Trump to declare public health emergency for opioids, a partial measure to fight drug epidemic," by USA Today's Gregory Korte: "President Trump will order his health secretary to declare the opioid crisis a public health emergency Thursday - but will stop short of declaring a more sweeping state of national emergency, aides said. ...Trump will sign a presidential memorandum ordering Acting Secretary of Health and Human Services Eric Hargan to waive regulations and give states more flexibility in how they use federal funds, said four senior officials responsible for crafting the administration's new opioid policy." https://usat.ly/2yNbsZq

It is on the right side of history. The only debate going forward will be: Will it be [British Labor Party leader] Jeremy Corbyn's and Bernie Sanders views of populism or Donald Trump's view and [Indian Prime Minister] Modi's

view of populism -- whether it will be a culturally right and economically conservative or whether it will be socialistic." ***$18.29 on Amazon*** http://amzn.to/2yNWm5E

JARED WATCH -- "Kushner will take a diminished role on Trump's China trip," by Annie Karni and Andrew Restuccia: "[A]s Trump heads to Asia for the first time as president next month -- a trip that will include a high-stakes reunion with a newly empowered Chinese President Xi Jinping on his home turf -- Trump's son-in-law is expected to see his diplomatic role greatly diminished.

"Kushner's shrinking role on the international stage is seen by some White House officials as another sign of Trump's new chief of staff, John Kelly, standardizing a previously unorthodox power structure. Other White House aides say it's evidence of a lean administration finally filling out and now running at full power. Kushner, they say, was moving away from the China portfolio pre-Kelly, dropping responsibilities he held as recently as April, when he helped plan Xi's visit to Trump's Mar-a-Lago resort in Florida." http://politi.co/2gIj2NI

--SPOTTED: JARED KUSHNER walking through Dulles terminal A around 3:15 p.m. yesterday.

-- LOCAL NEWS: "David Rubenstein, Private Equity Titan, Passes the Torch," by NYT's David Gelles and Michael J. de la Merced. http://nyti.ms/2gGr3PR

ON RUSSIA -- "Trump-Linked Company Reached Out to WikiLeaks on Hacked Emails," by WSJ's Rebecca Ballhaus: "The chief executive of a data-analytics firm that worked for President Donald Trump's campaign reached out to WikiLeaks founder Julian Assange to offer help organizing the Hillary Clinton-related emails the website was releasing, according to a person familiar with the effort.

"The outreach by the CEO of the firm, which is partly owned by a major Trump donor and has close ties to a Trump adviser, came as Mr. Trump was publicly cheering the leaks of his Democratic rival's emails and some supporters were seeking to unearth further messages. In an email sent in late July 2016 and recently reviewed by the person, Cambridge Analytica CEO Alexander Nix told other employees at the firm and Rebekah Mercer, a top Republican donor, that he had recently reached out to Mr. Assange to offer help better indexing the messages WikiLeaks was releasing to make them more easily searchable." http://on.wsj.com/2iA2jwH

GEOFFREY KABASERVICE in Politico Magazine **-- "The Deep Roots of Jeff Flake's Break With Trump:** Republican elites were always wary of the GOP base, for their own survival. But now, the restive, angry conservative grass roots are running the party": "[I]n the long view of history, there's nothing particularly surprising about the party's current chaos. It's a logical consequence of the conservative grass roots' takeover of the GOP. Over the past half-century, many Republicans had warned party leaders to keep their distance from the base, seeing it as something like the One Ring in The Lord of the Rings-too powerful and dangerous to be controlled. Now, the predictions of those

Cassandras are coming true and the conservative movement is destroying the Republican Party from within." http://politi.co/2gKrbkJ

****** **A message from Chevron:** This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video: http://politi.co/2IfOXGX ******

HARASSMENT WATCH -- "Brookings Cuts Ties With Literary Giant Accused Of Sexually Harassing Female Employees," by BuzzFeed's John Hudson: "The Brookings Institution has severed ties with Leon Wieseltier, a prominent figure in the literary world and a senior fellow at the think tank, following a wave of accusations from women who accused him of sexual harassment and unwanted advances. After initially suspending Wieseltier, Brookings President Strobe Talbott sent out a memo to employees on Wednesday afternoon saying he is no longer employed at the think tank, three employees told BuzzFeed News." http://bzfd.it/2iCdwwB

-- "Blogger amends vow to publish list of 'Shiy Media Men,'"** by Michael Calderone and Jason Schwartz: "A right-wing blogger and filmmaker who promised to publish the names of male journalists who were cited by female colleagues as sexual harassers on the list of 'Shi**y Media Men' told POLITICO on Wednesday that he was holding back, calling the men on the list and consulting with his lawyer.

"Blogger Mike Cernovich had announced his intention to publish the list 'in a few minutes' after obtaining it on Saturday and later identified two journalists on it and the accusations against them. The list contains the names of more than 70 men in media who were alleged to have committed acts ranging for 'creepy' direct messages to rape, according to women who added their names as the list was passed around in the wake of the Harvey Weinstein scandal." http://politi.co/2zR6OHA

MEDIAWATCH -- YASHAR ALI PROFILE -- "Who Is Yashar? The long, unusual, political story behind the man who's breaking all kinds of news these days, from Fox News to Harvey Weinstein," by BuzzFeed's Steven Perlberg: "[H]is previous career [was as] a major fundraiser for Hillary Clinton's 2008 campaign and an aide to former San Francisco mayor and current California lieutenant governor Gavin Newsom. Now, he says, he is focusing on reporting ... People close to the 37-year-old describe him as a driven, wealthy Renaissance man who gets obsessed with various topics and finds a way to succeed at them - and they aren't surprised that his new interest happens to be journalism.

"Other Democratic officials are dumbfounded by Yashar's career change, and they wonder how someone could develop sources in the entertainment, media, and intelligence communities seemingly overnight (though Yashar's reporting largely hasn't been disputed). ... In recent months, Yashar's time in media has caught the eye of editors who have tried to court the reporter for a full-time job. He is in early talks with

one major network, according to a person familiar with the matter. He has also been approached by BuzzFeed News." http://bzfd.it/2izWf7y

-- "Bill O'Reilly May Wind Up at Sinclair Broadcasting," by NBC News' Claire Atkinson: Bill O'Reilly, the former Fox News anchor, has been negotiating for a position with the Sinclair Broadcast Group, the nation's largest television-station owner, according to two sources familiar with the talks. Sinclair, known for its conservative commentary, is continuing with the talks despite the sexual harassment cases that cost O'Reilly his job at Fox this year ... Last week, The New York Times reported that O'Reilly had settled a $32 million sexual harassment claim against him by a former legal analyst, Lis Wiehl. The sources said the news does not appear to have sidelined the talks. 'They took a pause but it didn't really change anything for them,' one of the sources said." http://nbcnews.to/2IfevUu

-- "Ronan Farrow is working on another Weinstein exposé," by Page Six's Oli Coleman: "We're told that Farrow's making calls to potential sources for another New Yorker article to follow his blockbuster exposé on sexual harassment claims against the movie mogul. ... [An] insider said the piece may focus on the movie company's culture, which allowed Weinstein to prey on women for years." http://pge.sx/2i6OmCL

HOT JOB - NYT LOOKING FOR JUSTICE DEPARTMENT REPORTER - "On any given day, this beat is at the center of stories on mass shootings, major policy developments on civil rights, terrorist plots and more. But it is also rich with enterprise potential about drugs, guns, violent crime, prisons, terrorism and national security. We are looking for someone with aggressive instincts who will keep The Times ahead on spot news as it unfolds and deliver enterprise that surprises and enlightens our readers." http://bit.ly/2h9r3Ir

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): MANAFORT'S home raided by FBI agents in July -- DAN SCAVINO slams MCCONNELL -- TILLERSON tries to cool North Korea tensions

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Happy hump day afternoon. THE TRUMP WHITE HOUSE GOES FULL BORE AGAINST MITCH MCCONNELL -- DAN SCAVINO (@danscavino), senior aide to **PRESIDENT DONALD TRUMP:** "More excuses. @SenateMajLdr must have needed another 4 years - in addition to the 7 years -- to repeal and replace Obamacare....." ***He linked to this video*** http://bit.ly/2upo03K

-- THIS IS STUNNING. Mitch McConnell is the lynchpin to whatever Donald Trump wants to get done on Capitol Hill. Sure, health care did not go as the White House wanted it to. They might get there in the future, they might not. But McConnell is not going *anywhere* for a very long time, he commands respect from all Republican senators and controls the Senate floor. Remember, his Senate Republican Conference notched Trump's biggest legislative victory so far: the confirmation of Justice Neil Gorsuch. What McConnell said was not terribly controversial, and there are many Republicans in and around Trump that admit his view of what he could get done was probably a bit too rosy. Remember, Trump said health care would be easy, and the law could be repealed immediately. McConnell never said that. Capitol Hill is hardly ever in unison but dumping on McConnell is seen as confused a strategy as the administration could employ.

THE WHITE HOUSE did not respond to a request about whether Scavino's statement was representative of the administration's position on the top-ranking Senate Republican.

BULLETIN: "WASHINGTON (AP) - Pentagon chief: NKorea should stop 'actions that would lead to the end of its regime and the destruction of its people'"

NYT'S PETER BAKER and **GLENN THRUSH:** "[Trump's] ominous warning to Pyongyang in was entirely improvised, according to several people with direct knowledge of what unfolded. In discussions with advisers beforehand, he had not run the specific language by them ...

"Among those taken by surprise, they said, was John F. Kelly , the retired four-star Marine general who has just taken over as White House chief of staff and has been with the president at his golf club in Bedminster, N.J., for his working vacation. ...

"But the president's ad-libbed threat reflected an evolving and still unsettled approach to one of the most dangerous hot spots in the world as Mr. Trump and his team debate diplomatic, economic and military options. The president's aides are divided on North Korea, as on other issues, with national security veterans like Defense Secretary Jim Mattis and Lt. Gen. H.R. McMaster, the national security adviser, on one side and Stephen K. Bannon, the president's chief strategist, and his allies on the other." http://nyti.ms/2vOpBn6

-- These are divergent views on foreign policy within the top ranks of the administration.

BIG NEWS -- "FBI conducted predawn raid of former Trump campaign chairman Manafort's home," by WaPo's Carol Leonnig, Tom Hamburger and Ros Helderman: "FBI agents raided the Alexandria home of President Trump's former campaign chairman late last month, using a search warrant to seize documents and other materials, according to people familiar with the special counsel investigation into Russian meddling in the 2016 election.

"Federal agents appeared at Paul Manafort's home without advance warning in the predawn hours of July 26, the day after he met voluntarily with the staff for the Senate Intelligence Committee. The search warrant was wide-ranging and FBI agents working with special counsel Robert S. Mueller III departed the home with various records.

"The raid came as Manafort has been voluntarily producing documents to congressional committees investigating Russia's interference in the 2016 presidential election. The search warrant indicates investigators may have argued to a federal judge they had reason to believe Manafort could not be trusted to turn over all records in response to a grand jury subpoena." http://wapo.st/2vNMFSZ

ANNIE KARNI SCOOP -- "Trump to stay at Trump Tower for three nights": "President Donald Trump on Sunday is scheduled to make his first visit back to Trump Tower since his inauguration, according to a draft schedule shared with local New York City law enforcement and reviewed by POLITICO. The president is scheduled to depart his Bedminster, N.J. golf club, where he has been working and vacationing this week, on Sunday afternoon and travel directly to Trump Tower, where he will hole up at his old, beloved, three-story penthouse on the 66th floor for three nights." http://politi.co/2vF1hVc

FROM BEDMINSTER -- @realDonaldTrump at 7:56 a.m.: "My first order as President was to renovate and modernize our nuclear arsenal. It is now far stronger and more powerful than ever before...." ... **at 8:03 a.m.:** "...Hopefully we will never have to use this

power, but there will never be a time that we are not the most powerful nation in the world!" ***The president also retweeted Fox & Friends five times.***

-- @AliWatkins: "Putting aside all the other issues here, there is no way you're renovating and modernizing the nuke arsenal in six months."

STATE DEPT.: NOTHING HAS CHANGED -- "Tillerson tries to cool North Korea tensions as Trump boasts about nuclear arsenal," by Louis Nelson: "Secretary of State Rex Tillerson on Wednesday sought to tamp down concern that the U.S. is headed towards a military conflict with the repressive regime of dictator Kim Jong Un, even as President Donald Trump freshly claimed to have made the U.S. nuclear arsenal 'far stronger and more powerful than ever before.'

"'I do not believe that there is any imminent threat in my own view,' Tillerson told reporters aboard his aircraft as he traveled to Guam, one of the U.S. territories in the Pacific most threatened by North Korea. 'I think Americans should sleep well at night. I have no concerns about this particular rhetoric of the last few days.' He downplayed Trump's threat from Tuesday as an expression of readiness in the case of an attack. 'I think what the president was just reaffirming is, the United States has the capability to fully defend itself from any attack and defend our allies, and we will do so,' Tillerson said." http://politi.co/2hKrQm9

OUR BAD -- The Bloomberg story about Trump's "red team" examining tax reform that we included in this morning's Playbook says that Marc Short, Trump's top legislative hand, is involved. The original excerpt we saw did not have that detail. ***The story*** https://bloom.bg/2vOZHAA

HEADING TO COURT -- "Judge won't dismiss Menendez charges before trial," by POLITICO New Jersey's Matt Friedman: "A federal judge rejected on Wednesday a last-ditch attempt by Democratic U.S. Sen. Robert Menendez to avoid trial on corruption charges. U.S. District Court Judge William H. Walls did not rule on the merits of Menendez's argument that the U.S. Supreme Court's decision to toss former Virginia Gov. Bob McDonnell's corruption conviction should invalidate his own indictment. But Walls said that should be determined at Menendez's trial, which is scheduled to start Sept. 6." http://politi.co/2hKuIPG

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

RIP -- JERRY GARCIA died 22 years ago today.

ANOTHER CONGRESSIONAL RETIREMENT -- "Congresswoman Niki Tsongas announces she will not run for reelection," by the Boston Herald's Chris Villani:

"Congresswoman Niki Tsongas, who has represented Lowell for nearly a decade, announced today that she will not run for reelection, citing a desire to spend more time with her family. [Tsongas' statement:] 'I have learned in life that there is a time for endings and for new beginnings. After much thought, I have decided that this is one of those times. The time feels right most especially because of my desire to spend more time enjoying and celebrating my wonderful and growing family.'" http://bit.ly/2hJubgV

THE CAMPAIGN AGAINST MCMASTER -- "'The most well-organized campaign in the history of the alt-right' is targeting H.R. McMaster," by Business Insider's Natasha Bertrand: "The far right's crusade against national security adviser H.R. McMaster reached new heights last week, intensifying as Infowars founder Alex Jones invited an ultranationalist Russian political philosopher on his radio show to discuss 'globalist' threats to US President Donald Trump's agenda. Jones interviewed Aleksandr Dugin - who has been linked to Russian President Vladimir Putin and has close ties to Russian fascists and nationalists - as part of a segment attacking McMaster, who has come under fire from Trump's nationalist base for firing three National Security Council officials appointed by Michael Flynn, the former national security adviser. ... 'Globalists' like McMaster have made Russia 'enemy No. 1,' he said, because they need a battle to distract the public while they pursue their 'satanic' plans and 'destroy humanity.'" http://read.bi/2wHZIlp

WEEK IN REVIEW -- "John Kelly is an apolitical force in a White House divided by ideology," by WaPo's Bob Costa and Phil Rucker: "As one [official] put it, the political atmosphere under Kelly is a contrast to when the White House was led by Priebus, a GOP stalwart who 'was trained to not work with Democrats and to see them as the enemy.' The general's 'job has been to develop consensus and negotiate solutions.' Kelly, who tersely answers phone calls with his surname and signs his emails the same way, has taken care even in one-on-one exchanges to remain cagey about his point of view. He talks broadly about 'what the president wants to do' or 'what is good for the country,' according to people who have interacted with him." http://wapo.st/2hLdEJl

COMING ATTRACTIONS -- "Judges sets Oct. 18 arguments in Trump foreign emoluments suit," by Josh Gerstein: "U.S. District Court Judge George Daniels issued an order Wednesday setting oral arguments for Oct. 18 on a suit the liberal watchdog group Citizens for Responsibility and Ethics in Washington filed in January. The suit argues that Trump's business ties run afoul of the Constitution's foreign emoluments clause, which bars federal officials from receiving benefits from foreign governments. The Justice Department's final response brief in the case is due Sept. 22." http://politi.co/2hKloeI

WICHITA GOES HOLLYWOOD -- "Conservative Koch Brothers Are Secret Investors in 'Wonder Woman'," by The Hollywood Reporter's Tatiana Siegel: "Though they might be the most reviled figures among Hollywood's liberal crowd, the Koch brothers have been a silent investor in Warner Bros.' slate of movies for four years. Sources say Charles G. Koch and David H. Koch -- who are worth a combined $96.2 billion and wield enormous power in political circles as major backers of right-wing

politicians -- took a significant stake valued at tens of millions of dollars in RatPac-Dune Entertainment. Now-Treasury Secretary Steven Mnuchin brought the brothers in as investors as part of a $450 million deal struck in 2013 --3 a move that was never disclosed because RatPac-Dune is a private company.

"Though Mnuchin is no longer involved with the slate financing facility, having recently put his stake into a blind trust in order to avoid a conflict of interest, the Koch brothers continue to be stakeholders in such films as Wonder Woman, Dunkirk and Steven Spielberg's upcoming Ready Player One. A RatPac spokesperson didn't respond to a request. A spokesperson for Koch Industries says, 'Charles Koch, David Koch and Koch Industries do not have any involvement with this investment.' The brothers aren't the only unlikely billionaires who have sunk money into the Warner Bros. deal. Sources say Mnuchin also brought in Bill Gates for an amount similar to the Koch brothers'." http://bit.ly/2fsJZ7h

2020 WATCH -- "Tensions Flare as Cuomo Confronts Democratic Rift," by the NYT's Shane Goldmacher: "As he looks to heighten his national profile, criticizing the Republican health care bill and President Trump's immigration policy, Gov. Andrew M. Cuomo of New York has been forced to confront a political schism far closer to home. ... But after the election of Donald J. Trump, pressure has mounted on Mr. Cuomo to reunite his party.

"Reunification was the agenda of a strategy session last month in Mr. Cuomo's Midtown Manhattan office, attended by nearly two dozen Democratic state senators. When the discussion turned to how to best win elections, Mr. Cuomo suggested to the assembled lawmakers - many of them from New York City - that the leader of eight breakaway Democrats, Senator Jeffrey D. Klein, had a better understanding of the suburbs than they had.

"That was all Senator Andrea Stewart-Cousins, the African-American leader of the group who represents the suburbs of Westchester County, needed to hear. 'You look at me, Mr. Governor, but you don't see me. You see my black skin and a woman, but you don't realize I am a suburban legislator,' Ms. Stewart-Cousins said, according to the accounts of five people who were in the room. 'Jeff Klein doesn't represent the suburbs,' she said. 'I do.' Mr. Cuomo reacted in stunned silence." http://nyti.ms/2fsZ20E

WHAT? -- "GOP Sen. Ron Johnson: McCain's brain tumor might have been factor in no vote on health care," by CNN's Andrew Kaczynski: "Republican Sen. Ron Johnson of Wisconsin said Tuesday that he thinks that Sen. John McCain's brain tumor and the early morning hours may have affected the Arizona Republican's no vote on the Senate bill to repeal Obamacare. ... 'We did get a call from Paul (Ryan) and he assured us that skinny repeal was not going to pass the House it would have to go to conference,' said the Wisconsin senator on AM560 'Chicago's Morning Answer.' 'Again, I'm not gonna speak for John McCain -- he has a brain tumor right now -- that vote occurred at 1:30 in the morning, some of that might have factored in,' he continued." http://cnn.it/2hK22X9

TODAY'S BEYOND THE BELTWAY -- Bill Nelson targets Rick Scott -- Massachusetts sales tax weekend declared dead http://politi.co/2fsdWo1

SPOTTED: Tom Perez at Pret A Manger on the Hill this afternoon

MEDIAWATCH -- Our colleague, friend and fellow GW Hatchet alumna **Hadas Gold** is leaving POLITICO after five years. She is heading to CNN as a correspondent focused on European politics, media and global business and she starts in D.C. on Sept. 5.

Peter Canellos emails the POLITICO newsroom: "This is a unique and exciting opportunity for Hadas, but also an occasion to remember all the great work she's done for POLITICO, starting on the web team in 2013. Hadas is respected throughout the media world for her dogged but always fair-minded pursuit of news scoops. She is one of those reporters who will roll out of bed at any hour of the night or morning to jump on a competitive story. She is also a talented multi-media journalist, equally comfortable being interviewed in front of a camera and posing questions to others as the moderator of a panel discussion. All of her skills will be put to use as she moves beyond the media beat to explore European politics."

-- FUTURE OF MEDIA -- "Bloomberg Launches An Entirely New Model of Media," by AdWeek's Chris Ariens: "Bloomberg is leveraging its vast reach in financial data, its media heft and its broad-based, deep-dive research to be the world's next go-to management consultancy. ... The new consultancy will tap rich data from the Bloomberg terminals, the built-in research arms of Bloomberg Intelligence and Bloomberg New Energy Finance (BNEF) as well as its 2,700 journalists and analysts. ... [Bloomberg Media global chief commercial officer Andrew] Benett expects to hire 20 to 25 people to supplement ... specific practice areas, including financial services, tech and telecom, auto, government as well as luxury and lifestyle. ... The company already has 5 clients lined up: two in technology, one in financial services, one in auto and another in retail. Two clients, CA Technologies and Hartford Funds, have been working with Bloomberg for several years." http://bit.ly/2vOiHhN

IN CAMBRIDGE -- The Harvard Kennedy School Institute of Politics announced its fall class fellows, which includes **Yohannes Abraham, Dan Balz, Jason Chaffetz, Karen Finney, Sally Jewell** and **Mark Strand.** ***Full release*** http://politi.co/2hKoFe1

OUT AND ABOUT -- ChIPs, a non-profit dedicated to advancing women in technology, said farewell to former director of the U.S. Patent and Trademark Office Michelle Lee, who is heading back to Silicon Valley, with a gathering on the terrace of the law firm of Kellogg, Hansen, Todd, Figel & Frederick. **SPOTTED:** Pauline Newman, Jamie Spector, Kathy Kemper, Alan Davidson, Grace Koh and Sarah Harris.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than

50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Driving the Day

Good Sunday morning. BREAKING -- at 10:42 a.m.: A WHITE HOUSE SPOKESPERSON put out the following statement in response to questions about President Trump's remarks yesterday, per pooler Gabby Morrongiello of the Washington Examiner. "The President said very strongly in his statement yesterday that he condemns all forms of violence, bigotry, and hatred. Of course that includes white supremacists, KKK Neo-Nazi and all extremist groups. He called for national unity and bringing all Americans together." Morrongiello writes "POTUS will continue to receive regular updates from his team about the events that unfolded yesterday in Charlottesville, Va."

CHARLOTTESVILLE DAILY PROGRESS FRONT PAGE -- "A DAY OF DEATH: WOMEN KILLED BY CAR DRIVEN INTO CROWD; 19 INJURED ... OHIO MAN CHARGED WITH SECOND-DEGREE MURDER IN CRASH ... TWO STATE TROOPERS PERISH IN HELICOPTER WRECK IN ALBEMARLE" http://bit.ly/2wGgHWC

THE LATEST, via the Daily Progress's Bryan McKenzie: "A 32-year-old woman was killed and 19 people were injured after a driver sped into a crowd of counter-protesters at Fourth Street Northeast and Water Street mid-afternoon.

"The crash occurred after the rally had broken up and a large number of protesters were marching down Water Street. A Dodge Challenger sped into the crowd at Fourth Street Northeast, slamming into pedestrians and into the rear end of another car. The Dodge backed up the street quickly and sped away despite heavy front-end damage.

"The driver, James Alex Fields Jr., 20, of Maumee, Ohio, was arrested and charged with one count of second-degree murder, three counts of malicious wounding and one count of hit and run with injury. About two hours after the car crash, two state troopers were killed when their police helicopter crashed and burned near Old Farm Road. The helicopter was involved in providing surveillance and information during the day.

"Alt-right torchbearer Richard Spencer said he was outraged by what he said was a lack of police protection. 'I have never been so outraged at my government,' he said, addressing a crowd of approximately 100 supporters who had relocated to McIntire Park after Emancipation Park was cleared. 'We are never backing down. We are going to be back here.' ...

"Virginia Gov. Terry McAuliffe thanked local and state law enforcement and the National Guard and said white supremacists are not welcome in Virginia. 'Our message is plain and simple: Go home,' he said. 'You are not wanted in this great town.'" http://bit.ly/2wFKSNX

-- James Alex Fields Jr.'s mugshot. http://bit.ly/2vyDvaT

FIELDS' MOTHER SPEAKS -- AP's Sarah Rankin: "Fields' mother, Samantha Bloom, told The Associated Press on Saturday night that she knew her son was attending a rally in Virginia but didn't know it was a white supremacist rally. 'I thought it had something to do with Trump. Trump's not a white supremacist,' said Bloom, who became visibly upset as she learned of the injuries and deaths at the rally. 'He had an African-American friend so ...,' she said before her voice trailed off. She added that she'd be surprised if her son's views were that far right." http://bit.ly/2w2R6JI

ATTORNEY GENERAL JEFF SESSIONS OPENS FEDERAL PROBE: "Attorney General Jeff Sessions called late Saturday for a federal investigation into the racially tinged violence in Charlottesville, Virginia. 'The violence and deaths in Charlottesville strike at the heart of American law and justice,' Sessions stated. 'When such actions arise from racial bigotry and hatred, they betray our core values and cannot be tolerated. I have talked with FBI Director Chris Wray, FBI agents on the scene, and law enforcement officials for the state of Virginia. The FBI has been supporting state and local authorities throughout the day. U.S. Attorney Rick Mountcastle has commenced a federal investigation and will have the full support of the Department of Justice. Justice will prevail.'" http://politi.co/2vzni5d

CHARLOTTESVILLE MAYOR MICHAEL SIGNER (D) speaking with **JOHN DICKERSON** on **CBS' "FACE THE NATION -- DICKERSON:** "Mr. Mayor, the president said that he wanted to know what was going on in Charlottesville and that we want to see what we're doing wrong as a country, he said. What's your answer to that?" **SIGNER:** "You know, I don't want to make this too much about Donald Trump, we have a lot of grieving, a lot of work to do as a-- as a city and as a country, but he should look in the mirror. I mean, he made a choice in his presidential campaign, the folks around with him, to, you know, go right to the gutter, to play on our worst prejudices. And I think

you are seeing a direct line from what happened here this weekend to those choices. He has the opportunity, as do we all, to have a fresh beginning."

THE GUV. -- AP: "Virginia Gov. Terry McAuliffe will visit two Charlottesville churches and speak to congregants following violent clashes in the city between white supremacist groups and counter-protesters that left three dead. The governor's office says in a release that Lieutenant Governor Ralph Northam will join McAuliffe at both Sunday services. McAuliffe and Northam are scheduled to visit Mount Zion First African Baptist Church and Visit First Baptist Church." http://bit.ly/2uD3A7o

PRESIDENT TRUMP is facing widespread criticism from Republicans and Democrats after he declined to condemn by name white nationalists behind a deadly protest in Charlottesville, Virginia. Trump, who was speaking at his golf club Saturday in New Jersey: "The hate and the division must stop and must stop now. We condemn in the strongest possible terms this egregious display of hatred, bigotry and violence on many sides. On many sides." He later tweeted "condolences" to the family of the women and two Virginia State Police who died.

-- QUITE THE LEAD, from Glenn Thrush and Maggie Haberman on A14: "President Trump is rarely reluctant to express his opinion, but he is often seized by caution when addressing the violence and vitriol of white nationalists, neo-Nazis and alt-right activists, some of whom are his supporters." http://nyti.ms/2wGrD70

NRSC CHAIRMAN CORY GARDNER (R-COLO.) was the most high-profile Republican to directly push back on Trump. He tweeted: "Mr. President - we must call evil by its name. These were white supremacists and this was domestic terrorism." ... **GARDNER** to Jake Tapper on CNN's "State of the Union": "I think the president needs to step up today and ... call it for what it is. It's evil, it's white nationalism, it's bigotry and it's unacceptable. And if he doesn't do that, we can continue to answer the question of why. But I believe he has a chance to do that today."

REP. ILEANA ROS-LEHTINEN (R-FLA.): "White supremacists, Neo-Nazis and anti-Semites are the antithesis of our American values. There are no other 'sides' to hatred and bigotry."

FORMER PRESIDENT BARACK OBAMA put out a rare tweet quoting deceased South African President Nelson Mandela -- **@barackobama:** "'No one is born hating another person because of the color of his skin or his background or his religion...'" ... "'People must learn to hate, and if they can learn to hate, they can be taught to love...'" ... "'...For love comes more naturally to the human heart than its opposite.' - Nelson Mandela".

IVANKA TRUMP (@IvankaTrump) at 8:09 a.m.: "1:2 There should be no place in society for racism, white supremacy and neo-nazis." ... "2:2 We must all come together as Americans -- and be one country UNITED. #Charlottesville".

TOP TWEETS -- @gabrielsherman: "When I asked senior WH official why Trump

didn't condemn Cville Nazis, he said: 'What about the leftist mob. Just as violent if not more so'" ... **@GlennThrush:** "It is neither unfair nor inaccurate to point out that the president has been tougher on Mitch McConnell than Putin or Nazis in last 24 hours" ... **@marcorubio:** "Nothing patriotic about #Nazis,the #KKK or #WhiteSupremicists It's the direct opposite of what #America seeks to be. #Charlottesville". ...**@senorrinhatch:** "We should call evil by its name. My brother didn't give his life fighting Hitler for Nazi ideas to go unchallenged here at home. -OGH" ...

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

... Ken Schwencke (**@schwanksta**): "This is the White House's only response to my asking three times if the President condemns white supremacists" ["Hi Ken - On background, the President condemns all acts of violence."] http://bit.ly/2vv2HAJ ... **@BresPolitico:** "Worth noting no one in congressional leadership so far has called for hearings into rise of white supremacist/neo Nazi/racist movement".

THE DAILY STORMER , a neo-Nazi publication: "Trump comments were good. He didn't attack us. He just said the nation should come together. Nothing specific against us. He said that we need to study why people are so angry, and implied that there was hate ... on both sides! So he implied the antifa [anti-fascists] are haters. There was virtually no counter-signaling of us at all. He said he loves us all. Also refused to answer a question about White Nationalists supporting him. No condemnation at all. When asked to condemn, he just walked out of the room. Really, really good. God bless him."

DRUDGE BANNER: "MAKE AMERICA HATE AGAIN! CHAOS AT RACE RALLY IN VIRGINIA".

CLICKER - "Chaos and violence: Scenes from Charlottesville's white nationalist rally" -- ***30 pix*** http://politi.co/2fCpV2c

FLASHBACK -- PLAYBOOK SCOOP, June 23: "The Department of Homeland Security is restarting a stalled $10-million grant program for 'Countering Violent Extremism' this morning. Life After Hate, a group dedicated to deradicalizing neo-Nazis and stopping white extremism, was slated to get $400,000 in the final days of the Obama administration (http://bit.ly/2sxsh6x) before the program was halted for review, but the Trump administration dropped them from the new grant list that's getting announced today. The group has seen a twenty-fold increase in requests for help since Election Day 'from people looking to disengage or bystanders/family members looking for help from someone they know,' the organization's founder Christian Picciolini told us." http://politi.co/2sYwb91

THE AFTERMATH IN VIRGINIA ...

-- WAPO: "Three dead in wake of clashes at white nationalist gathering in Virginia," by Joe Heim, Ellie Silverman and T. Rees Shapiro in Charlottesville and Emma Brown in Washington: "Chaos and violence turned to tragedy Saturday as hundreds of white nationalists, neo-Nazis and Ku Klux Klan members -- planning to stage what they described as their largest rally in decades to 'take America back' -- clashed with counter-protesters in the streets and a car plowed into crowds, leaving one person dead and 19 others injured.

"Hours later, two state police officers died when their helicopter crashed at the outskirts of town. Officials identified them as Berke M.M. Bates of Quinton, Va., who was the pilot, and H. Jay Cullen of Midlothian, Va., who was a passenger. State police said their Bell 407 helicopter was assisting with the unrest in Charlottesville. Bates died one day before his 41st birthday; Cullen was 48. ...

"Video recorded at the scene of the car crash shows a 2010 gray Dodge Challenger accelerating into crowds on a pedestrian mall, sending bodies flying -- and then reversing at high speed, hitting yet more people. Witnesses said the street was filled with people opposed to the white nationalists who had come to town bearing Confederate flags and anti-Semitic epithets. A 32-year-old woman was killed, according to police, who said they were investigating the crash as a criminal homicide." http://wapo.st/2uzGhzj

-- NED OLIVER of the Richmond Times-Dispatch: "'When it hit, it hit hard and people just started flying into the air,' said Byron Woods, a Waynesboro resident who witnessed the crash. 'This is a sad day today in this great United States we live in.' Witnesses said there was no question the collision was intentional, describing the gray Dodge Challenger appearing to speed up over the course of two blocks before it rammed into a stopped vehicle just ahead of the mass of the people, who were chanting anti-racist slogans.

"'They'd thought they'd driven the Nazis out of town,' said city resident Eberhard Jehle, describing a generally jovial mood among the group. He said the driver, going at least 35 mph, made no attempt to stop. 'Oh, it was absolutely intentional,' he said." http://bit.ly/2w0A9Ra

COMING ATTRACTIONS -- LEXINGTON HERALD-LEADER: "Lexington mayor says Confederate statues at courthouse will be moved, " by Beth Musgrave: "Mayor Jim Gray said Saturday he is taking steps to remove two controversial Confederate-era statues from the lawn of the former Fayette County Courthouse on Main Street. Gray's announcement came the same day as multiple people were killed and injured in Virginia after a vehicle drove into counter-protesters who had clashed with white nationalists around a Confederate-era statue in Charlottesville. ... 'We have thoroughly examined this issue, and heard from many of our citizens,' Gray said in a statement. 'The tragic events in Charlottesville today have accelerated the announcement I intended to make next week.'" http://bit.ly/2vS0zno

DRIP, DRIP - NYT A1, "Mueller Is Said to Seek Interviews With West Wing in Russia Case," by Mike Schmidt, Matt Apuzzo and Maggie Haberman: "In a sign that the investigation into Russian interference in the 2016 presidential election will remain a continuing distraction for the White House, the special counsel, Robert S. Mueller III, is in talks with the West Wing about interviewing current and former senior administration officials, including the recently ousted White House chief of staff, Reince Priebus, according to three people briefed on the discussions.

"Mr. Mueller has asked the White House about specific meetings, who attended them and whether there are any notes, transcripts or documents about them, two of the people said. Among the matters Mr. Mueller wants to ask the officials about is President Trump's decision in May to fire the F.B.I. director, James B. Comey, the two people said." http://nyti.ms/2wUqisv

FOR YOUR RADAR -- "Iran lawmakers raise missile, Guard spending to challenge U.S.," by AP's Nasser Karimi in Tehran and Jon Gambrell in Dubai: "Iran's parliament voted overwhelmingly Sunday to increase spending on its ballistic missile program and the foreign operations of its paramilitary Revolutionary Guard, chanting 'Death to America' in a direct challenge to Washington's newest sanctions on the Islamic Republic. The lawmakers' vote comes amid growing anger in Iran over U.S. President Donald Trump's threats to renegotiate the nuclear deal struck with world powers in 2015. While they stressed the bill wouldn't violate the terms of that agreement, it again increases the friction between the two nations that routinely have tense encounters in the Persian Gulf." http://bit.ly/2uzxMUS

-- BLOOMBERG: "Top U.S. General to Meet South Korean Leader Amid Tensions," by Heejin Kim: "The U.S.'s top general plans to meet with South Korean President Moon Jae-in on Monday, just days after his counterpart Donald Trump said military options against North Korea were 'locked and loaded.' General Joseph Dunford, chairman of the U.S. Joint Chiefs of Staff, will meet with senior military officials along with Moon ... He will head to China next on the previously scheduled visit, Yonhap News Agency reported, citing an unidentified military official." https://bloom.bg/2fCoa56

TRUMP'S OBAMACARE SUPPORT-- "How the Trump administration is spending millions to shore up Obamacare," by Rachana Pradhan: "President Donald Trump has threatened to blow up Obamacare. But his own administration is separately dangling hundreds of millions of dollars before states to bail out their insurance markets. Alaska will get $323 million over the next five years to coax its lone Obamacare insurer to remain in the market and hold down premiums. At least four other states, including some that have vociferously opposed the Affordable Care Act, are seeking similar deals.

"The efforts come as the GOP push to repeal and replace the law is in disarray and state officials in both red and blue states seek ways to shore up their shaky markets. They have the blessing of the Trump administration's Department of Health and Human Services - even as the president himself is threatening to cut off key subsidies as early

as this week. That move could send premiums skyrocketing and potentially collapse insurance markets nationwide. The White House said Thursday it applauds the stabilization efforts even as Trump steps up the pressure on the Senate to resume efforts to try to pass legislation to repeal and replace Obamacare." http://politi.co/2w0jk8P

GET SMART FAST -- "Think Obamacare repeal was hard? Wait for tax reform," by Rachael Bade and Bernie Becker: http://politi.co/2wFwUvj

SUNDAY BEST ... JAKE TAPPER speaks with **HOMELAND SECURITY ADVISER TOM BOSSERT: TAPPER:** "Are you willing to at least concede that President Trump was not clear enough in specifically condemning white supremacy?" **BOSSERT:** "No, the words of the ignorant bear little with me and should bear less with you in the media. Unfortunately they don't. What I would say is that the president not only condemned the violence and stood up at a time and a moment when calm was necessary and didn't dignify the names of these groups of people but rather addressed the fundamental issue. So, Jake, what you need to do is focus on the rest of his statement. The president didn't just call for human beings to respect one another, which is his pragmatist core, fundamental bare minimum but he called for ideally for Americans to love one another. For all God's children to love one another. That is a fundamental assault on the very nature that we're seeing here."

-- TAPPER: "When you just condemn groups, as opposed to specifically white supremacists, Nazis, clan members, it creates this vagueness that ... allows neo Nazis to think, 'he's not condemning us, he's condemning anybody that was violent.' And that's the problem. And you, on this show today, have said that you condemn groups, condemn actions, condemn bigotry, but I haven't heard you say, 'I condemn white supremacists, I condemn neo Nazis, I condemn the alt right.' I haven't heard that. And I think a lot of people were upset -- a lot of Republican officials -- they didn't hear it from President Trump. But I don't want to belabor this point." **BOSSERT:** "Well, I think you've belabored it. So let me say, I condemn white supremacists, and racists and white Nazi groups, and all the other groups that espouse this kind of hatred and exclusion."

H.R. MCMASTER to **GEORGE STEPHANOPOULOS** on **ABC'S "THIS WEEK":** "Any time that you commit an attack against people to incite fear, it is terrorism."

-- ANTHONY SCARAMUCCI to George: **STEPHANOPOULOS:** "If you were White House communications director yesterday would you advise he give that statement?" **SCARAMUCCI:** "Well I wouldn't have recommended that statement. I think he needed to be much harsher as it related to the white supremacists and the nature of that. I applaud Gen. McMaster for calling it out for what it is: it's actually terrorism. And whether it's domestic or international terrorism with the moral authority of the presidency you have to call that stuff out."

CHRIS WALLACE speaks to **CIA DIRECTOR MIKE POMPEO** on **"FOX NEWS SUNDAY": WALLACE:** "You're saying you don't believe there's anything imminent in

terms of North Korean action -- another missile test, another nuclear test, firing those missiles towards Guam?" **POMPEO:** "Chris, I'm quite confident that he will continue to try to develop his missile program. So it wouldn't surprise me if there was another missile test. He conducted two in July. So it wouldn't surprise me if there was another missile test." **WALLACE:** "But, when you say there's..." **POMPEO:** "There's no but to that." **WALLACE:** "When you say there's nothing imminent..." **POMPEO:** "What I am talking about is I've heard folks talking about we being on the cusp of a nuclear war. I've no intelligence that we are in that place."

CHUCK TODD speaks with **ADM. MIKE MULLEN** on **NBC'S "MEET THE PRESS" -- TODD:** "You said you're concerned the rhetoric has limited options. What options are you concerned that the president has eliminated with his rhetoric?" **MULLEN:** "Well, I think it eliminates maneuver space for him because it looks like brinkmanship to me. And it looks like clearly he's, at least, verbally focused very specifically on the military options with the rhetoric that's out there. It's almost a fire and brimstone, 'Don't make another move or else.' And the comment that military options are locked and loaded - We've always had military options, and they're very complex, but they can be executed. It almost seems as if we're leading with those, which makes an awful lot of, it unsettles an awful lot of people."

-- ON KIM JONG-UN: "I don't think he's a rational actor. He's got a rich history in his family, the legacy to uphold. He is on a race to gain this capability. Much different from his father or his grandfather in terms of developing capability. He is in a flat-out sprint to develop this capability, and then see what happens. I just can't bring myself to the point where we say, 'Well, it's okay if this leader has these devastating weapons.'"

TRUMP'S WEEK AHEAD - Monday: Trump signs "a Presidential Memorandum on China's laws, policies, practices, and actions related to intellectual property, innovation, and technology" . ... **Tuesday:** Trump heads a discussion on infrastructure. ... **Wednesday:** Trump visits a VA hospital. ... **Thursday:** Trump meets with small business owners and SBA administrator Linda McMahon. ... **Friday:** Trump visits an opioid clinic.

WARREN WORLD -- LAUREN DEZENSKI goes **"Inside the Elizabeth Warren merchandising empire":** "Prayer candles. Action figures. Temporary tattoos. Coloring books. Elizabeth Warren isn't just a progressive icon, she's a merchandising industry unto herself. The Massachusetts senator and presidential prospect is at the center of a

sprawling business built around her appeal to liberals across the country - a reminder of the unabashed devotion she inspires on the left and the footprint she'll cast in the 2020 Democratic primary. 'Elizabeth Warren is an increasingly popular brand that people want to associate with,' said Adam Green, co-founder of the Progressive Change Campaign Committee. 'She's the Apple of politics.'

"It's impossible to know the true size of the Warren merchandising-industrial complex. The bulk of it exists beyond the senator's control on sites like online marketplace Etsy. And her campaign, which hosts its own online store, declined to disclose the exact amount of money it raises from merchandise sales. But it's safe to say no other senator has anything like it. Warren's campaign store has expanded beyond traditional political fare such as buttons, bumper stickers, tote bags and t-shirts to offer a line of products that capitalize on the 'Nevertheless, she persisted' meme spawned by Senate Majority Leader Mitch McConnell's much-publicized admonishment of Warren on the Senate floor earlier this year." http://politi.co/2wFZo8q

TRUMP'S WASHINGTON -- "Trump's Easing of Postcrisis Wall Street Rules Gains Momentum," by WSJ's Ryan Tracy and Dave Michaels: "Regulators in the Trump administration have started easing restrictions that were placed on Wall Street after the financial crisis, using broad powers to revisit rules intended to constrain everything from trading risks to executive pay. Several agencies are reviewing the Volcker rule, a part of the 2010 Dodd-Frank Act that limits banks' trading. Some regulators also recently dropped a plan to restrict bonuses on Wall Street that had been opposed by banks and brokerage firms.

"And the Labor Department on Wednesday disclosed an 18-month delay in the so-called fiduciary rule that requires brokers to act in clients' best interests when they handle retirement accounts. The moves show that while President Donald Trump might be struggling to advance his legislative agenda in Congress, his administration is making headway in changing some of the myriad rules that Wall Street has sought for years to overturn or water down." http://on.wsj.com/2vyqsWZ

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. ****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: Court says blend wall fears not enough to justify ethanol volume waivers

By Eric Wolff

07/28/2017 12:28 PM EDT

The D.C. Circuit today rejected EPA's decision to use a waiver to reduce conventional ethanol volumes in its rule setting volumes for 2014-2016, a win for ethanol producers.

The Renewable Fuel Standard allows EPA to lower volumes set by Congress if it determines domestic biofuel producers will not be able to provide adequate supply. But in its rule setting volumes for 2014-16, the agency said it had to issue the waiver because of inadequate demand for ethanol. If the agency required more ethanol than consumers would buy, a situation known as the blend wall, refiners feared complying with the program would be difficult and expensive.

The court held that EPA's attempt to argue that insufficient demand was the same as insufficient supply would not justify use of the waiver.

"We reject EPA's attempt to bootstrap the definition of 'renewable fuel' into a boundless general waiver authority," the three-judge panel wrote in its unanimous opinion.

The court rejected all other challenges in the case: It found that EPA does not have to address which companies bear the obligation for complying with the program in annual rules; it upheld EPA's separate waiver to reduce requirements for cellulosic ethanol; and it found that EPA does not need to consider the amount of leftover RFS credits from prior years when it sets future volumes.

The court also affirmed EPA's right to set biofuel requirements even when it misses statutory deadlines, a decision that could be important for EPA this year, as it is already behind schedule on setting final volumes for 2018.

WHAT'S NEXT: The court remanded the case back to EPA to figure out what to do now that its use of the waiver was invalidated for the previous three years.

Subject: Playbook Power Briefing, presented by Morgan Stanley: SESSIONS: Media subpoena policies under review -- New jobs numbers good for TRUMP -- How POTUS' GENERALS are trying to save the world, starting at 1600 Penn

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

Good Friday afternoon and happy first full day of recess.

SESSIONS: PRESS FREEDOM NOT 'UNLIMITED' -- "Sessions: DOJ reviewing policies on media subpoenas," by Madeline Conway: "The Justice Department is considering making changes to its policies on subpoenaing news organizations as part of its crackdown on government leaks, Attorney General Jeff Sessions said Friday. At a news conference, Sessions said the Justice Department is cracking down on leaks coming out of the government. Much of that effort involves investigating and prosecuting leak suspects, he said, but another aspect is 'reviewing policies affecting media subpoenas.' That review, he said, came at the suggestion of FBI agents, career investigators and prosecutors who have weighed in on the leak problem.

"'We respect the important role that the press plays, and we'll give them respect, but it is not unlimited,' Sessions said. 'They cannot place lives at risk with impunity. We must balance the press's role with protecting our national security and the lives of those who serve in the intelligence community, the armed forces and all law-abiding Americans.' Sessions did not offer more details on what kinds of changes the department is considering. At the news conference, Sessions described the nation as having a problematic "culture of leaks" that must be stamped out." http://politi.co/2urnQYz

-- @EvanPerez: "Sessions taking new look at reporter subpoenas. Holder era included treating reporters as co-conspirators, then a pullback. Pendulum swings" ... **@brianstelter:** "'Putting lives at risk' rhetoric cries out for evidence and documentation" ... **@adamgoldmanNYT:** "Sessions just fired shot across media bow. You know those DOJ media guidelines? They ain't worth shit." ... **@ZekeJMiller:** "DAG Rosenstein also announced the formation of a dedicated FBI unit to investigate classified leaks to news organizations"

FROM THE WHITE HOUSE -- @realDonaldTrump at 6:21 a.m.: "....and don't forget that Foxconn will be spending up to 10 billion dollars on a top of the line plant/plants in Wisconsin." ... **at 6:26 a.m.:** "Consumer confidence is at a 16 year high....and for good reason. Much more regulation 'busting' to come. Working hard on tax cuts & reform!" ... **at 6:35 a.m.:** "West Virginia was incredible last night. Crowds and enthusiasm were beyond, GDP at 3%, wow!Dem Governor became a Republican last night." ... **at 8:45**

a.m.: "Excellent Jobs Numbers just released - and I have only just begun. Many job stifling regulations continue to fall. Movement back to USA!" ***The president also retweeted a handful of supporters and Fox News tweets, including one with an electoral map, one challenging Republican senators and another saying "the losers are welcome" on the Trump Train.***

-- THE PRESIDENT started out on message talking about jobs and the economy, but his retweets changed that. The president (and his most fervent supporters) are still focused rehashing his election and attacking members of the Republican party.

ABOUT THOSE JOB NUMBERS -- "Trump (finally!) reaches million-jobs mark," by Marianne LeVine: "With the Labor Department reporting Friday that the economy added 209,000 jobs in July, Trump can finally say, truthfully, that he's created more than a million jobs since entering office. ... July's jobs number was a decrease from June, when the economy added 231,000 jobs. But unemployment ticked down to 4.3 percent, compared to June's 4.4 percent. Average hourly private-sector earnings were up 2.5 percent over the previous year, as they were in June. The pattern of job growth in 2017 remains essentially the same as in 2016." http://politi.co/2uqyVt9

MAKING IT OFFICIAL -- "Sources: Trump administration to deliver notice it intends to withdraw from Paris climate deal," by Andrew Restuccia: "The Trump administration will release a formal notice Friday outlining the United States' intention to withdraw from the Paris climate change agreement, two sources familiar with the issue said. The notice, which will be released by the State Department and transmitted by the U.S. delegation to the United Nations, will be the first written notice that the administration plans to pull out of the 2015 pact, which has won the support of nearly 200 nations. Trump announced in June that the U.S. will leave the agreement. Under the terms of the agreement, the U.S. can't fully withdraw until Nov. 4, 2020 - one day after the next presidential election." http://politi.co/2urarju

****** **A message from Morgan Stanley:** Has alternative energy gone mainstream? Several decades ago, renewable energy seemed futuristic. Now, it has emerged as a practical way to power our cities. Morgan Stanley explored the economics driving the industry, the obstacles it faces, and what it means for investors in renewable energy technology. Read more from Morgan Stanley. ******

SUNDAY SHOWS -- Meet the Press will have an exclusive interview with **Sen. Jeff Flake** (R-Ariz.).

EMAIL TROUBLES -- "After six months, Pence has now turned over all state-related AOL emails, his attorney says," by the Indianapolis Star's Tony Cook: "It took nearly six months after he left the governor's office, but Vice President Mike Pence and his legal team say they have now provided Indiana officials with all emails from his personal AOL account involving state business. Pence attorney Karoline Jackson said in a recent email to the state's legal counsel that 'a complete electronic production of state records' from Pence's time as governor had been delivered to the state as of June

23. The office of Pence's successor, Gov. Eric Holcomb, said the records consist of state-related emails from two AOL accounts Pence used as governor. ...

"Neither the Holcomb administration nor Pence's office would disclose how many emails from Pence's AOL accounts have now been transferred electronically to the state and it remains unclear how many of those emails were previously unavailable for public record searches. The law firm overseeing the delivery of the emails on behalf of Pence is Barnes and Thornburg, whose managing partner, Bob Grand, is a top fundraiser for Trump and Pence. Pence's attorneys are only providing emails they consider to be related to state business, but Lotter did not answer questions about how those determinations are being made." http://indy.st/2uqlJml

WHAT THE RIGHT IS READING -- "Wasserman Schultz talks about arrested aide Imran Awan," by the Sun Sentinel's Anthony Man: "Congresswoman Debbie Wasserman Schultz defiantly stands by her decision to keep an information technology aide on her payroll for six months after he was banned from the House network and fired by other members of Congress. 'I believe that I did the right thing, and I would do it again,' Wasserman Schultz said Thursday in an exclusive interview with the Sun Sentinel. 'There are times when you can't be afraid to stand alone, and you have to stand up for what's right.' ... The Weston Democrat did fire Imran Awan last week after he was arrested on bank fraud charges at an airport while trying to leave the country. ...

"His arrest, the congresswoman said, had nothing to do with the months-long investigation of Awan as an IT worker for a variety of members of Congress. An FBI affidavit filed with the criminal complaint said Awan and his wife claimed a property used to secure a home equity line of credit was a 'principal residence,' when it was, in fact, a rental property. Wasserman Schultz said there still hasn't been any evidence presented that he's done anything wrong involving his work for Congress. And, she said, she believes he may have been put under scrutiny because of his religious faith. Awan is Muslim." http://bit.ly/2uaQ4eY

-- @Heatherscope: "It's the first time (that I know of) she's spoken publicly abt the case. But the other thing that stands out is her explanation of laptop ... During May budget hearing, she grilled Capitol Police chief about equipment (laptop) confiscated by police that belongs to a member ... And DWS warned of 'consequences' if laptop wasn't returned. At the very least, implying laptop found by Capitol police was hers ... And NOW in latest Sun Sentinel piece, she totally distances herself from laptop, saying she's never seen it, it belonged to IT staffer, etc."

AFTERNOON READ -- POLITICO MAG'S FRIDAY COVER -- "Trump's Generals Are Trying to Save the World. Starting With the White House," by James Kitfield: "Taken as a group, Trump's generals have tended to see their mission as twofold: The first job is to correct what senior military officers see as the mistakes of the Obama administration, a hesitancy to use force or commit troops that many allies perceived as a retreat from traditional U.S. commitments in the world. The second job-and the far riskier one-is to mitigate the damage caused by their boss.

"An undisciplined and shoot-from-the-lip president, Trump has shown a proclivity for rattling allies with unexpected tweets and bullying phone calls. When he trumpets his 'America first' foreign policy, it's widely interpreted by allies as a fig leaf for isolationism and protectionism. The generals, with Tillerson as something of a junior partner-nicknamed the 'axis of adults' by a number of establishment Republicans and conservative commentators-have become the reassurers-in-chief to the outside world. They've already persuaded Trump to back away from some of his most controversial foreign policy positions, including labeling NATO 'obsolete,' moving the U.S. Embassy in Israel to Jerusalem, rescinding the North American Free Trade Agreement and the Iran nuclear deal, and reconsidering the venerable 'One China' policy. ...

"What's at stake, in the minds of the generals, is something considerably larger than winning the internal Game of Thrones. In the back of his airplane returning from a recent trip to Asia, General Dunford, Chairman of the Joint Chiefs of Staff, told me that that the international order they were striving to protect was more volatile and unpredictable today than at any moment since World War II. 'Today, we're confronting simultaneous challenges posed by China, North Korea, Russia and Iran, as well as a natural disaster in Sri Lanka,' he said, referring to flooding that had recently displaced hundreds of thousands of people. 'So, as I prepare for posture hearings in Congress, that's a reminder that this is the world as it is, not the world as we might want it to be.'" http://politi.co/2uqWrGe

HMM... -- "Democrats begin to see Pelosi as a 2018 problem," by McClatchy DC's Alex Roarty: "Nancy Pelosi might actually be in trouble. In a survey of 20 Democratic House candidates, only one - a former Senate staffer from Orange County, California - would state support for the congresswoman staying on as leader of the House Democratic Caucus. Of the rest, 18 declined to say if Pelosi should keep her job, while one, a political newcomer from a culturally conservative Ohio district, said he would vote for someone other than Pelosi." http://bit.ly/2uaAGiT

-- THIS LINE OF ATTACK will not surprise Pelosi or the DCCC. Republicans and Democrats often try to pin down their opposition by getting them on record about whether they will, or won't vote for a congressional leader. This has happened with both John Boehner and Paul Ryan. Pelosi wants to win back the majority. Doubtful she'll take it personally if candidates who aren't elected yet won't take a stand on backing her as leader.

TODAY'S BEYOND THE BELTWAY -- Warren heads to one of reddest parts of Massachusetts for town hall -- NYC crimes could hit historic low http://politi.co/2ubbQzl

CHECK YOUR PHONE -- "Good Luck America," Snapchat's political news show hosted by Peter Hamby, wraps its second season, with a look into the Trump administration's approach to the environment, featuring interviews with EPA Administrator Scott Pruitt and actor Mark Ruffalo. "GLA's audience has more than doubled since its first season,

with episodes now drawing more than 5 million unique viewers, almost 75% of them under the age of 25. Season 3 is expected to premiere this fall." http://politi.co/2ureEDz

MONUMENT WATCH -- "Congress approves plans to build a Global War on Terror memorial," by Military Times' Leo Shane III: "Lawmakers on Thursday gave final approval to the idea of a Global War on Terror memorial, clearing the path for what is expected to be a years-long process of designing and building a tribute to the latest generation of veterans. In wrap-up work before their summer recess, senators unanimously approved legislation that would allow planning of the memorial to begin immediately, instead of the normally mandated 10-year wait period after the end of a military conflict. ...

"The bill does not provide any money for the project, or specify any design plans. Instead, it authorizes [a] foundation to oversee fundraising and construction of the memorial. That's a process that supporters say will likely take a decade, if not longer. Organizers say the work can begin in earnest once the president signs the measure into law. The planning will include negotiations with the National Capital Memorial Advisory Commission to discuss a possible location on the National Mall for the memorial." http://bit.ly/2ub2ALB

OUT AND ABOUT -- WILBUR ROSS and **HILARY GEARY ROSS** hosted a party on Wednesday night at their house in Massachusetts Avenue Heights to celebrate Lawrence Kudlow's most recent book "JFK and the Reagan Revolution: A Secret History of American Prosperity". Unfortunately Kudlow couldn't make it to his own party because of transportation problems caused by weather that prevented him that day from flying down to D.C. from New York. For the guests who did show, Champagne, cocktails and canapés were served. ***$16.60 on Amazon*** http://amzn.to/2wczatL

Subject: POLITICO's Morning Transportation: The one group in Washington still excited about infrastructure — A hiccup in the hotline to driverless cars — DHS to share authority over drones?

By Tanya Snyder | 12/01/2017 10:00 AM EDT

With help from Stephanie Beasley and Brianna Gurciullo

PROBLEM SOLVERS AT BAT: The bipartisan Problem Solvers Caucus wants to "drive the agenda" on infrastructure, says Rep. John Katko (R-N.Y.), co-chair of the caucus's infrastructure task force. The caucus is preparing to issue a report "in the next week or two" with its proposals on infrastructure, to be ready to strike as soon as the tax debate concludes. "We're going to be loud about this," said Katko after a caucus meeting Thursday. "We're going to be ready to roll." The caucus has held five meetings to gather ideas for the report in the last two months.

Distinguished guests: Former DOT Secretary Ray LaHood and former Pennsylvania Governor Ed Rendell were also at Thursday's caucus meeting. LaHood said he's had multiple conversations with White House infrastructure adviser DJ Gribbin and Transportation Secretary Elaine Chao but that "they need a signal to do something, and that signal has been dark all year long." He lamented that Congress and the White House hadn't put infrastructure at the top of their agenda. "That bill would have been passed, hundreds of people would be working on bridges and roads and we'd be getting back to being No. 1 in infrastructure," he said.

Cold comfort: LaHood, Rendell and the lawmakers agreed that the House tax plan's proposal to eliminate private activity bonds would be "destructive" to the president's stated goal to get the private sector to foot much of the bill for his infrastructure plan. "You can't get rid of private activity bonds; that's the main motivator for private sector involvement," Rendell said. Infrastructure task-force co-chair Elizabeth Esty (D-Conn.) said Secretary Chao assured her in a meeting two weeks ago, "that, quote, 'that would be fixed' in the infrastructure bill - they're aware that [the elimination of PABs] is a big problem." Of course, the timeline for the infrastructure bill may have shifted since two months ago, when the president reportedly told the caucus that he wants to turn to infrastructure "12 seconds after tax reform."

IT'S FINALLY FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ships. Tanya is in the MT cockpit. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"I said, now I've got my Magic Bus (too much, Magic Bus) / I drive my baby every way (too much, Magic Bus) / Each time I go a different way (too much, Magic Bus)."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

SQUEAKY WHEEL: At least one Republican senator has raised an objection to the Senate passing its driverless car bill by unanimous consent. The Hill quoted Sen. Gary Peters (D-Mich.)

as saying there were "multiple" holdouts. Sen. Jim Inhofe (R-Okla.) told MT it's not him: "I do want trucks in there but not that much." The holds could mean that senators simply want more time to look at the legislation, or it could signal a significant obstacle to the consensus that would be required to fast-track the bill (S. 1885 (115)). Get the details here.

SHARING IS CARING: House Homeland Security Committee members during a hearing Thursday raised concerns that DHS wasn't doing enough to protect the public from terrorist plots to attach explosives to drones. Committee Chairman Michael McCaul (R-Texas) said it's time for Congress consider legislation that would give DHS the authority to test anti-drone attack methods and possibly require FAA and DHS to share jurisdiction over commercial drones. Stephanie has more details for Pros.

Don't forget: McCaul also continued rallying DHS to begin installing 3D computed tomography scanners at all airport security checkpoints this year, replacing the 2D X-ray scanners currently in use at most U.S. airports. Travelers shouldn't have to wait another year for TSA to finish piloting the technology, McCaul told DHS Acting Secretary Elaine Duke at the hearing. He has been hammering that point since the DHS inspector general briefed lawmakers last month on an audit that reportedly showed TSA failed between 70 and 80 percent of covert tests.

What it all comes down to: TSA is working with Analogic to pilot CT technology at some airports. Duke, like TSA Administrator David Pekoske before her, told the committee that the algorithms needed to help CT scanners identify objects in carry-on bags are still in development. She also said DHS did not have the money for a nationwide deployment of the technology. "We do not have the funding to deploy it at every airport...to buy for every airport would require much more than a reprogramming," she said. Each of Analogic's CT scanners carries a $300,000 price tag.

BY THE NUMBERS: The House Appropriations panel with jurisdiction over DOT funding held a hearing Thursday to talk with Federal Highway Administration officials about the Trump administration's request for $415 million for the agency's Emergency Relief program as part of another hurricane aid package. Brandye Hendrickson, FHWA's acting administrator, told lawmakers that her agency has given states and territories more than $130 million for emergency fixes, "but the net remaining need still approaches $500 million." In Texas, about 90 percent of the work to assess the damage to roads, bridges and highways is done. In Florida, the number is about 70 percent. In Puerto Rico, it's more than 91 percent. And in the U.S. Virgin Islands, it's about 80 percent.

A bigger problem? North Carolina Rep. David Price, the panel's top Democrat, said he was worried about the fact that the administration's request "fails to address the existing backlog of [emergency relief] projects in dozens of states that have suffered from other recent disasters." Overall, counting Hurricanes Harvey, Irma and Maria, the FHWA program has a $1.37 billion backlog of requests.

THINKING AHEAD: With self-driving cars on the way and DOT in charge of figuring out how to safely introduce them onto roadways, the department lacks "a comprehensive plan that sets clear goals, that establishes when and how it will act, [and] that indicates how it will monitor

progress," according to a new GAO report. The GAO challenged the agency to come to grips with how it will evaluate its current approach to vehicle testing and standards and to determine how self-driving cars will interact with other cars on the road. DOT concurred with the recommendation. Mary Lee has more for Pros.

HE SAID, SHE SAID: American Airlines said in a statement Thursday that "only a few hundred" out of the 200,000 flights the airline will operate in December are "currently unassigned to pilots" as a result of a computer glitch that allowed all of its pilots to take off the busy week of Christmas. But the Allied Pilots Association, which represents 15,000 American Airlines pilots, insists that it "is able to view in real time December flight crew assignments" and that, in fact, "thousands of flights are still listed as unassigned" - not hundreds. Tanya has more for Pros.

SHIFTING GEARS: Ken Altman, a former Senate THUD Appropriations Subcommittee aide, has been named the new senior director for government affairs at Amtrak.

THE AUTOBAHN:

- National Economic Council Director Gary Cohn rumored to be leaving the administration. The Wall Street Journal.

- Indiana attorney general requests delay of ELD mandate. Indiana Attorney General's Office.

- Former Facebook exec Randi Zuckerberg complains to Alaska Airlines about sexual harassment on flight. Facebook.

- "General Motors aims to run fleets of self-driving taxis by 2019." The Financial Times.

- "Thousands Apply to Trump's Drone Pilot Program." NextGov.

- "The Boring Company proposes 125-150mph "Loop" for Chicago express train request." Ars Technica.

- "Venezuelan airline barred from European Union skies." The Republic.

- "The DOT has issued fewer fines to airlines this year. Should we be worried?" The Washington Post.

- "Designing a new airline for hipsters (and Air France investors)." Bloomberg.

THE COUNTDOWN: DOT appropriations run out in 8 days. The FAA reauthorization expires in 121 days. Highway and transit policy is up for renewal in 1,035 days.

Subject: POLITICO's Morning Score: Lawmakers fundraise off Russia inquiry — Brooks explains his loss in text message — Q&A with VoteVets president

By Kevin Robillard | 08/17/2017 10:00 AM EDT

With Zach Montellaro, Daniel Strauss and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

RUSSIAN TO FUNDRAISE - "Lawmakers raise cash off Trump-Russia probe," by Austin Wright and Darren Samuelsohn: "Rep. Eric Swalwell's campaign website features ominous photos of President Donald Trump, Donald Trump Jr. and Jared Kushner. It warns about Russia's attacks on last year's presidential election and asks visitors to sign a petition demanding that a bipartisan commission investigate. Those who sign are then asked to contribute $5, $10, $25 or more to the California Democrat. Swalwell is one of the junior members of the House Intelligence Committee, which has long had an unspoken rule against engaging in partisan fundraising related to the panel's secretive work. But the panel's high-profile Russia investigation is now putting that rule to the test, and experts are warning that some committee members' recent appeals for campaign cash could undermine everyone's credibility. ... Democrats aren't alone in mixing the Russia probe with raising cash. House Intelligence Chairman Devin Nunes (R-Calif.) and Rep. Trey Gowdy have also done it. Gowdy's request for campaign cash came last month after Schiff told Bloomberg News the South Carolina Republican was acting like a 'second attorney' for Kushner during a closed-door committee interview with the president's son-in-law and senior White House adviser. In an email to supporters, Gowdy boasted that he had 'ticked off' Schiff and Democratic leaders." **Full story.**

MO BROOKS, MO' POST MORTEMS - Rep. Mo Brooks texted journalists, lawmakers and top Republican officials a short post-mortem on why he lost the Republican primary for Senate: "Our tracking polls had us surging ahead of [Luther Strange] until the [President Donald J. Trump] endorsement. LS got a bump then stabilized 2 or 3 points ahead of us (both our poll and other polls). Over the weekend we caught back up. Then, on Monday and Tuesday, voters started getting a personal robocall from the President urging them to support LS. You can imagine the impact on a rural or elderly voter to hear PDJT calling! That final phone call caused LS to surge past us. Also, the nonstop LS/[Mitch McConnell] attack ads pushed anti-LS voters from me to [Roy Moore]. Hence, the final result. In the 5th Congressional District, we won 42% to 29%RM to 28%LS. An interesting note. 68% of Alabama GOP Primary voters rejected PDJT's endorsement and voted against LS. Not yet sure what the national implications of that might be but we will find out."

PRO Q&A - Campaign Pro's Elena Schneider sat down with VoteVets President Jon Soltz. Here's a transcript of her conversation with the blunt-spoken leader of the Democratic veterans'

group.

How's the election cycle going for VoteVets so far?

There's been some huge growth in certain areas that I think a lot of the progressive political organizations have, like on Twitter and social media. Organically, on Twitter alone, we've gone from 14,000 to 81,000 [followers]. [President Donald] Trump blocked us on Twitter - that was another big moment. It was like, 'Really, dude?' It's true on Facebook, too. ... It's exploded the community. On online alone, we see numbers right now that's more consistent with what we'd do at the end of a cycle in terms of fundraising. We've done $700,000 in $15 donations, so far. That's the first six months. You're seeing that across the board from progressive groups. And, you know, it's also that some of the big boys are out of the room and it's allowed us to engage Trump directly.

What do you mean by that?

There's no one from Hillary [Clinton]'s team who says, 'You can't run that ad.' There's no Priorities people there saying, 'No, we want to talk about this today.' We can go after this guy. There's no Bernie-Hillary politics going on. There's a clean shot at this guy right now for the base groups. ... The activism, born out of Trump, turns on small donors that we can then push towards candidates. The Amy McGrath email we did last week did $7,000 just for her and $5,000 for us, just in one hit. Randy Bryce is raising online right now. So some of the candidates that maybe the DCCC isn't as keen on, based on the fact that they're in harder districts, have become a little bit of darlings. ....

Do you think Democrats will retake the House or the Senate in 2018? Is this a wave?

I have no idea. I mean, I'll tell you this - there's a lot of races that Democrats should be competitive in. If this was a corporation, I would buy stock. I would buy stock in Democrats' chances because history tells me that Democrats in the House should have some interesting opportunities, but that doesn't mean they'll get all the way there. ... The Senate map is really, really hard, but there's the overarching dynamic and our base is more fired up than their base, so that's worth a couple of points. **Full story.**

GETTING IN - "GOP state senator Campbell jumps in against Heitkamp," by Kevin Robillard: "Republican Tom Campbell, a North Dakota state senator and wealthy potato farmer, officially launched a campaign against Democratic Sen. Heidi Heitkamp on Wednesday and is launching a major advertising buy to kick off his effort. Campbell is the first entrant into the race against Heitkamp, who won her seat by just 3,000 votes over Republican Rick Berg in 2012. Heitkamp is considered one of the most vulnerable Democrats in the country in 2018, after President Donald Trump won the state by nearly 36 points in 2016. ... Heitkamp has raised money at a brisk pace this year, bringing in more than $3 million for her campaign committee. Meanwhile, Campbell has given his campaign enough personal money to launch an early TV ad blitz, beginning with a 60-second biographical spot." **Full story. Watch the video here.**

Days until the 2017 election: 82

Days until the 2018 election: 446.

CHARLOTTESVILLE FALLOUT CONTINUES - "McAuliffe has change of heart on Confederate statues," by the Washington Post's Fenit Nirappil: "Virginia Gov. Terry McAuliffe said Wednesday he wants Confederate statues across the state relocated from public spaces to museums, saying they had become a 'barrier to progress, inclusion and equality in Virginia.' ... It was a reversal for McAuliffe, who has said he did not support taking down monuments and the decision should be up to local communities. ... Lt. Gov. Ralph Northam, the Democrat hoping to succeed his boss, called for relocating statues to museums earlier in the day. ... It's a firmer stance for Northam, who previously treated debates over Confederate memorials as a local issue. ... Meanwhile, GOP nominees for lieutenant governor and attorney general blasted the idea of moving the statues as erasing history. Republican gubernatorial nominee Ed Gillespie urged a nuanced approach to the statues that emphasizes education, not glorification." **Full story.**

- "Adam Putnam: Fight the hatred, but those statues should stay," by the Miami Herald's Steve Bosquet: "The agriculture commissioner spoke at a Reagan Day barbecue to members of Leon and Jefferson county Republican parties. While he condemned the acts of those in Virginia, he stopped well short of calling for the removal of Confederate monuments in Florida and in other southern states. 'We need to be learning from that process, not just eradicating it from memory,' Putnam told the crowd. 'We ought to be focused more on eradicating hate today than eradicating yesteryear's history. ... Are we going to have to rename Jefferson County? Are we going to have to rename Washington County? Rename Jackson County? Where does it end?'" **Full story.**

BIG MONEY - "Phil Knight contributes $500,000 to Republican gubernatorial candidate Knute Buehler," by the Oregonian's Hillary Borrud: "The cash infusion will help Buehler narrow the fundraising gap with Gov. Kate Brown. But she still has a formidable advantage: $1.4 million on hand, even after spending more than $700,000 this year. Buehler's campaign has $700,000, after spending only $100,000. Knight's donation is his largest ever to an Oregon campaign. ... The billionaire [co-founder of Nike] has a history of contributing to both Republicans and Democrats." **Full story.**

- "Another big-money group has joined Colorado's governor's race - this one is backing George Brauchler," by The Denver Post's Mark K. Matthews: "The organization is Colorado Strong, whose backers have registered the state-based outfit as an independent expenditure committee - meaning that, unlike an official candidate campaign, it can accept unlimited sums of money from individual donors. Colorado Strong is at least the third such group to enter the 2018

contest - joining Frontier Fairness, which supports Democrat Mike Johnston, and Better Colorado Now, which is backing Republican Walker Stapleton, who is widely expected to enter the governor's race." **Full story.**

RETURN OF RAHM - "Rahm Emanuel rehabs his national profile," by Natasha Korecki and Kristen East: "Rahm Emanuel's bungling of the Laquan McDonald shooting case in 2015 so sunk his stature with the African-American community, Hillary Clinton wouldn't be seen with him during her campaign stops in his city. With one crisis of violence in minority neighborhoods and another with police department morale, he had all but been silenced on national politics. But 18 months after fighting off resignation calls and protests in the streets, the Chicago mayor has rediscovered his national voice - and with Donald Trump in the White House, he's as emboldened as ever to use it." **Full story.**

DECISION TIME - Perlmutter continues to consider House reelection bid: Democratic Rep. Ed Perlmutter, who dropped out of the Colorado gubernatorial primary, will decide on whether he'll run again for his House seat before Labor Day, even as soon as the next week, according to two sources familiar with the discussions. Perlmutter, who initially said he would not run for reelection, has met with candidates who are currently running in the Democratic primary to replace him.

CODA - QUOTE OF THE DAY: "And no, I do not look like him, he looks like me. I'm the oldest" - Greg Pence, brother of Vice President Mike Pence, who is considering a run in IN-06.

Subject: DOJ settles high-profile Clean Water Act case with farmer

By Annie Snider

08/15/2017 02:41 PM EDT

The Department of Justice today announced a $1.1 million settlement with a California farmer over wetlands destruction, ending a case that agricultural groups and property rights activists had criticized as federal overreach under the Clean Water Act.

John Duarte and Duarte Nursery Inc. agreed to pay $330,000 in civil penalties and fund $770,000 in restoration work to compensate for damage to 22 acres of protected streams and wetlands on his property. The agreement allows Duarte to return most of the site back to agricultural use and seek future determinations about whether streams and wetlands on the property are subject to federal protections.

Duarte was found guilty by a federal district court judge last year of violating the Clean Water Act by hiring a consultant to conduct "deep ripping" through waterways protected under the 1972 water law. Most farming practices, including plowing, are exempted from the law's permitting requirements, but deep ripping is not.

"Today's agreement affirms the Department of Justice's commitment to the rule of law, results in meaningful environmental restoration, and brings to an end protracted litigation," said Jeffrey Wood, acting assistant attorney general for the Justice Department's Environment and Natural Resource Division. The DOJ emphasized that "this case is not (and will not be used as) a pretext for federal prosecution of farmers who engage in normal plowing on their farms."

In a statement, Duarte said settling was a "difficult decision" that he came to "reluctantly" given the risks that an even greater penalty would have posed to his business.

WHAT'S NEXT: The settlement agreement is subject to 30 days of public comment and must ultimately be approved by the court.

Regulatory Update

WATER
Biofouling Management
California WATER

Final rule of the State Lands Commission adopts regulations under 2 CCR 2298.1 through 2298.9.1 and repeals regulations under 2 CCR 2297.1 and 2298 regarding the management of biofouling for vessels arriving at state ports to minimize the transfer of nonindigenous species. The rule establishes requirements for developing and maintaining a vessel-specific biofouling management plan and record book and incorporates by reference an annual reporting form that replaces two existing annual reporting forms. The rule also establishes requirements for biofouling management of a vessel's wetted surfaces and for high-risk vessels remaining in one port for 45 days or more. In addition, the rule clarifies that propeller polishing is not prohibited, specifies a process for the submission and approval of alternatives to requirements, and establishes criteria for emergency exemptions. Finally, the rule removes the requirement for submission of the ballast water treatment technology annual reporting form. The rule is effective Oct. 1, 2017. AIR

VOC Limits for Maintenance Coatings and Consumer Products

Connecticut AIR

Notice of the Department of Energy and Environmental Protection announces changes to a Nov. 8, 2016, proposed rule to amend regulations under RCSA 22a-174-1, -3a, -20, -40 and -41 and to adopt regulations under RCSA 22a-174-41a regarding architectural and industrial maintenance coatings. The rule revises the volatile organic compounds (VOC) content limits for consumer products by making some existing limits more stringent. The rule also provides procedures and test methods for classification and compliance with VOC limits and establishes reporting requirements. In addition, the rule revises definitions and revises the prevention of significant deterioration (PSD) permit program to address permit program maintenance. Finally, the rule updates the new source review permitting program by including an identification of nitrogen oxides as an ozone precursor in the PSD program and adds a minor source baseline date for fine particulates. The changes make additional revisions to definitions, clarify the applicability of provisions, and update categories and limits for coatings manufactured after May 1, 2018. HAZARDOUS WASTE MANAGEMENT
UST Petroleum Product Cleanup Fund Administrative Review Board
Massachusetts HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Revenue amends regulations under 503 CMR 2.00, 3.00, and 4.00 regarding the Underground Storage Tank (UST) Petroleum Product Cleanup Fund Administrative Review Board. The rule revises how UST owners claim reimbursements from the fund for cleaning up petroleum spills from their tanks and incorporates all board-approved procedural changes since 2012. The rule also reflects a change in how reimbursement fund fees are transferred to the Commonwealth Transportation Fund and includes the fee increase tie to the Consumer Price Index. In addition, the rule brings all UST standards into alignment and removes outdated references. A hearing is scheduled for Sept. 27, 2017, in Boston. Comments are requested, but a due date is not specified. Contact: DOR, Rulings and Regulations Bureau; 617-626-3250; RulesandRegs@dor.state.ma.us

North Dakota

OIL AND GAS INDUSTRY
Mineral Exploration and Development
North Dakota OIL AND GAS INDUSTRY

Proposed rule of the Industrial Commission, Department of Mineral Resources, amends regulations under NDAC 43-02-03-01 through -05-01-19 (nonconsecutive) and repeals regulations under NDAC 43-02-11-02, -04, -05, and -06 regarding mineral exploration and development. The rule revises requirements for contractors, owners of metering equipment, principal operators purchasing existing wells, mechanical integrity testing, sundry notices after spill cleanups, reclamation, dike and diked area construction, modification of saltwater handling facilities, and royalty statements. The rule also clarifies requirements for treating plant permits, signage for wells and facilities, ignition source placement, discharged fluids cleanup, reclamation of saltwater handling facilities and treating plants, plugging and abandoning inactive injection wells, receipt of comments on commission hearings, and conversion of completed wells to saltwater disposal wells. In addition, the rule adds reporting and testing requirements for saltwater disposal wells and injections pumps and prohibits the conversion of wells to saltwater disposal in certain circumstances. Finally, the rule removes reporting requirements, injection well operating requirements, references to various well types, and the requirement to provide an affidavit that all working interest owners of a property and all purchasers of the gas produced from a well have been notified of the application for tax exemption for a shallow gas well. Hearings are scheduled for Oct. 11, 2017, in Bismarck and Dickinson, and for Oct. 12, 2017, in Minot and Williston. Comments are due Oct. 23, 2017. AIR
Air Pollution Control
South Carolina AIR

Final rule of the Department of Health and Environmental Control amends Regulations 61-62.1, .5, .60, .61, .63, and .70 and adopts Regulation 61-62.97 concerning air pollution control to incorporate by reference amendments to federal standards under 40 CFR 50, 51, 52, 60, 61, 63 and 70, as of Dec. 31, 2016. The rule updates provisions concerning prevention of significant deterioration and nonattainment new source review. The rule also updates standards for designated facility plans and new source performance standards, national emission standards for hazardous air pollutants (NESHAPs), NESHAPs for source categories, and provisions under the Title V operating permit program. In addition, the rule addresses the EPA's Cross-State Air Pollution Rule Trading Program for annual nitrogen oxides and sulfur dioxide to address mandatory transport and regional haze state implementation plan infrastructure elements. The rule is effective Aug. 25, 2017. Contact: Marie Brown; DHEC, Bureau of Air Quality; 803-898-1796; brownmf@dhec.sc.gov

Subject: Today on Climate Beat

September 21, 2017

Today on Climate Beat . . .

. . . we went to Northern California, where San Francisco and Oakland just launched climate change nuisance suits against a several fossil fuel producers, litigation that could ultimately force some of the world's biggest coal, oil and gas companies to pay billions in compensation for a range of climate damages.

Getting back in the car, a coalition of states is suing the Transportation Department's Federal Highway Administration for indefinitely delaying implementation of an Obama-era rule requiring states to track greenhouse gas emissions from national highways, charging that the agency is violating the Administrative Procedure Act.

And our daily news roundup noted that North Carolina has joined a coalition of states that supports the Paris climate agreement, while also looking at how much progress states can make toward achieving the Obama administration's Paris greenhouse gas target.

Subject: Morning Energy, presented by the U.S. Chamber's Global Energy Institute: Republicans eye budget process for ANWR opening — Highlights from Zinke, Perry's joint appearance — Democrats want faster action for Puerto Rico

By Anthony Adragna | 09/26/2017 05:42 AM EDT

With help from Esther Whieldon and Ben Lefebvre

AN OPENING FOR ANWR? Senate Republicans intend to use their fiscal 2018 budget blueprint to lay the groundwork for new energy production in the Arctic National Wildlife Refuge by using special rules that would allow them to avoid a Democratic filibuster, Pro's Ben Lefebvre and Sarah Ferris report, citing sources familiar with the process. While the budget document couldn't mandate specific policies, it would enable Senate Energy Chairman Lisa Murkowski to write legislation that would remove restrictions on drilling in ANWR that could be bundled into a massive tax reconciliation package that needs just 50 votes in the Senate.

Doing so would realize a long-standing goal of Republicans and oil companies, while attracting vehement opposition from environmental groups and virtually all Democrats. The U.S. Geological Survey estimates that part of ANWR, a wide swath of tundra on the northern Alaska coast, home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years, could hold up to 12 billion barrels of oil. But Senate Republicans have little margin for error since two members of their caucus — Sens. Susan Collins and John McCain — have opposed similar bills in the past, though they'd be forced to consider that provision as part of the broader tax effort. A McCain spokeswoman says he's open to a "full debate" on the subject despite his past opposition. Collins told ME Monday night that ANWR has been far from her mind recently. "I've been focused on health care," she said, just after coming out against the latest Obamacare repeal effort.

There are a number of key questions. Some wonder if Murkowski's prior breaks with GOP leadership and the White House will hamper her pursuit of other priorities. Current low oil prices might make opening ANWR less urgent than in the past and there's some question whether oil and gas companies would flock to the area at today's crude price of $50 a barrel (though that answer would likely depend on the company). Infrastructure is not likely to be a major barrier, though, with the biggest requirement a short pipeline to connect drilling wells in ANWR to the main Trans-Alaska Pipeline System pipeline. "A pipeline is not a big lift,' said one oil and gas company representative who asked to speak on background to discuss the matter. "If the oil is there like they think it is, it's not prohibitive."

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and API's Carrie Domnitch was the first (of many) to identify Sen. John McCain's cameo in "Wedding Crashers." For today: Way back on Season 2 of "Saturday Night Live," this future presidential candidate hosted an episode. Who was it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Pro Policy Summit Highlights: Don't miss the highlights from the 2017 Pro Policy Summit. The Pro newsroom has assembled must-read stories, scoops and video content from a day packed with breaking news and insightful policy discussion. Summit Highlights.

LOTSA GROUND COVERED: Energy Secretary Rick Perry and Interior Secretary Ryan Zinke covered a wide array of topics during a Monday appearance at the National Petroleum Council. Highlights from that event via Pro's Ben Lefebvre:

—**New infrastructure study coming:** DOE Deputy Secretary Dan Brouillette, in coordination with the National Petroleum Council, will lead a study on how to improve the permitting process for pipelines and other energy infrastructure, Perry announced. The former Texas governor also called on the group to study how to make carbon capture, utilization and storage infrastructure economically viable. More here.

—**Interior reorganization still under consideration:** Zinke expects to complete an evaluation of whether to combine the Bureau of Safety and Environmental Enforcement and Bureau of Ocean Energy Management within the next couple months. He's also mulling the possibility of establishing Interior offices according to 13 watershed areas and moving BLM and Bureau of Land Reclamation headquarters out West. More here.

—**Zinke's report on national monuments remains** under review by the White House. "We're working on it. Most people will find it to be a very reasoned approach," he said.

—**Perry touts benefits of energy industry:** After being interrupted several times by protesters, Perry launched an extended diatribe against environmentalists criticizing the industry's record on climate change. "If you want to talk to something that saves lives, it's energy across the globe. You're involved in an industry that saves lives, lots of them, every year, around the globe," he said.

—**On loyalty to the administration:** Zinke said about a third of his workforce remained loyal to the previous administration. "I know that when I assumed Interior that I have 30 percent of the crew that's not loyal to the flag," he said. "I had a Fish & Wildlife Service that hated people to a degree."

** **A message from the U.S. Chamber's Global Energy Institute:** Insightful analysis is an important part of our mission. From economic modeling of proposed policies to our groundbreaking energy security index, the Global Energy Institute's reports and analysis are helping to shape the discussion on energy policy. Click here to learn more: http://bit.ly/2huaJ4F **

DEMOCRATS CALL FOR FOCUS ON PUERTO RICO: FEMA Director Brock Long and Homeland Security adviser Tom Bossert arrived Monday on the devastated island, but congressional Democrats expressed concern the administration wasn't doing enough. "Puerto Rico has taken a serious punch to the gut and they need our help. They need it now," Senate Minority Leader Chuck Schumer said. "The administration must quickly prepare an appropriate aid package for Florida, Puerto Rico, the U.S. Virgin Islands and the Western States for

Congress to act on in the near future," he added. Speaker Paul Ryan said: "Our fellow citizens in Puerto Rico remain in our prayers as we make sure they have what they need."

Jones Act waiver sought: Seven House Democrats requested a one-year waiver from the Jones Act to expedite hurricane relief aid to Puerto Rico, Pro Transportation's Tanya Snyder reports. An Energy Department status report Monday found nearly all of the island remained without power.

POLITICO's Jacqueline Klimas reports from San Juan that political leaders on the island are once again afraid their needs are an afterthought in Washington. "The important part is to make sure it's not forgotten," Sen. Marco Rubio said. "We have a fundamental obligation to a U.S. territory and American citizens to respond to a hurricane there the way we would anywhere in the country."

Governor assumes dam will collapse: Puerto Rico Gov. Ricardo Rosselló said he's operating under the assumption the Guajataca Dam will collapse, a fear that led to the evacuation of tens of thousands of area residents. "Some of the dam has fallen apart," he told CNN Monday. "I'd rather be wrong on that front than do nothing and having it fail and costing people their lives."

The president tweets: "Texas & Florida are doing great but Puerto Rico, which was already suffering from broken infrastructure & massive debt, is in deep trouble," President Donald Trump said in a statement released via his Twitter account Monday night. "It's (sic) old electrical grid, which was in terrible shape, was devastated. Much of the Island was destroyed, with billions of dollars...owed to Wall Street and the banks which, sadly, must be dealt with. Food, water and medical are top priorities - and doing well." he added in a pair of follow-up tweets.

Trump's first words on Puerto Rico since Sept. 20 came after the White House forcefully defended his fixation with NFL players' protests, which generated more than a dozen tweets since Friday.

U-TURN ON CLIMATE RULE: Reversing course, DOT told a federal judge in New York in a letter it will publish a regulation requiring states to track emissions from highways and craft reduction goals, Pro's Alex Guillén reports . Once published, the regulation takes effect immediately. Environmental groups and Democratic attorneys general had sued Federal Highway Administration for placing the rule on hold indefinitely. "Our lawsuit held the Trump administration accountable for illegally halting a common-sense tool to curb carbon pollution from transportation," said the NRDC's Amanda Eaken in a statement. The regulation is expected to run in the Federal Register Sept. 28.

ZINKE, PERRY SPEAK AT NATIONAL CLEAN ENERGY WEEK: It's a day of events as National Clean Energy Week kicks off in earnest today with a breakfast discussion at 8 a.m. featuring Perry and Zinke (hosted by former GOP Sen. Kelly Ayotte). Also expected to speak throughout the day are Sen. Lindsey Graham, House Republican Conference Chair Cathy McMorris Rodgers and Reps. Derek Kilmer and Ryan Costello. Full details here.

But greens cry foul: Twelve environmental organizations sent a letter to Congress arguing that

technologies like biomass, carbon capture or nuclear energy should not be considered clean. "The sponsors of 'National Clean Energy Week' include some of the dirtiest actors in the energy industry," the groups, which include 350.org, Food & Water Watch and Oil Change International, wrote.

HEARING ROUNDUP — TWO DOE NOMINEES IN SPOTLIGHT: Murkowski's push to quickly advance agency nominees continues today as her committee examines Steven Winberg's nomination to be assistant Energy secretary for fossil energy and Bruce Walker's selection to be assistant Energy secretary for electricity, delivery and energy reliability. Winberg previously headed up research and development for CONSOL Energy and also was a member of DOE's National Coal Council, while Walker's resume includes stints at National Grid and Consolidated Edison. Things get going at 10 a.m. in Dirksen 366.

E&C LOOKS AT ADVANCED ENERGY TECHNOLOGIES: The House Energy and Commerce Energy Subcommittee holds the latest in its "Powering America" series of hearings today with an examination of "the role advanced energy technologies play in empowering the nation's electricity consumers." Witnesses include representatives from Advanced Energy Economy, Holy Cross Energy, ComEd and LO3 Energy, among others. The hearing is set for 10 a.m. in Rayburn 2123.

GATHERING INPUT ON WATER INFRASTRUCTURE NEEDS: The House Transportation and Infrastructure Subcommittee on Water Resources and Environment hosts a hearing at 10 a.m. today with a panel of public and private sector witnesses on what they'd like to see for water infrastructure in a forthcoming legislative package. The full list of witnesses for the hearing in Rayburn 2167 is available here.

MAIL CALL! CEQ VETERANS CALL OUT NEPA SHORTCUTS: Trump's efforts to streamline environmental reviews leave his administration's decisions more vulnerable to being overturned in court because they don't allow for enough input from the public, four veterans of the Council on Environmental Quality warned in a letter to the White House Monday. "Emphasizing speed over quality sends the wrong message to agencies and creates significant legal risk that future environmental reviews of federal actions will be rejected by the courts and need to be redone," wrote Katie McGinty, Nancy Sutley, Christy Goldfuss and Brenda Mallory, all of whom served in Democratic administrations.

STATE AGs DISCUSS TRUMP-ERA ENVIRONMENTAL LITIGATION: A session at 2:45 p.m. with three attorneys general — Maryland's Brian Frosh, Illinois' Lisa Madigan and New York's Eric Schneiderman — discussing ongoing environmental litigation fighting White House efforts to weaken environmental protections is among the highlights of the Institute for Policy Integrity's state climate action conference today. Follow along here.

DEMOCRATS SEEK INFORMATION ON MINE SAFETY PICK: Sens. Sheldon Whitehouse and Bob Casey released a letter Monday seeking information on Mine Safety and Health Administration's investigations into Rhino Resource Partners, which mine safety nominee David Zatezalo worked at in a variety of senior roles between 2007 and 2014. They asked for the records no later than Sept. 29.

FAA, FLOOD INSURANCE FLOPS: Democrats blocked a Republican push to fast-track an FAA extension that also included additional provisions on flood insurance and tax credits for victims of recent hurricanes, POLITICO's Heather Caygle and Lauren Gardner report. The chamber is expected to consider the measure again later this week under a rule, which requires a simple majority, unlike Monday's fast-track procedure that required a two-thirds vote.

STUDY: RAIL DAMPENING PIPELINE INVESTMENTS: New research out from the National Bureau of Economic Research finds the flexibility associated with crude-by-rail shipping has led to decreased investments in long-term pipeline projects given the high upfront costs of such infrastructure. "The ability to ramp rail shipments up and down is valuable to crude oil shippers, and it reduces incentives to make long-run investments in pipeline capacity," Ryan Kellogg, a professor at the Harris School of Public Policy who co-authored the study, said in a statement.

CHAMBER URGES REJECTION OF GARRETT: Count the U.S. Chamber of Commerce as the latest group urging senators to reject former Rep. Scott Garrett's nomination to head the Export-Import Bank, Pro Financial Services' Zachary Warmbrodt reports. In a Monday letter, senior executive vice president Suzanne Clark expressed concern Garrett could use his position to prevent the agency from properly functioning while voicing strong support for four other nominees: Kimberly Reed, Claudia Slacik, Judith Pryor and Spencer Bachus.

ZINKE SPENT $2.5K ON TRAVEL IN MARCH: Zinke spent $2,508 in flights, lodging and meals meet with members of the Blackfeet Nation, agency staff and toured national parks in Wyoming and his home state of Montana in his first month in office in March, according to public records the agency released Monday. Zinke stayed at his home in Whitefish for most of his first trip, according to the secretary's trip itinerary for March through July the agency released earlier this month. Unlike Health and Human Services Secretary Tom Price who POLITICO earlier reported took private jets, Zinke's flights were commercial.

GRID-CONNECTED BATTERIES TAKING OVER RESIDENTIAL STORAGE MARKET: Homeowners are increasingly installing electricity batteries that connect to the grid instead of closed systems that feed power only to the residence, GTM Research says in a report out today. The report does not cite a specific reason for the change but notes customers are looking for back-up power in case of electric outages and to save money, while utilities are encouraging adoption to mitigate the impacts of growing solar power. Grid-connected projects will make up 57 percent of annual deployments by the end of this year, the report says.

DOESN'T LOOK STRESSED: Murkowski doesn't look like the heated health care debate is getting to her in this picture with a pink polar bear she tweeted out Monday from her visit over the weekend to the Anchorage Museum.

ALL-TIME HIGH: Bolstered by more than 500,000 people who've joined since last November, the Natural Resources Defense Council tells ME it now has three million-plus members and online activists.

MOVER, SHAKER: Ann Bartuska has joined Resources for the Future as vice president in its newly formed land, water, and nature program. She comes after serving as deputy undersecretary for research, education and economics as well as chief scientist at USDA.

HAPPENING TODAY

7:30 a.m. — National Clean Energy Week symposium kicks off with remarks from Secretaries Zinke and Perry, Reserve Officers Association, 1 Constitution Avenue NE

9:30 a.m. — Institute for Policy Integrity green states conference, New York University School of Law, 40 Washington Square South, Vanderbilt Hall, New York, N.Y.

10:00 a.m. — "Powering America: Technology's Role in Empowering Consumers," House Energy and Commerce Energy Subcommittee, Rayburn 2123

10:00 a.m. — "Legislative Hearing on 4 Fishery Bills," House Natural Resources Water, Power and Oceans Subcommittee, Longworth 1334

10:00 a.m. — Senate Energy and Natural Resources holds hearing on DOE nominations, Dirksen 366

10:00 a.m. — "Building a 21st Century Infrastructure for America: Water Stakeholders' Perspectives," House Transportation and Infrastructure Water Resources and Environment Subcommittee, Rayburn 2167

12:00 p.m. — "Maryland's Offshore Wind and Energy Efficiency Policies," Women's Council on Energy and the Environment, Dentons, 1900 K Street NW

12:00 p.m. — "The Future of Nuclear Power: Technology, Security and Geopolitics," Global American Business Institute, 1001 Connecticut Avenue NW, Suite 230

12:00 p.m. — "Energy Transition and the Future of Hydrokinetic Energy in the United States," Environmental Law Institute, 1730 M Street, NW, Suite 700

12:30 p.m. — Natural Gas Roundtable hosts David Carroll, president of the International Gas Union, for monthly luncheon, University Club, 1135 16th Street NW

2:00 p.m. — House Natural Resources Indian, Insular, and Alaska Native Affairs Subcommittee hearing on various bills, Longworth 1334

2:00 p.m. — "Examining America's nuclear waste management and storage," House Oversight and Government Reform Interior-Environment Subcommittee, Rayburn 2154

THAT'S ALL FOR ME!

A message from the U.S. Chamber's Global Energy Institute: Today, America's diverse energy resources are providing abundant, reliable and affordable electricity that is critical to our economy. Unfortunately, that mix is at risk. A new report by IHS Markit cosponsored by the Global Energy Institute explains just how important a diverse set of resources really is. Our current energy mix, including nuclear and coal, is saving us $114 billion per year in electricity costs—lowering the average price by 27%. Without all of our resources, America could lose 1 million jobs within 3 years and $158 billion in GDP, and each American household could see a loss of up to $845 in income each year. To read the report and learn more about how a balanced set of electricity resources is key to our economy and security, click here: http://bit.ly/2huaJ4F

Stories from POLITICO Pro

Reconciliation may provide opening for ANWR Back

By Ben Lefebvre and Sarah Ferris | 09/25/2017 06:07 PM EDT

Senate Republicans plan to open the door to oil drilling in an Alaskan wildlife refuge using special rules that would allow them to avoid a Democratic filibuster, according to sources tracking the budget process.

The Senate Budget Committee is still drawing up its fiscal 2018 blueprint, which is expected to lay the groundwork for tax reform using special budget reconciliation rules. Two sources familiar with the ongoing negotiations say the document also is expected to lay the groundwork for new energy production in the Arctic National Wildlife Refuge — a longtime goal of Republicans and oil companies.

It's a potentially risky strategy, with two Republican senators on record opposing similar bills in the past: Sens. John McCain of Arizona and Susan Collins of Maine. If those two remain in opposition, Senate leadership couldn't lose a single other GOP vote without jeopardizing their

entire reconciliation package, centered on tax reform.

Congress last tried to open ANWR more than a decade ago, and any legislation to do so would run into fierce opposition from environmental groups and virtually all Democrats. But proponents of the idea say their chances have improved since the election of President Donald Trump, who has sought to increase U.S. oil, gas and coal production.

"Energy dominance requires ANWR," said Matt Shuckerow, a spokesman for Alaska Rep. Don Young, invoking a favorite Trump administration catch-phrase. "We are working with leadership and looking at reconciliation."

The Senate budget resolution is expected to give special deficit-reducing instructions to the Energy and Natural Resources Committee in the upcoming fiscal year, totaling about $1 billion over a decade.

While budget writers can't mandate specific policies, sources say it would enable ENR Chairman Lisa Murkowski to write legislation that would remove restrictions on drilling in ANWR or other currently off-limits areas.

Opening up drilling in the arctic could raise as much as $5 billion over a decade, the CBO estimated in 2012, when oil was selling for about twice as much as it is now.

That measure could then be bundled into a massive tax reconciliation package, which will need just 50 votes in the Senate.

The House's budget, which has been stalled for months amid GOP infighting, goes even further. That version calls for $5 billion in extra energy revenues, and a House GOP aide says ANWR is "definitely on the table in terms of reconciliation."

The White House also "will continue to push for more domestic production," an administration official said. Trump's budget request sought $1.8 billion from opening new areas to energy production.

ANWR is a wide swath of tundra on the northern Alaska coast, home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years. Congress designated the 19-million-acre area a wildlife refuge in 1980, but set aside a 1.5-million-acre parcel known as "10-02" for possible future drilling if future lawmakers approved such a plan.

The U.S. Geological Survey estimates that part of ANWR could hold up to 12 billion barrels of oil.

In the past, drilling in the refuge only became a hot issue when gasoline prices were high, said Athan Manuel, director of lands protection program for the Sierra Club, which has been lobbying heavily against its development.

"Now it's completely become an ideological and political fight," Manuel added. "There are fewer

moderate Republicans than we need. The vote numbers for us are difficult on the Senate side if they go to budget reconciliation."

Young, the Alaska Republican who has spent much of his career advocating for expanded Arctic drilling, has raised ANWR with Interior Secretary Ryan Zinke, Shuckerow said.

Zinke is quietly working to allow oil companies to conduct seismic exploration in the region, The Washington Post reported this month. But actually letting them extract oil and gas from ANWR would require action by Congress.

The GOP has tried twice in the past to open ANWR for energy development through budget reconciliations. An attempt in 1995 failed after President Bill Clinton vetoed the overall budget package, while a second attempt in 2005 could not overcome a Democratic filibuster in the Senate.

Even using reconciliation, Republicans have little margin for error with only 52 seats in the Senate. And two of their caucus have voted against ANWR provisions in the past.

A spokeswoman for McCain, Julie Tarallo, said despite his past opposition the senator "is open to having a full debate in Congress about the United States' energy policy." Collins' office did not respond to requests for comment.

At least one Democrat, West Virginia Sen. Joe Manchin, may join Republicans if they try to use reconciliation to open ANWR.

"The energy we receive from Alaska is much needed for American energy independence," Manchin told POLITICO. "If it can be done in a safe way, and I think we've proven it can, we should look at every option we have."

Murkowski, who joined McCain and Collins to kill the Senate's Obamacare repeal bill in August, has introduced legislation that would direct the Interior Department to offer oil-and-gas production leases for at least 300,000 acres in ANWR, S. 49 (115). But she told POLITICO last week that Interior had not yet reached out to her about its push to open ANWR for seismic exploration or to form strategy on how to possibly open the area to drilling.

Some question whether her earlier breaks with GOP leadership and the White House will hamper her pursuit of other priorities.

"Murkowski is on the outside looking in" when it comes to GOP energy policy, said one energy lobbyist who requested anonymity to discuss political matters.

Another problem is current low oil prices. More than a decade of into the shale oil boom, the country looks cushioned from a possible oil supply shock, something that could make opening ANWR less urgent than in the past.

"Now that we're in this age of oil supply adequacy, the negotiating power of energy has

diminished," said Kevin Book, managing director of energy consultancy ClearView Energy Partners. "What adequacy has done has increased the political cost of opening up ANWR for production."

Another question is whether oil and gas companies would flock to ANWR at today's crude price of $50 a barrel.

Chevron and BP drilled one exploratory well in the area in the early 1980s at the behest of a local native tribe, according to Alaska Oil and Gas Association President Kara Moriarty. The drilling was done with the permission of the Interior Department, with which Chevron shared the data, but a strict confidentiality agreement keeps the results a closely held secret.

The answer would depend on the company. Prices are expected to rise eventually, and the refuge's onshore topology would make ANWR a more tempting target than the choppy waters and extreme winds off of Alaska's coastline, Moriarty said.

The steady spread of oil and gas pipeline networks immediately outside ANWR also means that bringing any oil from the refuge to market would be easier than it was in decades past, Moriarty added.

The biggest infrastructure requirement would be a short pipeline to connect drilling wells in ANWR to the main Trans-Alaska Pipeline System pipeline taking the crude south.

"A pipeline is not a big lift,' said one oil and gas company representative who asked to speak on background to discuss the matter. "If the oil is there like they think it is, it's not prohibitive."

Chevron put itself in the group of companies that would welcome the chance to set rigs there permanently.

"Chevron supports increased access to federal and private land for the responsible exploration and development of oil and natural gas resources, including the ANWR coastal plain," Chevron spokeswoman Veronica Flores-Paniagua said.

Environmental groups and other Democrats are already alarmed about how far the talk of opening ANWR has come this year. Interior's move to allow seismic exploration, if approved, could harm the polar bears, caribou, wolves and other wildlife already feeling the effects of climate change in the region, and the oil brought from under the tundra would add to greenhouse gas emissions, environmental and Alaskan native groups said.

"Protecting the Arctic Refuge has broad public and bipartisan support and deserves a full debate in regular order, not rushed through as part of the budget process," said Alaska Wilderness spokesman Corey Himrod.

Sens. Ed Markey (D-Mass.) and Michael Bennet (D-Colo.) in April offered legislation to enshrine the entire region as a wilderness area protected from drilling. The bill, S. 820 (115), was introduced with 37 Democrats and Independent Bernie Sanders (Vt.) as original co-sponsors.

"We're going to battle this," Markey told POLITICO, arguing that expanded shale oil production has made ANWR moot. "With efficiency gains and growth of fracking in the lower 48 states, there's no need to open ANWR."

Nick Juliano contributed to this report.

Perry calls for study on expanding energy infrastructure Back

By Ben Lefebvre | 09/25/2017 04:14 PM EDT

Energy Secretary Rick Perry called for a study on how to improve the permitting process for pipelines and other energy infrastructure, saying protests against those plans were slowing economic growth.

Perry asked the National Petroleum Council, whose membership includes various heads of the energy industry, to conduct the study with help from the Energy Department.

While domestic oil production has steadily increased since the mid-2000s, pipelines, railways, oil storage "and related system components" needed to move fossil fuel from well to market have to be "expanded, upgraded and maintained," Perry said.

With the rise of oil and natural gas fields in North Dakota, environmentalists have objected to major oil pipeline projects, including Keystone XL and the Dakota Access Pipeline.

"We have to ensure we have an uninterrupted flow of energy product," Perry said. "In recent years, objections to and restrictions on the construction of needed transportation infrastructure have increased, slowing the development of new infrastructure and hindering economic growth."

Perry also called on the NPC to study how to make carbon capture, utilization and storage infrastructure economically viable.

The event also attracted protesters, two of whom were escorted from the room after demanding Perry and Interior Secretary Ryan Zinke address climate change.

WHAT'S NEXT: Perry designated DOE Deputy Secretary Dan Brouillette to coordinate on the study with the NPC.

Zinke: BOEM-BSSE study expected in two months Back

By Ben Lefebvre | 09/25/2017 05:48 PM EDT

The Interior Department expects within two months to complete a study on the feasibility of combining its bureau that regulate offshore drilling safety with one that sells leases, Secretary Ryan Zinke said today.

Zinke said he hasn't yet decided whether to combine the Bureau of Safety and Environmental Enforcement and Bureau of Ocean Energy Management, which were carved out of the former Minerals Management Service in 2010.

Rejoining BOEM and BSEE is one of several ideas Zinke is considering to reorganize the department around the Trump administration's goal of increasing domestic energy production. Zinke also floated the possibility of establishing Interior offices according to 13 watershed areas and moving BLM and Bureau of Land Reclamation headquarters out West.

"There's no reason for BLM to be where they don't have holding. Push your generals out to where the fight is," Zinke told members of the National Petroleum Council today.

Zinke blamed a lag in oil and gas project permitting on the abundance of choke points in the existing process.

"There's too many ways in the present process for someone who doesn't want to get it done to put it in a holding pattern," he said.

He also estimated that a third of Interior's workforce remained loyal to the previous administration.

"I know that when I assumed Interior that I have 30 percent of the crew that's not loyal to the flag," Zinke said, comparing his tenure to "capturing a prize ship at sea and only the captain and first mate row over."

WHAT'S NEXT: Zinke said he expected the report on BOEM and BSEE to be ready within 60 days.

Lawmakers ask for Jones Act waiver for Puerto Rico Back

By Tanya Snyder | 09/25/2017 06:35 PM EDT

Rep. Nydia Velázquez (D-N.Y.) and six other Democrats are asking the Trump administration for a one-year Jones Act waiver to expedite hurricane relief aid to Puerto Rico.

In a letter to Homeland Security Secretary Elaine Duke, the lawmakers, most of them members of the Congressional Hispanic Caucus, asked for a "one-year comprehensive waiver of the Jones Act requirements for Puerto Rico." The Jones Act, which requires that all goods shipped between U.S. ports be carried on U.S.-built, -owned and -operated vessels, is often blamed for driving up prices in Puerto Rico.

"The island is now facing an unprecedented uphill battle to rebuild its homes, businesses and communities," the lawmakers wrote in the letter. "Temporarily loosening these requirements — for the express purpose of disaster recovery — will allow Puerto Rico to have more access to the oil needed for its power plants, food, medicines, clothing, and building supplies."

In a separate statement, Velázquez noted that the storm has brought about a sustained and complete shutdown of Puerto Rico's power grid, which "already faced serious infrastructure problems." Local officials predict it could take six months to get the power fully restored.

"Even before Maria made landfall, the Island was already suffering from economic and financial crisis," she said. "Now, at the worst time possible, the Island has endured a natural disaster of historic proportions ... We cannot and will not turn our backs on them."

In Puerto Rico, another desperate plea for help Back

By Jacqueline Klimas | 09/25/2017 09:39 PM EDT

SAN JUAN, Puerto Rico — Days after Hurricane Maria barreled through here virtually no people are on the streets and the usually bustling tourist area is littered with curled sheets of metal. Lines of cars waiting to fill up on gas are backed up along the highway off-ramps.

"We haven't forgotten about you," Adm. Paul Zukunft, the commandant of the U.S. Coast Guard, told a gathering on Monday after what the governor has called the "biggest catastrophe" in the U.S. territory's history.

But the political leadership of Puerto Rico worries that the suffering of its 3.5 million U.S. citizens is once again an afterthought in Washington.

"We don't have a voice in the Senate unless it's Marco Rubio," Jenniffer Gonzalez-Colon, Puerto Rico's single nonvoting member of the House of Representatives, said at an emergency operations center here, where POLITICO accompanied visiting dignitaries before touring the

Coast Guard's main base in the region, which suffered extensive damage.

"We don't have two senators," added Rep. Stacey Plaskett (D-Virgin Islands), whose constituents have been similarly hard hit by the season's historic storms and similarly lack a vote in Congress.

President Donald Trump has come under fire for failing to focus more attention on the plight of Puerto Rico and the nearby Virgin Islands over the weekend, while tweeting over a dozen times about the National Football League. The crisis was also largely absent from the 24-hour news networks, where Hurricanes Harvey in Texas and Irma in Florida received wall-to-wall coverage.

Trump on Monday tweeted about the island's plight but seemed to blame Puerto Rico itself for its woes.

"Texas & Florida are doing great but Puerto Rico, which was already suffering from broken infrastructure & massive debt, is in deep trouble," he tweeted. "It's old electrical grid, which was in terrible shape, was devastated. Much of the Island was destroyed, with billions of dollars owed to Wall Street and the banks which, sadly, must be dealt with. Food, water and medical are top priorities — and doing well."

It's an all-too-familiar predicament for disenfranchised residents of Puerto Rico, which is poorer than all 50 states, has an unemployment rate of nearly 12 percent, and is still reeling from a financial crisis of historic proportions in which it declared a form of bankruptcy earlier this year.

After Maria, the territory's leaders are hoping their strongest leverage to get long-term aid from Washington will be the sizable populations of Puerto Ricans who reside on the mainland and constitute a powerful voting bloc, especially in places like New York and Florida.

They are focused on building a coalition of lawmakers to gain support for a new federal aid bill. Congress has already passed a $15 billion package to assist those affected by Hurricane Harvey in Texas, but House Speaker Paul Ryan has signaled that more aid is on the way.

While Puerto Rico does not have a vote in Congress, large populations of Puerto Ricans on the U.S. mainland do have a voice in the midterm and presidential elections, and some experts predict how the White House and Congress respond could have an impact at the ballot box.

About 20 percent of Puerto Ricans live on the U.S. mainland, said Robert Stein, who teaches urban politics at Rice University's Baker Institute for Public Policy. The two states with the largest Puerto Rican populations, Florida and New York, control 54 House seats and 58 votes for president in the Electoral College.

"This may be a big issue in upcoming elections," Stein predicted.

Rubio of Florida said on Monday that helping Puerto Rico is personal for him.

"The important part is to make sure it's not forgotten," the former GOP presidential hopeful said.

"We have a fundamental obligation to a U.S. territory and American citizens to respond to a hurricane there the way we would anywhere in the country."

Rubio said it will be a challenge to get more hurricane aid through the Senate, but said lawmakers knew the first aid bill "would not be enough."

"There's an acknowledgment that we have to go back and do more, and now maybe sooner than anticipated," he said, noting that he expects Congress to address a funding bill for Maria and Irma later this month or early next.

Florida's other senator, Democrat Bill Nelson, who is up for reelection in 2018, tweeted Monday that he is "calling on U.S. military to send additional search & rescue, medical and construction teams to Puerto Rico."

Even before Maria, Nelson and Rubio sent a letter to Trump last week urging a greater role for the federal government in assisting U.S. territories after recent storms emanating from the Caribbean, including Puerto Rico and the U.S. Virgin Islands.

Other Puerto Rican officials also argued it is time for lawmakers to make the territory's needs a greater priority.

"Let them know that we are committed U.S. citizens, that we are proud U.S. citizens, that we helped others when they were going through difficult times not more than 10 days ago and that now it's the time to help Puerto Rico back," Gov. Ricardo Rossello told reporters Monday.

The situation in Puerto Rico, where downed trees and power lines and roofs and siding ripped off of buildings are now commonplace, could become more dire before it improves.

Residents lack basic necessities, including food and clean drinking water, and the island could have no electricity for many months. Many residents have no safe place to live. And a lack of temporary housing means residents are at greater risk of disease, such as dengue fever or other mosquito-borne ailments.

Early reports from the island's rich farmland also suggest its agricultural sector, which along with tourism is a major element of its already shaky economy, could be set back for a year or more.

Over the weekend, reports of hysteria started to spread from areas outside the capital, including a warning that a hospital full to capacity was at risk of collapsing, along with a major dam. Rossello, calling Maria the "biggest catastrophe" in the island's history, appealed for far more assistance, especially from the Pentagon.

"We still need some more help. This is clearly a critical disaster in Puerto Rico. It can't be minimized and we can't start overlooking us now that the storm passed, because the danger lurks," he told the The Washington Post.

Plaskett, who was elected to the at-large Congress seat in 2014, also said she expects Rep. Nydia

Velazquez (D-N.Y.), the first Puerto Rican woman elected to Congress, and Rep. Carlos Curbelo (R-Fla.), who has previously worked on legislation to address Puerto Rico's problems, to take the lead for Puerto Rico on a recovery bill in the House.

But Plaskett said she is also aware that her fellow lawmakers from the mainland can easily get distracted once Puerto Rico's plight drops from the headlines.

"They have their own interests to look out for as well," she said.

Compounding the island's dire situation is the fact that Hurricane Maria itself followed two other major storms in the 2017 season: Harvey in Texas and Irma in Florida.

"We're tired," Zukunft told POLITICO en route to Puerto Rico on Monday to assess the damage. "Hopefully we get a chance to take a knee at some point in time."

At Coast Guard Sector San Juan, the power is still off but sunlight streams in through gaping holes in the roof. There is the overwhelming smell of mold.

A Coast Guard cutter is anchored just off shore to ensure those helping with the storm response have some communications. (Zukunft related that tons of cocaine are aboard because the ship had to be quickly diverted from its drug interdiction mission to aid in storm relief).

But the bigger challenge may be ahead as the government tries to manage the rebuilding of economies from Texas to Florida to Puerto Rico.

"There's no doubt that agencies are being stretched to their limits. As much as they've been challenged up until this point, the real challenge lies ahead," said Gary Webb, the chair of emergency management and disaster science at the University of North Texas. "It's a totally different ballgame managing the recovery from three disasters."

Rubio assured Puerto Rican leaders Monday that he would be a solid voice for them among his colleagues on Capitol Hill.

"I will do everything I can when I get back to Washington tonight to be sure you have the resources and support not just to be able to respond now, but to get ready for the next one," Rubio told a room full of first responders in San Juan.

But experts predict it will have to be a multiyear investment by Congress to truly rebuild the island. The territory was already suffering from a debt crisis before the storm, and now the hurricane has wiped out its other major industry: tourism.

When asked if he thought there was an appetite in Congress to provide funding over the longer term to support rebuilding Puerto Rico, Rubio, responded, "I don't know, I hope so."

White House defends Trump's NFL fixation as Puerto Rico seeks help Back

By Matthew Nussbaum and Colin Wilhelm | 09/25/2017 06:56 PM EDT

The White House on Monday defended President Donald Trump's muted response to the devastation Hurricane Maria left behind in Puerto Rico, brushing off criticism that he's been more interested in kneeling NFL players than a U.S. territory suffering from a humanitarian crisis.

Before Monday night, Trump last tweeted about the storm on Sept. 20, writing, "Governor @RicardoRossello- We are with you and the people of Puerto Rico. Stay safe! #PRStrong."

For five days after that, as the scale of the devastation became apparent, Trump did not address the catastrophe from his Twitter account. Over the same period, he tweeted twice about Hillary Clinton, three times about Sen. Luther Strange (R-Ala.), once about NBA star Steph Curry and 12 times about the NFL, along with numerous additional posts about the national anthem that did not explicitly mention the NFL.

"It really doesn't take that long to type out 140 characters and this president is very capable of doing more than one thing at a time and more than one thing in a day," White House press secretary Sarah Huckabee Sanders said Monday, arguing that Trump's Twitter feed should not be taken as an indication of his priorities.

Several hours after Sanders spoke, and after four days of back and forth with the NFL, Trump wrote a series of tweets about the dire situation Puerto Rico, contrasting it with Texas and Florida, which he said were "doing great" after Hurricanes Harvey and Irma. Puerto Rico, he said, was in "big trouble" and had already been suffering from "broken infrastructure & massive debt."

"It's old electrical grid, which was in terrible shape, was devastated. Much of the Island was destroyed, with billions of dollars.... owed to Wall Street and the banks which, sadly, must be dealt with. Food, water and medical are top priorities — and doing well. #FEMA," the president tweeted.

Earlier Monday, Sanders called the Trump administration's response to the storm "unprecedented," even as it has been far less public than the responses to Irma and Harvey. Maria has left much of Puerto Rico — a U.S. territory of 3.4 million citizens — without power and with limited access to food and water.

"We've done unprecedented movement in terms of federal funding to provide for the people of Puerto Rico and others that have been impacted [by] these storms, we'll continue to do so," Sanders said, noting that FEMA Administrator Brock Long and Homeland Security Adviser Tom Bossert had traveled to the island to assess the damage and the response efforts.

She also pushed back against the idea that Trump is sending a message by tweeting attacks against NFL players for kneeling during the national anthem and not tweeting about Puerto Rico or the U.S. Virgin Islands, which also took a big hit.

"He's not emphasizing sports. You're missing the entire purpose of the message," Sanders said.

Trump, however, has been noticeably less engaged with Maria's devastation.

After Harvey and Irma ripped through Texas and Florida, Trump told several advisers he was very pleased with the administration's handling of the storms, and senior administration officials were buoyed by the idea that the response caused his poll numbers to climb.

But Trump has not seemed as focused on Maria, administration officials say, though they note he has called Puerto Rico's governor, Ricardo Rossello, to ask about the damage.

Rossello has so far praised FEMA's response and other parts of the Trump administration, but has had to petition the government for more military resources, mainly aircraft, for searches and air drops of essential goods to towns cut off by the natural disaster.

"We know that there are capabilities in the surrounding areas, helicopters, planes and so forth. And our petition is for us to be able to use them and be flexible in using them with making sure that resources arrive to those areas of that are more vulnerable in Puerto Rico," Rossello told POLITICO on Sunday night.

Rossello stopped short of criticizing Trump's level of engagement.

"I think he's paid attention," Rossello said. "He's called me three times and he offered two pre-landfall emergency declarations before both storms hit Puerto Rico," though Rossello said Trump had overlooked the "granular detail" of declaring a federal disaster for every section of the island.

But criticism against Trump has mounted from other corners. And reports that a White House disaster-aid request might not reach Congress until October further fanned the flames.

"Hey @realDonaldTrump you can't wait that long," Lin-Manuel Miranda, the "Hamilton" playwright of Puerto Rican descent, wrote on Twitter. "There will be a lot of American deaths on your watch if you wait that long."

"Just spoke w/ fmr Gov @luisfortuno51: 'PR on brink of humanitarian disaster.' USVI too. DC must put aside controversies, prioritize rescue," former GOP presidential candidate Mitt Romney tweeted.

Trump's election rival Hillary Clinton also called on Trump's administration to do more, and to recognize Puerto Ricans as U.S. citizens.

"President Trump, Sec. Mattis, and DOD should send the Navy, including the USNS Comfort, to Puerto Rico now. These are American citizens," Clinton tweeted on Sunday, referring to Defense Secretary Jim Mattis.

Puerto Rico's government, which is effectively bankrupt and in over $70 billion of debt, has asked the federal government to waive the costs the commonwealth might have to pay out of pocket. A majority Republican federal oversight board put in place last year to oversee the island's economic recovery already loosened its budgetary requirements on the local government to allow Rossello to spend more in the immediate response, though Puerto Rico had limited resources to begin with.

Though implicit, Rossello's fears about being forgotten came across. During his interview, Rossello underscored the uniquely precarious situation Puerto Rico faces because of its long-term economic struggles, while maintaining that Americans in Puerto Rico and U.S. Virgin Islands should receive no less aid than the residents of any state.

"Whatever relief package we have, whatever impact we have, we are U.S. citizens. We shouldn't be the lesser for it," the governor said. If a response proves lackluster, Rossello predicted "massive migration that would deteriorate our [economic] base here in Puerto Rico and would provoke significant demographic shifting in other areas of the United States."

On Monday the governor, who like Trump is highly active on Twitter, retweeted a statement from Puerto Rico's last Republican governor, Luis Fortuno.

"The Federal Gov needs to act immediately to assist PR," it said. "Congress should support the 3.5 m US citizens residing in PR in same way as TX and FL."

Josh Dawsey contributed to this report.

DOT reverses course, will publish highway emissions rule Back

By Alex Guillén | 09/25/2017 04:55 PM EDT

The Transportation Department will allow an Obama-era rule aimed at reducing greenhouse gas emissions from big highways to take effect following lawsuits from environmental groups and Democratic attorneys general.

The Federal Highway Administration delayed the rule from taking effect several times earlier this year before placing it on hold indefinitely.

But DOT today reversed course. In a letter to a federal judge in New York, the Justice Department said the rule has been submitted to the Federal Register and is expected to run on Sept. 28. The rule will take immediate effect upon publication, DOJ wrote.

The rule will require states to track emissions from highways and craft reduction goals.

"Our lawsuit held the Trump administration accountable for illegally halting a common-sense tool to curb carbon pollution from transportation," said the NRDC's Amanda Eaken in a statement. "Now the Federal Highway Administration should get busy working with planners nationwide to clean up the air, protect our health and provide smarter transportation options for Americans such as more public transit, bikeways and pedestrian walkways."

WHAT'S NEXT: DOT says the rule is expected to be published in Thursday's Federal Register.

House Democrats block FAA extension Back

By Heather Caygle and Lauren Gardner | 09/25/2017 12:25 PM EDT

House Democrats on Monday blocked a Republican push to fast-track an FAA extension , with just days to go until current law expires Sept. 30.

Top Democrats announced plans to vote against the six-month extension earlier in the day, citing opposition to unrelated Republican add-ons dealing with flood insurance, tax credits for victims of recent hurricanes and expiring health care programs.

The bill failed 245-171. The fast-track process used to consider the bill requires two-thirds support of members for passage.

House Republicans are expected to bring up the bill again under a rule — which requires only a simple majority for passage — later this week. But Senate Democrats are also uneasy with the extension, and it's unclear whether they would block the bill in the upper chamber.

Speaker Paul Ryan blasted Democrats for their opposition, accusing them of playing politics while federal aviation programs hang in the balance.

"It is a sad day when House Democrats will — in the name of politics — vote against disaster relief and air traffic safety measures," Ryan (R-Wis.) said in a statement Monday afternoon.

House Minority Leader Nancy Pelosi said in a statement that the "sprawling" bill goes far beyond just extending federal aviation programs and includes many provisions that don't have Democratic backing, including language dealing with the federal flood insurance program and

tax credits for hurricane victims.

The Democratic leader also cited Republican inaction on the Dream Act — the bipartisan bill that would provide a path to citizenship for some young, undocumented immigrants known as Dreamers — as reason for her opposition.

Ryan said Republicans are committed to addressing Deferred Action for Childhood Arrivals (DACA), the program that shields Dreamers from deportation, before it ends in March. But, Ryan said, that issue should remain separate from the six-month FAA extension.

"These are two unrelated and bipartisan initiatives with broad support from both sides of the aisle," he said. "It's shameful that politics will trump meaningful relief for families suffering from these devastating hurricanes. House Democrats are willing to shut down air traffic control to make a political point."

Some Republicans who oppose House Transportation Committee Chairman Bill Shuster's separate effort to divorce air traffic control functions from the FAA have said they also oppose the extension. These lawmakers think the Transportation chairman should accept that the Senate has no interest in such an overhaul and don't want the agency to operate in fits and starts under stopgap measures.

Rep. Peter DeFazio (D-Ore.), the top Democrat on the Transportation Committee, called Republicans "a bunch of losers" for continuing to push breaking up the FAA.

"We're here today because the chairman of the committee has stubbornly persisted in trying to privatize air traffic control," DeFazio said, blasting Shuster on the House floor.

Senate Democrats are reviewing the legislation, but, like House Democrats, believe the flood insurance provisions are problematic and noted that the tax breaks included in the FAA bill weren't offered to Hurricane Sandy victims in 2012, according to a senior aide.

Pelosi panned the bill's tax relief provisions for citizens affected by hurricanes Harvey, Irma and Maria for not "treat[ing] all families recovering from natural disasters the same."

The California Democrat also criticized Republicans for not quickly acting on other programs that need reauthorization — such as the children's health insurance program — and reiterated her call for a vote on the Dream Act.

"Instead of acting on these priorities, House Republicans are advancing a sprawling FAA extension package laden with completely unrelated and inadequate items," she said.

House Minority Whip Steny Hoyer, top Transportation Committee Democrat Peter DeFazio of Oregon and other Democrats also signed onto a Dear Colleague letter opposing the bill.

Brianna Gurciullo and Seung Min Kim contributed to this report.

Chamber urges Senate to reject Garrett for Ex-Im, confirm other nominees Back

By Zachary Warmbrodt | 09/25/2017 02:58 PM EDT

The U.S. Chamber of Commerce is joining the chorus of business groups calling on lawmakers to block the confirmation of former Rep. Scott Garrett to head the Export-Import Bank.

In a letter sent today to Senate Banking Committee leaders, U.S. Chamber senior executive vice president Suzanne Clark said the group was "extremely concerned" about reports that the bank's critics might try to derail the confirmations of other appointees to the export agency if Garrett's nomination were rejected.

"Each nominee deserves to stand or fall on his or her own merits," Clark said. "We trust that senators from both parties will reject any attempt to hold qualified nominees who enjoy the support of the majority of the Senate hostage in an attempt to gain leverage for the approval of a nominee who does not enjoy the support of a majority of the Senate."

Business groups have been lobbying to stop Garrett's appointment after he worked to kill the Export-Import Bank while in Congress.

The Chamber strongly supports the nominations of Kimberly Reed, Claudia Slacik, Judith Pryor and Spencer Bachus to serve on the Export-Import Bank's board, Clark said. But Garrett could use his position to prevent the agency from properly functioning, she added.

"As Chairman of the Ex-Im Bank, Mr. Garrett would have extraordinary powers to stop transactions from being voted on by the board, even when they have the support of a majority of Board members," she said. "While the temporary lapse in Ex-Im's charter and the lack of a quorum for the Ex-Im board have hobbled the bank's activities from the outside, confirming an opponent of Ex-Im as its chair would have the same impact regardless of a quorum."

WHAT'S NEXT: The Senate Banking Committee has not scheduled a vote on the nominees.

Price's private-jet travel breaks precedent Back

By Dan Diamond and Rachana Pradhan | 09/19/2017 10:30 PM EDT

In a sharp departure from his predecessors, Health and Human Services Secretary Tom Price last week took private jets on five separate flights for official business, at a cost of tens of thousands of dollars more than commercial travel.

The secretary's five flights, which were scheduled between Sept. 13 and Sept. 15, took him to a resort in Maine where he participated in a Q&A discussion with a health care industry CEO, and to community health centers in New Hampshire and Pennsylvania, according to internal HHS documents.

The travel by corporate-style jet comes at a time when other members of the Trump administration are under fire for travel expenditures, and breaks with the practices of Obama-era secretaries Sylvia Mathews Burwell and Kathleen Sebelius, who flew commercially while in the continental United States.

Price, a frequent critic of federal spending who has been developing a plan for departmentwide cost savings, declined to comment.

HHS spokespeople declined to confirm details of the flights or respond to questions about who paid for them, with a spokesperson saying only that Price sometimes charters planes when commercial flights aren't feasible. All three organizations that hosted Price last week — the Massachusetts-based health IT firm athenahealth, Goodwin Community Health Center in New Hampshire and the Mirmont Treatment Center in Pennsylvania — told POLITICO they did not pay for his flights or other travel costs.

"As part of the HHS mission to enhance and protect the health and well-being of the American people, Secretary Price travels on occasion outside Washington to meet face to face with the American people to hear their thoughts and concerns firsthand," an HHS spokesperson said, adding, "When commercial aircraft cannot reasonably accommodate travel requirements, charter aircraft can be used for official travel."

Price's spokespeople declined to comment on why he considered commercial travel to be unfeasible. On one leg of the trip — a sprint from Dulles International Airport to Philadelphia International Airport, a distance of 135 miles — there was a commercial flight that departed at roughly the same time: Price's charter left Dulles at 8:27 a.m., and a United Airlines flight departed for Philadelphia at 8:22 a.m., according to airport records.

Sample round-trip fares for the United flight ranged from $447 to $725 per person on United.com, though the price would have been lower if booked in advance or if Price's party received government discounts. Similarly priced commercial flights also left from Reagan National Airport and Baltimore Washington International. By contrast, the cost of chartering the plane was roughly $25,000, according to Ultimate Jet Charters, which owns the Embraer 135LR twin jet that ferried Price and about 10 other people to the clinic event.

In addition, Amtrak ran four trains starting at 7 a.m. that left Washington's Union Station and arrived at Philadelphia's 30th Street Station no later than 9:58 a.m. The least-expensive ticket, on the 7:25 a.m. train, costs $72 when booked in advance. It is just a 125-mile drive from HHS

headquarters in downtown Washington to the Mirmont Treatment Center outside of Philadelphia, where Price spoke. Google Maps estimates the drive as about 2½ hours. A one-way trip was estimated by travel planners to be about $30 in gasoline per SUV plus no more than $16 in tolls.

An HHS spokesperson declined to answer questions on how many private charter flights Price has taken since being confirmed as secretary on Feb. 10, but wrote in an emailed response, "Official travel by the secretary is done in complete accordance with Federal Travel Regulations."

Current and former staffers, speaking on the condition of anonymity, say Price has been taking private jets to travel domestically for months.

Ethics experts say the use of private charters by government officials, while legal, is highly dubious and in most cases a misuse of taxpayer funding.

"I can understand why the secretary might have to use a charter flight to get to a hurricane-devastated region, but Philadelphia is not one of those regions this year," said Walter Shaub, who was director of the United States Office of Government Ethics until July. "I find it hard to believe he couldn't find a suitable commercial flight to Philadelphia."

"This wasteful conduct reflects disdain for the ethical principle of treating public service as a public trust," said Shaub, who was appointed by former President Barack Obama. "Public office isn't supposed to come with frivolous perks at taxpayer expense."

Shaub said that the trips violate the "spirit" of the Federal Travel Regulations, citing the express guidance contained in the regulations that "taxpayers should pay no more than necessary for your transportation."

Members of the Trump administration have come under scrutiny for excessive use of government travel resources. The president and his family have rung up travel expenses at a faster rate than previous presidential families. The inspector general of the Environmental Protection Agency recently announced a probe into Administrator Scott Pruitt's frequent travel to his home state of Oklahoma. The Treasury Department's inspector general is looking into Secretary Steve Mnuchin's use of a government jet on a trip to Fort Knox, Kentucky, that involved viewing the solar eclipse. Most recently, ABC News reported that Mnuchin had requested a government plane to take him on his overseas honeymoon. The request was withdrawn on the grounds that it was unnecessary.

Price is an orthopedic surgeon who served in the U.S. House for 12 years representing a district in suburban Atlanta. After President Donald Trump nominated him to be HHS secretary in January, Price came under fire from Democrats and ethics watchdogs for having made stock trades in health-care companies while serving on a House panel overseeing Obamacare and other health issues.

He has also positioned himself as a champion of fiscal efficiency, backing major spending

reductions to agencies he oversees and legislation that would cull hundreds of billions of dollars from health entitlement programs. This month, Price had been scheduled to submit a department reform plan to the White House that is expected to propose new spending and staffing cuts. He also backed a nearly $6 billion proposed cut to the National Institutes of Health in March, and an overall 18 percent spending cut to HHS included in Trump's first budget proposal.

"Tough choices had to be made to identify and reduce spending within the department," Price said in a statement to Congress about his budget request. "Our goal is to ... [try] to decrease the areas where there are either duplications, redundancies or waste ... and get a larger return for the investment of the American taxpayer."

Price's travel itinerary last week included five charter flights that charter operators estimated would cost at least $60,000. The itinerary, according to airport records and sources with knowledge of Price's travels, began on Wednesday, Sept. 13 (arrows do not represent actual flight paths):

• Price and staff took a private charter that left Dulles that Wednesday at 2:26 p.m. and arrived in Waterville, Maine, at 3:37 p.m., where he then traveled to the Point Lookout resort and spent the night.

• On Thursday, Sept. 14, Price held a fireside chat with the CEO of athenahealth at the Point Lookout resort. He then took a private jet that departed Waterville, Maine, at 11:41 a.m. and arrived in Portsmouth, New Hampshire, at 12:09 p.m. for a scheduled visit to nearby Goodwin Community Health Center.

• Later on Thursday, Price made an announcement about grants for fighting the opioid epidemic, after which he took a private jet that left Portsmouth at 2:34 p.m. and arrived at Washington Dulles at 3:45 p.m.

• On Sept. 15, Price, accompanied by White House counselor Kellyanne Conway, left Dulles aboard a charter at 8:27 a.m. and touched down at Philadelphia International Airport at 9:01 a.m. for a scheduled visit to Mirmont Treatment Center, a local addiction treatment facility.

• Also on Sept. 15, Price, Conway and other staff departed Philadelphia aboard a charter plane at 12:39 p.m. and touched down at Dulles at 1:19 p.m., where the plane was met on the tarmac by two SUVs and a police escort.

The round trip to the Philadelphia airport, which is about 15 miles from Mirmont Treatment Center, where Price and Conway met with staff and patients — cost about $25,000, an official with the charter agency told POLITICO.

Eddie Moneypenny of Ultimate Jetcharters, who confirmed that his company's 30-seat jet was used for a Dulles-Philadelphia roundtrip last week, said he wasn't aware that the trip was for a government official and the charter had been booked through a third party.

Other charter services confirmed that charter flights between Washington and Philadelphia run

tens of thousands of dollars when retaining the same plane.

"I've been doing this for seven years," said Jake Sheeley of EvoJets, another charter service. "I've never seen a flight like this for less than $20,000." Sheeley also estimated that an itinerary modeled on Price's three-flight trip between Washington, Maine and New Hampshire would cost about $40,000.

Several former HHS staffers who had close knowledge of the travel plans of former HHS secretaries Burwell and Sebelius could not recall booking a charter flight for short-haul travel.

Staff for Burwell and Sebelius said booking even a single charter flight was, in the words of one, a "non-starter" within the department. For example, for last year's Obamacare enrollment kick-off, HHS staff had planned a multi-city tour for Burwell to urge Americans to sign up for coverage. The effort, which would have required charter aircraft, was ultimately scrapped because of its estimated $60,000 cost.

"We were worried about the optics and the cost to taxpayers," said one former staffer involved in the planning.

In her more than five years as a Cabinet secretary, Sebelius says she took a charter flight only to get to remote areas in Alaska, which she and staff said were otherwise inaccessible.

"The basic rules that our scheduling team worked under were, you flew commercial and you flew economy," she said in an interview. "That's just what they did."

Tracking Price's travel and meetings has been much more difficult than tracking those of his predecessors. His office only recently began informing reporters of trips ahead of time, and have declined to post most of his remarks and speeches to the HHS website despite his frequent speaking engagements.

Nonetheless, he's spent much of his tenure on the road. POLITICO identified at least 24 separate flights that Price has taken to conduct HHS business in the past four months alone. Those flights don't include Price's weekend trips home to Georgia. An HHS spokesperson said, "Secretary Price pays for personal travel out of his own pocket."

One of those unannounced trips was to last week's conference hosted by athenahealth, the health information company, at the Point Lookout resort in Maine. Price held a wideranging fireside chat with athenahealth CEO Jonathan Bush, the nephew of former President George H.W. Bush and first cousin of former President George W. Bush.

The HHS secretary apparently used his remarks to tweak the government's role as would-be reformers.

"Don't assume the federal government is gonna do the right thing in health care," Price said, according to one account of his talk.

Trump Foiling Bid to Shun Unwanted Ethanol Spat with Brazil

Posted August 07, 2017, 01:14 P.M. ET

By Mario Parker and Fabiana Batista

President Donald Trump's America First rhetoric is doing no favors for U.S. ethanol producers, who are hoping to avoid a trade fight with fuel buyers in Brazil.

The administration has started making noise about rising imports of Brazilian biofuel made from sugar. That's got the South American producer mulling tariffs or a quota on imports of U.S. fuel made from corn. A trade spat would be a much bigger problem up north because the U.S. ships more than four times as much to Brazil than it buys from the country.

The brewing trade dispute is gearing up to pit the world's two biggest ethanol producers against each other. As the rivalry heats up, hedge funds seem to be signaling that Brazil will be the winner -- speculators cut their bullish bets on corn last week while getting less bearish on sugar.

"The winds of protectionism are blowing in Washington," said Joel Velasco, a principal at Albright Stonebridge Group in Washington and a former representative for the Brazilian Sugarcane Industry Association, or UNICA. "The race to raise barriers can quickly sour things for U.S. and Brazil relations."

Raw-sugar futures have climbed 2.7 percent since the end of June, buoyed by the outlook for increased use in ethanol. Gains for crude oil have spurred Brazil's state-controlled oil company, Petroleo Brasileiro SA, to raise gasoline prices, boosting the allure of ethanol, which competes directly at the pump in a country where most cars can use either fuel. A recent fuel-tax hike is also favoring use of the biofuel.

Corn Wagers

Speculators cut their corn net-long position, or the difference between bets on a price increase and wagers on a decline, by 21 percent to 84,644 contracts in the week ended July 25, according to U.S. Commodity Futures Trading Commission data released three days later. By contrast, the net-bearish sugar position contracted by 19 percent.

The tension escalated last month, when the U.S. Environmental Protection Agency, in proposing

annual renewable-fuel quotas, asked for public comments addressing the agency's concerns that Brazilian ethanol is being used to satisfy parts of the country's biofuel mandate.

Both countries have long imported from each other, with demand fluctuating along with corn and sugar price differentials.

While Brazil also depends on its shipments to the U.S., its No. 1 customer, its industry as a whole is not as reliant on exports because of a robust domestic market, making a trade dispute more of an issue for the American producers. The U.S.'s capacity exceeds its current domestic demand.

Bad Timing

It's also bad timing for U.S. producers who already lost a mammoth customer in China after the nation raised tariffs on American ethanol and an animal feed byproduct. While the American industry wrote a Feb. 7 letter to Trump asking him to intervene, those issues were absent in a May announcement that the U.S. reached an agreement with China on commodities, including beef.

To ward off a similar fate from Brazil, Washington-based trade groups for agriculture and biofuels are lobbying the Trump administration for a softer stance and for the South American nation to reconsider its move toward a tariff.

The efforts seem to be helping. The South American nation on July 25 postponed an official decision from its trade chamber on the potential 20 percent tax. Groups including the U.S. Grains Council, the Renewable Fuels Association and Growth Energy applauded the move.

"This proposal, if implemented, would have wide-ranging and long-standing impacts on both our industries and the global fuel supply," the groups said in an emailed statement.

Still, it's hardly a settled debate. Brazil's industry group UNICA plans to push regulators to move against a recent flood of American shipments, according to Eduardo Leao, the group's executive director. One proposal is for an import quota of 600 million liters (158 million gallons), with a 20 percent tariff on shipments exceeding the limit, he said. That quota would be less than half the total shipments from the first half of this year.

U.S. ethanol exports to Brazil plummeted 68 percent in June, according to U.S. Agriculture Department data.

Even though gains for sugar prices mean that imports are sometimes favorable for Brazil, "they don't want to be on the hook," perpetually soaking up a surplus of U.S.-produced ethanol at the expense of their domestic industry, said Craig Irwin, an analyst at Roth Capital Partners LLC in Newport Beach, California.

U.K. Clears $5.5 Billion Offshore Wind Farm for Scottish Power

Posted August 07, 2017, 9:23 A.M. ET

By Anna Hirtenstein

The U.K. government gave the green light to ScottishPower Renewables Ltd. to build a 1.2-gigawatt

wind farm off the coast of Norfolk that may cost as much as $5.5 billion.

The East Anglia Three offshore wind farm received planning consent from Secretary of State for Business, Energy and Industrial Strategy Greg Clark, according to a statement from the developer. It will consist of 172 turbines, each more than twice as tall as the Big Ben clock tower in London. It may cost as much as $5.5 billion, according to analysts at Bloomberg New Energy Finance.

The developer will now move to the next phase where it prepares to bid in an auction for a contract for difference, which would fix a price for the electricity generated from the wind turbines. If successful, ScottishPower Renewables expects construction to begin in 2022 and for the project to be working by 2025.

"This project will need the U.K. to hold a third contracts for difference round in order to get a subsidy and find a route to market, as it will be built too late for it to compete in the second one," said Tom Harries, wind analyst at Bloomberg New Energy Finance.

ScottishPower Renewables is currently working on its East Anglia One wind farm, which is planned to be 714 megawatts in installed capacity and operational by 2020. It will sell its power at a price of 119 pounds ($155) a megawatt-hour. The developer expects to be able to deliver a lower price for East Anglia Three, according to the statement.

"Major contracts are already being delivered in towns and cities spread out all across the U.K.,," said Keith Anderson, CEO of ScottishPower Renewables. "Offshore wind has supported jobs and investment in Hull, Hartlepool, Lowestoft, Great Yarmouth, Grimsby, Teesside, Tyneside, Fife, Machrihanish and Belfast to name but a few. Large-scale projects like East Anglia Three will continue to help to encourage economic regeneration where it is needed most."

The East Anglia Three wind farm is expected to power nearly 1 million homes in the U.K. upon completion.

Merkel Climate Goal in Doubt with Greenhouse Gases on the Rise

Posted August 07, 2017, 8:45 A.M. ET

By Brian Parkin

More than 12 straight months of rising greenhouse gas pollution in Germany are casting doubt on whether Chancellor Angela Merkel's government can meet climate targets.

"Without an immediate program of climate protection, the 2020 target will clearly be missed," according to a statement from Agora Energiewende, a Berlin-based researcher that published preliminary emissions data on August 7.

Carbon dioxide emissions in Europe's largest economy grew by 5 million tons, or 1.2 percent, to 428 million tons in the first six months, according to Agora. The rise in greenhouse gases responsible for global warming follows increased German emissions in 2016, which reached 906 million tons compared with 902 million tons the year before.

The data shows that Merkel's goal—cutting 2020 emissions by 40 percent relative to 1990

levels—is on the verge of failure. By last year, Germany had cut emissions by just 28 percent compared to output in 1990.

"The gap to reach a 40 percent reduction target for climate protection won't narrow, but will remain at about 150 million tons," Agora Director Patrick Graichen said in the statement.

A combination of economic growth, rising power generation and car sales contributed to Germany's rising emissions last year, according to Agora. Goods and services in the world's fourth-biggest economy grew almost 2 percent, helping German car drivers add 3.4 million mostly-diesel automobiles to the road, a 4.5 percent increase from the year before.

Emissions from diesel combustion rose 6.5 percent in the first six months of this year. Carbon dioxide pollution from oil, gas and lignite combustion rose by almost 10 million tons for the six months through June 30. Emissions from hard coal dropped by 5 million tons, said Agora.

Lawmakers from Merkel's Christian Democratic party want Germany to drop over-ambitious climate targets and align the nation's policy with European Union-wide goals after next month's federal election. The EU wants to reduce emissions by 40 percent by 2030.

Germany's Ministry of the Environment didn't immediately respond to requests for comment. Coal plants run by RWE AG, Uniper SE and Vattenfall AB are to blame for slowing German progress toward greenhouse gas reduction goals, the ministry said earlier this year.

Merkel may seek to tread carefully over climate policy as the election nears. Climate change tops German voters list of worries, ahead of terror attacks, crime rates and the influx of refugees, according to a Kantar Emnid GmbH poll conducted on July 26-27. Some 71 percent of respondents said climate change "caused them personally most worry" according to the poll.

Big Oil's Dream of $65B Hidden Off Norway Is Fading Away

Posted August 07, 2017, 7:43 A.M. ET

By Mikael Holter

Norway's oil industry has been salivating for years over the Arctic Lofoten islands, which could hold billions of barrels of crude. It will likely have to keep dreaming.

The general election next month is unlikely to lift a deadlock that's keeping a ban on drilling off the environmentally sensitive archipelago as more and more Norwegians are turning their backs on the industry that helped make the country one of the world's richest.

"It's a dead issue," said Frank Aarebrot, a professor of political science at the University of Bergen.

Backed by unions and business, Norway's two biggest parties, Labor and the Conservatives, have long favored steps that could open up the area for exploration. But so far they have had to compromise with smaller parties that are determined to keep Lofoten oil-free.

That's because the area is a natural wonder. The waters off the rugged archipelago are home to the world's biggest cold-water coral reef and a breeding area for 70 percent of all fish caught in the

Norwegian and Barents seas, according to WWF. The islands also host mainland Europe's biggest seabird colony. Opponents of oil exploration argue a spill could cause catastrophic harm and that Norway will run afoul of the Paris climate agreement if it expands exploration more.

Oil companies led by state-controlled Statoil ASA, the biggest Norwegian producer, say gaining access is key if the country wants to maintain production of oil and gas, which is forecast to fall again from 2025 after already dropping 12 percent since a 2004 peak. While the government estimates Lofoten could hold about 1.3 billion barrels of oil equivalent, industry group Konkraft has said resources could top 3 billion barrels. If it's all crude rather than gas, that would represent at least $65 billion in sales value at current prices.

"We're dependent on making new discoveries to have new projects in that time-frame," Statoil spokesman Bard Glad Pedersen said by phone. "That also underlines the urgency in an impact assessment for Lofoten and Vesteraalen."

The debate over Lofoten frames a wider discussion in Norway over what role western Europe's biggest oil and gas producer, which started pumping crude in the 1970s, should take in the fight against climate change. Some 44 percent of Norwegians would be willing to leave some oil in the ground if it helps cut emissions, according to an Ipsos poll done this month for Dagbladet.

The question is also whether there will actually be a need for the area's untapped crude. As prices for renewable energy drop and oil producers from Exxon Mobil Corp. to OPEC hike their forecasts for electric car sales, Big Oil has started talking about crude demand peaking as early as next decade.

While both Prime Minister Erna Solberg and her rival from Labor, Jonas Gahr Store, say Norway needs to become less reliant on oil, they also maintain that petroleum production will continue to play a big part for many years ahead. Production alone still accounts for about 12 percent of the economy, down from more than 20 percent before oil prices crashed in 2014, and the entire industry employs almost 200,000 workers.

The Compromise

Ascendant opponents such as the Green Party, which looks set to gain more seats in parliament next month, and environmental groups say Norway needs to start to phase out its oil industry, arguing that more production would be a breach to its commitments under the Paris climate accord. Greenpeace is suing the country to get it to stop exploring in the Barents Sea off Norway's northern tip.

In a sign that opponents of drilling are gaining traction, Labor in a "compromise" earlier this year said it would only seek to start an impact study in one of the three areas designated as potential oil blocks off Lofoten. But even such as small move is opposed by the Center Party and the Socialist Left Party, its potential ruling partners after the Sept. 11 vote. Polls show such a coalition would win a clear majority.

Even industry friendly politicians such Ola Borten Moe, deputy leader of the Center Party, says there's no need to push into Lofoten. "There's more than enough good acreage available," he said in an interview.

But the former oil minister, who was well-liked in the industry, stopped short of presenting Labor with an ultimatum, contrary to the Socialist Left which says it won't lend its support to any government that allows oil activity off Lofoten.

"We will spend political capital on this," Kari Elisabeth Kaski, a member of the party's governing body, said in an interview. "It's an important symbolic issue."

The parliamentary situation is fluid and Labor could potentially seek support to form a coalition from the Christian Democrats and the Liberal Party, two centrist groups that currently support the Conservative-led government. But they also oppose an impact study.

Any government run by Labor or the Conservatives would maintain stable terms for the oil industry, including taxes and acreage awards, even if several smaller parties are pushing for an overhaul of Norway's energy policy.

The price for that may well be that Lofoten is left alone forever.

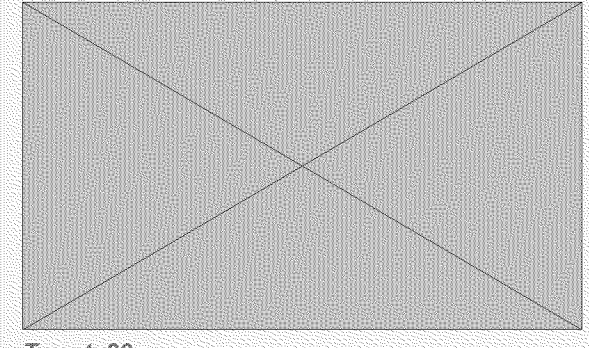
Reuters

The best part of the Republican tax plan

Alex Brill | The Hill

Fiscally responsible tax reform will prove well worth it when we have a broader tax base, lower rates, and a simpler tax code. While lawmakers should protect tax incentives for charitable giving and savings, the myriad of other deductions, credits, and exclusions should be considered fair game — starting with the state and local tax deduction. This repeal of the largest itemized deduction alone can finance a cut in taxes for half of all filers while preserving the American tax

code's progressivity.

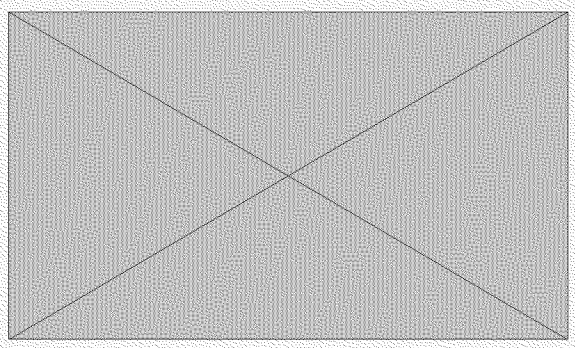


Twenty20

The bizarre case for dumbing down tech

Mark Jamison | AEIdeas

Are tech firms too smart? Some people seem to think so: Proponents of more regulations believe the world would be a better place if tech companies benefited less from what they know. The problem here isn't with privacy but instead stems from the basic belief that the race for knowledge is bad for competition. If our country values knowledge so much that we subsidize universities and promote STEM education, perhaps we should allow tech companies to be as smart as they can be.



Twenty20

Conservatives at odds over school reform only hurt themselves

Andy Smarick | US News & World Report

On K-12 policy, conservatives are pulled in opposite directions by competing schools of thought that are difficult to reconcile. The "bold reform" conservative camp sees our public education system as controlled by government monopolies. To many members of this camp, Education Secretary Betsy DeVos is an exceptional leader and spokesperson. But another branch of conservatism finds all of this unsettling.

Reuters

Republicans need tax principles to sell reform. Like these.

Michael R. Strain | Bloomberg View

Debate over the tax framework released by Republican congressional leaders and the Trump administration has rightly focused on the implications of its details — some known, some not — for the middle class, the rich, and the deficit. If these details are the trees, what is the forest? What principles should GOP leaders be trying to advance? Here's one: The system should treat comparable taxpayers similarly.

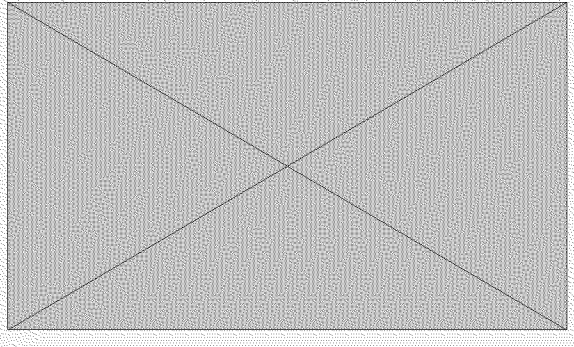
Rabbi Lord Jonathan Sacks receives 2017 Irving Kristol Award

Rabbi Lord Jonathan Sacks | AEI

Rabbi Lord Jonathan Sacks is an international religious leader, philosopher, award-winning author, and respected moral voice. He was awarded the 2016 Templeton Prize in recognition of his "exceptional contributions to affirming life's spiritual dimension." Last night he received the 2017 Irving Kristol Award, the highest honor conferred by AEI. "Don't lose the American

covenant," said Sacks. "It's the most precious thing you have. Renew it now."

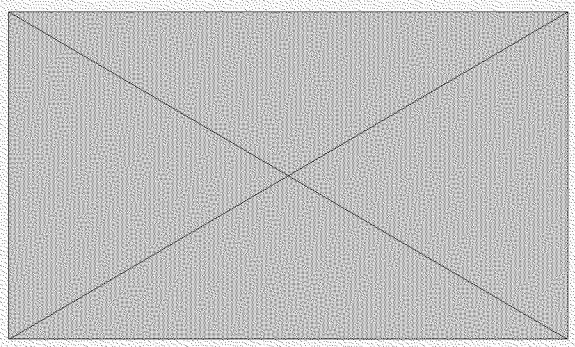


Reuters

A right-wing Justin Trudeau tries to fix Austrian immigration

Dalibor Rohac | The National Interest

Fears about a hard-right turn in Austria following its parliamentary election this past weekend need to be put in perspective. The populist, anti-immigration, Russia-friendly Freedom Party of Austria will likely be a junior partner in the center-right coalition government of Sebastian Kurz. Kurz's electoral success was driven in part by promises of political renewal — in particular a hard line against immigration from Muslim-majority countries.



Twenty20

Conservatives, regulatory humility goes both ways

Gus Hurwitz | AEIdeas

Regulation is built on an assumption that government has the power to do good things and need only authorize use of that power to see those good things done. Those of us who study regulation know that this sort of thinking is an embodiment of what Harold Demsetz called "the nirvana fallacy." But reflexive opposition to regulation should be tempered: There are times when regulation complements and even improves on market mechanisms.

Twenty20

Even the government is confused by the student loan program

Jason D. Delisle | US News & World Report

Last year, the US Treasury Department revealed a shocking statistic about the federal student loan program: Borrowers who default tend to carry the bad debt around with them for many years. A random sample showed that unpaid loans are in default for six years on average. A policymaker might find all of this puzzling. In

fact, the policies for curing a defaulted loan are so confusing, even the Department of Education gets them wrong.

Subject: Trump's EPA Curbs "Sue-And-Settle" Practice

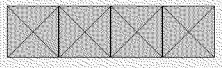
WHAT THEY ARE SAYING ...

Trump's EPA Curtails "Sue-And-Settle" Practice

BLOOMBERG: "The Trump administration moved Monday to curb settlements with conservationists and industry, instead vowing to fight cases designed to force the Environmental Protection Agency to take action. EPA Administrator Scott Pruitt said he is ending a 'sue-and-settle' practice that has resulted in closed-door agreements committing the agency to regulating greenhouse gas emissions or mercury pollution from power plants. 'It's very important that we do not engage in rulemaking through litigation,' Pruitt told reporters at a briefing Monday. As of today, with this directive and the memorandum, we're no longer going to be involved in that practice.'" (Bloomberg, 10/16/17)

TALKING POINTS MEMO: "Pruitt pledged that the agency would no longer reimburse attorneys' fees in cases where it decides to avoid a lawsuit, arguing that both environmental and business groups had abused it to enrich themselves in the past. 'This is not particular to one type of plaintiff,' he said. 'There should be no attorneys' fees paid, period, no matter who the plaintiff is.'" (Talking Points Memo, 10/16/17)

THE PROGRESSIVE FARMER: "President Barack Obama's U.S. Environmental Protection Agency took a lot of heat from rural America for working with environmental groups that sued the federal government on various aspects of environmental law. Otherwise known as sue and settle, environmental groups and others have made a cottage industry out of suing and forcing EPA to settle. The agency has taken heat for making so-called backroom deals with those groups, often leading to changes in environmental laws. On Monday, EPA Administrator Scott Pruitt announced an agency-wide directive to end the practice." (The Progressive Farmer, 10/16/17)



THE WASHINGTON POST: "Environmental Protection Agency Administrator Scott Pruitt issued a directive on Monday to limit the extent to which EPA can reach legal agreements with groups suing to force it to take regulatory action. Ending the practice known as 'sue and settle' has long been a top priority for conservatives and business groups. In recent years, especially under the Obama administration, the EPA and other agencies resolved litigation over delays in issuing rules by agreeing to specific timelines to act and reimbursing plaintiffs' attorney fees." (The Washington Post, 10/16/17)

FOX NEWS: "Republicans, including Pruitt, had fought with the Obama administration in court over what they described as a back-room practice that led to more red tape. They claimed the EPA routinely entered into consent decrees with environmental groups that had sued the agency, in turn leading to new regulations for states – covering clean air rules and more – without allowing them to defend their interests." (Fox News, 10/16/17)

THE WASHINGTON EXAMINER: "The Environmental Protection Agency on Monday became the first of President Trump's agencies to issue an order barring the agency from being drawn into court

settlements that alter environmental outcomes to the liking of environmental and other special interest groups." (The Washington Examiner, 10/16/17)

Arkansas

OIL AND GAS INDUSTRY
Oil and Gas Commission/Gas-Oil Ratio
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission repeals regulations under General Rule D9 regarding gas-oil ratio. The rule removes a provision that prohibits wells from producing gas in excess of the maximum ratio determined for a common source of supply unless all gas produced in excess is returned to the common source. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Regulatory Update

OIL AND GAS INDUSTRY
Oil and Gas Commission/Monthly Reports Costs
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission repeals regulations under General Rule C6 regarding monthly reports costs. The rule removes a provision that directs the commission to prescribe a fee per copy or subscription for notices and reports prepared and published by the commission. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Regulatory Update

OIL AND GAS INDUSTRY
Oil and Gas Commission/Pipeline Maps
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission repeals regulations under General Rule D11 regarding pipeline maps. The rule removes a provision that requires pipeline maps indicating the location, size, extensions, and any portions abandoned or not used to be filed at the request of the commission. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Regulatory Update

OIL AND GAS INDUSTRY
Oil and Gas Commission/Production Practice
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission repeals regulations under General Rule B33 regarding production practice. The rule removes a provision that requires naturally flowing wells to be produced at a continuous, uniform rate unless the commission specifically permits stop-cocking to reduce the gas-oil ratio or overcome logging up. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Regulatory Update

OIL AND GAS INDUSTRY
Oil and Gas Commission/Requirements for Well Completion Utilizing Fracture Stimulation
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission amends regulations under General Rule B19 regarding requirements for well completion utilizing fracture stimulation. The rule clarifies that the requirements apply to all new horizontal wells and all vertical wells where the amount of hydraulic fracturing fluid used during the hydraulic fracturing treatment of the well exceeds 10,000 barrels. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Regulatory Update

OIL AND GAS INDUSTRY
Oil and Gas Commission/Salt Water
Arkansas OIL AND GAS INDUSTRY

Final rule of the Oil and Gas Commission repeals regulations under General Rule B27 regarding salt water. The rule removes a provision that requires all wells producing 2 percent or more salt water in controlled fields to be reported monthly by their owner or operator to the commission. The rule is effective July 26, 2017. Contact: Lawrence Bengal; OGC; 501-683-5814

—Arkansas Register (08/01/2017)

Michigan

OCCUPATIONAL SAFETY AND HEALTH

Construction Code/Building Code

Michigan OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Licensing and Regulatory Affairs, Bureau of Construction Codes, amends regulations under MAC 408.30401 regarding the building code (Part 4) and storm shelter requirements under the incorporated 2015 International Building Code. The rule exempts certain Group E occupancies, including public schools and occupancies accessory to places of religious worship, from the requirement to construct storm shelters where the shelter design wind speed for tornadoes is at its highest (250 miles per hour). The rule makes permanent provisions of a July 1, 2017, emergency rule that expires Dec. 13, 2017. A hearing is scheduled for Aug. 24, 2017, in Lansing. Comments are due Aug. 24, 2017. Contact: Shannon Matsumoto; DLRA, Bureau of Construction Codes; 517-241-6312; matsumotos@michigan.gov

Pennsylvania

WATER
Environmental Laboratory Accreditation
Pennsylvania WATER

Final rule of the Environmental Quality Board amends regulations under 25 PAC 252.1 through .708 (nonconsecutive) concerning accreditation of environmental laboratories. The rule establishes requirements concerning development and maintenance of instructions for sample collection, preservation, and sample receipt. The rule also updates accreditation requirements, provides for designation of temporary laboratory supervisors, requires deficiencies to be corrected within 120 calendar days, and addresses personnel certification and qualification requirements. In addition, the rule requires laboratories to notify customers of an expiration of accreditation and removes requirements for onsite assessments, except for onsite assessments for initial accreditation. Finally, the rule provides for receipt of electronic applications and fee payment, increases fees, modifies the fee schedule, and requires laboratories to check the pH of each sample container. The rule is effective July 29, 2017. Contact: Aaren Alger; Department of Environmental Protection, Laboratory Accreditation Program; 717-346-8212; RegComments@pa.gov

Regulatory Update

WATER
Susquehanna River Basin Commission/Review and Approval of Projects
Pennsylvania WATER

Notice announces a June 29, 2017, final rule of the Susquehanna River Basin Commission that clarifies application requirements and standards for review of projects and provides for the registration of grandfathered projects. The rule also revises requirements for hearings and enforcement actions and updates definitions. The final rule includes numerous changes and clarifications to the rule as proposed. For example, the final rule allows the executive director to use past grandfathering determinations and allows the commission to waive certain registration information if a project is relying on a past grandfathering determination. The final rule does not finalize proposed changes to the consumptive use mitigation policy. The commission plans to reevaluate its policies and procedures for consumptive use and consumptive use mitigation in a more comprehensive fashion. The rule is effective July 1, 2017. Provisions concerning registration of grandfathered projects and grandfathered consumptive use are effective Jan. 1, 2018. AIR

Solid Waste Incineration Unit Negative Declarations/EPA Region 8

AIR

Notice of the EPA announces the withdrawal of a June 5, 2017, direct final rule (82 FR 25734) that approved negative declarations for several categories of solid waste incineration units in Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming. The negative declarations address small municipal waste combustor (MWC) units, large MWC units, commercial industrial solid waste incineration units, and other solid waste incineration units. The negative declarations also certify that there are no designated facilities subject to emissions guidelines currently operating in these states. The withdrawal is due to the receipt of one adverse comment that the agency will address in a subsequent final rulemaking. The withdrawal is effective Aug. 3, 2017. Contact: Gregory Lohrke; EPA Region 8, Air Program; 303-312-6396; lohrke.gregory@epa.gov. Citations: 40 CFR 62.1370 through 62.12660

ENDANGERED SPECIES

Washington State/Marine Mammals Incidental Take

ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request for authorization to take small numbers of marine mammals incidental to conducting construction activities related to marine structure maintenance and pile replacement at five naval installations in Washington state inland waters from 2018 to 2023. The proposed project consists of annual maintenance and repair activities of existing waterfront structures, including the replacement of 822 structurally unsound piles at Naval Station Everett; Zelatched Point; and the Kitsap Bangor, Kitsap Bremerton, Kitsap Keyport, and Kitsap Manchester naval bases. The proposed activities would expose marine mammals in the vicinity to elevated levels of underwater sound, resulting primarily in Level B incidental take and potentially Level A harassment. Comments are due Sept. 5, 2017. Contact: Ben Laws; NMFS, Office of Protected Resources; 301-427-8401; ITP.Laws@noaa.gov

GENERAL ENVIRONMENT AND SAFETY
Maine/West Buxton Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of an environmental assessment regarding the West Buxton Hydroelectric Project on the Saco River in Cumberland and York counties in Maine. The project, proposed by Brookfield White Pine Hydro LLC, of Lewiston, Maine, consists of an existing concrete dam, an impoundment, a dam-integral powerhouse with five generating units that total 3,812 kilowatts, a second powerhouse with a 4,000-kW generating unit, a conduit, a surge chamber, transmission lines, a switching station, and appurtenant facilities with an average annual generating capacity of 34,007 megawatt hours. The environmental assessment concludes that licensing the product, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment. Comments are due Sept. 5, 2017. Contact: Allan Creamer; FERC; 202-502-8365; allan.creamer@ferc.gov

GENERAL ENVIRONMENT AND SAFETY
Schedule I and II 2017 Aggregate Production Quotas
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Drug Enforcement Administration to adjust the 2017 aggregate production quotas for controlled substances in schedules I and II and the assessment of annual needs for list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine. The agency proposes to adjust aggregate production quotas for numerous specified controlled substances and chemicals to provide for the estimated medical, scientific, research, and industrial needs of the U.S.; lawful export requirements; and the establishment and maintenance of reserve stocks. The agency also proposes to establish aggregate production quotas for nine temporarily scheduled substances. The quotas include imports of ephedrine, pseudoephedrine, and phenylpropanolamine but do not include imports of controlled substances for use in industrial processes. Comments are due Sept. 5, 2017. PESTICIDES
Pesticide Tolerance Exemption/Beta Dyclodextrin, Methyl Ethers
PESTICIDES

Final rule of the EPA establishes an exemption from the requirement of a tolerance for residues of beta cyclodextrin, methyl ethers (CAS No. 128446-36-6) when used as an inert ingredient in pesticide formulations applied to growing crops preharvest, limited to a maximum concentration of 40 percent by weight in the pesticide formulation. The rule eliminates the need to establish a maximum permissible level for the residues when used in accordance with approved conditions.

The rule, which is issued in response to a petition filed on behalf of Wacker Chemie AG, of Munich, is effective Aug. 4, 2017. Objections and hearing requests are due Oct. 3, 2017. Subject: POLITICO's Morning Score: GOP eyes Obama-Trump districts — Pro-Jones super PAC files empty disclosure — Barton will retire

By Maggie Severns | 12/01/2017 10:00 AM EDT

With Zach Montellaro and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

PAINT IT RED - "GOP eyes Obama-Trump districts despite national headwinds," by Campaign Pro's Elena Schneider: "When Democratic Rep. Matt Cartwright woke up on Nov. 8, 2016, he represented a safe blue Pennsylvania district. But by the time he went to sleep that night, Donald Trump had painted Cartwright's turf red beneath his feet.

Cartwright still won a third term, but Republicans hope to follow up on Trump's top-of-the-ticket success by targeting Cartwright and 11 other House Democrats in Trump districts in 2018. A well-funded Republican jumped in to oppose Cartwright for the first time, while Rep. Cheri Bustos - the only Midwesterner in House Democratic leadership - has also drawn a stronger challenger than last year. Other Trump-district Democrats in Iowa, Minnesota and Wisconsin are also top Republican targets, as are open seats in the Las Vegas suburbs and southern New Hampshire." **Full story here.**

DRUMROLL, PLEASE - New disclosure from pro-Jones super PAC reveals... almost nothing: Highway 31, the mysterious new pro-Doug Jones super PAC that has recently spent close to $2 million in Alabama filed its first disclosure documents with the Federal Election Commission on Thursday. But the report, which spans Nov. 6-22, doesn't list any contributions from donors or organizations funding the PAC. Instead, Highway 31 disclosed spending itself into $1.1 million in debt -- all of it to high-profile political firms for ad production and placement -- and raising no money at all. The next disclosure won't happen until after the election, so voters in Alabama won't know who has been funding the ads when they go to vote.

Washington Democrats say they aren't the source of the funds for Highway 31. But it is worth noting that several firms with histories of doing high-profile work for national Democrats are working for the super PAC. Among them is Waterfront Strategies, a media buyer that has done work for House Majority PAC and Senate Majority PAC in the past. **See the filing here.**

BARTON IS DONE - "Barton to retire after nude selfie fallout," by POLITICO's Kyle Cheney: "Rep. Joe Barton (R-Texas) announced Thursday that he won't run for reelection in 2018, following a string of stories about him sending lewd texts and nude photos and videos to women. Barton, the ninth-most senior member of the House, told the Dallas Morning news in an interview, 'There are enough people who lost faith in me that it's time to step aside.' Local GOP

leaders had begun calling for Barton to step down in recent days." **Full story.**

Days until the 2018 election: 339

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and .mseverns@politico.com

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

RUNNING BUDDIES - "Jon Husted will be Mike DeWine's running mate," Cleveland.com's Jeremy Pelzer reports: "Ohio Secretary of State Jon Husted will end his gubernatorial campaign to become primary rival and Attorney General Mike DeWine's running mate, according to reliable sources tied to the candidates. The decision looks to be a game-changer in the race for Ohio governor in 2018, creating a Republican team with political and financial clout and turning one of DeWine's major challengers into an ally." **Full story here.**

NEW ENTRY - Dallas County sheriff will resign to run for governor, via WFAA: "Dallas County Sheriff Lupe Valdez will resign her office so she can challenge Greg Abbott in 2018, according to Dallas County Democratic Chairwoman Carol Donovan. ... Donovan told WFAA that Valdez will resign effective next Friday, Dec. 8. The deadline to file to be a candidate is Dec. 11." **Full story here.**

RATINGS ALERT - "House 2018: Less Than a Year Out, Race for Control Is a Coin Flip," by Sabato's Crystal Ball's Kyle Kondik: "We're a little bit past the halfway point between the last national election, in 2016, and the next national election, in 2018. In that time, the Democrats' chances of winning the House have only seemed to rise, based on a number of indicators. ... Put it all together, and the battle for control of the House looks something like a coin flip, with Democrats having a very real chance to net the 24 seats they need to win a majority. In fact, the big-picture indicators might suggest the Democrats should be favored to win the House. But we're not willing to go that far, at least at the moment." **Full story.**

AIR WAR - NARAL hits Democrat Lipinski for opposing gay marriage: NARAL Pro-Choice America is out with a TV ad that attacks Illinois Democratic Rep. Dan Lipinski for "opposing same-sex marriage" and "extended background checks to all gun sales." NARAL, along with several other progressive groups, has endorsed Lipinski's primary opponent, Marie Newman. **Watch the ad here.**

CANDIDATE PUSHBACK - McCready pens indictment of both parties: Democrat Dan McCready, who's vying to challenge North Carolina Rep. Robert Pittenger, wrote an op-ed in the Charlotte Observer slamming both parties for their handling of sexual harassment cases. McCready directly went after House Minority Leader Nancy Pelosi for using "moves from the Bill Clinton-era playbook, initially defending [Rep. John] Conyers instead of condemning sexual assault." Read the op-ed here.

QUOTE OF THE DAY: "I think it's time for both of them to go," New York Rep. Joe Crowley, chairman of the House Democratic Caucus, said of Sen. Al Franken and Rep. John Conyers on Thursday. Crowley is the highest-ranking Democrat to say both lawmakers should resign.

Subject: POLITICO's Morning Energy: Desperately seeking Zinke's attention — Wyoming v. West Virginia in coal feud — More time for comments on WOTUS repeal

By Anthony Adragna | 08/17/2017 10:00 AM EDT

With help from Alex Guillén and Adam Behsudi

EVERYONE WANTS ZINKE'S EAR: It may be August recess for much of Washington, but Interior Secretary Ryan Zinke has a bunch of deadlines coming up in the next couple of weeks and lots of people looking to grab his attention. Today's the last day for public comments on BOEM's push to write a new five-year offshore drilling plan (submit yours here). Nearly 51,000 comments have already poured in as President Donald Trump's administration is expected to begin the two-to-three year process of writing a plan that would open parts of the Gulf of Mexico and Atlantic Ocean as well as Alaska's Chukchi Sea, Beaufort Sea and Cook Inlet areas to drilling opportunities.

A group of 69 House Democrats, led by Rep. Jared Huffman, urged Zinke in a letter Wednesday not to expand drilling opportunities in the Arctic and Atlantic saying "the risks are simply too high, and the consequences too severe." But more than 110 other House lawmakers, led by Natural Resources Chairman Rob Bishop, said in their own letter it was "imperative" to open as much of the Outer Continental Shelf as possible "to ensure opportunities are not missed" to expand U.S. energy independence. Meanwhile, the administration of Trump ally Gov. Chris Christie voiced opposition to including any of the area off the coast of New Jersey in the new plan in its own comments. And a coalition of environmental organizations warned opening Atlantic waters to drilling posed "a direct threat to the fragile and unique ecosystems of the southeast coast and to the millions of people whose livelihoods depend on our clean coastal resources."

Separately, Zinke is nearing the end of his national monument review, and more than 400 executives from the outdoor apparel, footwear and equipment sectors are urging him not to make any changes to nearly two dozen designations under the Antiquities Act currently being examined. "As business leaders, we simply ask that your final report remain true to the Teddy Roosevelt values we share with you - to maintain the national treasures Presidents of both parties have protected, to defend the integrity of the monument-making process and to assure these majestic places remain accessible for all Americans, sustaining healthy communities and a healthy economy," they wrote. Among those signing the letter are Adidas Outdoors, Burton, L.L. Bean, Orvis, The North Face, REI and YETI.

Monument backers got some good news Wednesday when Zinke announced he would recommend no changes to California's existing Sand to Snow National Monument. "The land of Sand to Snow National Monument is some of the most diverse terrain in the West, and the monument is home to incredible geographic, biologic, and archaeological history of our nation," he said in a statement. Former President Barack Obama created it back in February 2016.

MORE TIME GIVEN ON WOTUS REPEAL: Interested parties now have until Sept. 27 to comment on the EPA's efforts to repeal the previous administration's Waters of the U.S. regulation after the agency extended the public comment period by a month, Pro's Annie Snider reports . Administrator Scott Pruitt wants to author his own version of the rule defining which marshes, bogs and creeks are subject to regulation under the Clean Water Act, though backers of the Obama rule have criticized the length of time the Trump administration gave for public comment.

Speaking of WOTUS, Pruitt appeared in a video released Wednesday for the National Cattlemen's Beef Association urging farmers and ranchers to make sure they formally submitted comments before the deadline. "This record being made is so important because it helps us make informed decisions," Pruitt said, being careful not to specify what the comment should sound like.

IT'S THURSDAY! I'm your host Anthony Adragna, and Faegre Baker Daniels' Andrew Wheeler was first up to identify Wednesday as the 40th anniversary of Elvis' death. For today: What's the only country located in all four hemispheres? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

WELCOME TO THE GOP, GOV. JUSTICE! Wyoming's all-Republican congressional delegation is decidedly not a fan of West Virginia Gov. Jim Justice's proposed $15-per-ton subsidy for utilities to buy coal from Appalachian mines instead of those in Western states. "We strongly urge you not to take actions, such as adopting the subsidy policy proposed by Governor Justice, that would repeat the mistakes of the last eight years," Sens. John Barrasso and Mike Enzi, as well as Rep. Liz Cheney, wrote in a letter to Trump. "Now is the time to remove distortions in our energy markets. We should not be imposing new ones." Justice's proposal would have to go through Congress, where Barrasso chairs the Environment and Public Works Committee, and Enzi holds the Budget Committee gavel, and where the Freedom Caucus, which tends to oppose any overt energy subsidies, holds substantial sway in the House.

GREENS CONDEMN CHARLOTTESVILLE RALLY: A coalition of more than 110 environmental and public interest groups issued a statement Wednesday condemning the white nationalist rally and associated violence from last weekend in Charlottesville, Va. "President Trump and all political leaders, no matter their party affiliation, have an obligation to stand up against such hate groups immediately and unequivocally," they said. "Their voices and words - and lack thereof - matter." Among those signing the statement are Citizens Climate Lobby, Earthjustice, Natural Resources Defense Council, Sierra Club and Physicians for Social Responsibility.

HEITKAMP LANDS A CHALLENGER: Wealthy potato farmer and Republican state Sen. Tom Campbell threw his hat into the ring to face Democratic Sen. Heidi Heitkamp Wednesday, Campaign Pro's Kevin Robillard reports. He's given enough personal money to launch an advertising blitz , which heavily focuses on his potato farming business that employs hundreds of people in the state. His first ad includes this pretty witty line: "It's time for a leader who knows how to grow something besides government."

ADVISER NO MORE: A spokesman said Wednesday Daniel Yergin, vice chairman of consulting agency IHS Markit, "fully supports" the decision to disband Trump's Strategic and Policy Forum that he sat on, Pro's Ben Lefebvre reports. Yergin, who advises many of the country's largest energy companies and helps organize the industry's largest annual conference, sat on the White House forum with the heads of GM, JPMorgan Chase and other major companies. Dow Chemical's Andrew Liveris also voiced support for the decision to disband the Manufacturing Council. "In discussions I had with the White House earlier today, I indicated that in the current environment it was no longer possible to conduct productive discussions under the auspices of the Initiative," he said in a statement. "And so, as proud as I am of the efforts we were taking on behalf of the American worker, disbanding the Manufacturing Jobs Initiative was the right decision." More from POLITICO's Dan Diamond on the corporate revolt here.

Meanwhile, the American Technology Council, a government committee with advisers from the tech industry, will keep going, Pro Tech's Steven Overly and Nancy Scola report, citing a White House official. The group was distinct from the other business groups that disbanded in that it was designed to convene government officials such as the secretary of Defense and head of OMB, rather than business executives. But it convened a summit in June that included heavy-hitters like Apple's Tim Cook, Amazon's Jeff Bezos and venture capitalist John Doerr, a major greentech backer.

MAIL CALL! PROTECT CLEAN ENERGY IN NAFTA TALKS: The Business Council for Sustainable Energy sent a letter to U.S. Trade Representative Robert Lighthizer urging the protection of clean energy technologies as the Trump administration begins to renegotiate the North American Free Trade Agreement. "Giving attention to items such as a zero tariff for goods produced in North America, promoting U.S. codes and standards, and updating language to reflect the growing impact of information technology on all sectors, will ensure that NAFTA supports the continued growth of clean energy and the benefits it provides to the U.S. economy," Lisa Jacobson, the group's president, wrote. That comes as multiple environmental groups slammed the administration for kicking off negotiations in private.

BATHROOM BILLS OPPOSED BY ENERGY SECTOR KILLED: Texas lawmakers failed to pass several bills by the end of a special session that would have limited transgender individuals' access to bathrooms in public places and schools, BuzzFeed reports. The bills, which divided state Republicans and the business community, were opposed by leaders of major energy companies, including BP America, Chevron, Dow Chemical Co., Exxon Mobil and Halliburton.

TRADE REMEDY CORNER: BIODIESEL INDUSTRY SAYS AD EXTENSION NOT A BIG DEAL: The Commerce Department this week announced a delay in its preliminary antidumping duty determination on imports of biodiesel from Argentina and Indonesia. The U.S. industry which is seeking relief says it's no big deal. The National Biodiesel Board, which is petitioning for the duties, requested an extension to the anti-dumping probe last month. The Commerce investigation is expected to issue preliminary countervailing duties by Aug. 22, which is also an extended deadline.

"It is evident from market reaction that some in the industry are not familiar with this legal

process and the fact that nearly every trade case, from steel to cased pencils, includes these routine extensions," said Doug Whitehead, chief operating officer of the National Biodiesel Board. "This in no way impacts the schedule or the fact that unfairly traded imports are hurting American companies and the employees who serve this industry. We remain confident that both the DOC and ITC will find in American biodiesel producers' favor."

SEND IN REINFORCEMENTS: NYU School of Law is launching the State Energy and Environmental Impact Center, backed by a $6 million grant from Bloomberg Philanthropies, to help state attorneys general fight Trump administration efforts to roll back environmental regulations or climate change policies, the Washington Post reports. David J. Hayes, deputy Interior secretary under President Obama, will be executive director for the nascent group.

PARK BOTTLE BAN AXED: Amid news it removed a Bikeshare station installed during the Obama administration from White House grounds, the Trump administration on Wednesday also killed off its predecessors effort to stop the sale of disposable water bottles on National Park Service grounds. "While we will continue to encourage the use of free water bottle filling stations as appropriate, ultimately it should be up to our visitors to decide how best to keep themselves and their families hydrated during a visit to a national park," Acting National Park Service Director Michael T. Reynolds said. The change in policy, which axes a 2011 Interior memorandum, takes effect immediately.

NEW ENERGY INFRASTRUCTURE COALITION LAUNCHED: The Energy Equipment and Infrastructure Alliance launched a new campaign Wednesday to tout "the importance and benefits of energy infrastructure and its ongoing development." Entitled Energy Builders, the effort comes in response to expanding pipeline protest movement and aims to highlight local economic benefits and jobs that come from infrastructure projects. "The extremists pushing to 'keep it in the ground' don't appreciate what these projects mean to wage earners and their families, not to mention the power they provide for America's homes and businesses now and in the future," Terry O'Sullivan, general president of the Laborers' International Union of North America, said in a statement.

REPORT: YES WE CAN (LIMIT TEMPERATURE INCREASES): The Rocky Mountain Institute released a report Wednesday arguing limiting temperature increases to 2 degrees Celsius is both practical and possible. "Today, many experts doubt that energy systems can decarbonize fast enough to prevent this scenario," the report says. "But this belief is both dangerous and wrong." Among the shifts needed are rapid and economic scaling of clean energy technologies; foundational changes to emissions within agriculture, forestry and other land-use behaviors and coordinated market and policy incentives globally.

HOW TO TAKE AN AX TO EPA: Former Trump EPA transition leader Myron Ebell issued a report Wednesday offering suggestions for how to radically reduce the size of the agency. Among his recommendations: Eliminate the enforcement office; abolish the 10 regional offices and push their emergency response functions to FEMA; stop the environmental justice programs; and overhaul how the agency approaches its scientific work. Ebell also calls for greater disclosure from the agency on its discretionary spending on functions not formally designated by Congress.

BIG SALE! Exxon Mobil, Chevron, Total and two dozen other companies bid on 76 million Gulf of Mexico acres, drawing more than $121 million in winning bids Wednesday from oil and gas companies, Pro's Ben Lefebvre reports. The bidding comes up short of the $247 million generated from a Gulf of Mexico lease sale last March.

ENVIRONMENTAL JUSTICE TOOL UPDATED: EPA issued an annual update Wednesday to EJSCREEN, its geographic tool for exploring environmental justice issues. According to EPA, the update includes new data on public schools and housing; a new way to view surface water pollution; and the ability to view cities as distinct areas, like with states. EPA will host three training webinars in the coming weeks. Click here for a blog post on the update from Matthew Tejada, director of EPA's Office of Environmental Justice. The Trump administration's proposed 2018 budget sought to zero out EPA spending on environmental justice, though Hill appropriators have not taken that route.

Subject: Playbook Power Briefing, presented by JPMorgan Chase & Co.: TRUMP accuses Dem congresswoman of lying about conversation with Gold Star family -- POTUS and PAUL RYAN back away from CSR deal -- SESSIONS says he has not been interviewed by MUELLER

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by JPMorgan Chase & Co.

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon. THIS MORNING, IN REVIEW ...

-- PRESIDENT TRUMP accused Frederica Wilson, a Democratic congresswoman from Florida, of lying about a conversation he had with the widow of a fallen U.S. soldier. "Democrat Congresswoman totally fabricated what I said to the wife of a soldier who died in action (and I have proof). Sad!" Wilson said she was in the car when Trump called. She tweeted this morning: "I stand my account of the call with @realDonaldTrump and was not the only one who heard and was dismayed by his insensitive remarks."

The fallen soldier's mother -- who also said she was in the car -- told the Washington Post that "President Trump did disrespect my son and my daughter and also me and my husband." She also backed up Wilson's side of the story. Trump has not released any evidence, but said during a pool spray at a meeting with senators that he "did not say what she said." ***The WaPo story from Anne Gearan and Kristine Phillips*** http://wapo.st/2zy7q4w

-- PRESIDENT TRUMP backed away from the Alexander-Murray deal which, as we detailed in the morning, he had given shifting opinions on. At 9:41 a.m., he tweeted: "I am supportive of Lamar as a person & also of the process, but I can never support bailing out ins co's who have made a fortune w/ O'Care." ***Situational awareness, Doug Andres, Ryan's White House press spokesman, said:*** "The speaker does not see anything that changes his view that the Senate should keep its focus on repeal and replace of Obamacare." (h/t Matt Fuller)

OTHER THINGS TRUMP COULD BE TALKING ABOUT -- Senate Republicans passing a budget, putting Washington one step closer to a once-in-a-generation tax rewrite ... His meeting with the Senate Finance Committee -- including Democrats! -- about tax reform ... The RNC raising $100 million ...

MCCONNELL: LET'S WORK MORE "McConnell to hold Senate in session for

longer workweeks," by Burgess Everett: "The Senate majority leader is preparing to hold the chamber in session for more rigorous workweeks, including Friday's and possibly even weekends, according to two sources familiar with the matter. The Senate GOP discussed a more aggressive schedule at Tuesday's party lunch and the majority of the conference agreed.

"The Senate has come under criticisms from conservatives for its light workweeks, typically spanning from Monday evening to early Thursday afternoon. But without buy-in from his members, it's been difficult to hold the chamber in open longer without facing the possibility of attendance problems and failed votes." http://politi.co/2zxfm5X

SESSIONS ON THE HILL -- "Sessions says Mueller hasn't interviewed him in Russia probe," by Josh Gerstein and Elana Schor: Attorney General Jeff Sessions on Wednesday told senators that he has not been interviewed by the special counsel probing Russia's meddling in the 2016 election and declined to answer questions about his private conversations with President Donald Trump.

"Until the president waives any claims to executive privilege, Sessions told the Senate Judiciary Committee, he would not address questions about his talks with Trump concerning the federal investigation into Russian electoral meddling, the firing of former FBI Director James Comey and other high-profile issues.

"Sessions told senators that Robert Mueller, the special counsel leading the Department of Justice's Russia probe, had not interviewed him. Deputy Attorney General Rod Rosenstein, who has taken over supervision of the Russia probe, has been interviewed by Mueller's team. ... Sessions did not discuss whether he had provided documents or other materials to Mueller, and his spokeswoman, Sarah Isgur Flores, said she did not know whether he had been asked. The attorney general initially hesitated when Sen. Patrick Leahy (D-Vt.) asked about his interactions with Mueller." http://politi.co/2zyxIJh

-- "Grassley promises hearing on 2016 law after reports it hurt opioid enforcement," by Elana Schor: http://politi.co/2zjOWnF

HMM... -- "Republican lawmakers' posh hideaway bankrolled by secret corporate cash," by the Center for Public Integrity's Carrie Levine: "[B]ehind the scenes, several major corporations and trade groups secretly bankrolled a plush hideaway for lawmakers at the same Republican National Convention in Cleveland where Trump gave the speech, records obtained by the Center for Public Integrity show. Comcast Corp., Microsoft, Koch Companies Public Sector, the National Retail Federation, Health Care Service Corp., the American Petroleum Institute, Chevron and AT&T are among the companies, associations and lobbying powerhouses that funded a limited liability company called 'Friends of the House 2016 LLC,' according to bank records.

"Friends of the House 2016 LLC, in turn, paid for the design and outfitting of an exclusive office, lounge and gathering space for Republican lawmakers -- including

House Speaker Paul Ryan -- and controlled access to the so-called 'cloakroom.' The limited liability company effectively hid the corporations' contributions from public view at a time when activist groups were pressuring companies to scale back giving to the Republican convention, and a few of the companies had publicly minimized their participation." http://bit.ly/2zxZvUl

****** **A message from JPMorgan Chase & Co.: What's the Word** It's been more than 30 years since we reformed our tax code, putting good jobs and higher wages at risk. In fact, 90% of CEOs believe that inaction by lawmakers could slow hiring and wage growth. Learn more about what tax reform could mean for American workers: http://politi.co/2xE3I1i ******

TRAVEL BAN UPDATE -- RULING THIS MORNING -- "Second judge rules against latest travel ban, saying Trump's own words show it was aimed at Muslims," by WaPo's Matt Zapotosky: "A federal judge in Maryland early Wednesday issued a second halt on the latest version of President Trump's travel ban, asserting that the president's own comments on the campaign trail and on Twitter convinced him that the directive was akin to an unconstitutional Muslim ban.

"U.S. District Judge Theodore D. Chuang issued a somewhat less complete halt on the ban than his counterpart in Hawaii did a day earlier, blocking the administration from enforcing the directive only on those who lacked a 'bona fide' relationship with a person or entity in the United States, such as family members or some type of professional or other engagement in the United States." http://wapo.st/2zy1sRb

CAMPAIGN STOP -- "DCCC raised $8.9M, NRCC $4.9M in September," by Maggie Severns ***More for Pros*** http://politico.pro/2zko9qW

AFTERNOON READ -- "A Marine Attacked an Iraqi Restaurant. But Was It a Hate Crime or PTSD?" by NYT's Dave Philipps in Portland, Oregon: "The DarSalam Iraqi restaurant, with its steaming plates of falafel and kebab, has for years served as a popular community gathering spot here. The Iraqi family who ran it felt welcome in this eclectic city.

"But all of that changed one night last spring when a man with a shaved head walked in and took a seat. As other customers chatted, he refused to order, instead staring at photos of the Iraqi countryside on the wall. After about a half-hour, he got up, walked over to the cash register, began cursing about Iraq, and threw a chair at a waiter's head, sending him dazed to the floor. ...

"Determined to take a stand, the authorities came down hard on the restaurant attacker, a 40-year-old California man named Damien Rodriguez. Though similar crimes typically merit misdemeanor charges, lawyers said, prosecutors charged him with felony-level hate crime and assault charges that carry a mandatory prison sentence. That is where people who know Mr. Rodriguez say the case took a wrong turn. Mr. Rodriguez was a decorated Marine sergeant major who was forced to retire after his arrest. He had

spent years in combat. Friends and family say his actions were not provoked by hate but by post-traumatic stress disorder for which, despite repeated efforts, he never received effective treatment." http://nyti.ms/2zy8R34

THE LATEST ON RUSSIA -- "GOP calls grow to end Russia investigations in Congress this year," by CNN's Manu Raju and Jeremy Herb: "In the House and Senate, several Republicans who sit on key committees are starting to grumble that the investigations have spanned the better part of the past nine months, contending that the Democratic push to extend the investigation well into next year could amount to a fishing expedition. The concerns are in line with ones raised by President Donald Trump, who has publicly and privately insisted he's the subject of a 'witch hunt' on Capitol Hill and by special counsel Robert Mueller.

"Democrats, meanwhile, are raising their own concerns that the congressional Russia probes are rushing witnesses -- including the testimony of President Donald Trump's son-in-law Jared Kushner -- as well as stalling appearances of other key Trump associates. ... Sen. Jim Risch, a senior GOP member of the Senate intelligence committee, said 'nobody wants to move this so quickly that we miss something,' but added: 'The question is how many weak leads can you follow?'" http://cnn.it/2zi93m4

-- "These Americans Were Tricked Into Working For Russia. They Say They Had No Idea," by BuzzFeed's Rosalind Adams and Hayes Brown: "Russia's most infamous troll farm recruited US activists to help stage protests and organize self-defense classes in black communities as part of an effort to sow divisions in US society ahead of the 2016 election and well into 2017. Four people contacted by what is believed to be the 'American Department' of the St. Petersburg-based Internet Research Agency told BuzzFeed News that while they found their contacts strange, they never suspected that they were the target of foreign recruitment." http://bzfd.it/2zy8XaE

ATTENTION HILL STAFFERS -- "Cups Could Be No More," by Roll Call's Alex Gangitano: "The beloved Cups & Company in the Russell Senate Office Building, a favorite on Capitol Hill, could lose its contract and end services. Charles and Kathy Chung have been operating Cups since 2001 and their contract has to be renewed every four years. But this time around, they are competing with other companies and will find out in November if Cups will still be operating." http://bit.ly/2zy5Y2f

-- PLEASE, don't do this. Cups is great.

Subject: BREAKING NEWS: Cutting Obamacare payments would boost insurance premiums by 20 percent, CBO says

Insurance premiums for Obamacare plans would rise 20 percent next year and people in small pockets of the country wouldn't have any insurance options if President Donald Trump scraps a key insurance subsidy, according to a new analysis from the CBO.

Trump has repeatedly threatened to pull the Obamacare subsidy - worth an estimated $7 billion this year - that helps insurers lower out-of-pocket health care costs for low-income customers. Trump must decide by early next week whether to make next month's payment.

The nonpartisan CBO also found eliminating the payments would increase the deficit by $194 billion over a decade because of higher spending on premium subsidies.

Scotts Miracle-Gro Leads Pack in Cutting Bee-Harming Pesticides

Posted August 07, 2017, 7:01 A.M. ET

By Tiffany Stecker

Scotts Miracle-Gro Co. made an unusual move last year when the company announced it would remove a class of insecticides linked to bee deaths from its Ortho brand of home and garden products by 2021.

The decision was timely: the company's main customers were, one by one, announcing goals to phase out products with neonicotinoids—neonics for short—from store shelves.

Lowe's, The Home Depot, and Wal-Mart accounted for more than 60 percent of Scotts Miracle-Gro's sales in 2016. All three have committed to remove neonics by 2018. One year after the announcement, the company is well ahead of its goal, having already ditched three chemicals in the class and plans to remove the last one well before 2021.

"It's a chance to differentiate us from our competitors," Tim Martin, vice president and general manager of the Ortho, Roundup and TomCat brands, told Bloomberg BNA. "There's plenty other control products that will help gardeners out in controlling the pests that might get into their roses and make them look less than beautiful."

Scotts Miracle-Gro, whose Ortho brand is now the leader in garden pesticides, has forged an image as the greener garden care company. It has the largest organic gardening business in the country, accounting for almost 10 percent of its $2.2 billion U.S. sales. The company has also invested in indoor and hydroponic growing, the primary method for growing cannabis as marijuana legalization spreads in states around the country.

In making its commitment, Ortho stepped into a heated debate over declining pollinator health. Though pesticides contribute to the problem, so do parasitic mites, landscapes barren of wild flowers and grasses, and climate change. The makers of neonicotinoids, and the farmers who benefit from their bug-killing properties, have urged the public not to jump to conclusions on the

chemicals' impacts on bees.

"The science shows that when the neonics are properly used, they're not posing a risk to pollinator colony health," Becky Langer, head of the North American Bee Care Program for Bayer CropScience, told Bloomberg BNA. Bayer, the original maker of the older neonic imidacloprid, also manufactures products to help beekeepers control parasitic Varroa mites that endanger honeybees.

"If we eliminate all of those choices, the customers lose access to the products which are allowing them to protect their homes and yards," Langer added.

Bayer CropScience sold its home pesticide business to French company SBM Développement last year, although the products still carry the Bayer name.

Neonics Out by 2021

Ortho's news of phasing out neonics ruffled the feathers of agricultural interests, an industry that has been skeptical of the claim that the chemicals are a primary cause of bee die-offs. The announcement to remove them from Ortho's product line was unconventional enough that Chairman and CEO Jim Hagedorn felt the need to explain the company's actions to shareholders.

"When consumers buy our products, they are physically interacting with the environment," he said on a May 3, 2016, quarterly earnings call last year, weeks after the announcement. "They care about the environment and they expect us to care as well. We can't simply play lip service to the issue. They need to know that we have their back."

"I'll just say this," Hagedorn added. "If we had the choice to make again, we would do the same thing. My only regret is we didn't do it sooner."

Scotts Miracle-Gro has made good on its promise well ahead of schedule. Ortho's pest-killers for trees, shrubs and flowers no longer contain three commonly used neonics: imidacloprid, clothianidin and dinotefuran. Acetimiprin, still used in some of Ortho's plant sprays, will be out well before the 2021 deadline, according to the company.

Neonics work by absorbing into a plant and spreading through the vascular system. These "systemic" insecticides have made the pesticide very convenient for users and reduces exposure to the surrounding environment. But they can also materialize in pollen that bees pick up and return to the hive, weakening the colony. Dust from seed coatings can also shake off and affect bees.

Colony Collapse Disorder Waning

Scientists generally agree that all pesticides pose a threat to pollinator populations, but there is debate over whether it's the top concern for overall bee health. A number of other factors—parasitic mites, loss of wild grasses and flowers and weather—also play a role.

Neonicotinoids came on the radar around 2008, when reports of bees fleeing their hives hit headlines. This mysterious "colony collapse disorder" drew attention to the importance of pollinators for food production and the environment.

Since, the situation has somewhat improved. The Department of Agriculture released a Aug. 1 survey that found a 40 percent drop in colonies lost due to symptoms associated with colony collapse disorder for honeybee operations with fewer than five colonies, and 27 percent less for

operations with five or more colonies.

A recent survey from the Bee Informed Partnership shows that beekeepers lost about 33.2 percent of colonies between April 2016 and March 2017, a notable decrease from the 2012-2013 peak of 45 percent but still a troubling rate for the sector.

Ortho's neonic alternatives work by killing bugs on contact, rather than systemically, Martin of Scotts Miracle-Gro said, eliminating any "collateral damage" to bees. The company's four neonic alternatives contain pyrethrins and spinosad, plant and bacteria-based pesticides, and sulfur.

The Drift Problem

But Ortho's alternatives are still sprays, meaning the product will drift on a windy day right as bees are feeding on nearby flowers, Frank Hale, an entomologist at the University of Tennessee Institute of Agriculture, said.

With neonics, homeowners can mix their product in a bucket of water, pour it around the base of a tree, cover it with mulch and let it seep to the roots to prevent the drift from happening.

"It could probably control the insects all summer," Hale told Bloomberg BNA. "With even a light breeze, that drift can drift across your whole yard. It can drift into your neighbor's pool."

Martin knows that a neonic phase-out isn't the only solution for helping pollinators. The company is working to improve the directions on the bottles and packages for the alternatives, like not spraying directly on a bloom, or applying when bees aren't active, like early in the morning or late in the evening, he said.

Human Error

Environmental groups that pressure retailers to stop selling neonics and plants treated with the pesticides, have taken notice.

"It's a significant step for a manufacturer of that size to be signaling 'hey, this is a problem, we want to be getting this out of out products'," Tiffany Finck-Haynes, a campaigner with the advocacy group Friends of the Earth, told Bloomberg BNA.

More than 120 retailers have made varying commitments to not sell plants or products with neonics, Finck-Haynes said. Friends of the Earth has led a push to get box-store retailers to phase out the chemicals since 2013.

The company also formed a partnership with the Pollinator Stewardship Council at the time of the neonic announcement. Michele Colopy, program director of the Pollinator Stewardship Council, said the move is just the first step in a long-term effort.

The human error of applying pesticides the wrong way is any product's biggest weakness, said Colopy.

"Our mission is not about banning pesticides," Colopy told Bloomberg BNA. "It's about education, it's about maintaining habitat."

"There seems to be a focus within the company [shifting away] from killing things to repelling

things," she added.

Invasive Species Plan Won't Shut Down Lake Michigan Shipping

Posted August 07, 2017, 01:12 P.M. ET

By David Schultz

The Army Corps of Engineers wouldn't shut down a crucial shipping channel between the Mississippi River and Lake Michigan as part of a draft plan to halt the spread of an invasive fish species.

The draft, released today, instead calls for installing numerous barriers at the Brandon Road Lock and Dam outside Chicago, including water jets, noise cannons, and an underwater electric fence. The corps said this and other measures should be the most effective at preventing the spread of the invasive Asian carp into the Great Lakes Basin. The carp has the potential to devastate the basin's fishing industry.

The corps estimated that these measures will cost more than $275 million to install, plus an additional $30 million in annual upkeep costs. The project could be complete by 2025 at the earliest, it said.

The corps also considered shutting down the lock entirely. While this would be the most effective at stopping the spread of the carp, it also would close an artificial channel that connects the Mississippi basin to the Great Lakes Basin. This option, however, would cause the the shipping industry to lose more than $300 million a year, the corps said.

Interior Calls for Changes in Sage Grouse Conservation Plans

Posted August 07, 2017, 03:13 P.M. ET

By Alan Kovski

Federal policy on the greater sage grouse in 11 states has room for changes, including modification of guidelines on oil and gas leasing as well as of the strictest protections aimed especially at mining, according to an Interior Department report released Aug. 7.

The report resulted from a policy review that Interior Secretary Ryan Zinke ordered in June. The agency called for better coordination of federal policies with state policies formulated to keep the bird from being listed for Endangered Species Act protections, a decision that could have had even greater impacts on energy, mining, and ranching sectors.

Zinke issued a statement saying he wanted agencies in his department "to immediately follow through on the short- and long-term recommendations," such as waivers and modifications for priority habitat protections.

Trump Foiling Bid to Shun Unwanted Ethanol Spat with Brazil

Posted August 07, 2017, 01:14 P.M. ET

By Mario Parker and Fabiana Batista

President Donald Trump's America First rhetoric is doing no favors for U.S. ethanol producers, who are hoping to avoid a trade fight with fuel buyers in Brazil.

The administration has started making noise about rising imports of Brazilian biofuel made from sugar. That's got the South American producer mulling tariffs or a quota on imports of U.S. fuel made from corn. A trade spat would be a much bigger problem up north because the U.S. ships more than four times as much to Brazil than it buys from the country.

The brewing trade dispute is gearing up to pit the world's two biggest ethanol producers against each other. As the rivalry heats up, hedge funds seem to be signaling that Brazil will be the winner -- speculators cut their bullish bets on corn last week while getting less bearish on sugar.

"The winds of protectionism are blowing in Washington," said Joel Velasco, a principal at Albright Stonebridge Group in Washington and a former representative for the Brazilian Sugarcane Industry Association, or UNICA. "The race to raise barriers can quickly sour things for U.S. and Brazil relations."

Raw-sugar futures have climbed 2.7 percent since the end of June, buoyed by the outlook for increased use in ethanol. Gains for crude oil have spurred Brazil's state-controlled oil company, Petroleo Brasileiro SA, to raise gasoline prices, boosting the allure of ethanol, which competes directly at the pump in a country where most cars can use either fuel. A recent fuel-tax hike is also favoring use of the biofuel.

Corn Wagers

Speculators cut their corn net-long position, or the difference between bets on a price increase and wagers on a decline, by 21 percent to 84,644 contracts in the week ended July 25, according to U.S. Commodity Futures Trading Commission data released three days later. By contrast, the net-bearish sugar position contracted by 19 percent.

The tension escalated last month, when the U.S. Environmental Protection Agency, in proposing annual renewable-fuel quotas, asked for public comments addressing the agency's concerns that Brazilian ethanol is being used to satisfy parts of the country's biofuel mandate.

Both countries have long imported from each other, with demand fluctuating along with corn and sugar price differentials.

While Brazil also depends on its shipments to the U.S., its No. 1 customer, its industry as a whole is not as reliant on exports because of a robust domestic market, making a trade dispute more of an issue for the American producers. The U.S.'s capacity exceeds its current domestic demand.

Bad Timing

It's also bad timing for U.S. producers who already lost a mammoth customer in China after the nation raised tariffs on American ethanol and an animal feed byproduct. While the American industry wrote a Feb. 7 letter to Trump asking him to intervene, those issues were absent in a May announcement that the U.S. reached an agreement with China on commodities, including beef.

To ward off a similar fate from Brazil, Washington-based trade groups for agriculture and biofuels are lobbying the Trump administration for a softer stance and for the South American nation to

reconsider its move toward a tariff.

The efforts seem to be helping. The South American nation on July 25 postponed an official decision from its trade chamber on the potential 20 percent tax. Groups including the U.S. Grains Council, the Renewable Fuels Association and Growth Energy applauded the move.

"This proposal, if implemented, would have wide-ranging and long-standing impacts on both our industries and the global fuel supply," the groups said in an emailed statement.

Still, it's hardly a settled debate. Brazil's industry group UNICA plans to push regulators to move against a recent flood of American shipments, according to Eduardo Leao, the group's executive director. One proposal is for an import quota of 600 million liters (158 million gallons), with a 20 percent tariff on shipments exceeding the limit, he said. That quota would be less than half the total shipments from the first half of this year.

U.S. ethanol exports to Brazil plummeted 68 percent in June, according to U.S. Agriculture Department data.

Even though gains for sugar prices mean that imports are sometimes favorable for Brazil, "they don't want to be on the hook," perpetually soaking up a surplus of U.S.-produced ethanol at the expense of their domestic industry, said Craig Irwin, an analyst at Roth Capital Partners LLC in Newport Beach, California.

Merkel Climate Goal in Doubt with Greenhouse Gases on the Rise

Posted August 07, 2017, 8:45 A.M. ET

By Brian Parkin

More than 12 straight months of rising greenhouse gas pollution in Germany are casting doubt on whether Chancellor Angela Merkel's government can meet climate targets.

"Without an immediate program of climate protection, the 2020 target will clearly be missed," according to a statement from Agora Energiewende, a Berlin-based researcher that published preliminary emissions data on August 7.

Carbon dioxide emissions in Europe's largest economy grew by 5 million tons, or 1.2 percent, to 428 million tons in the first six months, according to Agora. The rise in greenhouse gases responsible for global warming follows increased German emissions in 2016, which reached 906 million tons compared with 902 million tons the year before.

The data shows that Merkel's goal—cutting 2020 emissions by 40 percent relative to 1990 levels—is on the verge of failure. By last year, Germany had cut emissions by just 28 percent compared to output in 1990.

"The gap to reach a 40 percent reduction target for climate protection won't narrow, but will remain at about 150 million tons," Agora Director Patrick Graichen said in the statement.

A combination of economic growth, rising power generation and car sales contributed to Germany's

rising emissions last year, according to Agora. Goods and services in the world's fourth-biggest economy grew almost 2 percent, helping German car drivers add 3.4 million mostly-diesel automobiles to the road, a 4.5 percent increase from the year before.

Emissions from diesel combustion rose 6.5 percent in the first six months of this year. Carbon dioxide pollution from oil, gas and lignite combustion rose by almost 10 million tons for the six months through June 30. Emissions from hard coal dropped by 5 million tons, said Agora.

Lawmakers from Merkel's Christian Democratic party want Germany to drop over-ambitious climate targets and align the nation's policy with European Union-wide goals after next month's federal election. The EU wants to reduce emissions by 40 percent by 2030.

Germany's Ministry of the Environment didn't immediately respond to requests for comment. Coal plants run by RWE AG, Uniper SE and Vattenfall AB are to blame for slowing German progress toward greenhouse gas reduction goals, the ministry said earlier this year.

Merkel may seek to tread carefully over climate policy as the election nears. Climate change tops German voters list of worries, ahead of terror attacks, crime rates and the influx of refugees, according to a Kantar Emnid GmbH poll conducted on July 26-27. Some 71 percent of respondents said climate change "caused them personally most worry" according to the poll.

U.K. Clears $5.5 Billion Offshore Wind Farm for Scottish Power

Posted August 07, 2017, 9:23 A.M. ET

By Anna Hirtenstein

The U.K. government gave the green light to ScottishPower Renewables Ltd. to build a 1.2-gigawatt wind farm off the coast of Norfolk that may cost as much as $5.5 billion.

The East Anglia Three offshore wind farm received planning consent from Secretary of State for Business, Energy and Industrial Strategy Greg Clark, according to a statement from the developer. It will consist of 172 turbines, each more than twice as tall as the Big Ben clock tower in London. It may cost as much as $5.5 billion, according to analysts at Bloomberg New Energy Finance.

The developer will now move to the next phase where it prepares to bid in an auction for a contract for difference, which would fix a price for the electricity generated from the wind turbines. If successful, ScottishPower Renewables expects construction to begin in 2022 and for the project to be working by 2025.

"This project will need the U.K. to hold a third contracts for difference round in order to get a subsidy and find a route to market, as it will be built too late for it to compete in the second one," said Tom Harries, wind analyst at Bloomberg New Energy Finance.

ScottishPower Renewables is currently working on its East Anglia One wind farm, which is planned to be 714 megawatts in installed capacity and operational by 2020. It will sell its power at a price of 119 pounds ($155) a megawatt-hour. The developer expects to be able to deliver a lower price for East Anglia Three, according to the statement.

"Major contracts are already being delivered in towns and cities spread out all across the U.K.,," said Keith Anderson, CEO of ScottishPower Renewables. "Offshore wind has supported jobs and investment in Hull, Hartlepool, Lowestoft, Great Yarmouth, Grimsby, Teesside, Tyneside, Fife, Machrihanish and Belfast to name but a few. Large-scale projects like East Anglia Three will continue to help to encourage economic regeneration where it is needed most."

The East Anglia Three wind farm is expected to power nearly 1 million homes in the U.K. upon completion.

Big Oil's Dream of $65B Hidden Off Norway Is Fading Away

Posted August 07, 2017, 7:43 A.M. ET

By Mikael Holter

Norway's oil industry has been salivating for years over the Arctic Lofoten islands, which could hold billions of barrels of crude. It will likely have to keep dreaming.

The general election next month is unlikely to lift a deadlock that's keeping a ban on drilling off the environmentally sensitive archipelago as more and more Norwegians are turning their backs on the industry that helped make the country one of the world's richest.

"It's a dead issue," said Frank Aarebrot, a professor of political science at the University of Bergen.

Backed by unions and business, Norway's two biggest parties, Labor and the Conservatives, have long favored steps that could open up the area for exploration. But so far they have had to compromise with smaller parties that are determined to keep Lofoten oil-free.

That's because the area is a natural wonder. The waters off the rugged archipelago are home to the world's biggest cold-water coral reef and a breeding area for 70 percent of all fish caught in the Norwegian and Barents seas, according to WWF. The islands also host mainland Europe's biggest seabird colony. Opponents of oil exploration argue a spill could cause catastrophic harm and that Norway will run afoul of the Paris climate agreement if it expands exploration more.

Oil companies led by state-controlled Statoil ASA, the biggest Norwegian producer, say gaining access is key if the country wants to maintain production of oil and gas, which is forecast to fall again from 2025 after already dropping 12 percent since a 2004 peak. While the government estimates Lofoten could hold about 1.3 billion barrels of oil equivalent, industry group Konkraft has said resources could top 3 billion barrels. If it's all crude rather than gas, that would represent at least $65 billion in sales value at current prices.

"We're dependent on making new discoveries to have new projects in that time-frame," Statoil spokesman Bard Glad Pedersen said by phone. "That also underlines the urgency in an impact assessment for Lofoten and Vesteraalen."

The debate over Lofoten frames a wider discussion in Norway over what role western Europe's biggest oil and gas producer, which started pumping crude in the 1970s, should take in the fight against climate change. Some 44 percent of Norwegians would be willing to leave some oil in the ground if it helps cut emissions, according to an Ipsos poll done this month for Dagbladet.

The question is also whether there will actually be a need for the area's untapped crude. As prices for renewable energy drop and oil producers from Exxon Mobil Corp. to OPEC hike their forecasts for electric car sales, Big Oil has started talking about crude demand peaking as early as next decade.

While both Prime Minister Erna Solberg and her rival from Labor, Jonas Gahr Store, say Norway needs to become less reliant on oil, they also maintain that petroleum production will continue to play a big part for many years ahead. Production alone still accounts for about 12 percent of the economy, down from more than 20 percent before oil prices crashed in 2014, and the entire industry employs almost 200,000 workers.

The Compromise

Ascendant opponents such as the Green Party, which looks set to gain more seats in parliament next month, and environmental groups say Norway needs to start to phase out its oil industry, arguing that more production would be a breach to its commitments under the Paris climate accord. Greenpeace is suing the country to get it to stop exploring in the Barents Sea off Norway's northern tip.

In a sign that opponents of drilling are gaining traction, Labor in a "compromise" earlier this year said it would only seek to start an impact study in one of the three areas designated as potential oil blocks off Lofoten. But even such as small move is opposed by the Center Party and the Socialist Left Party, its potential ruling partners after the Sept. 11 vote. Polls show such a coalition would win a clear majority.

Even industry friendly politicians such Ola Borten Moe, deputy leader of the Center Party, says there's no need to push into Lofoten. "There's more than enough good acreage available," he said in an interview.

But the former oil minister, who was well-liked in the industry, stopped short of presenting Labor with an ultimatum, contrary to the Socialist Left which says it won't lend its support to any government that allows oil activity off Lofoten.

"We will spend political capital on this," Kari Elisabeth Kaski, a member of the party's governing body, said in an interview. "It's an important symbolic issue."

The parliamentary situation is fluid and Labor could potentially seek support to form a coalition from the Christian Democrats and the Liberal Party, two centrist groups that currently support the Conservative-led government. But they also oppose an impact study.

Any government run by Labor or the Conservatives would maintain stable terms for the oil industry, including taxes and acreage awards, even if several smaller parties are pushing for an overhaul of Norway's energy policy.

The price for that may well be that Lofoten is left alone forever.

SCRUTINY MOUNTS OF PRUITT'S HABITS: Critics of EPA Administrator Scott Pruitt increasingly see a chief who avoids contact with the broader public and distrusts even his own agency's career staff, opting instead for meetings with like-minded industry and political leaders that could prove useful in a future political run, Pro's Emily Holden and Alex Guillén report. The Trump administration doesn't consider Pruitt's $58,000 in charter and military flight expenses to be as troubling as former HHS Secretary Tom Price's and now consider the controversy resolved after Price's resignation last week, one administration official said.

Environmentalists and other critics say Pruitt's spending is at best tone-deaf given agency budget reductions and at worst speaks to paranoia. Christine Todd Whitman, a Republican who ran EPA during President George W. Bush's first term, said she recalls taking chartered planes only while visiting remote areas of Alaska that were otherwise inaccessible. "Most people have to wait in line for a long time for planes," Whitman said. "The fact that you just turn around and order a private plane ... that starts to look really problematic. It's a lot of money." The agency said the flights were all cleared by ethics officials and say Pruitt's unprecedented around-the-clock security protection is necessary given increased threats.

Others point to who he met with as especially revealing. An analysis of Pruitt's broader schedule shows he's met most often with oil and gas executives, followed by agriculture and farming interests. And the former Oklahoma attorney general has paid especially close attention to his home state. Of at least 30 meetings or speaking engagements Pruitt had with oil and gas executives or trade groups, seven appear to have connections to Oklahoma. He's also spoken at events or held calls with right-wing policy groups that spend little of their time on environmental issues, such as the Family Research Council, Council for National Policy, State Policy Network and Federalist Society.

PRUITT LIEUTENANTS HOP ONTO HOTSEAT: Sparks are guaranteed to fly as Senate Environment and Public Works Committee hears from four EPA nominees and an NRC candidate today. Expect Democrats to pay close attention to William Wehrum, the EPA air nominee, and his long history as an industry attorney, the same issue that kept him from this post in the pre-nuclear option George W. Bush era. Since leaving EPA a decade ago, Wehrum's client list is a who's who of industry groups, including the American Petroleum Institute, American Fuel & Petrochemical Manufacturers and the Utility Air Regulatory Group. Wehrum just last week helped industry groups challenge OSHA's silica rule in court — though the judges indicated they weren't buying his arguments that the agency had failed to prove new health benefits.

Heavy focus expected on Dourson: The other nominee likely to face heat is Michael Dourson, nominee for EPA chemicals and pesticides chief. The job will be vital as EPA works to implement the reformed Toxic Substances Control Act. Critics were also incensed when Pruitt earlier this year rejected agency scientists' suggestion to ban the pesticide chlorpyrifos. Dourson's work as an independent toxicologist often concluded that safe levels of various chemicals and pesticides were significantly higher than the findings of government and university scientists. Dourson is also the author of a series of self-described "science-Bible stories."

Also slated to attend: Matt Leopold, the nominee for EPA general counsel, and David Ross, the pick to run EPA's water office. Leopold is a Florida lawyer who was previously the Florida Department of Environmental Protection's general counsel. Ross heads the Wisconsin Department of Justice's Environmental Protection Unit and previously helped challenge the Obama administration's WOTUS rule, which EPA is working to repeal and replace. Joining the EPA nominees is Democrat Jeff Baran, who is up for renomination to the NRC through 2023.

If you go: Chairman John Barrasso will gavel in the hearing at 10 a.m. in Dirksen 406.

WHAT ABOUT THE BOSS?: Pruitt himself hasn't been to an EPW hearing since he was confirmed in February, and the committee's top Democrat Tom Carper is out of patience. "It's almost nine months into the administration and we're still waiting for the head of EPA to come in and defend the administration's budget for EPA, which is appalling," Carper told ME.

The House Energy and Commerce Committee has never heard from Pruitt in a public hearing, though it is traditional for the EPA boss to testify there at least once a year. Illinois Republican John Shimkus , who chairs the E&C environment subcommittee, says a visit is overdue, especially in light of the heightened scrutiny of his spending. Shimkus said he thinks Cabinet officials should fly commercial, just like members of Congress do. "We're also stewards of taxpayers' dollars and these agencies, we're asking them to do more with less," Shimkus told ME Tuesday. "It probably would have been better had he come earlier than later."

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Joyce Foundation's Ed Miller first identified Rep. Fred Grandy, aka Gopher from *The Love Boat*, as the Iowa congressman. For today: Who did Nancy Pelosi succeed when she first won election to Congress in 1987? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ADMINISTRATION PICKS ARMY CORPS CHIEF: Trump announced late Tuesday his choice of R.D. James to lead the Army Corps of Engineers. He's previously served on the Mississippi River Commission where he's provided water resources advice to several administrations and Congress. James has also served as president of the Southern Cotton Ginners Association. Among other responsibilities, James would have a major role as the Trump administration revamps the Waters of the U.S. regulation. An April report made it sound like James was lukewarm on taking the post: "I'm a country boy, and I can't imagine living up there, but, if chosen, I will, and I will do my very best."

TRUMP STRIKES HARSH TONE IN PUERTO RICO: Visiting the devastated island of Puerto Rico Tuesday, President Donald Trump warned the island's millions of residents — many of whom have been told not to expect electricity or potable drinking water for months — they had "thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico" and avoided a "real catastrophe" like Hurricane Katrina. As POLITICO's Matthew Nussbaum and Nolan D. McCaskill note, Trump maintained his boasts about a wildly successful response effort that hasn't matched the reality of the hurricane-ravaged island.

At a stop later in the day Trump insisted residents didn't need flashlights (it's unclear what he meant) even though 95 percent of the island lacks electricity. "The power grid, honestly, was devastated before the hurricanes even hit. And then the hurricanes hit and they wiped them out," Trump said, as he repeatedly seemed to blame the island for its poor infrastructure and financial situation. Joining him on the trip were Pruitt and Energy Secretary Rick Perry.

POLITICO's Burgess Everett and Seung Min Kim report the administration will today ask for $13 billion in hurricane recovery funding, $16 billion in flood insurance relief and more than $500 million for wildfires with congressional consideration likely in mid- to late-October.

BISHOP PROBES YEARS OF NON-COMMERCIAL TRAVEL: House Natural Resources Chairman Rob Bishop and Rep. Bruce Westerman sent a letter to Interior Secretary Ryan Zinke Tuesday asking for all records of non-commercial travel by the Interior secretary since the start of the Obama administration, as well as copies of department policies on the matter. "When partisan opportunists conflate diligent conformance to scandal, no one wins," they wrote. "Let's get all facts on the table, ensure taxpayers are protected and proceed with the peoples' business."

More questions raised for Zinke: A group of 26 House Democrats, led by Nanette Barragan and Don Beyer, asked Zinke in a Tuesday letter to immediately disclose all details of his use of charter aircraft.

Zinke doesn't plan to repay the government for his charter flights, the Associated Press reports.

NUCLEAR WASTE BILL ON ICE — FOR NOW: Shimkus said plans to bring a committee-passed nuclear waste package, H.R. 3053 (115), to the House floor are on hold for now as Nevada lawmakers, some of the most vocal opponents of the measure, deal with Sunday's massacre. "In light of the tragedy, there's no desire to move quickly," he said.

BISHOP: SILENCER CONTROVERSY 'SILLY': Delaying a broad sportsmen's package over language loosening gun silencer restrictions amid the response to the Las Vegas tragedy would be silly, Bishop told reporters. As your ME host reports, Bishop added: "If that's a hang-up, that's sad that that's a hang-up." GOP sources have previously indicated the SHARE Act, H.R. 3668 (115), likely won't come to the floor anytime soon after the shooting that killed 59 people and injured hundreds others.

COAL, NUCLEAR CAUTIOUSLY BACK PERRY'S PLAN: Representatives of the coal and nuclear industries offered qualified support before a House Energy and Commerce subcommittee for Perry's plan to extend their plants a lifeline through FERC, Pro's Darius Dixon reports.

Nuclear Energy Institute CEO Maria Korsnick voiced support for an extended public comment period while Paul Bailey, who heads the American Coalition for Clean Coal Electricity, said he'd back the proposal if forced to answer yes or no with "a huge caveat [that] we're still looking at it."

Lotsa wiggle room: FERC General Counsel James Danly told Senate lawmakers Tuesday the commission intends to act on DOE's resiliency pricing rulemaking proposal within the 60 days outlined by Perry, but he left plenty of room to tease out what that might look like, Pro's Darius Dixon reports.

Not giving up: Three new groups — the Energy Storage Association, the American Biogas Council, and the Business Council for Sustainable Energy — have linked arms with the other 11 energy groups asking DOE and FERC to slow down. The groups were spooked by FERC's decision on Monday to take comments on DOE's proposal even before the rulemaking was published but it's unclear how the processes will mesh. They have asked FERC to respond by Friday to their request for an extended comment period and technical conference.

GREENS PLAN SUIT OVER MISSED OZONE DEADLINE: A group of 10 environmental groups said Tuesday they plan to sue Pruitt after he missed a deadline to decide which parts of the U.S. do or do not meet the 2015 ozone, standard, Pro's Alex Guillén reports. In response, an agency spokesman told ME: "The agency is continuing to work closely with the states to work through the designations process for the 2015 ozone standard."

SEIA GOES TO THE WHITE HOUSE: The Solar Energy Industries Association has a meeting today at the White House with presidential aides and staff from DOE, USTR and other cabinet agencies, Abigail Ross Hopper from the Solar Energy Industries Association said Tuesday. SEIA is trying to ward off tariffs on imported solar panels that will ultimately be decided by the president. The group would not specify who they'd be meeting with. "We are speaking with all of those folks who have a seat at the table and will help advise the president what the right decision is," Hopper said. "This is a conversation about American jobs, American blue collar jobs from many of the states that voted for our president."

LET'S GET TOGETHER, ROYALLY: Interior convenes the initial meeting of its new Royalty Policy Commission today. Counselor to the Secretary for Energy Policy Vincent DeVito will chair the commission, which he said will help with "looking at financial elements [at Interior] that have not been looked at in quite some time." The department caught flak earlier this year for stacking the commission with industry representatives but failing to fill slots reserved for public interest groups. NGOs said they will provide public comments, however, with The Wilderness Society set to ask Interior to increase royalty rates for oil and gas developed on public land from the current 12.5 percent. "Remarkably, for oil and gas, this rate has not changed since the 1920s," TWS said in prepared remarks seen by ME.

MORE JABS AT MANCHIN FROM BLANKENSHIP: Former West Virginia coal executive Don Blankenship released an ad Tuesday attempting to link Sen. Joe Manchin to both the Benghazi consulate attack and the deaths at Upper Big Branch Mine, Campaign Pro's Kevin Robillard reports . The spot, airing on state television, provocatively asks: "Does Manchin have blood on his hands?" Blankenship, who served a year in prison for conspiring to violate mine safety standards, has previously mused about challenging Manchin for his Senate seat as a Republican.

MURRAY JOBS SUIT REACHES SUPREME COURT: Coal producer Murray Energy asked the Supreme Court Tuesday to conclude Section 321(a) of the Clean Air Act requires EPA to produce a detailed study of its effects on coal jobs, Pro's Alex Guillén reports . A federal appeals court said that study represents a discretionary duty after a district court judge originally called it a mandatory one. But keep your expectations in check: It'll likely take the administration months to respond and there's no guarantee SCOTUS will ultimately hear the appeal.

AHEAD OF THE CLASS: Solar energy capacity in 2016 was 4,500 percent higher than the government thought it would be 10 years earlier, and wind supply is 350 percent above projections, the Natural Resources Defense Council finds in a report out Tuesday. "When you look at how clean energy development has exploded beyond official government projections from just 10 years ago, it offers hope that its potential will continue to far surpass expectations and we'll meet our U.S. climate goals," Amanda Levin, co-author of the report, said.

CEI SUES FOR PARIS DOCUMENTS: The Competitive Enterprise Institute filed a lawsuit Tuesday seeking emails and text messages concerning the communications of three former Obama-era State Department officials in the lead up to the Paris climate agreement being reached. In particular, the lawsuit seeks records related to Todd Stern and Sue Biniaz's communications with officials at NRDC and the World Wildlife Fund.

LAWSUIT FILED OVER ADVISORY BOARD RECORDS: The Center for Biological Diversity filed a lawsuit Tuesday seeking NOAA records concerning its decision to end a federal climate change advisory panel — Advisory Committee for the Sustained National Climate Assessment — over the summer. Copy of the filing here.

MOVERS, SHAKERS: State Energy & Environmental Impact Center at NYU School of Law, which aims to help state attorneys general fight Trump environmental rollbacks, today announced the additions of **Elizabeth Klein** as deputy director and **Chris Moyer** as communications director. Klein was most recently Interior's associate deputy secretary under the Obama administration and Moyer was most recently deputy communications director for California Attorney General Xavier Becerra.

Former FERC Commissioner Colette Honorable has joined the Bipartisan Policy Center as a senior fellow.

Stories from POLITICO Pro

Pruitt critics see political motives in flights and meetings Back

By Emily Holden and Alex Guillén | 10/03/2017 07:02 PM EDT

EPA Administrator Scott Pruitt is facing growing political blowback about his taxpayer-funded spending and meetings with industry allies, with critics seizing on his expensive flights, $25,000 soundproof phone booth and 18-person security detail just days after lavish travel costs brought down former HHS Secretary Tom Price.

The travel expenses drawing the most scrutiny for Pruitt — $58,000 at last count — don't come close to the more than $1 million that taxpayers had spent to fly Price on private and government planes since May. But to his detractors, the EPA chief's spending on charter and government flights, eavesdropper protection and round-the-clock security point to an administrator who avoids contact with the broader public and distrusts even his own agency's career staff.

Instead, according to multiple interviews and POLITICO's review of agency travel records, Pruitt spends much of his time meeting with like-minded industry and political leaders — the kind of people who could back him in a future political campaign — but meets relatively seldom with environment and public health groups that oppose President Donald Trump's policies.

Pruitt, who spent six years as Oklahoma's elected attorney general, is already facing an EPA inspector general investigation for taking at least 10 commercial flights in March, April and May to his home state, where he is widely seen as a potential candidate for U.S. senator in 2020. Since then, he's been back to Oklahoma several times, including to meet with oil and gas companies and state political leaders and participate in media interviews, according to his published schedule.

Agency records released in the past week show that he has also spent tens-of-thousands of dollars on four private or government flights, including more than $36,000 to travel on an Air Force plane from Cincinnati to New York in June. House Democrats have asked the inspector general to review those as well. Senate Judiciary Chairman Chuck Grassley (R-Iowa) also cited some of Pruitt's travels last week in a letter urging Trump to rein in Cabinet spending.

The White House has taken note of the negative news coverage surrounding Pruitt's travels but doesn't consider his expenses to be as troubling as Price's, one administration official told POLITICO on Tuesday. Administration officials have said they consider the travel-expense controversy to have been resolved by Price's departure, which was quickly followed by an order requiring Cabinet officials to get chief of staff John Kelly's approval for almost any trips on

chartered or government planes.

But environmentalists and other critics say the records raise questions about Pruitt's priorities.

Pruitt "has traveled extensively and spent an inordinate amount of time in Oklahoma, which begs the question of whether or not he's laying the groundwork for a campaign," said Tiernan Sittenfeld, senior vice president of government affairs at the League of Conservation Voters.

Pruitt's staff has defended all his trips, and has said the four non-commercial flights were approved by ethics officials and were necessary for him to make it to key meetings.

But Christine Todd Whitman, a Republican who ran EPA during President George W. Bush's first term, said she recalls taking chartered planes only while visiting remote areas of Alaska that were otherwise inaccessible.

"Most people have to wait in line for a long time for planes," Whitman said. "The fact that you just turn around and order a private plane ... that starts to look really problematic. It's a lot of money."

Whitman said Pruitt's other expenses are troubling, too. The agency already had a secure enclosure where people can talk and use the phone protected from eavesdropping — but, as The Washington Post reported last week, EPA is spending nearly $25,000 to install a customized private phone booth that is outfitted against eavesdropping inside his office at DC's Federal Triangle.

Whitman said she "can't imagine what the reasoning is behind this, except the paranoia."

One current EPA employee, who requested anonymity to discuss internal agency affairs without authorization, told POLITICO that it's difficult for anyone outside Pruitt's office to hear someone speaking inside. A few hand-picked administrative staffers work outside the office's thick wooden doors, and beyond that are several unoccupied rooms, which are also guarded by security.

And Whitman said EPA administrators typically haven't needed the around-the-clock protection that Pruitt is demanding. "The problem that I have with it is not that he's getting the security details but that it's at the same time they're cutting the budget of the agency," she said.

Pruitt's aides say he needs his security detail, which is far bigger than what any previous administrator had, to guard him against increased threats. On one of his trips, the agency decided that his security needs warranted chartering a private flight so that Pruitt wouldn't have to fly commercial without a bodyguard or wait for a delayed plane.

His guards were initially drawn away from other duties in EPA's enforcement office until the agency made an exception to a hiring freeze to bring on more officers.

Eric Schaeffer, executive director of the Environmental Integrity Project and a former director of

civil enforcement at EPA, called Pruitt's travel habits "arrogant" and "tone-deaf."

"What would Republicans have done if Gina McCarthy had done this?" Schaeffer said, referring to former President Barack Obama's second-term EPA chief. "They would have gone ape. And now they're not concerned."

Penn State climate researcher Michael Mann, a frequent critic of Trump's and Pruitt's environmental policies, said via email Monday that "ethical violations demand that Pruitt step down."

"And by ethical violations, I don't just mean his abuse of the public trust through frivolous personal use of government-funded private plane trips," Mann added. "I also mean the manner in which he has betrayed the citizens he is supposed to represent by endangering them through the dismantling of environmental protections built up over decades, under Democratic and Republican administrations."

Critics say they are most upset because Pruitt's spending comes amid potential budget cuts. He has indicated, for example, that he wants to end payments to Justice Department lawyers who force polluters to pay to clean up Superfund sites, The New York Times reported last week.

They say his travel records are just as telling in showing whom he chooses to meet with as EPA administrator.

His four non-commercial flights included a trip to visit with Oklahoma farmers, meetings with Republican officials in North Dakota and a tour to criticize a Colorado environmental project mishandled by the Obama administration.

In July, he flew in an Interior Department plane from Tulsa to Guymon, Okla., where he met with farmers as part of a tour highlighting his effort to withdraw an Obama administration water rule. Pruitt and his aides then continued in the plane to visit state officials in Oklahoma City. The total cost for both legs was $14,434.50.

EPA declined to provide a more detailed schedule or a list of business leaders who were present. Spokesman Jahan Wilcox provided local news clips that report 90 farmers and ranchers from Oklahoma, Texas and Kansas attended.

In August, Pruitt toured the site of the Gold King Mine spill, a 2015 mining-waste disaster caused by EPA and its contractors, for a visit in which he said the Obama administration had "failed those who counted on them." He got there via a plane that EPA had chartered from Denver to Durango, Colo., at a cost of more than $5,000.

The agency says Pruitt had initially traveled on a commercial flight to Denver, only to learn that his planned connection to Durango would be delayed by several hours. Individual seats were available on other commercial planes but didn't have enough space for Pruitt's bodyguard or other staff, the agency said.

In a third trip, Pruitt had lunch with North Dakota Republicans — Gov. Doug Burgum, Sen. John Hoeven and Rep. Kevin Cramer — in Fargo. He and two staffers then flew with the governor on his state plane to meet farmers and tour an energy research center that studies ways to keep the state's struggling coal industry alive. The ride cost EPA $2,144.40, according to The Washington Post. A spokesman said Pruitt needed to fly with Burgum to keep up with the governor's schedule. Driving between the two cities would have taken about an hour and a half.

The flight with the biggest price tag, $36,068.50, was on an Air Force plane from Cincinnati to New York's John F. Kennedy International Airport on June 7. Pruitt then flew on to Rome, on what Wilcox described as a scheduled commercial flight, where he arrived several days early for a meeting with foreign environment ministers. Wilcox said Pruitt had to find a way to New York after the president invited him at the last minute to Cincinnati to promote infrastructure development.

EPA spokespeople have said they explored all other options for the Rome trip, although they did not comment on why Pruitt couldn't have flown commercially from Cincinnati to another U.S. international hub and then to Italy.

Trump's event with Pruitt was set to conclude by 2:10 p.m., according to the president's schedule. Pruitt's public schedule for the following day, June 8, didn't show any public meetings until 1 p.m., at the U.S. Embassy, and 2 p.m., with a business roundtable — which could have left time for even a lengthy international flight. Travel sites show that on a typical Wednesday, multiple options from Cincinnati to Rome would fit the time window and cost around $3,000 per person when purchased last-minute.

On June 9, Pruitt met with officials from the Catholic Church and attended a judicial roundtable. Not until June 10 and 11 did he met with foreign ministers, before leaving the high-profile event early to make it back for a Cabinet meeting at the White House on the morning of June 12, according to his schedule. During the trip, EPA tweeted pictures of Pruitt rolling pasta and eating prosciutto with Italian environment minister Gian Luca Galletti, which critics were quick to highlight when he left ahead of schedule.

A POLITICO analysis of Pruitt's broader schedule, as shown in EPA records, demonstrate he's spent much of his time meeting with key industries, including ones back home. He's met most often with oil and gas executives, followed by agriculture and farming.

Of at least 30 meetings or speaking engagements Pruitt had with oil and gas executives or trade groups, seven appear to have connections to Oklahoma. He's spent time with executives of companies whose employees donated at least $37,000 for his 2014 campaign to be Oklahoma attorney general, according to state campaign finance records.

For example, Pruitt met in March with representatives from Oklahoma Gas & Electric, whose executives were a major source of cash for his 2014 reelection campaign. Pruitt has also had face-to-face sit-downs with John Minge, the head of BP America, Duke Energy's Lynn Good and the boards of the National Mining Association, the American Coalition for Clean Coal Electricity, the American Petroleum Institute and American Fuel & Petrochemical Manufacturers.

Pruitt spends far more time with industry and political leaders than with environmental advocates, according to two months of calendars released under public records requests and another six months of far less detailed schedules that the agency has published.

EPA maintains a list of environmental or public health groups the agency has met with, but they do not appear officially on Pruitt's schedule.

The EPA chief has also spoken at events or held calls with right-wing policy groups that spend little of their time on environmental issues. For example, he had a call in May with the Family Research Council, a conservative group that lobbies against abortion rights and believes homosexuality is "unnatural" but has never filed comments on EPA proceedings.

In the same month, he had a speaking engagement with the Council for National Policy, which advocates for limited government and "Judeo-Christian values," and was on a call with the State Policy Network, an umbrella group for state-level conservative think tanks.

He continues to appear at events for the Federalist Society, a group that advocates for an originalist interpretation of the Constitution and has become an established gatekeeper for conservatives seeking judicial posts.

Price resigns from HHS after facing fire for travel Back

By Dan Diamond, Rachana Pradhan and Adriel Bettelheim | 09/29/2017 04:40 PM EDT

HHS Secretary Tom Price resigned Friday in the face of multiple federal inquiries and growing criticism of his use of private and government planes for travel, at a cost to taxpayers of more than $1 million since May.

The White House said the former seven-term Georgia congressman, 63, offered his resignation earlier in the day and that President Donald Trump had accepted it.

Price becomes the first Trump administration Cabinet secretary to step down. The White House said Trump asked Deputy Assistant Health Secretary Don Wright to serve as acting secretary of the agency, which has an annual budget $1.15 trillion and includes the Medicare and Medicaid programs, as well as the FDA, NIH and CDC.

As late as Thursday, Price said he believed he had the president's support. But the tumult surrounding his travel became another distraction for an administration already reeling from the defeat of repeated Senate efforts to repeal Obamacare and criticism for its hurricane relief efforts in Puerto Rico.

Price ran afoul of Trump in part because his actions seemed to symbolize everything the president had inveighed against on the campaign trail by vowing to "drain the swamp." The fallout extended to the entire Cabinet Friday night when the White House announced that chief of staff John Kelly must approve almost all travel on "government-owned, rented, leased, or chartered aircraft."

Price, in his resignation letter, expressed regret that "recent events" distracted from efforts to overhaul the health care system. "In order for you to move forward without further disruption, I am officially tendering my resignation as the Secretary of Health and Human Services effective 11:59 PM on Friday," he wrote.

Senate Democrats quickly served notice they were preparing for a potential confirmation fight over Price's successor, saying the next HHS secretary must not undermine Obamacare. Under Price, the department cut the law's enrollment period in half and slashed advertising and outreach for the enrollment period starting in November.

"The next HHS secretary must follow the law when it comes to the Affordable Care Act instead of trying to sabotage it," said Senate Minority Leader Chuck Schumer.

"Tom Price's replacement needs to be focused on implementing the law as written by Congress and keeping the president's promise to bring down the high cost of prescription drugs," Senate Finance ranking Democrat Ron Wyden of Oregon said in a statement.

House Speaker Paul Ryan, a close ally, praised Price as a dedicated public servant. "His vision and hard work were vital to the House's success passing our health care legislation," Ryan said in a statement.

POLITICO revealed that Price flew at least 26 times on private aircraft at a cost of hundreds of thousands of dollars, a sharp break with his predecessors' practice. Many of Price's flights were between major cities that offered inexpensive alternatives on commercial airlines, including Nashville, Philadelphia and San Diego.

On some of those trips, Price, an orthopedic surgeon, mixed official business with leisure. He took a government-funded private jet in August to get to St. Simons Island, an exclusive Georgia resort where he and his wife own land, a day and a half before he addressed a medical conference he and his wife have long attended. In June, HHS chartered a private jet to fly Price to Nashville, where he owns a condominium and where his son resides. Price toured a medicine dispensary, spoke to a local health summit organized by a friend and had lunch with his son, an HHS official confirmed.

Price also used military aircraft for multi-national trips to Africa, Europe and Asia, at a cost of more than $500,000 to taxpayers. The White House said it had approved those trips but not the private jets within the United States.

Price tried to defuse the controversy by promising on Thursday to reimburse the government for

the approximately $52,000 cost of his own seat on his domestic trips. But that wasn't enough to tamp down the scandal, which had infuriated the president and prompted a bipartisan inquiry from the House Oversight Committee and separate calls for accountability from lawmakers including Republican Sen. Chuck Grassley. The inspector general of Price's own agency is reviewing if Price complied with federal travel regulations.

The White House put Cabinet officials on notice Friday that it would crack down on use of private planes, telling them chief of staff John Kelly must approve almost all travel on "government-owned, rented, leased, or chartered aircraft."

Mick Mulvaney, director of the Office of Management and Budget, sent out the memo soon after Price's resignation was made public, reminding department and agency heads that, by regulation, "Government-owned, rented, leased, or chartered aircraft should not be used for travel by Government employees except with specific justification."

The issue of Cabinet members' travel has already extended beyond Price: POLITICO reported Interior Secretary Ryan Zinke and his aides took several flights on private or military aircraft, including a $12,000 charter plane to take him to events in his hometown in Montana and private flights in the Caribbean. Zinke dismissed the furor as a "little B.S." during a Friday appearance at the Heritage Foundation.

Price's wife, Betty, accompanied him on the military flights, while other members of the secretary's delegation flew commercially to Europe.

HHS spokeswoman Charmaine Yoest said Price reimbursed the agency for his wife's travel, but declined to elaborate.

White House officials have groused about Price's frequent travels, with one senior White House official saying the HHS secretary was "nowhere to be found" as they mounted a last-ditch unsuccessful push to repeal Obamacare.

Congressional Democrats attacked Price for advocating spending cuts to the health agencies he oversaw and health care programs while spending taxpayer dollars on private jets. "There could not be a clearer statement of the Trump administration's priorities," Sen. Maggie Hassan (D-N.H.) said. Key Democrats overseeing health issues in Congress had formally requested that HHS's inspector general review Price's travel practices.

In June, Price defended a proposed fiscal 2018 budget for HHS that included a $663,000 cut to the agency's $4.9 million annual spending on travel, or roughly 15 percent. "The budgeting process is an exercise in reforming our federal programs to make sure they actually work — so they do their job and use tax dollars wisely," Price told the Senate Finance Committee on June 8.

Ethical questions dogged Price even before questions about his travel arose. During his Senate confirmation hearing to helm HHS, Price faced pointed questions about his personal investments in health care companies during his time in Congress. Democrats called on government ethics officials to investigate Price's health care stock trades, following reports that he got a sweetheart

deal from a biotech company and invested in Zimmer Biomet, a medical device-maker, just days before writing legislation that would have eased regulations on the sector.

The Senate confirmed Price by a 52-47 margin in February after he maintained full Republican support.

Price carved out a reputation as a staunch fiscal conservative during his decade-plus tenure in the House of Representatives. He generally supported reducing government spending on health care while shifting more of the financial burden onto individuals. Like most conservatives, he's supported privatizing Medicare so that seniors would receive fixed dollar amounts to buy coverage and limiting federal Medicaid spending to give states a lump sum, or block grant, and more control over how they could use it.

Trump expected to pick Bush EPA official turned industry lawyer for agency's air office
Back

By Alex Guillén | 07/24/2017 10:03 AM EDT

President Donald Trump is expected to nominate Bill Wehrum, a former George W. Bush-era EPA official, to run the agency's powerful air office, according to two sources outside the administration familiar with the plans.

While Wehrum would bring critical knowledge of EPA's workings and environmental law, he also represents several high-profile industry groups in lawsuits challenging numerous Obama-era EPA regulations, meaning he may face recusal and conflict issues similar to EPA Administrator Scott Pruitt.

Wehrum served as acting assistant administrator for the Office of Air and Radiation from 2005 to 2007. Bush pulled Wehrum's formal nomination to that post after Democrats blocked him as too industry-friendly, though the new simple majority threshold on nominees likely will prevent that from happening again. Wehrum spent 2001-2005 as counsel to Jeff Holmstead, Bush's first air administrator. Holmstead emerged last month as a possible Trump pick to be EPA deputy administrator, though coal lobbyist Andrew Wheeler remains the frontrunner for that job.

In a 2013 interview with Law360, Wehrum said that despite the Supreme Court's 2007 ruling that said EPA has the authority to regulate greenhouse gases, he believes "Congress never intended the EPA to address an issue such as climate change under the Clean Air Act."

He also called for lengthening the review cycle for National Ambient Air Quality Standards beyond five years — House Republicans recently passed a bill that would stretch that to ten years — and said the Obama administration tried to shift power away from the states and toward

EPA, comments since echoed by Pruitt.

And in a 2015 Wall Street Journal editorial, Wehrum said the EPA-caused Gold King mine spill highlighted how the agency "often criminalizes actions that are nothing more than accidents, many far less damaging to the environment than the Animas River disaster." That spill fouled Colorado's Animas River and downstream areas for several weeks before water quality returned to normal and the river was reopened to recreational activities.

Wehrum pointed to the 2014 chemical spill that fouled drinking water for hundreds of thousands of West Virginia residents, which led to an EPA investigation and the company's bankruptcy, as an example of "unjust" treatment.

For the last decade Wehrum has been a partner at the high-powered D.C. law firm Hunton & Williams, where he currently represents high-profile clients, including two leading oil and gas industry lobbying groups, in a number of ongoing lawsuits against EPA.

Wehrum represents the American Petroleum Institute in a challenge to EPA's methane rule for new oil and gas wells, as well as the separate legal battle over EPA Administrator Scott Pruitt's decision to stay that rule while under review, where API has defended Pruitt's stay.

He also represents either API or American Fuel & Petrochemical Manufacturers, a refinery sector group, in lawsuits over a 2015 rule limiting pollution from oil refineries; a "regional consistency" rule that governs how court rulings apply to nationwide EPA regulations; and permitting rules for Indian lands.

He represents the Utility Air Regulatory Group, a coalition that challenges EPA air regulations, in a legal challenge over an Obama-era rule meant to decrease explosions at chemical plants and other facilities. Pruitt has put that rule on hold while it is under review.

Wehrum helped the Gas Processors Association challenge two greenhouse gas reporting rules. He took an EPA boiler regulation to court on behalf of a coalition of industry groups, including the American Chemistry Council, the National Association of Manufacturers and the American Forest & Paper Association. He is challenging an EPA emissions rule for brick manufacturers on behalf of an industry group. And he represented construction interests in various lawsuits against the Labor Department, including an ongoing challenge to the Occupational Safety and Health Administration's 2016 silica exposure rule.

Wehrum did not immediately reply to a request for comment on Monday. EPA and White House spokespeople did not immediately respond to a request for comment.

EPA nominee's case against OSHA rule draws skepticism from judges Back

By Alex Guillén | 09/26/2017 12:24 PM EDT

Federal judges seemed skeptical today of arguments made by William Wehrum, President Donald Trump's pick to head EPA's air office, against the Occupational Safety and Health Administration's silica rule.

Wehrum, an attorney at Hunton & Williams, argued on behalf of various industry groups that OSHA had not proven that lowering the silica standard would provide any significant health benefits.

"OSHA had a thumb on the scale" because it had already decided to lower the standard and had "lost objectivity," Wehrum told a three-judge panel at the D.C. Circuit Court of Appeals.

Judge David S. Tatel called Wehrum's comment "curious" and pointed to reams of data and studies OSHA used to justify the new standard.

Chief Judge Merrick Garland noted that there are some legitimate disagreements among scientists about silica's health effects — but he said the law says the regulation in such situations

should lean in favor of caution. "There's supposed to be a thumb on the scale in terms of safety," Garland said.

"We believe that skepticism is well warranted," Wehrum replied.

A Justice Department attorney defending the rule faced light questioning from the judges about OSHA's methodologies and called Wehrum's arguments about uncertainty in epidemiology "flimsy."

As air administrator, Wehrum would be charged with implementing or writing new versions of a number of health-based standards, including the 2015 ozone rule. EPA officials last week noted that Wehrum can argue against the OSHA rule since it is not an EPA regulation and is unrelated to his nomination.

WHAT'S NEXT: The D.C. Circuit will weigh Wehrum's argument along with arguments made by other attorneys on technological, economic and union issues with the silica rule. Wehrum's nomination hearing was postponed last week and has not yet been rescheduled.

Trump brings harsh edge to Puerto Rico trip Back

By Nolan D. McCaskill and Matthew Nussbaum | 10/03/2017 05:03 AM EDT

President Donald Trump brought a jarring tone to Puerto Rico as he toured the hurricane devastation Tuesday, appearing to blame the U.S. territory for having "thrown our budget a little out of whack" and complimenting officials for sustaining only 16 deaths, compared with the much higher human toll of Hurricane Katrina.

"I hate to tell you, Puerto Rico, but you've thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico," Trump said as he met with local officials from the island, which declared a form of bankruptcy in May. "And that's fine."

The president also appeared to boast that the death toll in Puerto Rico pales in comparison to the more than 1,800 fatalities that followed Katrina in 2005.

"We saved a lot of lives," said Trump, who added that "every death is a horror" and broached what he called "a real catastrophe" in Katrina.

"Sixteen people versus in the thousands," the president said, overstating Katrina's death toll.

"You can be very proud of all of your people, all of our people working together," he told Gov. Ricardo Rosselló. "Sixteen versus literally thousands of people. You can be very proud. Everybody around this table and everybody watching can really be very proud of what's taken place in Puerto Rico."

A Rosselló spokesman said Tuesday night that the death toll had more than doubled, to 34, news agencies reported.

Trump landed in Puerto Rico on Tuesday after spending much of the past week boasting about a wildly successful response effort that hasn't matched the reality of the hurricane-ravaged island — and after picking a fight over the weekend with San Juan's mayor and other "political motivated ingrates" who have questioned the robustness of the federal response.

The visit came as he's attempting to be soother-in-chief for the nation after a shooting in Las Vegas left at least 59 dead on Sunday night — the first time he's had to navigate two disasters of national scope that are politically perilous for any president, but especially one prone to off-the-cuff riffs.

The Puerto Rico stop marks only the start of emotionally charged travels for Trump this week. On Wednesday, he is scheduled to travel to Las Vegas to meet with the families of victims of Sunday's massacre.

Trump struck a somber and unifying tone Monday when discussing the attack in Las Vegas. But on Tuesday, he traded the scripted and controlled setting of the Diplomatic Room for a storm-ravaged island where more than half of the residents remain without access to drinking water and only 5 percent of the island has electricity.

Throughout the day, he boasted about his administration's response and appeared to repeatedly blame Puerto Rico for its poor infrastructure and financial situation before Hurricane Maria ripped through and left a humanitarian crisis in its wake.

Early on Tuesday, Trump extended praise to his officials and to Rosselló, Puerto Rico's Democratic governor. And he asked the island territory's Republican non-voting congresswoman, Jenniffer González-Colón, to repeat past accolades of the administration's response for the television cameras.

"He's not even from my party, and he started right at the beginning appreciating what we did," Trump said of Rosselló. "Right from the beginning this governor did not play politics. He didn't play it at all. He was saying it like it was, and he was giving us the highest grades. And on behalf of our country, I wanna thank you."

Trump, however, sought to have the plaudits reciprocated, noting that he watched González-Colón say "such nice things about all of the people that have worked so hard" the other day and asking her to repeat her compliments.

"Jenniffer, do you think you can say a little bit [of] what you said about us today?" Trump asked. "And it's not about me. It's about these incredible people, from the military to FEMA to first responders. I mean, I've never seen people working so hard in my life. Perhaps you could say, congresswoman?"

Cameras captured the president engaging in a conversation with a hurricane victim, asking

multiple questions and commending public officials in closing, but also telling another group of victims impacted by the storm to "have a good time."

The pool of reporters accompanying the president described a pair of basketball-related exchanges. Trump asked a teenager whether he played basketball and was going to the NBA. After handing out bags of rice at a church, Trump began tossing paper towels into the crowd — mimicking the motions of a jump shot.

In later remarks Tuesday — as the president handed out flashlights — Trump insisted Puerto Ricans don't need flashlights, though much of the territory is still without power, as he acknowledged to reporters just minutes prior.

"The power grid, honestly, was devastated before the hurricanes even hit. And then the hurricanes hit and they wiped them out," Trump said. "A lot of generators have been already brought to the island. Most of the hospitals are open — or at least partially open. But most of them now are open. And, again, the job that's been done here is really nothing short of a miracle. It's been incredible."

Trump has courted controversy by blasting on Twitter the "poor leadership ability" of Puerto Rican officials, who he said "want everything to be done for them." Trump had also said the island's leaders "are not able to get their workers to help," and he accused Carmen Yulín Cruz, the Democratic mayor of San Juan — who repeatedly slammed the Trump administration's response to Hurricane Maria — of trying to score partisan political points by criticizing him.

"We have done a great job with the almost impossible situation in Puerto Rico. Outside of the Fake News or politically motivated ingrates," Trump tweeted on Sunday.

All the while, he's kept up an upbeat tone about the response. He told reporters in the Oval Office on Monday that it's "amazing what's been done in a very short period of time." He added: "There's never been a piece of land that we've known that was so devastated."

Other officials have echoed his attitude. "The federal government is doing everything within our powers and capabilities to first focus on the life-sustaining and life-saving measures as well as on the rebuilding process," press secretary Sarah Huckabee Sanders told reporters on Monday.

But Trump's comments on Tuesday at times distracted from his administration's response efforts, with Cruz, the San Juan mayor, freshly criticizing the president for his comments about Puerto Rico's impact on the U.S. budget.

"It goes to prove the lack of sensibility," she told CNN in an interview.

Colin Wilhelm contributed to this report.

White House seeking $29 billion more in disaster assistance Back

By Burgess Everett and Seung Min Kim | 10/03/2017 08:54 PM EDT

The Trump administration is expected to request about $29 billion in disaster assistance on Wednesday, according to three sources familiar with the matter.

The administration is expected to ask Congress to deliver nearly $13 billion in funding for recovery from hurricanes that struck Puerto Rico and other parts of the United States, $16 billion in flood insurance relief, and more than $500 million for wildfires, the source said. Congress is expected to consider the package in mid- to late-October.

The figures were first reported by the Associated Press. The nearly $13 billion in FEMA funding is estimated to last through Dec. 31, one source said, although the government has been spending disaster money more quickly than expected because of the recent spate of hurricanes.

Congress previously approved more than $15 billion in disaster assistance for hurricanes in Texas and Florida in September.

Nuclear waste bill clears House committee with bipartisan backing Back

By Darius Dixon | 06/28/2017 12:05 PM EDT

The House Energy and Commerce Committee approved nuclear waste reform legislation this morning on a bipartisan 49-4 vote, facing only a handful of Democratic holdouts.

The bill, H.R. 3053, sponsored by E&C Environment Subcommittee Chairman John Shimkus, would make the first changes in 30 years to the Nuclear Waste Policy Act, which names Yucca Mountain as the nation's sole waste repository.

The committee agreed to a compromise manager's amendment that would let DOE open one interim storage facility while regulators continue to work on a permanent repository. That eliminated most of the Democratic objections to a draft version of the bill that would have barred such work until the Nuclear Regulatory Commission issued a decision on Yucca Mountain.

Yucca Mountain supporters have been concerned that a storage site would take the pressure off of approving a repository. Meanwhile, lawmakers have been anxious to move the waste building up at defunct nuclear power plants in their states.

Another bipartisan amendment, also approved on a voice vote, removed the bill's original language impacting Nevada's water rights and air permitting. The amendment would also increase Yucca's capacity from 70,000 metric tons to 110,000 metric tons.

The bill also authorizes payments to host states and limits work on any defense waste-only repository.

New Jersey Rep. Frank Pallone, the top Democrat on E&C, said that the bill was "a delicate and difficult negotiation, but I believe we have arrived at a very good compromise."

WHAT'S NEXT: Shimkus has said he expects the bill to get a vote by the full House before the August recess, but GOP leaders have not yet scheduled floor time for the bill.

Bishop: 'Silly' to delay sportsmen's package over silencer provision Back

By Anthony Adragna | 10/03/2017 02:26 PM EDT

House Natural Resources Chairman Rob Bishop told reporters today it would be "silly" to remove provisions in a broad sportsmen's package, H.R. 3668 (115), loosening restrictions on purchasing gun silencers even after the nation's worst shooting massacre in modern history.

"The suppressor part actually helps people," he said. "To remove it, you're not helping anybody out. That would be silly to do that."

He added: "If that's a hang up, that's sad that that's a hang up."

GOP sources previously told POLITICO the Las Vegas shooting would derail consideration of the Sportsmen's Heritage and Recreational Enhancement Act at least in the short term.

Bishop said he'd been told by leadership the legislation would get a floor vote "soon," but said he'd never been given a specific date. But the Utah Republican said he hadn't spoken to them about the matter this week.

"To get a floor vote for things, I would strip naked if I had to," he said.

WHAT'S NEXT: Republican sources have previously indicated the SHARE Act is unlikely to get a floor vote in the near future.

Coal, nuclear industry leaders cautiously supportive of DOE proposal Back

By Darius Dixon | 10/03/2017 05:38 PM EDT

Coal and nuclear power industry representatives offered qualified endorsements today of the Energy Department's proposed regulation that offer their plants an economic lifeline.

Many experts are already confused about DOE's proposal to FERC, and a strange-bedfellows coalition of energy groups, including oil and renewables trade associations, has asked regulators to slow down.

Testifying before a House Energy and Commerce subcommittee, Nuclear Energy Institute CEO Maria Korsnick said she'd support having another 30 days to comment on the Energy Secretary Rick Perry's plan to FERC, which gave regulators just 60 days to finalize the rule or issue an interim final rule. She said the proposal is "a good baseline but additional conversations need to be had through the rulemaking process."

Paul Bailey, who heads the American Coalition for Clean Coal Electricity, demurred when asked how long FERC should collect comments, stressing that the work "needs to be done very, very quickly." Bailey said he'd back the proposal if he was only given a yes-or-no option, but he added there was "a huge caveat [that] we're still looking at it."

Rep. Fred Upton (R-Mich.) noted that FERC often allows 180 days to comment on complex proposals.

Meanwhile, Marty Durbin, an executive with the American Petroleum Institute, which has criticized the proposal, said it was "totally inconsistent" with the grid study DOE issued in August.

John Moore, of the Natural Resources Defense Council, said he would toss the proposal "in the trash can because I don't think it meets the minimum standards of due process and the Administrative Procedures Act."

WHAT'S NEXT: FERC has asked for comments on the proposal to be submitted by Oct. 23 and for reply comments by Nov. 7. DOE has not yet published its proposal in the Federal Register, which will kick off the 60-day countdown clock.

Official: FERC will take 'appropriate action' on DOE pricing rule within 60 days Back

By Darius Dixon | 10/03/2017 04:22 PM EDT

FERC intends to act on the Energy Department's resiliency pricing rulemaking proposal within the 60 days Energy Secretary Rick Perry directed last week, FERC General Counsel James Danly told lawmakers this afternoon. But his comments left plenty of room for interpretation.

"Right now, the commission is internally reviewing the notice of proposed rulemaking that was put forward by the secretary," Danly told members of a Senate Energy and Natural Resources subcommittee, while noting that FERC has already requested comments on the proposal.

"We're reviewing the options that are available and we are in the process of building the record by soliciting these comments and reply comments," he said. "Once they're assembled, we're going to review them and take the appropriate action within the 60-day timeframe established by the NOPR."

The law that Perry is using to initiate the rulemaking at FERC directs regulators to take "final action" within a reasonable timeframe, but it's unclear what FERC might consider a final action. Similarly, Danly's phrase "appropriate action" could represent a number decisions by FERC.

WHAT'S NEXT: FERC has asked for comments on the proposal to be submitted by Oct. 23 and for reply comments by Nov. 7. DOE has also not yet published its proposal in the Federal Register, which will kick off the 60-day countdown clock.

Greens will sue Pruitt over missed ozone deadline Back

By Alex Guillén | 10/03/2017 05:13 PM EDT

Ten environmental groups say they plan to sue EPA Administrator Scott Pruitt for missing the Oct. 1 deadline to decide which parts of the U.S. do or do not meet the 2015 ozone standard, a critical step toward implementing the rule and curbing pollution.

"It's an outrage that Scott Pruitt just willfully ignored his legal and moral obligation to keep American communities safe from dangerous air pollution that sends children to the hospital," Matthew Gravatt of the Sierra Club said in a statement.

Pruitt earlier this year announced plans to delay the designations by one year, citing trouble with data collection from states. Following lawsuits from green groups and Democratic attorneys general, EPA reversed course and said Pruitt would work to meet the deadline. But the deadline passed this week without any word from EPA on any designations.

The underlying 2015 standard is itself under review at EPA, along with a host of other Obama-

era regulations. EPA in recent weeks also sent for White House review what appears to be a proposal setting new thresholds for which areas would have to take action to improve their air quality.

EPA on Monday had no comment on when the agency plans to issue the designations.

Groups suing include the Sierra Club, Natural Resources Defense Council, American Lung Association and National Parks Conservation Association.

WHAT'S NEXT: The Clean Air Act requires anyone suing EPA over a missed deadline to give the agency at least 60 days' notice. The lawsuit could be filed as soon as early December.

Taxpayer advocate, Democrats see industry tilt on Zinke's royalties panel Back

By Ben Lefebvre | 09/14/2017 03:33 PM EDT

Interior Secretary Ryan Zinke has pledged to increase energy revenue from federal lands, but congressional Democrats and public watchdogs are worried the agency is putting key policy decisions about royalties in the hands of the industry.

Interior officials have said increasing drilling on federal lands would help fulfill President Donald Trump's promise to "usher in a golden age of energy dominance" — and help restore the agency's coffers back to levels seen a decade ago, when they were bolstered by oil prices that flirted with $150 a barrel.

Now, with oil prices under $50 a barrel, the portion of Interior's budget from those revenues has dropped to $6.2 billion, one-quarter of where it was in during the heady market of 2008.

"I will be looking at revenue," Zinke told senators during a June budget hearing, pointing to the federal income from natural gas, oil and wind. "If you're going to operate on public land, then the public should have a say, because we are all stewards of our public lands. We want to make sure we have a fair return. That return should be transparent."

But public interest groups and Democrats say the 20-member advisory committee Zinke named to review royalty rates that oil, natural gas and coal companies pay for access to federal land and water is stocked with industry-linked members.

The committee includes five energy company representatives and six others members who hail from energy-friendly, GOP-led local governments. Critics say it lacks representatives from public interest groups or Democrats who might question whether the public is getting a fair deal from new drilling.

"We should be exploring better royalty structures," Sen. Tom Udall (D-N.M), whose state is the fifth largest oil producer in the country, said in an email. "But I'm skeptical that the royalty policy committee established by Secretary Zinke is structured to ask the most probing and balanced questions to benefit citizens." Udall plans to reintroduce his legislation, S. 2254 (108), next week that would institute royalties on gold, silver and other precious minerals currently excluded from generating royalties.

Ryan Alexander, president of public watchdog group Taxpayers for Common Sense, lauded Zinke's move to restart that commission as an opportunity to make sure taxpayers get a fair return for energy developed on public lands, but its make-up didn't give her confidence that would happen.

"There's a lot of people who know a lot of stuff on that committee," said Alexander, whose nomination to the committee was rejected by Interior. "But there isn't anyone who focuses on taxpayer interest. It is a definitely a concern that this is weighted toward the industry. We're going to be watching carefully."

Republicans have backed Zinke's exclusion of environmental and public interest groups.

"Many of these public interest groups have been driving this debate in court and so forth at the demise of our natural resource industry, and our economies and jobs in places like Montana," Sen. Steve Daines (R-Mont.) told POLITICO. "So it's time to change it up."

Interior's royalty rates dictate the percentage of the proceeds from oil, gas or other energy produced from federal lands or waters that companies must share with the government. The new committee will "provide advice to the Secretary ... on the fair market value of and on the collection of revenues derived from, the development of energy and mineral resources on Federal and Indian lands," according to the charter Zinke approved in March.

Oil production on federal lands reached an all-time high of 580 million barrels in 2016 from the surge in offshore production, according to data from the Office of Natural Resources Revenue, an overall increase of 33 percent from 2008.

Even as oil production surged, oil revenues flowing to Interior dropped to $2.8 billion, however, the lowest point since 2005, largely because of weak market prices. U.S. oil averaged $43.29 per barrel last year, less than half the price in 2014.

Natural gas volumes have fallen by a a third since 2008, with most of the drop because of offshore drillers' shift to more profitable oil production. And coal production on federal land fell by a third between 2008 and 2016, following electric utilities' switching to cheaper natural gas.

Interior's decisions on royalties have a major impact on state budgets. In 2016, Wyoming received $684 million from federal leases, nearly one-quarter of the state's $3 billion budget that year, while New Mexico got $386 million, about 6 percent of the state's total budget.

Interior lowered the minimum royalty payments for oil and gas produced from shallow-water areas of the Gulf of Mexico that it offered in a lease in August. But that cut failed to attract companies to the area, which is largely tapped out of oil and gas from years of development, and only 10 percent of the tracts up for auction were leased.

Interior has also rolled back an Obama-era rule on assessing the value of coal from federal lands that required mining companies to use the price they sold the coal at on the open market — not to affiliate companies they may have sold it to at a steep discount. Zinke's move did away with a rule that the department estimated would increase Interior's coal royalty revenues by up to $85 million a year, but that coal companies complained was too burdensome.

Zinke's appointments to the committee include employees of ConocoPhillips, Anadarko Petroleum and the National Ocean industries Association, a trade group representing offshore drilling companies.

He also included Matthew Adams, vice president of taxation at Cloud Peak Energy, a Wyoming-based coal company that donated $10,000 to Zinke's PAC in 2016. Cloud Peak paid the department $80 million in royalties last year, according to government data.

Interior Department spokeswoman Heather Swift called the commission members "eminently qualified individuals," and added that Cloud Point Energy's donation to Zinke's PAC was "absolutely not" a factor in appointing a company representative the commission.

Another member of the committee is John Sweeney, an investor relations executive at VWR Corp., a Pennsylvania-based company that provides laboratory services to the pharmaceutical, biotech, industrial and healthcare industries.

Sweeney nominated himself to the commission and was appointed because of "his education and experience in business connecting investors with developers," Swift said. Sweeney did not reply to messages seeking comment.

Swift also pointed to the native American tribes on the commission as operating some renewable energy projects. Those tribes on the board are also heavily invested in oil, gas and coal projects. The Navajo Nation, whose president Russell Begaye is on the royalty commission, runs the largest coal-fired power plant in the western United States, and Begaye wrote an op-ed in March asking for government assistance to keep plant from shutting.

Zinke promised to appoint up to four members representing "academia and public interest" groups when he announced plans for the commission, and he has stressed the importance of public oversight on royalties.

But the sole slot that was allotted in the end for a representative for the public interest went to Daniel Rusz , a coal expert from energy industry consulting group Wood MacKenzie.

Interior's Swift initially said the choice came about because "no groups identifying themselves as public interest were nominated or self-nominated." She didn't address the rejection of the

Taxpayers for Common Sense nomination, but said the group was "still permitted to attend the public meetings and the public comments are taken into consideration in decision making processes."

The commission also doesn't include any local government representatives identified as Democrats or nominated by Democratic governors. No one from Colorado or California was appointed, despite those two states producing more energy resources from federal lands than Alaska or Texas.

Gov. Steve Bullock, the Democratic head of Zinke's home state of Montana, nominated a Montana Department of Natural Resources employee who helps manage 6.2 million acres in the state that received $23 million in royalties from Interior in 2016, though that nominee was rejected. Interior did name a Montana representative as an alternate board member in case a sitting member drops out.

Instead, Interior appointed a Clinton Carter, Alabama's Republican state finance director. Alabama received $1.9 million in royalties from the department in 2016.

The lack of public accountability advocates on the board threatens to undermine its purpose of helping Interior increase public revenue, House Natural Resources committee ranking member Raul Grijalva (D-Ariz.) said in a letter to Zinke.

Appointing a committee dominated by the fossil fuel industry with no public interest voices does not build "greater trust and transparency," Grijalva said in his letter, adding that the committee "should not be allowed to act as a fig leaf for actions designed solely to favor the interests of drilling and mining companies."

Convicted coal exec attacks Manchin in new ad Back

By Kevin Robillard | 10/03/2017 04:15 PM EDT

Don Blankenship, a former energy executive convicted of a misdemeanor related to the deaths of 29 coal miners in West Virginia, is paying for an inflammatory new television ad attacking Democratic Sen. Joe Manchin.

The 30-second ad, which is airing on broadcast television in the state, starts by talking about the deaths of four Americans at the U.S. consulate in Benghazi, Libya and then links it to the deaths at Upper Big Branch Mine, which Blankenship blames on the federal government. The ad repeatedly shows Manchin side-by-side with former President Barack Obama and Democratic presidential nominee Hillary Clinton, along with captions asking: "Does Manchin have blood on his hands?"

"In 2012, four Americans were killed by terrorists in Benghazi, Libya. Many say the Obama administration hid the Benghazi truth," a male narrator says. "The truth about more killed Americans has also been hidden. In 2010, 29 Americans were killed. None of them were an ambassador, none were CIA agents, none were killed by terrorists. They were coal miners who were killed when the U.S. government reduced their mines' airflow. President Trump must be told the truth about Obama's deadliest cover-up."

The ad is the latest in a series of amateurish spots Blankenship has paid for attacking Manchin and asserting federal officials are to blame for the deaths at Upper Big Branch. The United Mine Workers of America have blasted the ads as "desperate, low-life attempt to once again shift the blame for a decade of death, destruction and despair at Massey Energy while Blankenship was CEO."

Manchin is considered a slight favorite to win reelection in a state President Donald Trump won handily. Rep. Evan Jenkins and Attorney General Patrick Morissey are competing in the Republican primary to challenge Manchin in 2018. Blankenship has previously mused about running for the seat himself as a Republican.

Murray asks Supreme Court to force EPA study of coal job losses Back

By Alex Guillén | 10/03/2017 03:21 PM EDT

Coal producer Murray Energy has asked the Supreme Court to force EPA to study how its regulations and other actions affect coal jobs.

A federal judge in West Virginia initially sided with Murray in ruling that Section 321(a) of the Clean Air Act required EPA to produce a separate, detailed study of its effects on coal jobs, despite EPA arguments that it did so on a rolling basis as it worked on each rule.

But just days before the July 1 deadline for EPA to cough up a study going back through 2009, the 4th Circuit Court of Appeals ruled that the study is a discretionary duty, not a mandatory one open to enforcement in the courts, thus freeing EPA from having to produce the study.

Last week, Murray appealed to the Supreme Court, arguing that the 4th Circuit's ruling "creates a substantial blind spot where EPA will be left to its own devices.

"An evaluation of the job losses that have occurred and those jobs that remain under threat because of EPA's decisions will be a powerful tool in helping EPA, Congress, the States, and Plaintiffs address and correct a policy that, up until now, has been far 'too narrow a policy and a cruel one at that for workers' in the coal industry," Murray wrote.

The case is *Murray Energy v. Pruitt*, 17-478.

WHAT'S NEXT: It will likely take months for the Trump administration to reply. If the Supreme Court agrees to hear the appeal — a major question — it likely will do so next spring or fall.

By Anthony Adragna | 10/26/2017 05:40 AM EDT

With help from Alex Guillén and Eric Wolff

WHAT A CONFIRMATION MESS! Sen. Jim Inhofe's hold on Democratic FERC nominee Richard Glick may end up indefinitely delaying the confirmations of a whole bundle of Energy, Interior and FERC nominees his party supports. The Oklahoman desperately wants to get his buddy Scott Pruitt some help at EPA and wants the agency nominees confirmed before he'll release his hold, but Democrats appear exceedingly unlikely to ease the path to passage for any of President Donald Trump's EPA picks. The problem is Glick's pick is a component of a negotiated package of nominees between Senate Energy Chairman Lisa Murkowski and ranking member Maria Cantwell, so without him the entire package is stuck. "As much as I want to move all of the nominees that have gone through the process, other committees are not mine to resolve," Murkowski told reporters. "That's something Senator Inhofe is going to have to work through."

Barrasso blames Democrats: Four EPA picks cleared the Senate Environment and Public Works Committee on Wednesday and Chairman John Barrasso wasted no time in blasting Democrats for preventing their swift confirmation. "It's time to clear the deck and let these people who've been nominated, vetted, gone through the committees, been approved — time to get them to work," he said, describing the delays as "outrageous." Of course, ME gently reminds readers that Republicans routinely placed holds on non-controversial Obama nominees, and it was GOP concerns over biofuels policy that delayed consideration of the EPA picks last week. Now, a fellow Republican's hold is delaying consideration of another bloc of nominees.

No fast lane for Wehrum, Dourson: It's true Democrats have slow-walked many of Trump's picks thanks to arcane Senate procedural tactics and they signaled they'd do so again for the controversial selections of Michael Dourson to run EPA's chemical office and William Wehrum to run the agency's air division. "We're going to move it as slowly as we can at this point," Sen. Tom Udall , author of the landmark overhaul of the nation's chemicals law, told reporters about Dourson. "We'll use all the time. It's a devastating departure from the bipartisanship that we had in passing TSCA reform." This is important because with the Senate's calendar already jam-packed, leadership is frequently less inclined to tackle nominees that require the chamber to burn days via procedural hurdles.

NORTHEY NOMINATION IN LIMBO: Republican Sens. Ted Cruz and Mike Lee on Wednesday put a hold on the nomination of Bill Northey to a senior USDA post. Northey had been expected to breeze through the chamber. According to a spokesman for Lee, the senator had lifted his hold by Wednesday afternoon, but a Republican Senate aide said Cruz's hold was still on as of late afternoon.

Payback at work? Northey's name had moved out of the Senate Agriculture Committee by voice vote, but multiple sources in the refining industry told ME that the holdup was a "reaction" to the way Iowa Republican Sens. Joni Ernst and Chuck Grassley intensely pressured EPA into protecting Renewable Fuel Standard volume requirements. "It's about time someone stood up to the kind of extortion we have seen coming from some of the Midwestern senators when the RFS is at issue," said one refining industry source.

Rubbing salt on wound: Blocking Northey has some extra sting. Grassley's grandson, Iowa State Rep. Pat Grassley, is a candidate to replace Northey as Iowa agriculture secretary if he is confirmed to the subcabinet position, the Des Moines Register reported. "It is indeed shocking that this type of corncob-rolling would be taking place in such an august body as the U.S. Senate," another refining source said.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and the Union of Concerned Scientists' Katherine Catalano was first to identify Vermont and Mississippi as the two states that have never sent a woman to Congress. For today: How many (and which) states have two House seats? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

FLAGGING! Trump is meeting with Pruitt today at 3 p.m. in the Oval Office.

GOVERNOR REQUESTS PROBE OF WHITEFISH CONTRACT: Puerto Rico Gov. Ricardo Rosselló asked the DHS inspector general Wednesday to look into why the tiny company of Whitefish Energy from Interior Secretary Ryan Zinke's hometown won a $300 million contract to rebuild the island's electric grid. "I request that your office complete its review of the Whitefish Contract so that a final determination can be made as to the Whitefish Contract and address any other issues regarding the same by Monday, October 30, 2017," he said in a letter.

New electricity sheriff on the island: The requested probe comes as the federal oversight board for Puerto Rico named Noel Zamot, a retired Air Force officer, to a position overseeing the recovery of the beleaguered Puerto Rico Electric Power Authority from two major hurricanes, Pro Financial Services' Colin Wilhelm reports.

Well, this is just stupid: Whitefish Energy and San Juan Mayor Carmen Yulín Cruz spent the afternoon fighting on Twitter after the mayor suggested the company's contract should be "voided" immediately earlier Wednesday. "We've got 44 linemen rebuilding power lines in your city & 40 more men just arrived. Do you want us to send them back or keep working?" Whitefish asked on Twitter. Cruz shot back the comment "implies that you will not treat the City of San Juan with the diligence it deserves. Thus admitting political motivations." Hours later, Whitefish apologized for its comments and said they "did not represent who we are and how important this work is to help Puerto Rico's recovery."

Eyebrows up: Montana Sen. Steve Daines said he'd never heard of the two-person, two-year-old company based in his state that won the $300 million contract. "I literally found out about [Whitefish] in the paper," he told ME. "Anytime a large contract is awarded Congress should be

asking questions. It's appropriate."

** **A message from Chevron:** Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2yXRtrd **

TRUMP ENDORSES RESILIENCY PUSH? He never uttered the words climate change, but Trump seemed to back rebuilding Houston to better withstand flooding during a swing through Texas on Wednesday. "We're going to look at the concept of a more permanent solution, because you do get inundated and it's been going on for decades," he said. "Let's take a look at the costs and then see if it's possible to do, because that would save a lot of money into the future and it would also put a lot of people to work." ME would note that what the president's talking about doing seems like it would have been covered under the Obama administration's flood standard that he rolled back in August.

SHARPENING THOSE (DEREGULATORY) KNIVES: As ordered by Trump in the spring, federal agencies released plans for reducing regulations that slow the deployment of energy resources.

—**The Interior Department** said it wanted to speed up permitting for energy projects and minerals mining by tweaking policies designed to protect wildlife conservation areas, Pro's Ben Lefebvre and Esther Whieldon report. And the Fish and Wildlife Service is re-evaluating whether laws establishing protections for migratory birds should apply to energy projects, while also reviewing an Obama-era rule that gave wind developers 30-year permits to injure or kill protected eagles.

—**EPA** pledged to review how its regulations and other actions affect employment across multiple sectors, the agency said in its own report. Laws like the Clean Air Act and Clean Water Act include language about EPA studying its impacts, and coal company Murray Energy nearly forced EPA to produce such a study for an Obama administration rule earlier this year before the 4th Circuit said the duty is not mandatory. The report does not say how often or expansive the studies will be.

—**The Energy Department** wants to revisit how it develops energy efficiency standards and may issue a request for information specifically on how to amend its procedures for setting up new efficiency standards for consumer products, Pro's Darius Dixon reports. The agency will also look at ways to make the national labs "operate more efficiently" and potentially expand its efforts to lower barriers for "small-scale" natural gas exports to include larger-scale projects.

—**The Commerce Department** vowed to speed up environmental review processes tied to offshore energy projects and create a committee to ultimately "exempt certain actions" from Endangered Species Act regulations designed to protect endangered species, Pro's Ben Lefebvre reports.

PRUITT: I'M NO ENFORCEMENT SOFTIE: Polluters won't get a free pass while he runs EPA, Administrator Pruitt told Bloomberg in an interview. "They don't know me," Pruitt said.

"I've led a grand jury. We are going to do enforcement, to go after bad actors and go after polluters." He added — without offering any timeframe — that he's still making plans for a "red team, blue team" exercise to debate climate science, but said any effort to revisit the endangerment finding would be separate.

Money quote from Pruitt: "I am here because I really feel called to it. My desire each day is to bless the president and the decisions he's making."

Oops: An EPA press release Wednesday referred to Bill Wehrum as the nominee to head the agency's "Office of Air and Regulation." It's, of course, actually the Office of Air and Radiation.

ON TAP TODAY IN CONGRESS — E&C SUBPANEL MULLS THREE BILLS: The House Energy and Commerce Energy Subcommittee gathers at 10 a.m. to mark up three bills: H.R. 1733 (115) aims to boost beneficial reuse of used lubricating oil; H.R. 2872 (115) would allow FERC to grant license exemptions to push hydropower development at existing non-powered dams and H.R. 2880 (115) seeks to promote closed-loop pumped storage hydropower development. Background memo here.

Fun aside: ME saw subcommittee Chairman Fred Upton (and potential challenger to Michigan Sen. Debbie Stabenow) on the Senate side on Wednesday where he said he was "trolling for lunch."

LCV URGES 'NO' ON BUDGET: Ahead of today's vote on the Senate-passed budget H. Con. Res. 71 (115), the League of Conservation Voters urged lawmakers to vote it down since it provides a pathway for opening ANWR to drilling. "We have a moral obligation to protect this natural treasure and to transition to a clean energy future," the group wrote of ANWR.

Other bill passes: The House voted 234 to 187 in favor of the Sunshine for Regulations and Regulatory Decrees and Settlements Act H.R. 469 (115), which would limit the ability of the government to enter into so-called "sue and settle" agreements by requiring settlements to be posted online and opened to additional intervenors.

NASA NOMINEE HEARING SCHEDULED: The Senate Commerce Committee will hold a confirmation hearing Nov. 1 on Oklahoma Rep. Jim Bridenstine's selection to run NASA, it announced Wednesday.

READY TO ROLL! A new group, the Alliance Commission on U.S. Transportation Sector Efficiency, launches today with the goal of developing recommendations to reduce energy use in the U.S. transportation sector by 50 percent by 2050. Members from the public and private sectors participating in the effort include Pittsburgh Mayor William Peduto, Fort Worth Mayor Betsy Price, Audi of America President Scott Keogh, National Grid President Dean Seavers, NRDC President Rhea Suh and EEI President Tom Kuhn. More information here.

MAIL CALL! CAN I BE A WITNESS? The House's second-highest Democrat, Minority Whip Steny Hoyer, asked Senate Banking Chairman Mike Crapo to allow him to testify at Scott Garrett's confirmation hearing next week to lead the Export-Import Bank. "Scott Garrett is

precisely the wrong pick to lead the Ex-Im Bank," Hoyer wrote. Letter here.

GOVERNORS: WE NEED A WILDFIRE FIX: Four governors — Nevada's Brian Sandoval, Montana's Steve Bullock, California's Jerry Brown and Wyoming's Matt Mead — sent a letter to congressional leaders urging lawmakers to "reform the federal wildfire suppression funding formula and provide stability for long-term planning and wildfire mitigation practices."

PIPELINE ATTACK TRACKER LAUNCHES: Energy Builders unveiled a new database to track attacks on energy infrastructure, such as pipelines, that it argues have become a "regular feature" of environmental protests against such projects. Greenpeace USA Executive Director Annie Leonard quickly shot back: "This is more fear-mongering by a corporate bully hoping to see what it can get away with in Trump's America."

NEW MONUMENTS AD UNVEILED: The National Wildlife Federation is launching a six-figure ad buy on cable news networks in the Washington area featuring a delegate of the Navajo Nation Council urging Trump to "protect America's heritage, protect our national monuments." Watch here.

MOVER, SHAKER: Adam Fetcher has recently started as VP of environmental impact and policy at outdoor clothing brand Askov Finlayson. He previously was a speechwriter and communications adviser at Patagonia and is an alum of Obama DHS and Interior and OFA (h/t Playbook).

Stories from POLITICO Pro

Puerto Rico board names officer to oversee power utility recovery Back

By Colin Wilhelm | 10/25/2017 05:23 PM EDT

Puerto Rico's federal oversight board will appoint a "chief transformation officer" for its beleaguered power authority.

The board announced plans to name Noel Zamot, a retired Air Force officer, to the position to oversee the recovery of the Puerto Rico Electric Power Authority from two major hurricanes. Most of the U.S. commonwealth has been without power since Hurricane Maria hit the territory over a month ago.

The lack of electricity affects medical services, water distribution and other key portions of Puerto Rico's infrastructure.

Recently PREPA awarded a no-bid contract worth hundreds of millions of dollars to a Montana company with two employees and no record of wide-scale electrical repair that has connections to Interior Secretary Ryan Zinke. The utility, which is run by the commonwealth government. announced the contract a day after Puerto Rico Gov. Ricardo Rosselló met with President Donald Trump and other officials in Washington.

The company, Whitefish Energy, feuded with San Juan Mayor Carmen Yulin Cruz on Twitter Wednesday afternoon, asking her if they should send their workers home after she questioned their receiving the contract.

Zamot previously served as revitalization coordinator, a position appointed by Puerto Rico's governor to work with the federal oversight board on the commonwealth's economic recovery.

The board named Zamot under its authority as the utility's trustee under the debt restructuring law passed by Congress last year. The executive director of the board argued that the role is similar to an appointment made in municipal bankruptcy.

"As the representative of PREPA under Title III of PROMESA, the Board believes the successful exit of PREPA from Title III requires adapting the pre-hurricane transformation plans with ongoing federal reconstruction efforts," said Executive Director Natalie Jaresko.

Trump to roll back climate-focused flood standard Back

By Annie Snider | 08/15/2017 12:41 PM EDT

President Donald Trump will roll back a flood standard designed to protect federal investments from stronger storms as part of an executive order set to be signed this afternoon, according to a White House source.

The Federal Flood Risk Management Standard was established under an executive order issued by President Barack Obama in 2015. It requires that new federally funded projects — from government buildings like Veterans Administrations hospitals to bridges and schools funded by federal grants — be built to withstand the stronger storms and additional flooding projected to occur as the climate changes. It does not apply to the National Flood Insurance Program.

The Obama administration's standard offers multiple options for achieving greater flood protection, but generally requires construction to withstand a 500-year storm. The previous standard, on the books for more than four decades, required construction to take place outside of the 100-year floodplain. The new standard has not actually taken effect yet; each federal agency is tasked with developing its own regulation for implementing the standard, and none have yet been finalized.

Industry groups objected to the standard, arguing it was developed behind closed doors and could greatly increase costs.

Environmental groups have objected to efforts to repeal the standard.

"Ninety percent of all natural disasters in the United States involve flooding. These events claim lives and strain the capacity of government agencies and local communities to adequately respond and provide relief," Laura Lightbody with the Pew Charitable Trusts said in a statement.

WHAT'S NEXT: Trump is slated to sign an executive order on infrastructure containing the roll back of the Federal Flood Risk Management standard at 3 p.m. today.

Interior outlines plan to speed permitting Back

By Esther Whieldon and Ben Lefebvre | 10/25/2017 07:39 PM EDT

The Interior Department said on Wednesday it was looking to speed up permitting for energy projects and minerals mining by tweaking policies designed to protect wildlife conservation areas.

Interior's Fish and Wildlife Service is also re-evaluating whether laws establishing protections for migratory birds should apply to energy projects, and it's reviewing the Obama rule that gave wind developers 30-year permits to injure or kill protected eagles.

"The federal government can and must be a better business partner," Vincent DeVito, counselor for energy policy to Secretary Ryan Zinke, said in statement accompanying the report that was written to comply with President Donald Trump's executive order calling on agencies to streamline the permit process for energy projects.

Interior said the Bureau of Land Management will examine whether to change procedures to speed up permitting, including how it grants rights of way through national monuments and other national conservation areas and for mineral leases near wild scenic rivers.

And within three months, FWS hopes to finalize new guidance on what FERC-licensed interstate pipelines should do to mitigate the damage they inflict on migratory birds and their habitat.

Interior has already taken steps on many of the rules listed in the report, including repealing a disputed Obama rule on hydraulic fracturing.

The department also made clear it was mulling loosening multiple rules governing drilling in Alaska.

The department could change or rescind numerous rules for offshore oil and gas drilling, such as eliminating the requirement that drilling companies have cap and flow systems and containment domes to stop oil spills within seven days' reach of well sites.

Another change would make it easier for BOEM to process permits for companies to conduct seismic testing offshore.

Another issue the report highlighted was a potential regulatory change to reduce the number of

protests that challenge BLM lease sales. Those protests have risen sharply, the report said, and are typically focused on opposition to fracking or fighting climate change rather than parcel-specific protests.

"A regulatory change may be necessary to limit redundant protests that hinder orderly development," the report sad.

DOE to scrutinize efficiency rulemaking, LNG exports Back

By Darius Dixon | 10/25/2017 04:22 PM EDT

The Energy Department plans to revisit how it handles the development of energy efficiency standards, the agency's central regulatory power, according to a memo the agency released this afternoon.

In a six-page document responding to a White House executive order aimed at reducing rules that "unnecessarily encumber" energy development, Energy Secretary Rick Perry says the agency is focusing on four areas where it wants to shed burdensome regulations, particularly on energy efficiency.

The document says DOE is considering whether to issue a request for information specifically on how to amend its procedures for setting up new efficiency standards for consumer products. Commenters, the agency said, pressed DOE to extend the agency's so-called lookback provision, which mandates that each efficiency rule be revisited every six years for a potentially tighter standard. Although changing that timeframe would need congressional intervention, the memo states that DOE may conduct the necessary review but avoid establishing a more restrictive rule in order to give affected industries more time to comply.

Before it can sign off on a more aggressive standard, DOE rulemakers have to declare that a regulation is both "economically justified" and "technologically feasible." But DOE says economically justified "is subject to interpretation" and may seek to redefine the term.

Perry says DOE will look for ways to make the national labs "operate more efficiently" and it plans to build on its rulemaking effort to lower barriers for "small-scale" natural gas exports to non-Free Trade Agreement countries to potentially include "larger-scale exports."

WHAT'S NEXT: The document was sent to the White House but it didn't include a timeline for the review processes.

To view online click here.

Commerce presses to cut environmental review times for energy projects Back

By Ben Lefebvre | 10/25/2017 04:10 PM EDT

The Commerce Department today issued recommendations it said would speed up environmental review processes tied to offshore energy projects.

The proposals in the Commerce report sent to the White House are designed to help meet President Donald Trump's April executive order calling on agencies to streamline the permit process for energy projects. The Commerce recommendations focus on the National Marine Fisheries Service.

Among the recommendations is to create an Endangered Species Committee to ultimately "exempt certain actions" from Endangered Species Act regulations designed to protect endangered species.

"Commerce recognizes that the statutory provisions might constrain flexibility on this endeavor but nevertheless commits to reviewing the issue," the department said in the report.

The department also recommended NMFS decrease the steps needed to complete an individual environmental review and combine more projects into "batch" consultations to save time, the report says. The department said it will designate someone to monitor how long reviews were taking.

Commerce said it would consult its agency economists and OMB to "improve standards to adequately assess the potential costs and benefits to business communities, infrastructure and the environment" before new marine sanctuaries were designated.

An agency spokesman said the Obama Commerce Department already conducted such cost-benefit analyses, but the new recommendation "reflects that the Department felt the last administration did not take industry into account,"

WHAT'S NEXT: The White House will review the report.

Subject: Wind energy credit changes only apply to new construction

By Eric Wolff

11/03/2017 01:44 PM EDT

A proposal to cut the production tax credit for wind energy in the House tax bill will only apply to turbines built after the bill passes, according to a manager's markup published today.

The version of the Tax Cuts and Jobs Act, H.R. 1 (115), introduced Thursday would eliminate the inflation adjustment to the production tax credit, lowering it from the 1.9 cents per kilowatt-hour level that took effect this year to 1.5 cents per kilowatt-hour.

A summary from the House Ways & Means Committee indicated that the change would only apply to new turbines, but the bill text did not. The manager's amendment released today fixes that inconsistency.

Sen. Chuck Grassley (R-Iowa) has criticized the proposed language, noting that the PTC already has a scheduled sunset written into it.

AIR
Harcros Chemicals/Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. Harcros Chemicals Inc. (Civil Action No. 2:17-cv-2432), lodged June 26, 2017, with the U.S. District Court for the District of Kansas. The consent decree would resolve claims regarding alleged Clean Air Act violations in connection with three of Harcros' chemical manufacturing, repacking, blending, storage, and distribution facilities in Bessemer, Ala.; Kansas City, Kan.; and Shreveport, La. The consent decree would provide injunctive relief regarding those facilities and 26 additional facilities in various states by requiring Harcros to pay a civil penalty of $950,000 for the alleged violations and for violations expected to be uncovered at the other facilities. The defendant also would be required to audit its facilities for compliance with CAA Section 112(r), to correct any discovered violations of the requirements, and to perform a supplemental environmental project to enhance its fire-prevention capability at eight of its facilities. Comments are due Sept. 5, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

GENERAL ENVIRONMENT AND SAFETY
Mountaineer Xpress and Gulf Xpress Projects
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of the final environmental impact statement for the Mountaineer XPress Project and the Gulf XPress Project proposed by Columbia Gas Transmission LLC and Columbia Gulf Transmission LLC, respectively. The Mountaineer XPress Project involves the construction and operation of approximately 170 miles of pipeline and modification to or construction of three compressor stations in West Virginia, for the transportation of up to 2.7 million dekatherms per day (Dth/d) of natural gas. The Gulf XPress Project involves the construction and operation of seven new compressor stations and upgrades at an existing compressor station and meter station in Kentucky, Mississippi and Tennessee to allow for an additional 860,000 Dth/d of natural gas delivery to the Gulf Coast region. The agency concludes that approval of the proposed projects would result in some adverse and significant environmental impacts, however, if the projects are constructed and operated in accordance with mitigation measures discussed in the EIS and agency recommendations, the impacts would be

reduced to acceptable levels. Contact: FERC, Office of External Affairs; 866-208-3372; FERCOnlineSupport@ferc.gov

Driving the Day

Good Sunday morning. NIGHT ON THE TOWN -- SPOTTED: JARED and **IVANKA** at Masseria Saturday night.

-- NOTABLE, from the president Saturday night: Question: "What's the one thing that will work with North Korea?" **TRUMP:** "Well, you'll figure that out pretty soon." ... **TRUMP:** "I've known Harvey Weinstein for a long time. I'm not all surprised to see it."

SHOT -- @realDonaldTrump at 9:59 a.m.: "Senator Bob Corker 'begged' me to endorse him for re-election in Tennessee. I said 'NO' and he dropped out (said he could not win without..." **at 10:09 a.m.:** "..my endorsement). He also wanted to be Secretary of State, I said 'NO THANKS.' He is also largely responsible for the horrendous Iran Deal!" ... **at 10:13 a.m.:** "...Hence, I would fully expect Corker to be a negative voice and stand in the way of our great agenda. Didn't have the guts to run!"

CHASER -- AP: "Corker's free agent status should make Trump, GOP nervous," by Richard Lardner: "The two-term lawmaker isn't seeking re-election. That gives him even more elbow room to say what he wants and to vote how he pleases over the next 15 months as Trump and the party's leaders on Capitol Hill struggle to get their agenda on track. Corker, a fiscal hawk, is holding the GOP's feet to the fire on tax legislation, declaring that he'll oppose any measure that increases the national debt by a single cent. Republicans hold a narrow, 52-seat majority in the Senate, and just three defections would torpedo the top priority in their partisan push." http://bit.ly/2wFTCDg

FLASHBACK, BURGESS EVERETT and **JOHN BRESNAHAN:** "But Corker said Trump has repeatedly urged him to run again. 'When we knew we had the support of the president, that didn't really matter,' Corker said of Bannon." http://politi.co/2gmjXjq

THE PRESIDENT'S WEEK -- TRUMP will host the Pittsburgh Penguins at the White House Tuesday. Prime Minister Justin Trudeau and his wife, Sophie Gre??goire, come to the White House Wednesday. **TRUMP** goes to Pennsylvania on Wednesday.

ONLY IN PLAYBOOK -- MORE ON TIM MURPHY: Over the past 72 hours, Rachael Bade, Jake Sherman and John Bresnahan have received an outpouring of thank-you notes from ex-Murphy aides for writing about staff abuses that occurred in that office over the years (ICYMI, read about it here: http://politi.co/2gfEx4X). "I don't want to get my name caught up in any of this, but I did want to thank you for writing about Murphy and Susan," one person wrote. "They hurt so many people, so many kids who didn't know it wasn't normal. I'm not one to get satisfaction from others down fall, but I'm so relieved they won't be able to keep abusing people."

After our story ran, several former Murphy staffers called Rachael to divulge their own horror stories. One ex-staffer spoke of being scolded by chief of staff Susan Mosychuk - Murphy's right-hand in his reign of terror -- for trying to expense costs associated with using her personal car to drive the congressman around town. Another ex-staffer spoke of Murphy badmouthing his work ethic to his new boss -- a congressman -- on the House floor. And third got dressed down for taking a lunch break his first day on the job -- he didn't know Mosychuk made staff eat at their desks. Mosychuk and Murphy's office did not have a comment.

BUT THIS GUY THINKS THEY'RE GREAT! -- Christopher Schell, Murphy's legislative director who started there in May, sent Rachael, Jake and Bres this statement on Friday night defending Mosychuk: "The actions ascribed to Susan by former-staffers, both unidentified and identified, are wholly inconsistent with my time in Congressman Murphy's DC office. Personally, I feel working with Susan has been one of the best experiences of my professional career. I have found her scrupulously honest, and in my innumerable interactions with Susan and staff, I have never once heard her scream or use intimidating language. I have spoken with Susan any number of times about staff, and I've only ever heard her express an earnest desire to make their lives easier. I'm proud to work with Susan, and I'm proud of the excellent work Congressman Murphy has accomplished with the help of his talented staff."

HMM -- "Erik Prince, Blackwater Founder, Weighs Primary Challenge to Wyoming Republican," by NYT's Jeremy Peters, Maggie Haberman and Glenn Thrush: "Erik Prince, the founder of the security contractor Blackwater, is seriously considering a Republican primary challenge for a Senate seat in Wyoming, potentially adding a high-profile contender to a fledgling drive to oust establishment lawmakers with insurgents in the mold of President Trump.

"Mr. Prince appears increasingly likely to challenge John Barrasso, a senior member of the Senate Republican leadership, according to people who have spoken to him in recent days. He has been urged to run next year by Stephen K. Bannon, who is leading the effort to shake up the Republican leadership with financial backing from the

New York hedge fund billionaire Robert Mercer and his daughter Rebekah. Over the weekend, Mr. Prince traveled to Wyoming with his family to explore ways to establish residency there, said one person who had spoken to him." http://nyti.ms/2y2qCa9

-- SO, Bannon is encouraging these people to run: Michael Grimm, a convicted felon with a decidedly moderate voting record, and Erik Prince, a government military contractor who doesn't even live in the state of Wyoming.

TRUMP RE-UPS ON TWITTER -- @realDonaldTrump retweeted a tweet from yesterday at 5:04 a.m.: "More and more people are suggesting that Republicans (and me) should be given Equal Time on T.V. when you look at the one-sided coverage?"

TRUMP'S GOP -- "Republicans largely abandon their platform of fiscal restraint," by WaPo's Damien Paletta: "The Republican Party has largely abandoned its platform of fiscal restraint, pivoting sharply in a way that could add trillions of dollars in federal debt over the next decade. Cutting spending to balance the budget was almost religion to the Republican Party for much of the past eight years. But all year long, despite their control of the White House and Congress, Republicans have not taken steps to balance the budget, to overhaul entitlement programs such as Medicare and Medicaid, or to arrest the growth of the country's $20 trillion in debt.

"With the House passing a critical budget resolution this past week, GOP lawmakers are charging forward next week with plans to cut taxes in a way that could add more than $1.5 trillion to the government's debt over 10 years, with the goal of legislation by early next month. That is on top of an effort to significantly increase military spending. White House officials say their focus is on growing the economy now and dealing with the debt later." http://wapo.st/2xqmQun

USING THE PEN -- "Trump Poised to Sign Order Opening New Paths to Health Insurance," NYT's Robert Pear: "Stymied in his efforts to repeal the Affordable Care Act, President Trump is poised to issue an order that could ease some federal rules governing health insurance and make it easier for people to band together and buy coverage on their own, administration officials said Saturday.

"One official said the directive could move the president a step closer to one of his longstanding goals: allowing consumers to buy health insurance across state lines. Conservatives say that interstate sales could expand options for consumers, increase competition in the insurance market and perhaps lower costs.

"The order, which the administration officials said was likely to be announced in the coming week, would instruct three cabinet departments to take actions to help individuals and small businesses join together to buy insurance through arrangements known as association health plans. Such plans could be sponsored by trade and professional groups and community organizations." http://nyti.ms/2wFK8YA

****** **A message from Koch Industries:** Koch has been the Environmental Protection

Agency's (EPA) first- or second-ranked company for pollution prevention initiatives since 2012. What's more, since 2012, we have implemented more than 1,000 pollution prevention activities across the United States. See how at ChallengeAccepted.com.
******

MUELLER WATCH -- "Hoping to Have Trump Cleared, Legal Team Eases Resistance to Inquiry," by NYT's Matt Apuzzo and Mike Schmidt: "White House officials once debated a scorched-earth strategy of publicly criticizing and undercutting Robert S. Mueller III, the special counsel investigating Russian efforts to disrupt last year's election. Now, President Trump's lawyers are pursuing a different course: cooperating with the special counsel in the hope that Mr. Mueller will declare in the coming months that Mr. Trump is not a target of the Russia inquiry. ...

"The president's legal team is working swiftly to respond to requests from Mr. Mueller for emails, documents and memos, and will make White House officials available for interviews. Once Mr. Mueller has combed through the evidence, Mr. Trump's lawyers plan to ask him to affirm that Mr. Trump is not under investigation, either for colluding with Russian operatives or for trying to obstruct justice." http://nyti.ms/2xqLQNd

SHAKING THE MONEY TREE -- "GOP hopefuls' new must-have: Megadonors," by Maggie Severns and Kevin Robillard: "The first big move of Leah Vukmir's Senate campaign wasn't a traditional kick-off speech or a catchy web video, but a private audience with an influential billionaire. Vukmir, a nurse and longtime Republican state legislator in Wisconsin, was only vaguely familiar with roofing magnate Diane Hendricks. But shortly before launching her Senate bid, Vukmir met with the megadonor and other businesspeople at a wood-paneled country club owned by Hendricks. After two hours hearing from Vukmir about her political beliefs and preliminary campaign plans, Hendricks stood up and told the soon-to-be candidate she had her support.

"Just like that, Vukmir had acquired this year's must-have Senate campaign accessory: a billionaire backer. Hendricks 'likes the fact that we've removed red tape and regulations in Wisconsin,' Vukmir told POLITICO. She is one of a growing group of Republican candidates around the country who spent the first months of this year courting megadonors and even announcing their support before formally launching campaigns, in the same manner that Jeb Bush and others did for months during the last presidential race.

"Candidates scrambling for donor help is nothing new. But the early efforts this year to secure big-name funders have further blurred the hazy lines between candidates and unlimited-money outside groups, while reshaping Senate races around the country - propelling unknown candidates to prominence, scaring off potential opponents and heralding millions of dollars of outside spending as Republicans prepare for tough campaigns against Democratic senators." http://politi.co/2kxWwbt

-- "Trump zeroes in on 2020 battlegrounds," by Gabe Debenedetti: "President Donald Trump's campaign operatives and other allies have begun surveying the political

landscape for his 2020 reelection bid, viewing a handful of upcoming midterm races as especially insightful to his strategic path three years from now. There's been a flurry of activity in those states in recent weeks.

"Aides from Trump's 2016 effort have signed on to work campaigns in Ohio and Florida, giving them footholds in two essential battleground locations. Trump himself has repeatedly returned to Pennsylvania, Wisconsin, Ohio, and Michigan, the quartet of Democratic-leaning Rust Belt states that helped propel him to victory. ... Here are five of the 2017 and 2018 races that Trump operatives and allies expect will begin to answer these questions in the run-up to 2020." http://politi.co/2kuLi7E

MEANWHILE, ON THE LEFT -- "The 'Resistance,' Raising Big Money, Upends Liberal Politics," by NYT's Ken Vogel on A1: "It started as a scrappy grass-roots protest movement against President Trump, but now the so-called resistance is attracting six- and seven-figure checks from major liberal donors, posing an insurgent challenge to some of the left's most venerable institutions - and the Democratic Party itself. The jockeying between groups, donors and operatives for cash and turf is occurring mostly behind the scenes. But it has grown acrimonious at times, with upstarts complaining they are being boxed out by a liberal establishment that they say enables the sort of Democratic timidity that paved the way for the Trump presidency. ...

"Just as the new forces on the right are threatening primary challenges to establishment Republicans, some groups on the left have begun talking about targeting Democratic incumbents in the 2018 midterm elections. Entrenched Democratic groups are facing growing questions about the return on the hundreds of millions of dollars they have spent over the years." http://nyti.ms/2y0Zg71

FOR YOUR RADAR -- "Americans Jailed After Failed Coup in Turkey Are Hostages to Politics," by NYT's Carlotta Gall in Hatay, Turkey: "One is a NASA scientist who was vacationing with relatives in Turkey. Another is a Christian missionary who has lived in Turkey for 23 years. Others include a visiting chemistry professor from Pennsylvania and his brother, a real estate agent. They are among a dozen Americans who have been jailed by the government of President Recep Tayyip Erdogan and face long prison sentences for allegedly playing a part in a failed coup last year. ... [A]mid deteriorating relations with the United States and Europe, Turkey is also arresting increasing numbers of foreign nationals. Most, including the Americans, are accused of ties to the Islamist cleric Fethullah Gulen, who Turkey says orchestrated the conspiracy from his self-imposed exile in Pennsylvania." http://nyti.ms/2hUUwsX

-- "Tropical storm Nate weakens but rain, floods to continue," by AP's Jeff Amy in Biloxi, Mississippi: "A fast-moving storm called Nate brought flooding and power outages to the U.S. Gulf Coast early Sunday after it sloshed ashore outside Biloxi, Mississippi - the first hurricane to make landfall in that state since Katrina devastated the region 12 years ago. The storm hit Mississippi as a Category 1 hurricane with maximum sustained winds near 85 mph (140 kph) but weakened later to a tropical storm as it moved inland, the U.S. National Hurricane Center in Miami said. More than

100,000 residents in Mississippi and Alabama were without power following the arrival of Nate, but no deaths or injuries were reported early Sunday." http://bit.ly/2z5hotT

SUNDAY BEST ...

-- NRA'S CHRIS COX to **CHRIS WALLACE** on **"FOX NEWS SUNDAY"** : "We don't believe bans have ever worked on anything. What we have said has been very clear: that if something transfers a semi-automatic to function like fully-automatic, then it ought to be regulated differently. ... People can own things safely and responsibly and be a danger to no one. And that's the part of this conversation. It can't be a fair and balanced conversation if you are not willing to discuss the broader problems we have with a violent culture coming out of Hollywood, with video games that have fundamentally changed how military simulators work."

-- CHUCK TODD talks with **SEN. DIANNE FEINSTEIN (D-CALIF.)** on **NBC'S "MEET THE PRESS": TODD:** "Are you running for re-election?" **FEINSTEIN:** "You are going to find out about that very shortly." **TODD:** "What do you make of the poll recently? 50 percent say they'd like they don't know if they want to see you run for re-election again." **FEINSTEIN:** "Oh look. There are polls and then there are polls. I'm ready for a good fight. I've got things to fight for. I'm in a position where I can be effective, and hopefully that means something to California." **TODD:** "Well, that sounds like you've just announced your re-election bid. Close?" **FEINSTEIN:** "Close."

-- CHUCK also sat down with **HOUSE MAJORITY WHIP STEVE SCALISE (R-LA.)**: **TODD:** "Is [the right to bear arms] unlimited?" **SCALISE:** "It is." **TODD:** "You really believe it is?" **SCALISE:** "You've seen limits put in place, Chuck, you've seen limits already in place you've seen laws on the books ... Let's go out and enforce those laws, don't try to put new laws in place."

-- MICK MULVANEY to Chuck about a health care deal with Democrats: "Fixing ... that's an interesting word ... If the question is is the president interested in working with Democrats to repeal and replace -- that would be our language --the answer is yes."

-- JAKE TAPPER speaks with **SEN. CHRIS MURPHY (D-CONN.)** on **CNN'S "STATE OF THE UNION": TAPPER:** "Do you think Tillerson should resign?" **MURPHY:** "Again, I don't think that that solves the problem. I think the president should stop undermining the people in his administration. I think he should stop doing hurtful things to the country's national security, like telling the North Koreans that there is no diplomatic path for them to give up nuclear weapons. I have big disagreements with Secretary Tillerson. I don't think he's been a good secretary of state. But I'm not sure that there is anyone that can succeed in that position, given the just absolutely catastrophic dysfunction of this White House."

THE NATIONALS WIN! -- WAPO'S TOM BOSWELL "With two swings of the bat, everything may have changed for the Nationals": "Maybe something changed, even something big, on Saturday night as the autumn moon rose over the right field stands to

get a glimpse of what, far down on planet earth, was causing all that ruckus down at Nationals Park, a place that seldom raises it voice until the heavens take note.

"Within a matter of perhaps 15 minutes of lunacy, Game 2 of this National League Division Series changed utterly, from what seemed like an almost certain Chicago Cubs victory to a stunning, ground-shaking, 6-3 Washington Nationals win.

"Eighth-inning home runs, first a titanic one by Bryce Harper to tie the score, then a three-run wall-scraping thriller by Ryan Zimmerman to win it, tied this series at a game apiece, but with enormous baseball gravitational pull suddenly on the Nats' side just when such cause for hope was least expected." http://wapo.st/2fTS1Tp

-- GAME 3, Monday in Chicago, 4 p.m., TBS

PHOTO DU JOUR: Jason Aldean performs "I Won't Back Down" on "Saturday Night Live," on Oct. 7 in New York in tribute to the victims of the Las Vegas mass shooting and the late rock superstar Tom Petty. | Will Heath/NBC via AP

POSTCARD FROM THE NEW YORKER FESTIVAL - PREET BHARARA, in a Q&A with Jeffrey Toobin, describing when he met with then-President Elect Trump during the transition: "At the time, I had guys with lights and sirens and guns who could facilitate my entry into the building, because there are Secret Service you have to coordinate with. And I go into the building, and you may remember at the time, there was a stakeout of journalists in the lobby at Trump Tower. And I try to - they're very hard to avoid, because you walk in like and they're all right there. And I'll never forget that as I'm walking towards the elevator bank trying to ignore the press, somebody shouts out 'Mr. Bharara, are you here to serve a subpoena?'" **TOOBIN:** "And that day may come." ... **BHARARA:** "[S]omeone [is] going to hire me for like 8 bucks an hour to..." **TOOBIN:** "Not you, exactly."

BHARARA: "'You've been served.' [Laughter] I would totally do that, by the way." **TOOBIN:** "I know. Next time." **BHARARA:** "And I would waive my hourly fee. So somebody yells that, I laugh very hard on the inside, we get in the elevator, there's lots of gold. We get up to the 26th floor, and then there becomes this issue of whether or not - small detail that I thought was cool, whether or not I have to go through a metal detector. And I found out later that there was a little bit of an argument between the head of the Secret Service there and the security folks. And he said no, I'm ... the top law enforcement official in Manhattan. I'm not going to get wanded going through. And what I thought was cool about that was Mitt Romney apparently had been to meet the President Elect a few days earlier, and they wanded that guy. I'm very petty. Small

things ... are important to me."

--SETH MEYERS, in a Q&A with Ariel Levy: "When we meet a comedian and they send us a sample and we like the sample, we will just look at their Twitter feed. Because we can go back and look at five years of jokes ... There's this weird thing now that everybody's kind of leaving a permanent record of their writing. Which is great for people who are trying to find writers but it's also for young writers, it's a reminder that if you're going to put yourself out there, make sure it's a refined product that you will be happy to be judged by because that will be what happens."

ON LAS VEGAS -- "Who Was Stephen Paddock? The Mystery of a Nondescript 'Numbers Guy,'" by NYT's Sabrina Tavernise, Serge Kovaleski and Julie Turkewitz: "Stephen Paddock was a contradiction: a gambler who took no chances. A man with houses everywhere who did not really live in any of them. Someone who liked the high life of casinos but drove a nondescript minivan and dressed casually, even sloppily, in flip-flops and sweatsuits. He did not use Facebook or Twitter, but spent the past 25 years staring at screens of video poker machines. Mr. Paddock, a former postal worker and tax auditor, lived an intensely private, unsocial life that exploded into public view on Sunday, when he killed 58 people at a country music festival and then shot himself. But even with nationwide scrutiny on his life, the mystery of who he was has only seemed to deepen." http://nyti.ms/2fS7fs0

-- CHRIS WALLACE talks with **STEVE WYNN** on **"FOX NEWS SUNDAY":**
WALLACE: "I understand that Stephen Paddock had gambled and stayed at your properties along with a lot of other places along the Strip. I know you talked to your security team afterwards. Looking back, after talking to all of them, how much of a profile did you have on him? And was there anything in that profile that should have raised a red flag?" **WYNN:** "He's been staying in Las Vegas since '06. So you know, we're talking about 11 years with his girlfriend or at least in recent years, frequent visitor, once or twice a month to this hotel and others. The most vanilla profile one could possibly imagine. A modest gambler at least by our standards, you know, nothing serious, paid promptly, never owed any money anywhere in Las Vegas. He didn't fit the profile of a problem or compulsive gambler. ...

"But if there's anything interesting that stood out over the six years, nobody that's ever worked here have ever seen the gentleman or the lady take a drink of wine, beer or alcohol of any kind. Now, a lot of people don't drink. But considering their frequency of all the restaurants, and their behavior as normal tourist taking advantage of everything that's available in our resort, they never ever imbibed in any liquor. Their behavior was conservative, private, understated in every way. You never ever would stop a man like this coming in, you know, in the building."

-- JASON ALDEAN'S SNL cold open http://bit.ly/2yPalos

-- "Showgirls, casinos and chapel weddings: Las Vegas snaps back after deadliest mass shooting in modern U.S. history," by WaPo's Kevin Sullivan in Las

Vegas: "Forty-seven hours after the massacre, Crystal Rose was back in her flouncy red showgirl plumage on the Vegas Strip, bare-chested except for tiny, shiny pasties keeping her just this side of legal. ... 'I took the day off yesterday, out of respect,' said Crystal, 25 ... This pulsing City of Sin has returned almost immediately to its high-glitz version of normal after Sunday's massacre of 58 people, the deadliest mass shooting in modern American history. The shows go on. The roulette wheels spin, the dice fly, and people carrying Coronas wander the Strip alongside bubbly showgirls and a guy dressed as Chewbacca." http://wapo.st/2kxkh3u

-- WSJ: "Las Vegas Mayor Predicts Limited Economic Impact From Mass Shooting": http://on.wsj.com/2yxJOQa

TRUMP INC. -- "Losses at Trump's Scottish resorts doubled last year," by AP's Bernard Condon: "Donald Trump boasts of making great deals, but a financial report filed with the British government shows he has lost millions of dollars for three years running on a couple of his more recent big investments: his Scottish golf resorts. A report from Britain's Companies House released late Friday shows losses last year at the two resorts more than doubled to 17.6 million pounds ($23 million). Revenue also fell sharply." http://bit.ly/2y2n9eo

FIRST PERSON - "I witnessed Harvey Weinstein's sleaziness up close: ex-waitress," by Jade Budowski in the N.Y. Post: "Harvey Weinstein was every bit the sleazy Hollywood caricature recent reports have made him out to be. When I was working as a waitress [at Tribeca Grill], I watched numerous times as a string of young women - some seemingly no older than 21 - entered the restaurant for long, flirty dinners with him, even though he was married with five children. These women were all the same: vaguely European, always beautiful, stylishly dressed, and totally out of place next to someone like him. The staff could usually tell that the woman was there to meet him before she had even said a word.

"If a woman waited for him at the bar, he'd bellow furiously at more than one of us for not having seated her prior to his arrival, despite the fact that she'd insisted on it. 'Why the f- -k isn't she at the table?' he'd say. The ritual for his rendezvous was very firm. Champagne, caviar, and an unspoken rule that Weinstein and his date not be disturbed. The pair would sit close, whispering and touching each other suggestively. After dining, Weinstein and a woman would often disappear for a while, exiting the restaurant through a side door. ... Many of the women he saw would return for second or third dates. Sometimes, Weinstein and a woman would come back to the restaurant the next morning, with her sporting wet hair and the same clothes." http://nyp.st/2wEYFUn

****** **A message from Koch Industries:** It's one thing to say we're committed to environmental responsibility. But quite another to demonstrate it. This year, Koch was named the EPA's ENERGY STAR® Partner of the Year. The award recognizes organizations that have made outstanding contributions to protecting the environment through energy efficiency. To-date we've invested $600 million into energy saving initiatives. And over the last five years, we've saved enough energy to power 360,000

households for an entire year. See our contributions at ChallengeAccepted.com. ******

MEDIAWATCH - ALEX WAGNER has returned to "CBS This Morning" after her maternity leave. ***Video of the show welcoming her back and her sharing some pix of her new baby boy, Cy Kass*** http://cbsn.ws/2z5kdvd

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from New York:

-- "Citizens of anywhere," by Matthew Valencia in 1843 Magazine: "Globalisation has turned citizenship into a commodity. Matthew Valencia went shopping for a new passport and found bargains to be had." http://bit.ly/2hU21Ao

-- "The Last Invention of Man," by Max Tegmark in Nautilus Magazine: "How AI might take over the world." http://bit.ly/2yNMXrc

-- "Why nation-states are good," by Dani Rodrik in Aeon Magazine: "The nation-state remains the best foundation for capitalism, and hyper-globalisation risks destroying it." http://bit.ly/2ktG9wN (h/t TheBrowser.com)

-- "What Happens When We Give up Control of Our Cars?" by Malcolm Gladwell in Car and Driver: "A history of unintended consequences." http://bit.ly/2fYAcGK

-- "The Story Behind the Chicago Newspaper That Bought a Bar," by Andy Wright in Topic: "Journalists will go far for a story and they'll go far for a drink-but would they buy a bar? In Chicago, that's exactly what a newspaper did. An oral history of an incredible experiment." http://bit.ly/2yvb95t (h/t TheBrowser.com)

-- "Christ in the Garden of Endless Breadsticks," by Helen Rosner in Eater: "They are designed to create a sense of vague familiarity. You go to Olive Garden because you've always gone there. You bring your children, and they grow up having always gone there. It is a restaurant that's good at some things, a few of them on the menu, more of them about price and convenience and a general exhausted tolerance for unruly children and arguing couples." http://bit.ly/2fRIcW1

-- "How Deep Is Your Love?" by Alison Kinney in Lapham's Quarterly: "Turreted and crenellated, the castle appears as the product of centuries of reconstruction and renovation, down to the irregularities of the asymmetrical foundation. But Neuschwanstein, the unfinished masterpiece of Ludwig II, king of Bavaria from 1864 to 1886, was built to manifest Ludwig's obsession with Richard Wagner. The king was the world's greatest opera fan; Neuschwanstein remains the world's greatest work of fan art." http://bit.ly/2y1scJs

-- "The Coming Software Apocalypse," by James Somers in The Atlantic: "A small group of programmers wants to change how we code-before catastrophe strikes." http://theatln.tc/2z4dAcg

-- **"In 1973, I invented a 'girly drink' called Baileys:** We got £3,000 all-in for the creation of the world's most successful cream liqueur," by David Gluckman in Irish Times: "We bought a small bottle of Jamesons Irish Whiskey and a tub of single cream. We mixed the two in our kitchen, tasted the result and it was bloody awful. We went back to the store, found some Cadbury's Powdered Drinking Chocolate, and added it to our formula. Hugh and I were taken by surprise. It tasted really good." http://bit.ly/2yNNwRQ

-- **"Justin Bieber Made a New Jersey Suburb Lose Its Mind This Summer,"** by Reeves Wiedeman in Vulture - per Longreads.com's description: "Justin Bieber spent his summer in a quiet American suburb doing what most people do: He went to the mall, purchased beverages at Starbucks, and played basketball in a driveway. His appearances caught a community off guard and made them ravenous for gossip." http://bit.ly/2xnlz1c

-- **"Selling China by the Sleeve Dance,"** by Nicholas Hune-Brown in Hazlitt: "Beneath the ubiquitous posters for the Shen Yun ballet is a battle between dissidents and the state over the soul of a nation, both at home and across the diaspora." http://bit.ly/2xmxy4X (h/t Longform.org)

Playbookers

WEEKEND WEDDINGS -- Hunter Walker, White House correspondent at Yahoo News, on Saturday married **Gloria Rejas Romero,** the former associate director of finance at the Michael J. Fox Foundation, at the Prospect Park Boathouse in Brooklyn. The couple met at a bar in Brooklyn. Business Insider's Colin Campbell was best man, and there was a Peruvian band and themed cocktails. Guests also got gift bags with a New York Yankees shot glass and a bottle of Pisco. ***Instapic*** http://bit.ly/2wFObnQ

-- **Vanessa Oblinger**, director of media relations at Javelin, on Friday evening married **Dr. Steven Santos**, scientific review officer at NIH, in an intimate ceremony at the Portuguese-style winery Morais in the Virginia countryside. They met playing on the same co-ed hockey team. ***Pics*** http://bit.ly/2kxoxA2 ... http://bit.ly/2y8R1p9

SPOTTED: Jason Gorey and Lauren Ehrsam, Keith and Kristen Urbahn, Matt Latimer and Anna Sproul Latimer, Bre Payton, Brielle Coolly, Ben Domenech, Joe Schoffstall, Matt Vespa, Taylor Swindle, Ben Walters, Dylan Colligan, Tyler Bryant and Jonathan Bronitsky.

OBAMA ALUMNI - John Farmer, director of technology and civic innovation at Microsoft and former senior adviser for innovation in the Obama White House, on Saturday married **Brittany McCandless,**digital producer for CBS News' "60 Minutes Overtime" and a CNN alum. The ceremony was the Church of the Holy Name of Jesus and the reception was at the Harvard Club. The couple met in August, 2014 on the

street in Manhattan. Their honeymoon is in Dubai, Zanzibar and Kenya. ***Pics*** http://bit.ly/2wF9A0x ... http://bit.ly/2fVMBrk ... ***NYT announcement*** http://nyti.ms/2y0Yhn1

SPOTTED: Brian Forde, Coach Kathy Kemper, Todd Park, Amy Geng, Ryan Panchadsaram

OUT AND ABOUT -- SPOTTED at a News Media Alliance party last night for Franklin Foer's new book, "World Without Mind: The Existential Threat of Big Tech" hosted by David Chavern -- ***$16.20 on Amazon*** http://amzn.to/2gmhMwB : Terry Samuel, Marcus Brauchli and Maggie Farley, Sally Quinn, Margaret Carlson, Eli Lake, Ali Shehabi, Michael and Sarah Crowley, Eric Lipton, Ryan Williams, Garance Franke-Ruta, Denise Couture, Paul Wood, Janet Donovan, Mark Neuman, Nina Rees, Dana Milbank and Anna Greenberg, Perry Bacon, Evelyn Farkas, Abdulwahab al-Hajjri.

SPOTTED at a birthday party last night for Liz Sidoti's 40th at the home of Stephanie Cutter and co-hosted by Sara Fagan and Nedra Pickler: her husband Andy Davis, Poppy MacDonald, Mike Gottlieb, Amy and Matt McDonald, Debra Deshong, Jo Anne Ginsburg, Linda Roth, Penny Lee, Kiki McLean, Mo Elleithee, Mary Kathryn and Michael Steel, Kevin Madden, Terry Sullivan, Michael and Tovah Meehan and Andrea Jones on a state visit from California -- ***pic of the party*** http://bit.ly/2z7rXwB

TRANSITIONS - GARRETT MURCH has been hired as the new political/communications director of the Maine Republican Party. He most recently has been a senior adviser in Maine Gov. Paul LePage's office of policy and management and is a LifeZette and Jeff Sessions alum.

BIRTHDAY OF THE DAY: Adrienne Watson, the DNC's deputy communications director and Trump war room director, celebrating in Bermuda. **A trend she thinks is undercovered:** "Democrats are winning races across the country - we've flipped 8 seats this year, while Republicans haven't flipped any in contested races. We are converting the enormous momentum on the ground into wins." **Read her Playbook Plus Q&A:** http://politi.co/2xpPAmT

BIRTHDAYS: Blain Rethmeier, managing director at Ditto PR, is 41 (hat tip: Tim Burger) ... Steve Coll, dean of Columbia's Graduate School of Journalism and a New Yorker staff writer, is 59 ... former Rep. Dennis Kucinich (D-Ohio) is 71 ... the Rev. Jesse Jackson is 76 ... Bill Schneider ... Mackenzie Weinger ... Ivanka Farrell of Bully Pulpit Interactive ... Jennifer Allen of LCV ... Kim Gamel of Stars and Stripes ... Matthew J. Shuman ... Dan Dunham ... Politico's Terry Golway ... former HHS Secretary Tom Price is 63 ... Rep. David Kustoff (R-Tenn.) is 51 ... Kristen Osborne of MSNBC PR (h/t Hollie Tracz) ... Joseph Galitzin ... Julia Tylor ... Adam Weiss (h/t Jon Haber) ... Molly Erman, VP of brand and communications at New Lab and author of "Work Life," who celebrated last night at New Lab's first anniversary party ... Nicole Schlinger of Campaign HQ (h/t Jimmy Centers) ... Anna Levin ...

... Shripal Shah, VP at American Bridge ... Tom Sheridan, a Democratic lobbyist at the Sheridan Group (h/t Erik Smith) ... Lillie Belle Viebranz of Palantir ... Abdul Dosunmu, DOT alum now a student at NYU Law ... Ingrid Jones ... Micah Morris ... Caroline Nonna Holland, tech policy fellow at Mozilla and Obama DOJ alum ... David Burstein, CEO and founder of Run For America ... Riki Parikh, policy counsel for Sen. Michael Bennet (D-Colo.) ... Dennis Alpert, director of advocacy and public affairs for U.S. government relations at Pfizer, is 52 ... Shankar Vedantam, NPR's social science correspondent and host of the "Hidden Brain" podcast ... Sophia Yan ... Kiffin Eckert ... Kirk Monroe, EVP at Rasky Baerlein ... Tamara Lipper Smith ... Bridger McGaw ... Marcella Caldwell-Gadson ... Nicholas Piatek ... Joe Torsella ... Kay Lund ... Kirk Schwarzbach ... Judy Sulentic (h/ts Teresa Vilmain)

****** **A message from Koch Industries:** At Koch, we work to create more value, using fewer resources than the day before. With more than 300 manufacturing sites across the United States, we're one of America's largest manufacturers. To stay in business for the long term, we constantly need to improve and innovate- both in the products we make and how we make them. In 2015, 92 percent of our production-related waste from reporting facilities was recycled, recovered for energy or treated. Overall, Koch has had a 33 percent reduction in waste produced since 2012. Creating innovations while saving resources? Challenge Accepted. ******

FOX 31 Denver
August 4, 2017
http://kdvr.com/2017/08/04/epa-administrator-pruitt-part-of-delegation-to-tour-gold-king-mine-area-on-2-year-anniversary-of-spill/

Environmental Protection Agency Administrator Scott Pruitt and Colorado leaders will tour the site of the Gold King mine spill on Friday to mark the second anniversary of the spill that dumped 3 million gallons of tainted wastewater into the Animas River.

Gov. John Hickenlooper, Sens. Cory Gardner Michael Bennet, and Rep. Scott Tipton will also tour the site above Silverton, and meet with Pruitt and other representatives of the EPA. ...

A cleanup led by the EPA at the old gold mine on Aug. 5, 2015 dumped wastewater contaminated with arsenic and lead into the Animas River in southwest Colorado, turning it a shade of yellow.

The blowout sent water laced with toxic heavy metals through southwest Colorado, New Mexico and Utah.

Summaries

AIR
Alabama SIP/Cross-State Air Pollution Rule
AIR

Proposed rule of the EPA would approve portions of revisions to the Alabama SIP that replace the Cross-State Air Pollution Rule (CSAPR) federal implementation plan with a state trading program for ozone season nitrogen oxides (NOx) emissions. The state program is integrated with the CSAPR federal trading programs and is substantively identical to the federal trading program except for provisions allocating emission allowances among state units. If approved, the SIP revisions would automatically eliminate state units' requirements to participate in the federal allowance trading program for ozone season NOx emissions. The revisions also would satisfy the state's good neighbor obligation to prohibit emissions that significantly contribute to nonattainment or interfere with maintenance of the 1997 eight-hour ozone NAAQS and partially satisfy the good neighbor obligation regarding the 2008 eight-hour ozone NAAQS. Comments are due Sept. 18, 2017. Contact: Ashten Bailey; EPA Region 4, Air Regulatory Management Section; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
Alabama SIP/Regional Haze Plan and Infrastructure Requirements
AIR

Proposed rule of the EPA would approve revisions to the Alabama SIP regarding visibility and regional haze. The rule allows the state to change from reliance on the Clean Air Interstate Rule to reliance on the Cross-State Air Pollution Rule; converts EPA's limited approval and limited disapproval of the 2008 regional haze SIP to a full approval; and approves the visibility prong of the state's infrastructure SIP submittals for the 2012 fine particulate matter, 2010 nitrogen dioxide, and 2010 sulfur dioxide NAAQS. The rule also converts EPA's disapproval of the visibility portion of the infrastructure SIP submittal for the 2008 ozone NAAQS to an approval.

Comments are due Sept. 18, 2017. Contact: Michele Notarianni; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
Alabama SIP/Transportation Conformity Standards
AIR

Direct final rule of the EPA approves portions of revisions to the Alabama SIP regarding transportation conformity standards. The revisions reflect updates to federal transportation conformity standards that address the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) (73 FR 4420; 01/24/2008) and that reorganize and update standards so they apply to any new or revised NAAQS (77 FR 14979; 03/14/2012). The rule is effective Oct. 16, 2017, unless adverse comments are received by Sept. 18, 2017. Contact: Kelly Sheckler; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-9222; sheckler.kelly@epa.gov. Citations: 40 CFR 52.50

AIR
NESHAP for Plywood and Composite Wood Products
AIR

Notice of the EPA announces the submission of a new information collection request to the OMB regarding the plywood and composite wood products (PCWPs) NESHAP residual risk and technology review. The collection will include a survey (Phase I) of operators of major source and synthetic area source PCWP facilities regarding facility-level, emissions and control information; compliance data; and descriptions of technological innovations used to avoid major source status. The collection also will include a contingent testing phase (Phase II) if the information gathered during Phase I is inadequate, consisting of a survey of selected PCWP facilities across various industry segments regarding emissions and production information. Comments are due Sept. 18, 2017. Contact: John Bradfield; EPA, Sector Policies and Programs Division; 919-541-3062; bradfield.john@epa.gov. Citations: 40 CFR 63, Subpart DDDD

Regulatory Update

AIR
South Carolina SIP/Regional Haze
AIR

Proposed rule of the EPA would supplement a Jan. 17, 2014, (79 FR 3147) proposed approval of a revision to the South Carolina SIP for regional haze. The revision includes a progress report towards reasonable progress goals (RPGs) for the Cape Romain Class I Wilderness area and a determination of adequacy of the existing regional haze SIP. The progress report specifies that the state's regional haze plan is sufficient to enable the state and other states to achieve RPGs for the wilderness area. The supplement addresses the agency's proposed finding that the state adequately relied on the Clean Air Interstate Rule in its regional haze plan from 2007-2011 to meet requirements under the regional haze rule. The supplement is in response to a court decision to delay Phase 2 sulfur dioxide emissions and ozone-season nitrogen oxide budgets for the state under the Cross-State Air Pollution Rule. Comments are due Sept. 18, 2017. Contact: Michele Notarianni; EPA Region 4, Pesticides and Toxics Management Division; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 52

Subject: Court says EPA overstepped in denying small refiners RFS exemption

By Alex Guillén

08/15/2017 02:09 PM EDT

The Obama administration in 2016 wrongly forced two small refineries in Wyoming to comply with the Renewable Fuel Standard, a federal court ruled today.

The Sinclair Oil-owned facilities had requested exemptions from the RFS, citing language in the law that allows EPA to spare small refiners from the program's biofuel blending requirements if they would experience "disproportionate economic hardship." While DOE recommended granting them a 50 percent waiver, EPA in October 2016 said both facilities were profitable enough to bear the RFS's costs and thus would have to comply fully with the program.

However, a split panel from the 10th Circuit Court of Appeals today said EPA overstepped its authority by concluding that the exemption could only be granted if complying with the RFS presented a long-term, "existential threat" to the refineries' survival.

EPA "chose a definition of economic hardship plainly at odds with Congress's statutory command," concluded the two majority judges, Timothy Tymkovich, a George W. Bush appointee, and Nancy Moritz, an Obama appointee. They sent the matter back to EPA for further action.

In a dissent, Carlos Lucero, a Clinton appointee, said he believed EPA had relied on "a more nuanced analysis" than the majority said which may have been permissible.

The decision comes just weeks after the D.C. Circuit ruled in a separate case that the Obama EPA had misappropriated a broader waiver authority under the RFS to require using less corn ethanol in 2016 than Congress required.

WHAT'S NEXT: EPA must review the refineries' petitions in light of the ruling. The agency could find further reasons for denying the petitions or it may grant Sinclair the sought-after exemptions.

October 12, 2017

Today on Climate Beat . . .

. . . we went on the radio, noting that EPA chief Scott Pruitt is offering his rationale for why the agency is moving to repeal the Obama administration's Clean Power Plan (CPP) before replacing it, arguing the rule is creating ongoing regulatory for coal plants even though it has been stayed by the Supreme Court.

In personnel news, David Harlow, who recently worked with the law firm Hunton & Williams is joining EPA's air office to serve in a role similar to the one held by former senior air office counsel Joe Goffman during the Obama administration.

And our daily news roundup looked at speculation about what might happen to EPA's GHG rule for new power plants given the recent attention on the CPP.

From: Morning Media
Sent: Wed 10/4/2017 9:40:54 AM
Subject: Morning Media: POLITICO Morning Media: When the president blocks you -- Split-screen tragedy -- Top editors meet DOJ -- Moment of silence for S.I.

By Michael Calderone | 10/04/2017 05:39 AM EDT

TRUMP BLOCKS JOURNALIST CHALLENGING FALSEHOODS: Toronto Star Washington correspondent Daniel Dale emerged during the 2016 race as one of the journalists most closely tracking candidate Trump's statements -- and misstatements -- on the campaign trail. He chronicled the experience in a POLITICO magazine piece, "Confessions of a Trump Fact-Checker," and since inauguration has tallied more than 650 false claims. He revealed Tuesday that the president has now blocked him on Twitter.

-- Dale told me the president's action "won't change anything about the work I produce, it'll just make it slightly (and needlessly) more difficult to do it. I've now created a separate Twitter account just so I can view the president's tweets and obtain links for quote-tweeting purposes, and I'll have to toggle back and forth throughout the day. So: hardly a big problem, just silly. I think the blocking is more silly and revealing than it is an actual impediment." (A White House spokesperson did not respond for comment).

-- Still, it's troubling to see public officials, from the president down, selectively bar members of the public, including journalists, from reading what they tweet unless in response to serious abuse online. But as I noted on Twitter , even prominent journalists block their colleagues -- including this media reporter -- on Twitter for presumably the same reason: to avoid scrutiny. It's understandable for a journalist to block users when facing harassment and highly personal attacks. It's hypocritical to do so in an effort to skirt responsibility for one's work while professing to hold others accountable.

-- Not to mention, you can always just mute people who annoy you.

Good morning and welcome to Morning Media. Follow, don't block, me at @mlcalderone and send tips to mcalderone@politico.com. Morning Media is edited by Alex Weprin (@alexweprin). Archives. Subscribe.

SPLIT-SCREEN TRAGEDY: Cable news networks turned to Puerto Rico on Tuesday as Trump visited the storm-ravaged island. Still, the ongoing humanitarian crisis only got so much airtime given that news outlets remained primarily focused on the massacre in Las Vegas, where the president heads today.

BETWEEN THE TWO VISITS, Trump found time Tuesday night to attack the press by retweeting Fox News host Sean Hannity's swipe: "Tonight the truth about how despicable the media and the left are in America today. We will name names. 9 est Hannity Fox News from Vegas."

UNIVISION CEO RANDY FALCO URGED political leaders in Washington not to forget

Puerto Rico: "Just imagine if the entire state of Connecticut was cut off from communications, electricity, fresh water and supplies after a natural disaster. We would not tolerate any delay in getting our citizens there help. And we should not tolerate any further delays with Puerto Rico, which is roughly the same size as Connecticut. Puerto Rico may be separated from the mainland U.S. by an ocean but it is still America."

MILLIONS TUNE IN TO CABLE NEWS IN WAKE OF LAS VEGAS ATTACK. Alex Weprin writes: In the the aftermath of the mass shooting, millions of people turned to cable news for the latest information. More than 7.4 million people, on average, watched Fox News, CNN and MSNBC in primetime on Monday -- roughly twice as many as normal, even in this busy news year. All told, Fox News averaged just shy of 3.6 million viewers in primetime, compared to CNN, which averaged just shy of 2 million, and MSNBC with 1.9 million.

FROM ORLANDO TO LAS VEGAS: Journalists who covered the previous deadliest mass shooting in modern U.S. history offered advice for those covering the latest one, as Poynter's Kristen Hare reports.

MUST-READ: "Two strangers bond over country music and beer. Then the gunshots started." -- WaPo's Wesley Lowery.

SOUND BITES:

-- "Most telling, depressing observation at our morning editorial meeting: 'We did that story during the last mass shooting.'" [Scott Simon]

-- "Amazed at the number of prominent people who want to believe ISIS claims over the FBI. Folks want a narrative that bad?" [Chuck Todd]

DOJ MEETS THE PRESS: Deputy Attorney General Rod Rosenstein met Monday with top editors and news executives to discuss the Justice Department's process for dealing with reporters in leak investigations. Attorney General Jeff Sessions announced plans in August to review the guidelines for issuing media subpoenas.

-- The News Media Dialogue Group previously provided input to the Obama administration for guidelines it issued after coming under fire for secretly seizing reporters' records. The current group included: Bruce Brown (Reporters Committee for Freedom of the Press), Chris Isham (CBS), Ken Strickland (NBC), Susan Page (USA Today), Jerry Seib (WSJ), Marty Baron (WaPo), Elisabeth Bumiller (NYT), David Vigilante (CNN), Chris Turpin (NPR), and Karen Kaiser (AP).

-- Rosenstein told attendees that the "review of its policies regarding obtaining information from, or records of, members of the news media is still in the information gathering phase," according to a Department readout. During the meeting, "the group discussed the motivations of those that leak classified information to the news media, the importance to news media organizations of notice before information is subpoenaed, the impact of the current guidelines on prosecutors and the news media, and some of the previous cases prosecuted by the Department."

EMBRACING "THE ENEMY": The president's attempt to delegitimize the press as the anti-American enemy of the people doesn't appear to be working, according to a new Reuters/Ipsos poll: "The poll of more than 14,300 people found that the percentage of adults who said they had a 'great deal" or 'some' confidence in the press rose to 48 percent in September from 39 percent last November." Meanwhile, the poll found that "confidence in Trump's administration moved in the opposite direction."

"THE YEAR THAT CHANGED JOURNALISM": The new print edition of the Columbia Journalism Review examines how the "world of journalism is a fundamentally different place as a result of the election of Donald J. Trump," editor Kyle Pope writes. The issue, available today, includes contributions from Lee Bollinger, Margaret Sullivan, Jill Abramson, Janine Gibson, and McKay Coppins. And CJR is also holding a half-day conference today on the subject in Atlanta. If you're not in the neighborhood, here's the livestream.

BROKAW DISMISSES KELLY KERFUFFLE: After a series of reports suggesting Megyn Kelly deliberately cut off Tom Brokaw's mic because he was criticizing the NRA, the NBC News veteran said the incident was a misunderstanding triggered by his difficulty hearing in the studio. "Chick Hearn, the late, great L.A. Lakers play-by-play announcer had a phrase: no harm, no foul," Brokaw told The Washington Post. "Exactly the case this a.m. No harm, no foul. Not worth any fuss. I'm a Kelly fan."

DEEP DIVE: "The Unstoppable Rise Of Jesse Watters, 'Golden Boy' Of Trump's Favorite Network" -- HuffPost's Maxwell Strachan

ROSS RUNS: Ross Barkan, who quit the Jared Kushner-owned Observer after it endorsed Donald Trump and who has more recently been writing on New York City politics for the Village Voice, is entering the fray himself as a candidate for state senate. Barkan was asked about the legacy of local journalists running for office, most notably Norman Mailer and Jimmy Breslin in the late 1960's, and whether there are examples of any actually winning.

-- "The great Errol Louis ran for city council in 1997," Barkan told The Voice, referring to the NY1 anchor and CNN commentator. "He was very active in the community. I think he had founded a local credit union. I believe he'd been a journalist beforehand. He ran a serious Democratic primary. He did not win. I don't know of journalists turned winners, but I'm not going to let that stop me. As we've learned from the 2016 presidential cycle, past is not prologue, and I don't think it ever will be again."

HONORING S.I. NEWHOUSE: Condé Nast will pause for a moment of silence today at 10:30 a.m. for the late S.I. Newhouse, who was also honored Tuesday night with the darkening of the tower spire lights at the magazine empire's current home of 1 World Trade Center and the company's previous offices at 4 Times Square and 1 Bryant Park.

"MAGAZINE MEDIA. BETTER. BELIEVE IT." That's the new pitch from the Association of Magazine Media. The New York Times rolled out its "Truth" advertising campaign earlier this year, and now the magazine association, working on behalf of 123 brands, is also marketing

itself as upholding credibility and trust in an era of rampant misinformation and so-called "fake news." The new ad slogan will also be the theme of the next American Magazine Media Conference in February.

REVOLVING DOOR:

John Cook, who twice left Gawker Media during the past decade, is now departing its successor, Gizmodo Media Group, where he most recently served as executive editor for the special projects desk. Cook wrote in a memo that he plans to take time away from the news cycle and "pursue some ideas that don't necessarily involve writing and editing news stories on the internet." The experience, he told colleague has "been exhilarating, maddening, terrifying, enraging, heartbreaking, and worth it."

Kelsey Snell, most recently with The Washington Post, is returning to NPR as a Congressional reporter. She once worked as an intern and production assistant on the weekend edition of "All Things Considered.

Masha Gessen and **Troy Patterson** will be writing for The New Yorker's site. Gessen, who has written extensively on authoritarianism and Putin's Russia, will write a twice-weekly column. Patterson, currently Style editor for Bloomberg, joins as a cultural critic, writing primarily on television, per staff memo.

FUNDING NONPROFIT NEWSROOMS: The Democracy Fund, the John S. and James L. Knight Foundation, and the John D. and Catherine T. MacArthur Foundation announced a $3 million fundraising campaign today for News Match, which aims to support nonprofit newsrooms by matching contributions to over 100 eligible organizations.

CONGRATS: Pulitzer Prize winner David Wood - whom I was fortunate to cross paths with at HuffPost - has won the Dayton Literary Peace Prize for his book, "What Have We Done: The Moral Injury Of Our Longest Wars."

EXTRAS:

-- Reuters' Katie Paul writes on women -- and women journalists, like herself -- now being able to drive in Saudi Arabia.

-- Ava Sirrah, who worked in the New York Times' branded content studio, addresses the blurring of editorial and advertising for MediaShift.

-- Charles F. McElwee III revisits the legacy of Morton Downey Jr. in the age of Trump for The American Conservative. And if you need a refresher on Downey Jr., please watch.

-- Morning Hangover publisher and former Breitbart spokesman Kurt Bardella writes on the healing power of country music.

-- And the inside story behind the most famous Rolling Stone cover, from Joe Hagan's

forthcoming biography of Jann Wenner.

Subject: EPA boosts industry membership on key advisory boards

By Alex Guillén

11/03/2017 01:41 PM EDT

EPA officially announced the new line ups for several key advisory boards today, bolstering their membership with employees of energy companies and state agencies just days after Administrator Scott Pruitt ordered scientists who have received agency grant money to give up their EPA funding or their seat.

As POLITICO reported on Tuesday, the Science Advisory Board's new additions include representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting, a firm frequently hired by industry interests. Their additions boost the industry membership of SAB, although the panel had previously included members from Dow Chemical and other industries or companies.

The Clean Air Scientific Advisory Committee, which provides health advice for air quality standards, also has three new members. Aside from new Chairman Tony Cox, an independent consultant, the new members are Larry Wolk of the Colorado Department of Public Health and Environment and James Boylan of the Georgia Department of Natural Resources.

EPA also announced a slate of new additions to the Board of Scientific Counselors, which advises on research issues. The former chairwoman, Deborah Swackhamer of the University of Minnesota, is now listed as member, while Paul Gilman of waste-to-energy company Covanta has taken over as chair.

Other new BOSC members include representatives from the North Dakota Petroleum Council, Eli Lilly and Co., the Defense Threat Reduction Agency, the Arkansas Department of Environmental Quality, the California Energy Commission and the consulting firm Ramboll Environ.

Today on Climate Beat . . .

. . . we talked vehicles, reporting that a new industry coalition supporting current fuel economy and greenhouse gas standards has released its current membership, including many electric utilities that would benefit from wider deployment of electric vehicles (EVs), as well as two automakers that only build EVs.

In court, EPA Administrator Scott Pruitt has signed a directive he says will end "sue and settle" agreements through which he says special interest groups such as environmental organizations have forced the agency into legal agreements that impose binding deadlines for issuing discretionary regulations.

Looking at the calendar, an American University professor plans to present her findings to EPA that there is "no evidence that more stringent local pollution regulation changes GHG emissions from manufacturing sectors," a study that could add to the debate over the agency's cost-benefit review justifying its plan to repeal the Clean Power Plan.

In personnel news, EPA Administrator Scott Pruitt appears poised to tap an Alaska official to lead EPA Region 10, moving the agency closer to filling a handful of remaining political slots and bringing in personnel needed to help Pruitt advance President Donald Trump's broad deregulatory agenda at the agency.

And our daily news roundup looked at how some coal towns are not finding much relief from the Trump administration's shifts on climate change policy.

Subject: Manchin rules out Trump energy secretary appointment

By Austin Wright

08/18/2017 02:50 PM EDT

Sen. Joe Manchin (D-W.Va.) today ruled himself out as the next Energy secretary, quashing speculation President Donald Trump might nominate him to run the Energy Department and have the governor of West Virginia appoint a Republican senator.

The plan, floated last week in a Bloomberg News report, could have given the GOP one more vote for its stalled bill to repeal and replace Obamacare.

But Manchin took himself out of the running at a town hall in West Virginia, according to spokesman Jonathan Kott.

The current Energy secretary, Rick Perry, is considered a contender to succeed White House chief of staff John Kelly as head of the Department of Homeland Security.

Subject: BREAKING NEWS: Mueller's office announces plea hearing set for Michael Flynn

Special Counsel Robert Mueller has formally charged ex-national security adviser Michael Flynn with one count of making a false statement, according to a court document.

A plea hearing for Flynn has been scheduled on Friday for a federal court in Washington, D.C., the office of special prosecutor Robert Mueller announced Friday morning.
